Company to be used in the furnace as a trial of its merits as a steam coal, the same was used on Monday, August 20th, 1877. One of the furnaces was coaled with it from the time the fires were lighted at 4 a.m., until the steamer was near Eastport at noon. When first put in the furnace on top of the wood it took fire very readily, was of a very free burning nature and burned like the Pennsylvanian anthracite coals, with a bluish flame and without any smoke, and for some time gave a great heat. The furnace was fired with this coal until the amount sent on board was consumed. When it was cleaned out there was a good deal of partly consumed coal mixed with a thin red clinker. Another lot of similar coal I burnt on an open grate, and it appeared to burn better there than in the furnace. The latter had a strong draft and generated such a heat that it partly melted the coal. In the grate the draft was much more moderate and the combustion slower, under which circumstances it did not melt together so much. Upon the whole the coal performed as well as I expected a surface coal would do. It is undoubtedly of an anthracite nature. Previously to this trial I had visited the shaft and was much struck by the apparently large quantity indicated in its vicinity. The seams can be plainly traced along the shores of the Bay at many places for more than a mile in length. I made a descent down the shaft and found that in following down the hanging wall of the seam it dipped to the northward, drifts cut into this seam in several places evidenced a thickening of the same as it was traced downwards. The site of the shaft is within a few feet of high water mark and directly on the shore of the Bay. A small expense in dredging would enable schooners and small vessels to load at the pit head. My opinion is that it is a good thing and should be developed, and with that end in view I have personally subscribed to the sinking of the shaft. Andrew Taylor, Engineer Stmr. New York. ————————Prof. Karsten's Report. To H.R. Robertson, Esq., Chief Engineer and Gen. Agent Lepreaux Coal Mine:- Sir, - I herewith have the honor of submitting to you and others interested in the so-called Lepreaux Coal Mine, my report of examination of it:- 1st - After a thorough and exact, as well as practical, examination of the formation surrounding your shaft: of the general inclination of the ground: of the appearance of the strata on both the east and west sides of the said shaft, as well as the vegetation now upon the lands, and also the dip of the veins, I can confidently assert that in almost every particular they agree with the formation of the anthracite regions of the State of Pennsylvania. The rocks that have been cut through give clear conclusive evidence that the region abounds in pure anthracite coal, of the same nature as that which is mined in Pennsylvania. 2nd - The shaft situated on the Lepreaux river, and now 130 feet deep shows evidence of a gradual increase in quality, and every foot sunk will in my opinion, give further evidence of this gradual increase to a better quality. 3rd - The coal that has been and is now being taken out, is of a pure lignite nature, has a shining lustre, and has the fracture and cleavage of anthracite coal, and equals it in weight. It is of a partly soft nature and is covered with a coating of a black compound which resembles graphite, but which still in my opinion is or has been caused by the chemical action of the salt water for the past ages upon the carbon of the said coal, and although it has this imperfection, it today burns freer and brighter, and gives a greater heat than poor ordinary anthracite. 4th - Having made two thorough trials of its burning qualities I am convinced that it is a pure anthracite coal. The first test was made on the open hearth at the blacksmith's shop, and I found that after a small quantity of wood had been consumed the coal ignited easily and burnt freely. After the interim of twelve minutes from the time of kindling, the fire was burning bright and clear, with no clogging or coking. A fresh supply was then put on and in fifteen minutes afterwards I distributed the fire and found the coal clear and but very little burnt. The fire was again heaped together, and when one hour and a half had elapsed was again disturbed, when no slate, nor clinkers, nor coking could be found, but merely a red ash and partly unconsumed coal. The second test was made in a large open front stove and gave the same convincing evidence of its being good and pure anthracite coal. The heat imparted by this coal is 5 per cent in excess of that from the States and the trials were in a most general manner satisfactory. 5 - The fossiliferous formation near the bed of these seams is of the grandest that I have seen North of the State of Pennsylvania and bears a strong resemblance to that of the Middle States. Some fossils found of splendid ferns, leaves and stems and grasses now in my possession, all evince the Anthracite formation. The analysis of the coal I have taken with me I shall at a future date. 6 - What is most needed now is depth, and at the distance of three hundred feet I feel sure that you will be rewarded for your faith and perseverance by striking the hard and unaffected Anthracite coal. I would suggest that as your shafts are situated too near the margin of the river or bay, and in consequence the action of the tide upon the southern wall or bank is very dangerous, and may cause a serious inconvenience in the future, that you start your working shaft either to the north of your present prospecting shaft, say 100 to 125 feet or else on the second or third vein. This would, no doubt, be more expensive in the commencement, but in the end would be the cheapest. In conclusion I tender you my best wishes,and trust that your enterprise may be rewarded. If the work is moderately pushed by next spring, I feel sure you will be able to produce black diamonds mined in your own country, and unsurpassed by those from abroad. Let me again wish you success, and remain gentlemen, your obedient servant. John C. Karsten, General Superintendent of the Gilberg Silver

S.J. Daily News - Dec. 17, 1877 Lepreau Anthracite Coal. - Yesterday afternoon a test of Anthracite coal, obtained from the recently discovered mine of the New Brunswick Anthracite Coal Mining Company, was made in the office of Robt. Robertson, jr., secretary of the Company, Water street. The test was very satisfactory. The new coal burned as brightly and cheerfully as any Anthracite coal obtained from the best mines in the United States, and emitted an amount of heat which could not fail to convince those who witnessed the trial of its value and utility for all uses to which hard coal is applied. In appearance the coal differs little, if at all, from Pennsylvania Anthracite. Judging by the character of the coal, the extent of the seams so far discovered, the excellent opportunity for shipment, and the ability of the gentlemen forming the company to bring into play the very best appliances, the prospects of the New Brunswick Anthracite Coal Mining Co.

Daily Telegraph - Jul. 20, 1877 Anthracite Coal. - Messrs. Clinch & Sons write us to say that they have found a vein of anthracite coal not far from the line of railway at Musquash. The proprietors of the coal found near Lepreaux send us specimens of the coal found in that place, which seem to be of fair quality."

S.J. Globe - Jul. 27, 1877 Anthracite Coal At Point Lepreaux. - For many years the outcrops and coal indications in the neighborhood of Musquash and Point Lepreaux have given foundations for the belief that this valuable article existed in quantities in those localities. But owing to no exertions having been made to determine the truth of its existence, beyond merely digging deep holes in the ground no satisfactory conclusion was arrived at, although some of the old inhabitants state that burning coal was obtained in small quantities from the outcrops as long ago as sixty years. Within the last two years, however, the proprietors of land in the neighborhood of Pt. Lepreaux have been sinking a prospecting shaft, and an invitation having been extended us to visit it, we accepted of the same and have had our expectations more than exceeded by what we saw. It has been generally believed that the surface indications do not indicate carboniferous period of geological formation in this locality, but this is not true, for shales, sandstone, conglomerates and limestones abound, and fossils of leaves and vegetable matter have been found in the same in profusion and it is acknowledged that these undeniably indicate the true carboniferous formation. The situation of the shaft is on the North side of the arm of Mace Bay into which the Little Lepreau river empties. The formation of the land to the southward across the intervening water has the appearance which characterizes the Devonian period, and it dips downward and underlies the land to the northward, and

this again is another proof of the carboniferous formation of the land that is being prospected, for it gives its proper geological position. Having arrived at the mouth of the shaft we prepared for descent by donning overhauls to protect our clothing from the drip and dirt, incident to such an undertaking, and under the guidance of the affable manager, Mr. Hugh R. Robinson, we step on to the ladders and begin. The first ten to fifteen feet is through shale and the upper crust overlying the seam, from thence begins the crushed coal which crumbles in the hand when brought in contact with the air. Soon all light is shut off from the mouth of the shaft by a slant that it takes to the northward, and we are dependent for light on the fitful gleam of the oil lamp that is carried in the hat of our guide. After a few turns from one side to the adjacent on the ladders we are told that we have descended forty feet, and are at the mouth of the first drift that has been made. It extends but a few feet from the wall and defines the breadth of the seam. At this point an examination shows that we have passed through the crushed coal and that the seam is assuming the appearance of a true anthracite. Another descent of forty feet and we are at the mouth of another drift, eighty feet from the surface of the ground. The seam here is broader and the coal, though not as pure as it will be when the shaft has been sunk well into the bed, is a merchantable article. A miner detaches a bucketful to be taken to the surface and burnt under our inspection. We went down thirty feet further but our lamps going out we ascended to the surface and prepared for a descent to the bottom of the pit in the 'tub', which traverses the other section of the shaft. With one foot in and one out we are lowered away, one hundred and eighteen feet, and when we regain our sight we find the black diamonds on every side in a solid wall are sending back in glancing scintillation the rays of the lamp. Here the coal is almost a pure anthracite and the indications are that the supply is unlimited. We are struck by the fine appearance of the four solid walls that surround us and cannot resist the feeling that is forced upon us that the future market supply for the Dominion of anthracite coals is New Brunswick. Stepping into the tub a few moments bring us light and heat of the Sun. The coal when burning had all the quality of the ordinary Pennsylvania anthracite, having a light blue flame and burning very freely in an ordinary grate. Its heating qualities are large, and it leaves a regular ash. When first kindled the odor of sulphur marked the presence of pyrites, but it soon passed away. This is due to the fact that the samples burnt were taken from the upper surface of the seam and from a close proximity to the crushed coal. There is no doubt but that this will not be apparent in coal from the heart of the seam."

Chignecto Post - Jun. 21, 1877 A seam of anthracite, 13 ft. thick has been found at Lepreaux, N.B. The value of the discovery to this Province cannot be estimated."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
Daily News - May 7, 1877 The Mace's Bay Coal Field. - The work of prospecting the anthracite coal bed at Mace's Bay, which was stopped last fall by the caving in of the pit when the seam had widened to four feet, has been resumed. A shaft has been sunk, but as it does not strike the upper edge of the seam another is to opened. Mr. R.R. Robertson, a mechanical engineer of New York, but formerly of Pictou, N.S., has been visiting the scene of operations, and returns to New York this morning. He is confident that the coal will widen to fifteen feet, that being the distance between the walls of shale, and regards the property as very valuable - too good a thing to part with to a company. Mr. Robertson, Mr. Harvey Stickney and the Messrs. Hanson own the mine."

St. Croix Courier - Nov. 1, 1877 The Anthracite Coal Mine.- A company to work the Anthracite Coal Mine at Mace's Bay has been formed by H.R. Robertson, W.S. Harding, G.K. Hanson, C.N. Skinner, George S. Robertson, and Robert Robertson, Jun. The principal place of business will be in St. John."

Daily Telegraph - Nov. 3, 1877 New Brunswick Anthracite Coal Co. - A meeting of the stockholders of the above named company was held at the office of C.N. Skinner, Esq., yesterday afternoon. Mr. Skinner presided and Mr. Robert Robertson acted in the capacity of secretary. Bye-laws were passed and the deed of the land made out in the name of the company. Directors are to be chosen on next Monday afternoon."

S.J. Globe - Nov. 6, 1877 The New Brunswick Anthracite Coal Company. - The first annual meeting of this Company was held last Friday, in the office of C.N. Skinner, Esq., and was adjourned until yesterday at 2 o'clock, p.m., at the same place. The usual business of passing bye-laws, forming prospectus, electing of Directors, etc., were proceeded with. The Company come before the public under very propituous auspices. The following gentlemen compose the Board of Directors. J.S. Boies DeVeber, M.P., Chairman; W.S. Harding, M.R.C.S.; C.N. Skinner, Q.C., Judge of Probates; Geo. S. Robertson; Robt. Robertson, jr., Secy.-Treas. Hugh R. Robertson, M.E., is Chief Engineer and General Superintendent. The prospectus, the advance sheets of which are at hand, deals with the object of the Company; the advantageous position of the mine (which is situated directly at tides waters); contains extracts from reports on the coal; the estimated amount of coal in the deposits; and last and most important, the offer to the public. The offer can be condensed into the following: Twenty-five per cent. of any subscription will only be asked until the coal is being raised. At that period any subscriber can have the option of paying fifty per cent more - in all seventy-five per cent - which will be accepted in full for paid up stock of the amount of any subscription, or may forfeit his stock without incurring or remaining under any further liability and at a subsequent stage it makes the statements as follows: This arrangement the Company thinks will be considered liberal towards those who may incline to invest, because the final and greater payment, and that too with an abatement, is only to be made after full knowledge has been acquired, and the great value of the coal deposit ascertained, with the proviso and reservation in favor of the subscribers that if, through any unforeseen cause, the reasonable expectation as to value should not be realized to the fullest extent, the privilege of withdrawal is extended. A history of the discovery, written by the secretary, has been published in pamphlet form for distribution to those desirous of information on the subject, and is a fair outline of the details of the finding of the coal."

Morning Freeman - Nov. 7, 1877 The New Brunswick Anthracite Coal Mining Company. - The first annual meeting of this company was held on Monday afternoon at the office of C.N. Skinner, Esq. Bye-laws, &c., were adopted, the form of a prospectus was agreed to, and the following Directors were elected:- J.S. Boies DeVeber, Esq., M.P., Chairman, Robert Robertson, jr., Sec.-Treas., W.S. Harding, M.R.C.S., C.N. Skinner, Q.C., Geo. S. Robertson, Henry Vaughan. Mr. Hugh E. Robertson is Chief Engineer and General Superintendent."

S.J. Daily News - Nov. 7, 1877 The New Brunswick Anthracite Coal Mining Company.- The following gentlemen compose the Board of Directors: J.S. Boies DeVeber, M.P., Chairman; W.S. Harding, M.R.C.S.; C.N. Skinner, Q.C., Judge of Probate; Henry Vaughan and George S. Robertson; Robert Robertson, Jr., Sec'y-Treas. Hugh R. Robertson, M.E., is chief engineer and general superintendent."

Morning Freeman - Nov. 14, 1877 ADVERTISEMENT: Wanted Immediately. For the N.B. Anthracite Coal Mining Co. - Twenty miners. Apply at the Mines, Mace's Basin, or to Bob Robertson, Jr., Sec'y. Treas., Robertson's Building, Water

Morning Freeman - Nov. 14, 1877 and Moncton Times - Nov. 16, 1877 The N.B. Anthracite Coal Company advertise fortwenty miners to work in the company's mines at Lepreaux. Operations at the mines are being pushed forward rapidly, and the company expect to have large quantities of coal in the market by the end of February next."

St. John Daily News - Nov. 15, 1877 ADVERTISEMENT: The N.B. Anthracite Coal Mining Co. (Limited) Head OfficeRobertson's building, Water street, St. John, N.B. -- Capital Stock .... $300,000.00 -- Shares ... $500 each. -- Directors: J.S. Boies Deveber, Esq., M.P. Chairman; Messrs. Henry Vaughan; Dr. W.S. Harding; C.N. Skinner, Q.C.; Geo. S. Robertson. Hugh T. Robertson, M.E. Chief Engineer and Genl. Supt. Robt. Robertson, Jr., Secy-Treas. The Prospectus has been issued and Stock Subscription Books are now open. One of which lies at the Company's Office, and one at each of the offices of the several Directors. The most favourable terms are offered to subscribers. Full information concerning the Mine and Company can be obtained at the office or from the Directors. An exhibition of the burning qualities of the coal will be made at the office on the afternoon of Friday the 16th inst., at 2:30 o'clock, to which the public are invited."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
S.J. Daily News - Nov. 15, 1877 N.B. Anthracite Coal Company. - Considerable public interest is now being manifested in the New Brunswick Anthracite Coal Company, whose advertisement appears in the News today. The gentlemen whose names are given as Directors, with the Secretary-Treasurer, furnish the best guarantee as to the nature and prospects of the undertaking. These gentlemen, with others, have satisfied themselves, with the aid of Mr. Hugh R. Robertson, Engineer, that the lands of the Company contain an almost unlimited quantity of coal, some of which has already been tested and admitted to be of superior quality, that the facilities for mining and shipping are all that could be desired, and with these facts before them have abandoned further prospecting, and are now sinking the first mining shaft which will be completed in a few weeks. The work of raising the coal will follow as soon as machinery can be placed on the grounds, and before the end of March they feel confident that their coal will be in our markets in large quantities. Mr. Robert Robertson, Jr., Secretary-Treasurer of the Company, has been very active in working up this enterprise, and is so sanguine of the superiority of the coal that he purposes giving a public exhibition of its burning qualities at his office, Water street, on next Friday afternoon."

Moncton Times - Nov. 19, 1877 Lepreau Anthracite Coal. - Yesterday afternoon a test of Anthracite coal, obtained from the recently discovered mine of the New Brunswick Anthracite Coal Mining Company, Water street. The test was very satisfactory. The new coal burned as brightly and cheerfully as any Anthracite Coal obtained from the best mines in the United States, and emitted an amount of heat which could not fail to convince those who witnessed the trial of its value and utility for all uses to which hard coal is applied. In appearance the coal differs little, if at all, from Pennsylvania Anthracite. Judging by the character of the coal, the extent of the seams so far discovered, the excellent opportunity for shipment, and the ability of the gentlemen forming the Company to bring into play the very best appliances, the prospects of the New Brunswick Anthracite Coal Mining Co. are very bright indeed.- News"

Morning Freeman - Nov. 24, 1877 Anthracite. - We received a few days ago the prospectus of the New Brunswick Anthracite Coal Company. From this we learn that the capital stock is $300,000, in shares $5 each, and the object for which it is formed is to acquire and operate valuable coal mines situate at Mace's Bay. The coal measures, it is stated, comprise 300 acres, and are about twenty-six miles from St. John. A prospecting shaft has been sunk to the depth of 130 feet, disclosing a seam 20 feet 6 inches in breadth. The coal has been analyzed by Mr. Harrington, of the Geological Survey of Canada, and by Mr. Karsten, of Pennsylvania, who found that the coal improves rapidly in quality as the shaft descends, and that at the 130 feet level it contains 11.36 per cent. of fixed carbon. A few feet farther down it will be found of a quality equal to that of the best Pennsylvania Anthracite. Within 140 feet of the pit head the channel is 12 feet deep. The water on the other side of the peninsula is deeper, and the coal can be placed on board of moderate sized vessels at

S.J. Globe - Oct. 19, 1877 N.B. Anthracite Company. - The Provincial Secretary gives notice that H.R. Robertson, W.S. Harding, G.K. Hanson, O. Hanson, C.N. Skinner, Geo. S. Robertson, and Robert Robertson, jun., have filed in his office a memorandum of Association for the incorporation of the New Brunswick Anthracite Coal Mining Company, for the purpose of raising and procuring Coal and other mineral substances, the sinking of all manner of works for the purpose of carrying out the objects of the Company, and to carry on all the necessary business connected with the transportation by land or by water of the coal to be mined and raised by the Company, and in selling, taking care of, and disposing of the same, with a capital of three hundred thousand dollars ($300,000), to be divided into sixty thousand shares, of five dollars each, ($5.00) and stating that the office or principal place of business will be at the City of Saint John, in the City and County of Saint John, with the mines of the Company at Mace's Bay, in the County of Charlotte."

Morning Freeman - Oct. 20, 1877 The New Brunswick Anthracite Coal Company have duly filed their memorandum in the office of the Provincial Secretary, and so became a body corporate. Their capital is to be $300,000, the shares $5 each."

Chignecto Post - Oct. 25, 1877 New Company.- A new coal mining company, with a capital of $30,000, has been formed. It is called the New Brunswick Anthracite Coal Mining Company. Samples of the coal are pronounced of an excellent

Daily Telegraph - Sep. 26, 1877 and Moncton Times - Sep. 26, 1877 The Anthracite Mines. - Work at the Mace's Bay(St. John County) anthracite coal mines is being vigorously prosecuted. The new prospecting shaft develops a fine quality of hard coal. - Telegraph"

Morning Freeman - Sep. 28, 1877 Point Lepreaux Anthracite. - Dr. W.S. Harding, on Union Street, made a trial yesterday afternoon of some of the coal taken from the Point Lepreaux Anthracite mine. At two o'clock, he kindled a fire of it in his study franklin, and with only one slight replenishing, it burned brightly until eight p.m. The heat was strong, the burning free, and the ignition easy. Its ashes were a white fine powder, and it gave every indication of being a first-class house coal. The appearance of the article, in the lump, is equal to that of the Philadelphia anthracite, but it is not quite so hard. Dr. Harding, who takes much interest in coal formations, and who has connected himself with the company, expresses the firm belief that as the mining reaches the bottom seam, the grain will become fully as firm and hard as that of the best anthracite. It is the intention of the managers to issue a prospectus shortly, and place their coal in the market for public

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;

Morning Freeman - Aug. 27, 1878 N.B. Anthracite Mines. - The public will regret to learn that, for the present, operations have been suspended on the Point Lepreaux Anthracite Coal Mine works. The new shaft which was being sunk by the company through the coal seam dod not continue through to the coal bed, as was anticipated it would do. The Directors are in hopes to resume work shortly, after deciding upon a course of operation."

St. Croix Courier - Feb. 14, 1878 Anthracite Coal.- The history and discovery of Anthracite coal at Lepreaux and the prospectus of the company, which have been on our table for some time, shall receive early attention."

Daily Telegraph - Feb. 20, 1878 Mining prospects along the line of the Grand Southern between Musquash and Lepreaux, more especially as regards coal, are daily becoming brighter. We shall be able to see the result of some personal observations and investigations in an early issue."

Morning Freeman - Feb. 22, 1878 The N.B. Anthracite Coal Co. - The Point Lepreaux Anthracite Coal Company are energetically pushing their works for putting their coal in the market towards completion. The shaft is now sunk 160 feet below the surface, and will only require a depth of forty feet more to strike the coal bed. Mr. Henry Farrell, an experienced miner, has been brought from the United States, and he is preceded by the strongest recommendations of his ability and skill. Mr. Farrell will hold the position of mining foreman. He pronounces the prospects of good anthracite coal as very encouraging; he will enter upon his engagement with the company on Monday next. It is expected that in about two months from the present, the coal will be for sale in the market. We are informed that, just now, in certain kinds of coal, especially of slack, there is a scarcity in the market."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
Daily Telegraph - Feb. 27, 1878 After Coal Along the Grand Southern. - A few days ago, at an early hour of a charming winter morning, the editor of this paper, accompanied by a leading member of the Telegraph staff, set out on s trip to the western part of the county of St. John and the Charlotte border, on a prospecting tour. We did not profess to be experts in that line, but one can feel a pleasure in looking at the lumbering and milling operations of the fine northern counties without being able to write of our Woods like Mr. Edward Jack; one can catch the enthusiasm of the manufacturers and shipbuilders of St. Martins without being able to deliver an historical oration on the subject, and, undoubtedly it is possible to mingle with the farmers of New Brunswick, in a place dedicated to good learning, spicy and philosophic journalism and successful agriculture, and to profit by the discussions of practical men on one of the greatest industries in the country, without being able to go as deeply into the merits of rival dairy stock as the Secretary for Agriculture. So we thought about coal. We might not be able to deal with it as Professor Bailey has done in his Minerals of New Brunswick, or to report on the formations of bygone ages like Mr. George Matthew, yet we could have our say about it, without being interested in coal, like the magnates of Springhill Mine - whose fortunes are as good as made - or without organizing a Coal Company or devoting a pamphlet to The History of the Discovery of Anthracite Coal at Lepreaux, like Mr. Robert Robertson, Jr. We were none the less, however, disposed to go in pursuit of useful knowledge under the difficulties. A Halt. -Our first stopping place was at Clinch's Mills, a rising point in the new Parish of Musquash, and the seat of the milling industry of Messrs. C.F. Clinch & Sons. Nearly all the way from the eastern part of Lancaster to that point, we kept in sight of the Grand Southern Railroad, which is graded and the mason work for the culverts built, ready for the superstructure, as the road bed is ready for the sleepers, which are piled all along the route, and at several adjacent mills. They are mostly cedar, though we thought we saw some spruce. We made a halt at the village, enjoyed the genial hospitality of Mrs. Clinch and then we set out to look for coal. We had not far to go. Mr. Clinch's barn stands farther back from the road than his house - a barn in which, by the way, we saw some fine Jersey stock - and almost immediately behind the barn, we found men at work in making a shaft, already 40 ft. deep. They were working on a well defined seam of what seemed to be coal, and the material brought up had the appearance of crushed coal, not unlike the slack of bituminous coal mines. The foreman, who is an experienced miner said she'll show the good coal when we get further down. Our companion descended the shaft, and found among the crushed coal along the walls of the seam, a few pieces which had every appearance of anthracite. They were brought in and part of them placed in Mr. Clinch's anthracite coal stove. They soon became red, like the Lehigh which was in process of combustion; but they ignite much more readily than that coal, and leave more impure deposit of ash, etc., behind. Part of the samples we brought to town with us. Some time ago, in sinking a drain, a black substance like coal had been found by Mr. Clinch. The water at that point was troublesome, and under advice the present shaft, which was within a few feet of the other, was commenced. Outcrops of what seemed to be coal had been found in the adjacent hills and rivulets, at several points in a farm of 700 acres. It seems probable that several seams of coal traverse the land, and that, at the proper depth, the coal will be obtained of the same quality as that found at Lepreaux, which, at a depth of 460 feet, was fairly good. Time will tell. Probabilities are in favor of the coal beds. If they turn out well, there is the river and harbour not far distant, and there is the railroad, partly built, passing in front of Mr. Clinch's door, by which the products of the mine can be borne elsewhere, east or west, or used in manufactures on the spot. Should this take place, then the incidental prophecy of a Montreal newspaper will be realized, which used to come addressed to Clinch's Mines. We now proposed to make a new department, and to hold on the even tenor of our way, (the phrase is borrowed) a little further. We had travelled seventeen miles and proposed to make another trip of about nine miles, being bent on visiting Little Lepreaux and the northern shore of Mace's Basin. Messrs. Edward Clinch and Albert Dunn joined us on this trip, and were our guides, philosophers and friends. The former is the parish commissioner, a fine young man, though he has as little skill in getting up litigation as Justice Jordan of Simonds. The other is a popular county Concillor. We were not long in reaching Mr. Oscar Hanson's residence and were sorry to find that he was absent, or rather we would have been sorry had we not found his better half at home, who extended to us a cheerful welcome, placed a barn at our disposal for our horses and sleighs, and subsequently pressed on us her generous hospitalities. We felt no particular need of Mr. Oscar Hanson, though if he should be at home when next we call on him, we shall be happy to see him! He is located at Little Lepreaux on a fine farm, keeps a post office; at least some one keeps it, and he also runs a mill. The border lines are so mixed at Mr. Hanson's place that it is hard to say whether he lives in the county of St. John or in the county of Charlotte - perhaps the keen-eyed assessors know, but we don't, we should say that he lives a good deal in both counties, and that, in fact, it would be in the public interest to rectify the boundaries at that point, by annexing a small portion of the county of Charlotte to the county of St. John, just the round off the western end of the parish of Musquash, and make matters seem intelligible. We proposed to walk to the mine, passing the Hanson Mills; passing also the residence of Mr. G.K. Hanson, who was also absent, and pressing down to Mace's Basin. Mining Operations and Buildings. -Here were signs of life; here some persons were proving their faith by their works. Two large buildings were in course of erection, one a residence for the new manager

of the mine, who was daily expected and has since arrived, and the other for a better house and machine shop. Near this last was a stand for the engine, which is to be of 160 horse power, and nearer the bank still was the working shaft, over which a shed had been erected. A few feet away was another shed, circular in shape, where a horse supplied the power necessary for raising and lowering the bucket, which took the miners up and down and brought the debris and water to the surface from the bottom of the pit. This debris was carried, by means of a small tramway, to the bank of the basin, where it was dumped off. Three gangs of miners are employed, each gang working eight hours. One gang goes on at 7 a.m. and works to 3 p.m., the second comes on at the latter hour and works until 11 p.m., when the third gang comes on and works until 7 a.m. Twelve miners are employed, four in each gang, this being as many as the shaft will accomodate. They are now slowly and laboriously making their way through the rock formation at the rate of about 2 feet per day. They have now reached the depth of 120 feet and they will require to go down 90 feet more in order to strike the seam, which lies at an angle of about 80 degrees. When this shaft has been sunk they will be able, by means of it, to drift to the two other seams in that vicinity, one of which lies 200 feet outside the seam on which they are now descending, and under the channel of the river, while the other is about 180 feet inland. The central seam is 20 feet 6 inches in thickness, while the outer seam is even larger, The exact size of the third seam has not been accurately determined. The direction of these three seams is nearly east and west and they all drop towards the north. Coal of fair quality, of which specimens are available, was got at a depth of 130 feet in the first shaft now closed and which was quite near the shore, but coal of a much better quality is expected to be found in the new shaft, which will strike the seam at a depth of 210 feet. A Descent to the bottom of the shaft, which was accompanied by the writer, is necessary, in order to get an idea of what is going on. Broadcloth overcoats, etc., are not in order in this business, and require to be exchanged for waterproof garments of light texture. Fur caps may be good for warmth, but are not adapted to the drippings of the coal mine. The miner's hat is more so, and it is equipped with a small lamp. By the kindly assistance of the miners - sly fellows who, we suspect, laugh in their sleeve at the awkwardness of novices - your toilet is completed by the addition of a pair of mitts. They are dripping wet, but no matter, so is the mine. Now you step into a tub, or rather half step into it, for one foot and leg must be kept outside in order therewith to steer the frail descending tub. You seize the chains by which the tub is lowered, when the horse at the mill gets the word to move on his monotonous round, but the chains have become icicles, and you require every moment to renew your hold. The shaft is dark, but the foreman who descends with us is also provided with a small lamp in his hat. The dripping commences soon after you leave the perpendicular, and makes you wish that the descent of 120 feet, which seems longer than you expected, could be more rapidly made. On reaching the bottom, it is difficult to get standing room, except in water, for the water of the sides of the shaft trickles into the bottom and forms a well. There are found the miners at work, now making holes for thier blasting powder, and now applying the the fuse and beating a retreat; then returning to place the debris in their tubs or to bail out the water into the same receptacles, when it became troublesome. The ascent is made on the same principle as the descent, and we liked it the better of the two! It would make this notice too long to describe the indications of coal that we witnessed, or to glance at the geology of the remarkable Devonian basin, in which it is found, - a basin extending from that point in several directions, and a formation extending from that place to Black River, and the neighborhood of Gardner's Creek in this county, where indications of coal also have been found. We hope to refer to these matters in a further notice, but we cannot close this one without saying that while we would not advise any one to invest in a new coal stock like this, who cannot afford to lose money, however good his chance of making it may be, and while the quality of coal at proper depths has yet to be determined, we must record the astonishment with which we behold the indications of coal deposits on a grand scale in a region which does not belong to the Coal Measures at all, and in a formation lying far beneath them, in which are also found the granites of St. George, Nerepis and Hampstead, though they are perhaps not quite so old as the free burning anthracite found in the Devonian basin. Nor, on looking at the region, could we help indulging a vision of future populations in these new coal regions, of traffic by water; of traffic by railroad; of a mighty impetus to be given to the industries of St. John, and other cities and towns in the province, should things turn out as they probably may. The vision may prove a baseless failure, and we again say, we wish capitalists and speculators to judge for themselves and to act warily and with caution, but our judgement and

St. Croix Courier - May 16, 1878 The Anthracite Coal Mines at Lepreaux.- Mr.Editor:- My prolonged absence from home has partly prevented my keeping promise in reference to the coal mine now opening at Mace's Bay, on the property of Messrs. G. & O. Hanson. I said partly; the other reason of delay was owing to the fact of the company being compelled to abandon the shaft which they had been sinking (at great expense through the rock) after penetrating over one hundred feet in consequence of a sudden influx of water (equal to three thousand gallons per hour) which at that time was fully up to the capacity of their means to discharge, leaving them little or no time for blasting or discharging of the rock. But with that energy and determination which has so far characterised all their movements they immediately began prospecting and finally where the vein cropped out so near the surface that after removing a few feet of clay they struck coal mixed with shale the vein being about (as near as one can estimate) twenty feet wide between the head and foot rock. I visited the mine two days ago. The shaft which is about fourteen feet square was then a little over fifty feet deep at what is called a double shaft, lined with cribwork made from timber eight inches square with a partition running down the centre. They have a portable steam engine of twelve horse power to do the hoisting, and employ about thirty men. They have I believe a paid up capital of about seventy five thousand dollars; they have spent about eight thousand making improvements, building a store and boarding house (nearly finished), blacksmith shop, engine house, &c. They are paying good wages to their workmen and have paid their bills promptly once a month, and, in short, are conducting the enterprise with an energy and perseverance which will (if it be in the range of possibilities) result in complete success. Now with regard to the quality of the coal found here. Not being an expert in such matters I have no opinion to offer, but have been told by those who are and have been told by those who are and have been for many years practical miners that it is undoubtedly anthracite coal, although as yet mixed with impurities, but that it improves in quality as they go down. Now, Mr. Editor, with this brief and imperfect sketch I close for the present with the promise that if the immediate future disclose anything new or interesting in the great industry now in process of development, to keep you posted as far as in me lies. - Lepreaux"

Chignecto Post - May 23, 1878 The Lepreaux Anthracite Company are pushing their shaft, and expect to supply St. John this fall."

Bay Pilot - May 23, 1878 LEPREAUX ANTHRACITE. - A quantity was sent up to the city, a day or two ago, and distributed among directors. Mr. Lewin pronounced the combustion of it as highly satisfactory. The shaft is to be continued fifty feet lower, when it is expected that the natural coal bed will be reached. Progress is made at about the rate of twenty feet per week. The Company are in hopes to supply the market with a superior article of coal, at a considerably reduced rate on present prices, during the present summer. - FREEMAN"

Daily Telegraph - May 25, 1878 Personal. - Mr. H.R. Robertson, of the Anthracite Coal Mining Company, St. George, N.B., and Superintendent of the Bertha and Edith Gold Mining Company, Virginia, arrived in town last evening, by the International Line boat."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
S.J. Daily Telegraph - Nov. 7, 1878 N.B. Anthracite Coal Co. - The second annual meeting of the New Brunswick Anthracite Coal Mining Company was held yesterday afternoon in Messrs. B. Robertson & Sons building on Water Street. The officers for the ensuing year were not elected. The meeting was adjourned until Saturday next, when a directorate will

S.J. Daily News - Nov. 11, 1878 Anthracite Mining Company - A meeting of the Anthracite Mining Company was held in Mr. Robinson's establishment, Water Street, Saturday evening. J. Boies DeVeber, Esq., was elected President of the Company, and Messrs. Henry Vaughan, Dr. W.S. Harding, Hugh R. Robertson, Oscar Hanson, George T. Robinson and C.N. Skinner were chosen directors. The appointment of a Secretary and Treasurer was deferred till next Tuesday afternoon, when the Company will hold another meeting."

Chignecto Post - Nov. 14, 1878 The N.B. Anthracite Co., has been formed at St. John. Operations will be recommenced."

S.J. Daily Telegraph - Nov. 16, 1878 N.B. Anthracite Co. - A private meeting of the N.B. Anthracite Coal Mining Company was held in the company's rooms, Robertson's building, St. John street last evening. There was a full attendance of the directors. The object of the meeting was to settle some preliminaries with the design of pushing the investigations. Another meeting of the directors is to be held early next week."

Daily News - Apr. 3, 1879 Lepreaux Anthracite Coal Mine. - We have on hand for several days a lengthy report of a recent visit to the Anthracite Coal Mine at Lepreaux, and regret that owing to a press of other matter we are obliged to greatly curtail it. The N.B. Anthracite Coal Mining Company were incorporated in October 1877. The present officers are: J.S. Boies DeVeber, President. Directors - Dr. Harding, H. Vaughan, Geo. S. Robertson, C.N. Skinner, Oscar Hanson and Hugh R. Robertson. The company have spent about $20,000 in experimenting. Finding that it is impossible to get the people of New Brunswick to take stock in the enterprise, they are negotiating with American and Canadian capitalists, and it is believed that the negotiations will prove successful. At the annual meeting of the company in November last the majority of those interested were of opinion that the enterprise was a failure, and seemed loath to give it further financial aid. Mr. Hugh R. Robertson was so confident that an excellent article of coal in large quantities could be found next where the operations had been carried on that he offered to sink a shaft at his own expense. He has done so and the result has satisfied all who visited the mine last week that the mine is a valuable property. Some of the coal taken from the mine was tested at Mr. Levi Young's establishment with most satisfactory results. The coal is of an excellent quality; and it is felt that in the Lepreaux Anthracite Mine there is a Big Bonanza."

S.J. Daily Sun - Apr. 3, 1879 Testing Lepreaux Anthracite. - Yesterday afternoon a sample of the coal recently taken from the mine at Lepreaux was submitted to a careful test in the furnace of Mr. Levi Young, Waterloo street. Those who were present expressed themselves delighted with the success of the test. Referring to this coal, the Montreal Gazette says:- We have been shown, by Mr. Ireland, a specimen of what he claims to be anthracite coal, mined by himself about thirty miles from St. John, N.B., and near the Bay of Fundy. Mr. Ireland states that coal was discovered in this locality some four years ago, and pronounced by geologists to be bituminous shale, but he avers that the specimens which he now has, and which may be seen in our office, are of anthracite. An effort is being made to form a company to make further experiments and work the mine. Should it prove to be a bed of anthracite coal, the discovery will have a most important

S.J. Globe - Apr. 3, 1879 Lepreaux Anthracite Coal. - Yesterday afternoon, at Mr. Levi H. Young's Foundry, some of the coal from the mines of the New Brunswick Anthracite Coal Mining Company was burned with a very good result, showing its free burning and great heating qualities. This is a red ash coal and possesses a much greater amount of caloric qualities than the white ash. The parties interested seem confident that they will be able to furnish Anthracite equal in every respect to the imported article."

Weekly Freeman - Apr. 5, 1879 Some specimens of Lepreaux Anthracite coal were brought to this city the other day and tested, and were found to burn very well and give a good heat."

S.J. Globe - Feb. 16, 1879 Auction Sale: ... Messrs. L.H. Deveber & Sons, insolvents: ... 2,048 shares of New Brunswick Anthracite Coal Mining stock to Mr. John MacIntyre for $1..."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
S.J. Daily Sun - Mar. 27, 1879 Three Hours on the Rocks. - The perilous position of the Excursionists to Lepreaux in the Richard Doane. - Early yesterday morning the steam tug Richard Doane left for Point Lepreaux with a party of about twenty-five excursionists, who had been invited to take the trip by the Management of the Lepreaux Anthracite Coal Mining Company, for the purpose of inspecting their mines at that place. The day was fine and the trip down was very pleasant and made in safety. The inspection of the mines completed, the tug started on the return trip in the afternoon which was smoothly made until, at about seven o'clock, when near Mahogany Island, the tug suddenly grounded and stopped short. The position at once became one of great peril, and considerable consternation was manifested by all on board. The tug threatened at any moment to careen over and bury the excursionists in a watery grave. It was found that the R.D. had run aground on a ledge of shelving rocks near Mahogany Island, and it at once became apparent to those on board that their position was one of extreme danger, and that, in the event of her tipping over, their only chance for life would be in case she should roll over on the side where the water was, in all probability, the shallowest, owing to the shelving nature of the ledge. Their position was felt to be becoming momentarily more dangerous, and any delay but increased it. The excursionists were then, in order to prevent loss of life, should the tug go over, put ashore in boats on Mahogany Island, two trips being made, with an interval of about five minutes between each trip. The party were cooped up on the island for about three hours, at the end of which time the tug floated off. They then returned to the tug and steamed for the City, arriving here at a late hour, used up with the excitement and nervous strain attendant upon their perilous detention. During the trip up the tug leaked considerably, and the pumps had to be kept continually going to prevent the water gaining. Among the citizens who were on board were the Rev. Dr. Bennet, Mr. Pugsley, Alex. McDermott, Mr. R. Robertson, Jr., Mr. Robertson, C.E., of the Lepreaux Mines, and Mr. M. McDade, representative of the Daily News. The excursionists were all very much frightened at the occurrence, and on their arrival in the city were singularly uncommunicative on the matter; in fact, the gentlemen on whom our reporter called informed him that they had agreed to keep the matter quiet and would say nothing about it, the only information given was to the effect that it was nothing but a slight detention. However, it is an undoubted fact that their position was one of unusual and extreme peril."

S.J. Daily Sun - May 7, 1879 Lepreaux Anthracite Coal. - The mine of anthracite coal at Point Lepreaux is attracting the attention of American capitalists. Mr. H.L. Fuller, manager of the Jaddow Coal Pit, Pennsylvania, now in the city, has been instructed by Mr. Belloni, of New York, proprietor of the Block House Mines, Cape Breton, to proceed at once to Lepreaux and make a careful examination of the nature and extent of the coal deposit there. Mr. Fuller will inspect the mine today."

S.J. Globe - Nov. 7, 1879 The annual meeting of the New Brunswick Anthracite was held in the Company's office, Robertson Building, Water Street, on Wednesday afternoon. The following gentlemen were elected as the directors for the ensuing year: Messrs. J.S. Boies DeVeber, Henry Vaughan, George S. Robertson, Oscar Hanson, Hugh R. Robertson, C.N. Skinner and Dr. Harding. The President and Secretary will be elected at a future meeting of the Board."

S.J. Daily News - Nov. 7, 1879 N.B. Anthracite Mining Company. - The annual meeting of the New Brunswick Anthracite Mining Company (Ltd.) was held in the Company's office, Robertson Building, Water Street, last Wednesday afternoon. The following gentlemen were elected as the directors for the ensuing year, viz: Messrs. J.S.B. DeVeber, Henry Vaughan, George S. Robertson, Oscar Hanson, Hugh R. Robertson and C.N. Skinner and Dr. Harding. The officers will be appointed at a future meeting of the directors."

St. Croix Courier - Jan. 22, 1880 The anthracite mines at Lepreaux will be vigorously operated next spring. A large addition to the working capital has been made by the introduction of stockholders from Pennsylvania, and lively times in the vicinity of the mines may be expected."
S.J. Daily Sun - Mar. 27, 1880 Grand Southern Railway ..... Edward Jack, Esq.,was sworn: - Reside in Fredericton. Am a surveyor, know the location of the Grand Southern Railway; have been over the country exploring, also geologically. Copper and lead occur in many places; anthracite coal has been found, but the formation did not look favorable to me. Was there the day of the St. John fire. Had an analysis of stone made showing lead, copper, silver and trace of gold. After giving a sketch of mining prospects, Mr. Jack said the water power there was the best in New Brunswick, in his opinion. The Grand Southern crosses the rivers at right angles, affording thereby great facilities for manufactures. In some sections the soil was good, for soil near the sea. It is better than the interior of Albert or Kent. ......"

S.J. Globe - Nov. 6, 1880 The New Brunswick Anthracite Coal Company, organized a few years ago to mine coal at Lepreaux, is in trouble. Mr. Oscar Hanson, of Lepreaux, made application to Judge Palmer in the Equity Court yesterday afternoon for an order to wind up the affairs of the Company, alleging that it is insolvent, that it owes him $1,100 for more than a year, and has not yet paid him; that it has been inoperative for more than a year, etc., etc. This morning, an affidavit was filed on behalf of the Company that it is not bankrupt; that the account with Mr. Hanson is in dispute; that the Company has mining properties, etc., valued at over $400,000, and that operations in the works are to be resumed in the spring. His Honor decided to hear testimony in the case on Wednesday next. Mr. J. Gordon Forbes is counsel for the

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;

Daily News - Nov. 8, 1880 Coal Company in Court. - Mr. Oscar Hanson, of Lepreaux, made applications to Judge Palmer in the Equity Court on Friday afternoon for an order to wind up the affairs of the New Brunswick Anthracite Coal Company, alleging that it is insolvent, that it owes him $1,100 for more than a year, and has not yet paid him; that it has been inoperative for more than a year, etc., etc. On Saturday morning, an affidavit was filed on behalf of the Company that it is not bankrupt; that the account with Mr. Hanson is in dispute; that the Company has mining properties, etc., valued at over $400,000, and that operations in the works are simply suspended until spring. His Honor decided to hear testimony in the case on Wednesday next. Mr. J. Gordon Forbes is counsel for the petitioner; Mr. E. McLeod represents the Company."

Daily Telegraph - Nov. 8, 1880 Equity Court. - In reference to the New Brunswick Anthracite Coal Mining Company matter the Judge in Equity, will, it is said, issue a mandatory injunction for the return of the articles carried away from the mine. Mr. O. Hanson, who petitions the dissolution of the company, on the grounds that it is insolvent, has a $1,000 claim against the company."

S.J. Globe - Nov. 9, 1880 Alleged Discovery of a Coal Mine. - Yesterday some very fine specimens of soft coal were shown us that were said to have been taken from the ground on Mr. Thos. Clark's property at Lancaster, a few miles from the city. Connoisseurs who have examined the specimens say it is fully equal to many of the kinds brought here, but there appear to be some people who think the mine is a myth."

S.J. Daily Sun - Nov. 12, 1880 In the Equity Court, yesterday, the evidence in the case of Oscar Hanson vs. the N.B. Anthracite Coal Mining Co. was concluded, and the court adjourned till this morning, when his Honor Judge Palmer will give

S.J. Globe - Nov. 12, 1880 All the evidence in the Hanson-New Brunswick Anthracite Coal Company case is in, but Judge Palmer has not rendered his decision."

S.J. Daily Sun - Nov. 13, 1880 In the Equity Court yesterday there was no decision given in the Hanson vs. Anthracite Co. case."

S.J. Daily Sun - Oct. 1, 1881 The Search for Anthracite Coal. - For the last two or three months an expert in matters connected with explorations for anthracite coal has been at work at and near Lepreaux, in the vicinity of the shaft which was sunk in 1877. This gentleman is employed by a few persons, here and in Philadelphia, who are anxious to settle the question as to the existence of anthracite in this locality. Amongst those who are taking an interest in the exploration is a principal owner of anthracite mines in Pennsylvania, who will invest in an anthracite property in New Brunswick, if the result proves favorable. Up to the present a thorough search has been made over a large area, but, while the formation seems very favorable, nothing of practical advantage has been found. The expert is now boring at a point several miles distant from the shaft formerly sunk, a point where the indications seem most favorable. Between the inflow of water and the presence of gravel the operations of the boring party are necessarily slow. The expense of the experiment will be considerable, but the finding of anthracite would be an event of importance in our history. If anthracite does not exist at Lepreaux it will be well to have the fact established. It is altogether likely the question will soon be settled, one way or the other."

Daily Telegraph - Jul. 21, 1882 The Nova Scotia Glass Works at New Glasgow, which has been suspended for a few days, on account of the supply of sand having run out, began operations again on Wednesday. Some 17 new hands arrived a few days ago from Ohio, U.S. A new warehouse is now in course of erection on the east side of the factory. - Eastern

S.J. Daily Sun - Oct. 7, 1882 Anthracite at Lepreaux. - Operations are now being conducted on a large scale at Lepreaux in the search for paying deposits of anthracite coal, and according to the testimony of members of the company, with good prospects of success. The prospecting is under the direction of an experienced Philadelphia expert, who has sunk a row of pits some fifteen yards apart, running north and south for fully half a mile across the district where the indications are deemed to be most favorable. Not so long ago, he is said to have struck a seven feet wide vein, the drift of which he is

S.J. Daily Sun - Jun. 16, 1884 Lepreaux. - There is a deposit of anthracite coal about six miles distant from the station from which some of the very best coal is said to have been taken. The mine, which is owned by a number of St. John and American gentlemen, has not been worked during the winter, but it is reported that operations will be commenced this week."

Bay Pilot - Jun. 26, 1884 A number of men are at work at the Lepreau anthracite coal mines."

S.J. Daily News - Mar. 15, 1884 It is stated that there is a prospect of the Lepreaux coal mines being worked next summer."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
S.J. Daily Sun - Jul. 12, 1886 Mining Investigation. - Hon. Messrs. Blair and Mitchell, commissioners under the great seal, concluded on Friday last, at Fredericton, a hearing of an application for the escheat of a coal mining lease, held by Oscar Hanson, in the parish of Musquash. John H. Kinnear and J.S. Gilbert were the improvements. The ground of application was nonfulfillment of the terms imposed by the crown, G.F. Gregory appeared for the movers, Wm. Wilson, M.P.P., for the respondent. The proceedings were stenographed by Frank Ristson, official reporter. Decision will probably be rendered in a few days."

Daily Telegraph - May 13, 1886 The Musquash Anthracite Mining Co. met yesterday afternoon, and after appointing a committee to frame bye- laws adjourned until Monday next."

S.J. Daily Sun - May 19, 1886 and Daily Telegraph - May 19, 1886 and S.J. Globe - May 19, 1886 Musquash Anthracite Coal Mining Company. - This company has just been organized under special act of incorporation, passed at the last session of the New Brunswick legislature, empowering the company to acquire lands, mining leases and all kinds of mining properties in the counties of St. John, Charlotte and Kings, and to carry on mining operations in connection with same. The capital stock of the company has been fixed at six hundred and twenty-five thousand dollars, with power to increase the amount to one million dollars whenever required. At a meeting of the company, held on the 17th inst., the following gentlemen were unanimously elected directors, viz.: James S. Gilbert, J.S. Boies DeVeber, John H. Kinnear, C.N. Skinner, Wm. S. Harding, W.G. Audenfeld (Philadelphia), and James U. Robertson (Liverpool), and at a subsequent meeting of the directors they appointed James S. Gilbert, president, and S. Schofield, treasurer and secretary of the company."

St. Croix Courier - May 27, 1886 The Musquash Anthracite Coal Mining Co. has been organized under special act of incorporation, passed at the last session of the New Brunswick legislature, empowering the company to acquire lands, mining leases and all kinds of mining property in the counties of St. John, Charlotte and Kings and to carry on mining operations in connection with the same. The capital stock of the company has been fixed at $625,000 with power to increase the amount to $1,000,000 whenever required."

Moncton Daily Transcript - Aug. 29, 1888 and St. Croix Courier - Aug. 30, 1888 During the past few weeks about 14 men have been prospecting Lepreaux for anthracite coal. It is understood that the indications show that there is an immense quantity of anthracite in this region, and it is currently reported that Boston capitalists are ready to proceed to the development of the coal business there as soon as it has been discovered that it can be found in paying quantities."

Royal Gazette - Nov. 21, 1888 Musquash Anthracite Coal Mining Company. Public Notice is hereby given, that the principal Office of this Company has been established at the Works of the Company in the Parish of Musquash, New Brunswick. Dated at Saint John, N.B., 16th November, 1888. J.S. Gilbert, President. S. Schofield, Secretary."

St. Croix Courier - Oct. 18, 1888 Down in a Coal Mine.- What is Being Done by the Company Operating the Mine at Lepreaux.- (St. John Gazette) A company composed of Hon. C.N. Skinner, Dr. Harding, J.S. Gilbert, J. Bois DeVeber, Mr. Audenreid, Mrs. Audenreid and the Robertson estate have been operating a coal mine at Lepreaux since 1885. Coal was first discovered on the farm of Mr. Hanson, about the year 1878. He endeavored to mine it to some extent, but on account of the poor quality of the coal gave up the attempt. Since that time those who compose the present company have been prospecting very extensively. A shaft has been sunk to the depth of 80 feet, and the coal has been found to improve in quality the deeper it is mined. The coal which is obtained at present is not of good enough quality for ordinary burning but has been found to answer very well for smelting. The company have had the advice of an expert; who after examining the mine, said that coal of a superior quality would be reached by sinking a shaft 25 feet further. The coal extends over a very large area. The seam which is being worked at present is about 10 feet thick. The coal bed has been at one time under water which has slacked the coal on surface making it unfit for burning on account of the amount of earth mixed with it and its crushing nature. The company inspirited by the advice of the expert have been at work sinking the shaft to the required depth with excellent prospects of finding good coal. The coal at Lepreaux is anthracite and there are indications that the seam extends a long distance up the coast, but whether it exists in paying quantities at any place excepting Lepreaux has not been learned as yet."

St. Andrews Beacon - Aug. 29, 1889 Musquash has a great future before it, if the output of her coal mine continues to improve, as it is now doing. Those persons who are mining on the Clinch property have reached a point where the coal is of such good quality that it will burn quite freely in an open grate. There is a good deal of sulphur in it, as well as splinters of rock, but the quality is improving with every foot. Mr. Fred Stevenson brought some fine samples over last week from the

Daily Telegraph - Jan. 16, 1889 Musquash Anthracite Coal Mines. - The annual report of the Musquash Anthracite Coal

Mining Company was held yesterday at Musquash. The directors elected were Messrs. James S. Gilbert, John N. Kinnear, Charles F. Kinnear, J.S. Boies DeVeber, W.S. Harding, Charles N. Skinner, St. John, and William G. Andenried,

Daily Telegraph - Oct. 1, 1889 St. Andrews. - Mr. N. Treadwell has received from Musquash a sample of the coal from the Clinch mine, which he has tested and pronounces it a good specimen."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
Chignecto Post - Apr. 24, 1890 The anthracite coal mine at St. John is being opened up. The prospects are fairly encouraging and a number of men are at work in the mine."

S.J. Globe - Jan. 23, 1890 Coal Mining. - A meeting of the stockholders of the Musquash Anthracite Coal Company was held at Musquash on Tuesday, and the following were chosen directors: Messrs. James S. Gilbert, John M. Kinnear, Charles F. Kinnear, J.S. Boies Deveber, W.S. Harding, Charles N. Skinner and William G. Audenreid, of Philadelphia."

S.J. Daily Sun - Jan. 24, 1890 and S.J. Evening Gazette - Jan. 24, 1890 A meeting of the stockholders of the Musquash Anthracite Coal Mining company was held at Musquash on Tuesday, and the following were chosen directors: Messrs. James S. Gilbert, John M. Kinnear, Charles F. Kinnear, J.S. Boies DeVeber, W.S. Harding, Charles S. Skinner and William G. Audenreid, of Philadelphia."

S.J. Globe - Aug. 21, 1891 The Musquash Coal Mine. - Work is being pushed in the Musquash anthracite coal mine. Seven men are now at work, and the intention is to put on more men as soon as room will permit. The shaft is now between sixty-five and seventy feet deep. Over one hundred buckets were taken out Friday. The miners who have charge of the affair are of the opinion that the mine will pan out well if properly handled. Large pieces of stone bearing silver ore have also

Evening Gazette - Aug. 28, 1891 Coal at Lepreau. - H.T. Champney, president of the J.P. Bush Manufacturing company, of New York, who has been visiting the provinces the past week left on the Yankee this morning. Mr. Champney has interested himself in coal mines at Lepreau, which promises their early development in the near future."

Weekly Record - Fri. Nov. 13, 1891 ... The latest news in mining matters is that anthracite has been discovered in paying quantities at Musquash below St. John. Prof. W.J. Roberts, who has been operating in this vicinity, says the anthracite is of the very best quality. In April next work of sinking new shafts and the production of coal will be carried on vigorously."

Daily Telegraph - Nov. 28, 1891 Mining Licenses. - Surveyor General Tweedie was in the city yesterday. He held a court to consider two applications for mining licenses, one from Musquash for coal and the other from Loch Lomond for

S.J. Daily Sun - Nov. 28, 1891 Two applications for mining licenses, one from Musquash for coal and the other from Loch Lomond for manganese, were considered by Surveyor General Tweedie and T.G. Loggie of the Crown lands office, Fredericton, yesterday."

Chignecto Post Oct. 1, 1891 Lepreau, Charlotte County, N.B. bids fair to yet be a great coal mining district. All along the coast in that section coal has been found and some of it mined. The Fredericton Gleaner says a pure vein of anthracite was struck there last week. It is not known how extensive it is but it is expected to be large."

St. Croix Courier - Oct. 15, 1891 The efforts of the parties who have been prospecting for coal at Lepreaux for some time past now seem to be crowned with success. It is said that 40 feet from the surface where the operations are going on a seam of anthracite coal, six feet, has been found. Some of the coal has been tested. It is free burning anthracite and of excellent quality. An expert from Pennsylvania, who is directing the operation, says he has no doubt whatever that a most valuable bed of anthracite has been discovered."

St. Croix Courier - Sep. 3, 1891 It is said the anthracite coal mines at Musquash promise great things. If they should develop into a deposit of value, it will be a great thing for New Brunswick."

Fredericton Daily Gleaner - Sep. 18, 1891 Coal mining. - Lepreaux, Charlotte county, bids fair to yet be a great coal mining district. All along the coast in that section coal has been found and some of it mined. A pure vein of anthracite was struck there last week. It is not known how extensive it is, but it is expected to be large."

Moncton Daily Times - Sep. 22, 1891 Coal Mining. - Lepreau, Charlotte County, N.B., bids fair to yet be a great coal mining district. All along the coast in that section coal has been found and some of it mined. The Fredericton Gleaner says a pure vein of anthracite was struck there last week. It is not known how extensive it is but it is expected to be large."

St. Croix Courier - Sep. 24, 1891 Lepreau bids fair to yet be a great coal mining district. All along the coast in that section coal has been found and some of it mined. A pure vein of anthracite was struck there last week. It is not known how extensive it is, but it is expected to be large."

Codes: R8 / IDX_Names: Dipper Harbor/ Lepreau Coal;
St. Andrews Beacon - Jun. 9, 1892 The Mining Business.- Among recent visitors to St. Andrews have been Prof. Wm. F. Roberts and Wm. F. Roberts, jr., of Philadelphia. They are both mining experts, and are now on their way to Newfoundland, to examine some coal deposits, in the interests of a wealthy American syndicate. Prof. Roberts is no stranger to New Brunswick, having been for several years past engaged in developing the Lepreaux coal mine. He has made a cursory examination of many of the mineral sections of this Province, and is convinced that New Brunswick is rich in mineral resources. His companion has not been in Canada before. He is greatly impressed with the appearance of the country and the physical development of the people. The most of his mining experience has been gained in Colorado, Arizona, Arkansas and other western mining states. During the stay of the two gentlemen in St. Andrews, they were shown some mineral specimens which they pronounced very rich. Sheriff Stuart also drove them to some of the localities where the specimens were procured, and they were greatly pleased with the quality of the rock and its surroundings."

Evening Gazette - Feb. 11, 1893 Coal Mining at Musquash. - The Anthracite Coal Mining Company stockholders met in special session at the office of Mr. C.N. Skinner yesterday afternoon. The business to have been considered was the question of increasing the capital stock to one million dollars, and other matters connected with prospecting for coal. The meeting appointed a committee, consisting of Messrs. J.S. Boies DeVeber, Jas. G. Gilbert and C.N. Skinner, to look into the above questions and report in a fortnight, until which time the meeting adjourned."

St. Croix Courier - Jan. 5, 1893 The Lepreaux Coal Mines. - [Toronto Empire]. - Mr. A.H. Hilyard, of New York, president of the Commercial Mining company, Sudbury, is stopping at the Rossin. He is an enthusiast regarding the mineral wealth of Canada. To illustrate how comparatively little is known by Canadians of the wonderful mineral resources of their country, said Mr. Hilyard to an Empire reporter yesterday, take the discovery of true anthracite coal in what was supposed to be the well prospected province of New Brunswick last year. Many are unaware of its discovery and very few of its great intrinsic value to the province and the rest of eastern Canada. A company, of which J.S. Gilbert, of St. John, N.B., is president, with a directorate comprising such men as C.F. Kinnear, Judge C.N. Skinner, J.S. Boies DeVeber, of St. John, and W.G. Audenreid and C. Sydney Sheppard, of New York and Buffalo, has leased 14 square miles on the Bay of Fundy, in the parish of Musquash, 21 miles from St. John, and propose to erect collieries immediately. Last year the well known mineralogist, Prof. W.F. Roberts, of Hazelton, Penn., in his report said regarding this property that at the depth of 65 feet seams of 6 feet and 10 feet had been struck, and that the coal was true anthracite, and humanly speaking, inexhaustible. There was 20 year's supply in sight after portions of the deposit had been proved. The engineer employed reported no engineering difficulties of consequence, and the shipping facilities are so particularly favorable that the coal can be marketed with comparative little cost. $58,000 have already been expended in opening the mine, and the presence of true anthracite was not known as a fact until 1891. The discovery has given an impetus to the work and arrangements have been completed to begin extensive operations to place the anthracite in Eastern Canada. The company are confident of the enormous bonanza they have, for the deposit has been conclusively proved for five miles. This is only one instance to show that Canadians have not taken that interest or displayed that enterprise in developing their mineral resources that they deserved."

Evening Gazette - Jan. 19, 1893 Coal Mining. - At the annual meeting of the shareholders of the Musquash Anthracite Coal Mining Co., held yesterday afternoon, Hon. C.N. Skinner was elected president and J.S. Gilbert, J.S. Boies Deveber, Geo. Barnhill, W.G. Audenreid of Philadelphia, Sidney Shephard of Buffalo, N.Y., and A.H. Hilyard of New York city, directors. The capital stock will be increased to one million dollars, and operations will be pushed forward in the spring."

S.J. Daily Sun - Jan. 19, 1893 Musquash Anthracite Coal. - At the annual meeting of the shareholders of the Musquash Anthracite Coal Mining Co., held in this city Wednesday afternoon, Hon. C.N. Skinner was elected president and J.S. Gilbert, J.S. Boies DeVeber, Geo. Barnhill, W.G. Audenreid of Philadelphia, Sidney Shepherd of Buffalo, N.Y., and A.H. Hilyard of New York City, directors. It is proposed to increase the capital stock to one million dollars, and to push on operations in the spring with increased facilities and a large plant. Mr. Hilyard informed a Sun reporter that a company had located a six foot seam and a ten foot seam of anthracite on their property."

Daily Times - Jan. 20, 1893 Anthracite Coal in New Brunswick. - A St. John despatch says: The Musquash anthracite coal company held its annual meeting here today. Hon. C.N. Skinner was elected president. The directors are J.S.B. Deveber and Geo. Barnhill, of St. John, W.G. Audenreid, of Philadelphia, Sydney Shephard, of Buffalo and A. Hilyard, of New York. The company propose to increase their capital to $1,000,000 and to prosecute operations on an extensive scale in the spring. They have, it is alleged, located a six foot seam and a two foot seam of pure anthracite coal in Musquash parish, St. John county, not far from Le Preaux. For the past 15 years the existence of anthracite coal in that region has attracted the attention of prospectors and considerable money has been expended in seeking for it in paying quantities. Hugh R. Robertson, of Joggins raft fame sank a shaft some 80 feet in 1877, but was forced to abandon operations by lack of funds. The coal is in close proximity to the bay shore with open water for large sized vessels all the year round."

St. Croix Courier - Sep. 27, 1894 A diamond drill has been taken to Musquash by the capitalists who are interested in the development of the coal fields there. The drill is being set up, and in two or three days the work of boring will be

Progress - Feb. 9, 1895 The Musquash Anthracite Coal Company held its annual meeting recently and re-elected the old officers and directors. Borings were carried on last fall by Boston parties, but owing to the lateness of the season and other matters, nothing definite as to the deposits of coal were ascertained. It is expected that borings will be continued next

St. Andrews Beacon - Feb. 28, 1895 Mr. Mitchell committed the bill incorporating the Lepreaux Mining Company (Limited). Agreed to with amendments."

St. Croix Courier - Jan. 31, 1895 The annual meeting of the Musquash Anthracite Coal Company was held Wednesday afternoon of last week. The reports of the officers were read and other routine business was done. The old officers and directors were re-elected. Some borings were carried on last fall by Boston parties, but owing to the lateness of the season and other matters, nothing definite as to the deposits of coal were ascertained. It is expected that borings will be continued next spring."

Weekly Record - Fri., Feb. 26, 1904 A correspondent writes the St. John Telegraph as follows: 'At this time when hard coal is often scarce and a high price (and in fact last year it was a minus quantity) the thought is strongly suggested - is there any undeveloped coal supply in our own dominion? At the time of the great fire in St. John in 1877 a prospecting party was about starting for the parish of Lancaster, St. John County, to investigate a tract of land said to hold anthracite coal on the estate of the late Col. Archibald Menzies, near the mouth of the Musquash river. Some specimens had been previously brought to the city and used in Spiler's factory and were said to have been of a good quality. The fire breaking out, the party turned back, some of them to make an effort to save their homes while others returned to the United States. The property is now owned by the heirs of the late Col. Menzies - Mrs. I. Price, of Kings County, N.B.; Mrs. Henderson, of Musquash, and Mrs. A.J. McAllum, of Yarmouth, N.S."

Daily Telegraph - Dec. 1, 1891 Mining Licenses. - Hon. L.J. Tweedie, accompanied by Mr.T.G. Loggie of the crown land office, Fredericton, and Mr. F.H. Risteen, stenographer, go to Albert county today. At 2 o'clock they will hold court to listen to the protest lodged by Mr. C.A. Peck and others against theapplication for a license to search made by Mr. J.DeWolfe Spurr. Another protest will be heard at the same sitting, lodged by W.C. Pipes, against the application of W.C. Dobson for license to search for gold and silver at or near Albert, Albert county. Upon the conclusion of these cases Hon. Mr. Tweedie will come to St. John to hear protests of Mr. Anderson and others of Musquash, against granting anapplication for a license to search for coal filed by Mr. C.F. Clinch."

St. Croix Courier - Mar. 14, 1895....An act to incorporate the Lepreaux Mining Company Limited....."

Codes: S5 / IDX_Names: Albert County Coal (some Albertite);
Morning News - May 25, 1860 The New Wellington Coal. - A specimen of the outer covering of this coal, with thin veins of coal running through it, has been left at our office, where it may be inspected by the curious. The coal is bituminous and of

a superior description - the vein is ten feet in thickness. We believe this is the first coal discovered in Albert County fit for burning purposes. At the last session of the Legislature an act was obtained incorporating a Company to work the mine. The capital stock is to be divided into 2500 shares of £10 each – 12 the liability of the shareholders being limited, we understand, to the extent of their capital invested. The Company have a lease for 21 years of 200 acres of land in Hillsboro', near the present Albert Mines, at which the operations will be carried on. There is every probability that the

S.J. Daily Globe - Sep. 16, 1865 A specimen of coal, found on the farm of Mr.Dornin, at Salmon River, was handed to us a day or two since, and may be seen at this office. It seems to bear a stronger resemblance to the Joggins coal than to any hither to found in Albert. - Albert Co. Advocate"

S.J. Daily News - May 12, 1876 Discovery of Coal.- Coal (probably Albertite) has been discovered on the farm of D.F. O'Regan on the Caledonia Mountains, about 11 miles from Hopewell Hill, A.C."

Chignecto Post - Jul. 3, 1879 A seam of anthracite, 11 inches thick, is said to have been found at Harvey by Mr. John

S.J. Daily Sun - Jun. 27, 1879 Harvey, June 24 - John Stevens, of Harvey, who has been indefatiguable in searching for minerals, has been rewarded by finding a seam of anthracite. The seam, when first discovered, was less than an inch wide, but at the depth of a few feet widened to 11 inches. It burns freely, leaving but a small percentage of red ashes. The vein is solid and promises well."

Moncton Daily Times - Dec. 3, 1880 Mr. John Stevens, of New Horton, left a box full of coal at our office this week, a sample of what is found in large quantities on his farm. He dug enough last fall to do all winter. It seems to be a good article and burns brightly, making little or smoke and no cinders."

S.J. Globe - Dec. 31, 1880 Coal Found. - The Maple Leaf says that Mr. Gideon Pearson, of Harvey, A. Co., has found a coal mine, apparently of an excellent quality and in large quantities on his farm. The facilities for shipping are good, the mines being only about a mile from the bay."

Moncton Daily Times - Oct. 16, 1880 Albert County News (From the Maple Leaf). - New Discovery of Coal. - On Monday Mr. John McLaskey gave usa sample of coal found on his farm at Germantown Lake. He said it had been dug about two feet from the surface, and large lumps are to be found in the brook. At the cropping out it is represented to be a two foot seam. It was tested by Mr. Owen Anderson, blacksmith, and pronounced excellent, for the following reasons: 1st, It has no smell; 2nd, It gives a clear blaze; 3rd, It is easily lighted; 4th, It is a good coal for welding purposes, and better than the most that is brought here."

Chignecto Post - Jan. 6, 1881 The Maple Leaf says that Mr. Gideon Pearson, of Harvey, A.Co., has found a coal mine, apparently of an excellent quality and in large quantities on his farm."

Moncton Daily Times - Mar. 1, 1882 and Daily Telegraph - Mar. 2, 1882 Searching for Coal. - Mr. E.B. Chandler, Jr., of Dorchester, has been searching for coal near Curryville, in Albert. He has had several men at work."

S.J. Daily News - Aug. 3, 1883 Mr. E.B. Chandler has commenced to develop a promising coal deposit near Albert Station."

Moncton Daily Times - Jul. 20, 1883 Albert Co. - A seam of bright coal, about six inches thick, has been discovered on the property of Mr.Gilbert Peck, at Hopewell Hill."

Moncton Daily Times - Mar. 2, 1883 Albert County. - Coal. - Mr. E.B. Chandler has a party of men at work at Demoiselle Creek, excavating for coal. The prospects are considered good."

Chignecto Post - May 17, 1883 Hillsboro/Surrey.- Explorations for coal are being made on the farm of Alexander Barnett, Esq., by E.B. Chandler. A shaft has been sunk to a depth of about 25 feet. Some bits of coal have been found, and the indications are that digging will be profitable."

Codes: S5 / IDX_Names: Albert County Coal (some Albertite);
Moncton Daily Transcript - May 17, 1883 and Moncton Daily Times - May 19, 1883 and Weekly Transcript - May 23, 1883 BORING FOR COAL. - A co-operative company comprising the names of Messrs. G.B. Lutz, E.T. Trites, Newton Wilbur and James Robertson has been formed to prospect and bore for coal on the Horsman place, adjoining the Wilson farm and is located about 150 yards from Mr. Blake's pit. Boring was begun on Monday and on Tuesday the workmen had reached a depth of 22 feet. The company have secured a lease of the farm (which contains between 900 and 1000 acres) to run 99 years. No coal has yet been discovered. - Ex."

Moncton Daily Times - Aug. 10, 1888 Albert Co. - Rumor has it that E.B. Chandler has struck a paying vein of coal, back of the Hill. It is to be hoped such is the case and that it may at last prove a success to Mr. Chandler."

S.J. Daily Sun - Aug. 16, 1888 Albert. - It is reported that a vein of coal has been struck in this vicinity."

Daily Times - Sep. 3, 1888 James A. Marks, and Joseph Stultz have discovered a superior kind of bituminous coal on Demoiselle Creek and have secured the property and opened it up over a territory of 5 miles. They drove in some distance on the seam and the seam enlarged very fast as it went in. Being opened over so large a territory it will no doubt prove a

Moncton Daily Times - Aug. 1, 1890 and Daily Telegraph - Aug. 2, 1890 and Chignecto Post - Aug. 7, 1890 Reported Discovery of Albertite. - A vein of albertite coal, nine inches wide, is reported to have been discovered on the farm of Ralph Steeves, Lower Hillsboro', and is now being inspected by mining men with a view to developing it. It will be a valuable find, if workable, as albertite is worth about $23 per ton. Six or seven American and English capitalists interested in the Albert County mine development are expected at Hillsboro' on Saturday."

Daily Telegraph - Oct. 12, 1891 Alma, Oct. 10. - Capt. Henry Calhoun, of Albert Mines, is prospecting for coal here. Good looking coal has been found. Numbers of Alma people have become intensely interested in mining and are doing considerable prospecting. Doubtless success will crown their efforts and they will receive remunerative returns for their

Moncton Daily Times - Sep. 24, 1891 Albert Co. - Capt. H. Calhoun and others have several miners here prospecting for coal. It isreported that they have found some very good indications. The mining fever has been running very high here of late; nearly all the whole parish is leased for prospecting. We hope that some of the promoters of this laudable enterprise will strike a bonanza."

Moncton Transcript - Aug. 5, 1893 and Moncton Daily Times - Aug. 8, 1893 Coal Discovered at Salisbury. - At Salisbury yesterday as two men were boring for a well on the farm owned by Coroner Keith they discovered a vein of hard coal. The coal was examined and proved to be of a superior quality. The site where the discovery was made is in the vicinity of the place where a few years ago Mr. Chandler of Dorchester had a prospecting party at work. They however were unsuccessful in the search and subsequently gave it up. Mr. Keith intends opening up the vein in the near future."

Moncton Transcript - Dec. 2, 1895 Several very fine samples of Albertite were lately shown to a St. John Globe reporter by Mr. W.F. Best, analytical chemist. These interesting samples were obtained at the Bishop Farm, near Harvey, Albert

Moncton Daily Times - Jan. 25, 1895 Hillsboro. - James Robinson, of the Mines, has begun to work in search of coal. He is sinking a shaft 8 ft. by 12 ft. Five men are now at work."

Moncton Transcript - Nov. 22, 1895 and S.J. Daily Sun - Nov. 25, 1895 and Gazette - Nov. 25, 1895 The coal field on Ezra Bishop's farm, Harvey, A.Co., is causing quite an excitement. Several men are at work where coal was so recently discovered and are already greatly encouraged."

Codes: S5 / E2 / J8 / IDX_Names: Albert County Coal (some Albertite); Oil and Gas - Kings Co.; Albert Mines;

Miramichi Gleaner - Jun. 9, 1860 Fires in Albert County. - We learn from our enterprising contemporary, the Colonial Presbyterian, that in Albert county there has been considerable destruction of property. Recently a building in connection with the Caledonian Oil Works, including about 1000 gallons of oils, was burnt. The Albert Coal Mine has been on fire for some weeks, so as to completely prevent working. Efforts are being made to extinguish it, but the scarcity of water is so great, that much loss, it is feared, will occur before the repairs can be commenced. ... Another Mining Company has been formed at Hillsboro', under the title of the Wellington Mining Company. Among the more prominent persons in the new Company are, we believe, Messrs. Patrick King and James Spence, of Moncton, Mr. R.J. Moffat, and others of Hillsboro'. Verily the County of Albert is rich in mineral wealth. It is to be regretted that this fine country is, to a large extent, shut out from intercourse with her neighbour Westmorland, except by means of ferry above Hillsboro', the management of which has of late been anything but satisfactory to the majority of travellers. - Col Presbyterian."

Codes: S5 / J8 / IDX_Names: Albert County Coal (some Albertite); Albert Mines;

Novascotian - Oct. 14, 1850 Mining Information. - From Albert we hear that a very rich seam of asphaltum or pitch coal is being worked in Hillsborough, on the land of Mr. Duffy. The vein is twelve feet in thickness, but is only worked to the width of eight feet, and seven in height. This valuable working is in a ravine in the forest, about four miles from Edgett's Wharf, on the western bank of the Petitcodiac, about 12 miles below the Bend. It is reported that a seam of bituminous coal, six feet in thickness, has been found on the ShepodyRiver, by Mr. Smith, the Agent of the General Mining Company in Nova Scotia, and that preparations are making for working it on an extensive scale. In addition to its great agricultural capabilities, the County of Albert appears to abound in mineral wealth; and if half what is said be true, it will certainly prove one of the richest and most valuable portions of New Brunswick. - St. John pa."

S.J. Daily Telegraph - Jan. 10, 1880 and Moncton Daily Times - Jan. 10, 1880 and Bay Pilot - Jan. 15, 1880 and Weekly Freeman - Jan. 17, 1880 Coal Mine in Kent County. - The Moniteur Acadien learns that Louis Gosselin, of St. Marie, Kent County, has discovered a coal mine which promises to be rich and of good quality."

Weekly Transcript - Jul. 15, 1885 Coal. - A Shediac correspondent sends us the following:- A large coal field has been found upon the farm of the late R.G. Atkinson, Scadouc River, which appears to be something worth looking after. It is in width about 300 yards. The prospectors dug in from the bank twelve feet. The seam was 2 inches thick at the bank and 18 inches at the distance of twelve feet."

S.J. Daily Sun - Sep. 6, 1885 Buctouche & Moncton Railway… From that on to Humphrey's mills in Moncton, the country is alternately cleared and wooded, and there is a section with strong indications of coal and other minerals, while one or two good building stone quarries will be tapped..."

Daily Times - Aug. 4, 1887 Kent County's New Coal Mining Enterprise. - The Newcastle advocate says: The Weldford Coal Mining Company that has been recently incorporated for the purpose of mining Gold, Silver, Coal and other Ores and Minerals near Weldford Station in Kent county, is now in good working shape and intends to waste no time in beginning operations. Application has been made to the crown for a mining licence to cover one mile of ground in Kent county. The following are the officers of the Company:- M. Adams, president; W.W. McLellan, vice president; James Brown, Weldford, secretary; Isaac A. Humphry, treasurer. The total capital of the company is to be $75,000, divided into 25,000 shares of $3 each. The annual meeting of the company is to be held the first Tuesday in January of each year. Mr. Robert Clark has been retained to draw all necessary leases from owners of land and to have the same executed as soon as possible. There are strong indications that coal exists in large quantities in the vicinity where the mining operations are to be begun, and, with the good transportation facilities provided by the I.C.R, the prospects of the company are bright."

Moncton Daily Times - Dec. 23, 1887 The Weldford Coal Mining Company has a party boring for coal in the vicinity of Coal Branch Station, and it is rumored they have struck a valuable seam. - World"

Royal Gazette - May 4, 1887 Public Notice. We, the undersigned, hereby give notice of our intention to apply for Letters Patent, under the provision of Chapter 9, 48th Victoria, of the Acts of Assembly of the Province of New Brunswick, intituled An Act respecting the incorporation of Joint Stock Companies by Letters Patent. 1. The proposed corporate name of the said Company is the Weldford Coal Mining Company. 2. The objects of the Company are the exploring, digging, raising and mining of Gold, Silver, Coal and other ores and minerals, together with the crushing and smelting of the same, with such other things as are incident to the obtaining thereof. 3. The Office or chief place of business of the said Company is to be situate at Weldford Station, on the I.C.R., in the county of Kent. 4. The amount of Capital Stock of the said Company shall be Seventy five thousand dollars ($75,000), to be divided into Twenty five thousand shares (25,000), and the par value of each share shall be Three dollars ($3.00). 5. The amount of Capital Stock actually subscribed at the present time is fifteen thousand shares (15,000), amounting to Forty five thousand dollars ($45,000). 6. The following are the names of the persons who have been chosen to act as Provisional Directors of the said Company:- James Brown, of Weldford Station, in the county of Kent, Merchant; Matthew T. Glenn, of Weldford Station, County of Kent, Hotel-keeper; Andrew Dunn, of Weldford, in the County of Kent, Merchant; William W. McLellan, of Newcastle, in the county of Northumberland, Track-master I.C.R.; Michael Adams, of Newcastle, in the County of Northumberland, Barrister-at-law; and David W. Clark, of Weldford Station, in the county of Kent, Stonecutter. Names Residence Occupation James Brown, Weldford Merchant Matthew T. Glenn, do. Hotel keeper Andrew Dunn, do. Merchant William W. McLellan, Newcastle Track master, I.C.R. David W. Clark, Weldford Stonecutter Stephen M. Dunn, do. Merchant Michael Adams, Newcastle Barrister-at-Law Weldford, 23rd April, 1887"

Royal Gazette - May 11, 1887 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the ninth day of May, A.D. 1887, incorporating James Brown, Merchant; Matthew T. Glenn, Hotel-keeper; Andrew Dunn, Merchant; David W. Clark, Mason; Stephen M. Dunn, Merchant; all of Weldford, in the county of Kent, and Province of New Brunswick; and William W. McLellan, of Newcastle, in the county of Northumberland, Province aforesaid, Track- master, I.C.R., for the purpose of exploring, digging, raising and mining of Gold, Silver, Coal, and other Ores and Minerals, together with the crushing and smelting of the same, with such other things as are incident to the obtaining thereof, by the name of The Weldford Coal Mining Company, with a total capital of Seventy five thousand dollars, divided into twenty five thousand shares of three dollars each. Dated at the office of the Provincial Secretary, at Fredericton, this ninth day of May, A.D. 1887 David McLellan, Provincial Secretary."
Moncton Daily Transcript - Aug. 3, 1891 A vein of coal a foot thick at a distance of seven or eight feet down was reached at Cocagne recently by a company lately formed in Moncton. The coal is said to burn clean."

Codes: S6 / IDX_Names: Kent County Coal;
Daily Telegraph - Aug. 5, 1891 Moncton, Aug. 3. - The Moncton company who recently applied for the right to prospect for coal at Cocagne, Kent Co., is beginning to think that the prospects for the discovery of an abundance of coal at that place are very favorable indeed. A shaft several feet square has been sunk eight or nine feet, and a seam of coal a foot or more in thickness has been struck. The coal is pronounced to be of a good quality, resembling Sydney coal, somewhat, and burns readily without leaving the usual amount of cinders and ashes common to the ordinary kind. A number of men have been engaged to continue the search, and as the present shaft seems to have all the evidence found in extensive coal regions, it will not be surprising to learn of a valuable coal find at this point at no distant day."

Richibucto Review - Jan. 1, 1891 Our Cocagne correspondent writes: - Mr. Simon Bourgeois has been interviewed by no less than half a dozen miners since the late discovery of coal including Mr. P.B. Bourque, foreman of the Joggins mines of N.S., although it is understood that the seam is to be tested by Mr. Winslow of P.E. Island. Some of these gentlemen are a little doubtful as to the existence of an eleven foot seam of coal in this vicinity owing to the fact that the Pictou, Springhill, and Joggins mines scarcely exceed seven feet, while the uniform depth of the latter is but five. Nevertheless they all think that five or even four feet of solid coal could be worked to great advantage especially when in proximity to such good shipping facilities as our harbour affords."

Daily Times - Jan. 3, 1891 Our Cocagne correspondent writes: Mr. Simon Bourgeois has been interviewed by no less than half a dozen miners since the late discovery of coal, including Mr. P.B. Bourque, foreman of the Joggins mines of N.S., although it is understood that the seam is to be tested by Mr. Winslow of P.E. Island. Some of these gentlemen are a little doubtful as to the existence of an eleven foot seam of coal in this vicinity owing to the fact that the Pictou, Springhill, and Joggins mines scarcely exceed seven feet, while the uniform depth of the latter is but five. Nevertheless they all think that five or even four feet of solid coal could be worked to great advantage especially when in proximity to such good

Daily Times - Jul. 18, 1891 and Daily Telegraph - Jul. 20, 1891 A New Mining Enterprise. - A number of Monctonians, including Messrs. J. Beaton, C.E. Northrup, P.S. McManus, W. Watson and W.A. Metzler, have secured a licence to prospect for coal on an area of five miles on the Cocagne river. If coal is found in paying quantities it will no doubt be a rich thing, for besides the nearness to Moncton, the opportunities of shipping to P.E. Island and North Shore ports are unexcelled. The area is about five miles from the B. & M. Railway."
Moncton Transcript - Mar. 3, 1893 Kent Co. notes. - It is reported that the seam of coal which was found near the north fork of the Coal Branch Stream some years ago is to be at last opened up. It is understood that a number of our enterprising business men have taken it in hand, and intend commencing operations soon and it is to be hoped they will meet with better success than the Weldford Mining Co., Ltd. - Review"
Richibucto Review - Jul. 9, 1896 Last week, while digging a well on Belony Goguen's farm on the north side of the river, workmen discovered a fine seam of coal at only a few feet from the surface. The seam is about a foot in depth, but as

this thickness was found at the foot of a large hill, down which the seam slopes, it is probable that the seam will be found gradually thicker as it advances up the hill. The seam is solid and pure allowing the gravel to be shoveled off as from a floor. The coal has been tested and pronounced to be of excellent quality."

Richibucto Review - Apr. 28, 1898 Coal Branch. - Mr. Ripley, of Maccan, was here last week prospecting for coal. He has sold his claim to Mr. James Spencer."

Daily Telegraph - Dec. 12, 1898 A party consisting of Mr. and Mrs. Fred Little, Mr. Willie Little, Miss Annie Scott and Miss Augusta Mahood visited the coal mine at Mount Carlyle on the 4th. Mr. C.C. Carlyle, the genial owner of the mine gave the party a very cordial reception, and entertained them with several musical selections on the gramaphone."

Moncton Daily Times - Mar. 29, 1898 Coal Branch. - Robbie says that he does not intend going to the Klondyke, but has a share in Mr. Carlyle's coal mine and will leave shortly for Nova Scotia to engage some expert miners."

Daily Times - Mar. 29, 1898 Coal in Kent County. - Important Discovery By Mr. Carlyle at Coal Branch. - Ricibucto, March 28. - Mr. C.C. Carlyle, who has been prospecting for coal at Coal Branch, Kent Co., has been quite fortunate, having struck a seam that varies from 32 to 36 inches in thickness. The coal is of excellent quality for steam or heating purposes and is so hard that some competent judges pronounce it equal to fairly good anthracite. The mine is within a few miles of the I.C.R. The average output will be from 10 to 30 tons per diem. Coal has been found in this vicinity before, but not in

N.B. Reporter - Mar. 30, 1898 Mr. C.C. Carlisle, who has been prospecting for coal at Coal Branch, Kent Co., has struck a seam that varies from 32 to 36 inches in thickness. The coal is of excellent quality."

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Mar. 31, 1898 Coal in Kent County. - Mr. C.C. Carlyle, who has been prospecting for coal at Coal Branch for some time past, has succeeded in striking a seam fully three feet deep. The coal is of an excellent quality and so hard that it is pronounced by competent judges to be equal to a fair quality of anthracite. About twenty tons per day will be the average output. The mine is within a few miles of the I.C.R. As soon as the roads become passable, shipments will commence. We are pleased to hear of Mr. Carlyle's success."

Moncton Daily Times - May 4, 1898 Coal Branch. - The contract for the construction of a wagon road to Mr. Carlyle's coal mine at Mount Carlyle was on Thursday awarded to Mr. Thos. Spencer of Canaan, We hope to see it completed soon, when Mr. Carlyle will open up his mine on an extensive scale."

Richibucto Review - May 12, 1898 It is reported that the N.B. Government is about to give the Mount Carlyle Coal mine some concessions of considerable value. Mr. Carlyle has had a petition before the executive in relation to this for some time. A spirited action like this will commend itself, not only to the people of Kent but to the whole province whatever their political creeds may be. Now that our lumber is beginning to fail it behoves us to make the most of every possible opening, and the man who opens a mine or starts any new industry deserves all encouragement. Hon. Mr. Emmerson appears to be making a good beginning."

Moncton Daily Times - Sep. 7, 1898 Coal Branch. - Mr. C.C. Carlyle is having his engine placed in position at the coal mine, and operations will commence in a few days."

Richibucto Review - Jul. 6, 1899 Mr. C.C. Carlyle, of Mount Carlyle Coal Mine, has been in town taking orders for coal. He has, it seems, sold to almost every one of our coal burning citizens. The coal is said to be of first class quality."

Richibucto Review - Sep. 28, 1899 Our Coal Branch correspondent writes that Mount Carlyle Coal Mine started again, Monday. All orders can be filled this Fall. A crew of experienced miners are coming from Newcastle, Queen's Co., to give some pointers to our men of Kent, who know little or nothing about digging coal."

N.B. Reporter - Aug. 22, 1900 and Richibucto Review - Aug. 23, 1900 A coal seam twenty-two inches in thickness has been discovered in the Parish of Dundas, Kent county, along both banks of the Cocagne River. The coal is said to be of good quality and present in paying quantities. Fifteen square miles along both sides of the Cocagne River have already been taken up by Dr. Chandler and Moncton parties."

Richibucto Review - Aug. 23, 1900 Cocagne, Aug. 20. - A number of gentlemen interested in mining were here last week examining the coal seam on Mr. William's farm and arranging to form a company to further the work of ascertaining the value of the find. Dr. A.H. Chandler went to Fredericton on Saturday."

Richibucto Review - Dec. 13, 1900 Sale of a Coal Mine. - Mount Carlyle Coal mine was handed to a Moncton gentleman the other day for $15,000.00. The former proprietor, C.C. Carlyle, retains a royalty of ten per cent on the output for three years. This is estimated to be worth $5,000.00. The sale of this valuable property should stimulate interest in our natural resources. A few days after the sale was concluded Mr. Carlyle received from another American Company with headquarters at Providence, R.I., an offer more advantageous than the one he had first accepted. Oil scale taken from the mine had been tested in Boston and found to be very rich. It is reported that the Mineral Product Co. of New York, a very wealthy corporation, intend erecting a refining furnace for manganese at the mine next summer."

Moncton Daily Times - Jun. 27, 1900 Coal Branch. - A company of miners from Springhill are negotiating for the lease of Mount Carlyle coal mine."

Richibucto Review - Sep. 13, 1900 Dr. A.H. Chandler, who has been prospecting for coal at Cocagne, has discovered a seam, fifteen inches thick at least, on the south side of the river. The miners found it impossible to get all the way through the seam on account of quicksands. - Moncton Times."

S.J. Star - Aug. 1, 1901 and Daily Times - Jul. 31, 1901 Sinking A Shaft. - The Canadian Coal and Manganese Company have men at work sinking a shaft on the coal property at Harcourt. The shaft is being sunk under the direction of Mr. Rees, a practical miner, and is located some distance from the spot where G.R. Jones carried on his operations. Only a few men are at work, but more are to be put to work. C.G. Polleys and Geo. R. Haddock, who arrived from New York on Saturday last, went up to the mine yesterday. C.E. Northrup, at Mr. Polleys' request, also went up to the mine yesterday for the purpose of taking a number of views of the surrounding country, which is described as quite picturesque. - Times, 31st."

Codes: S6 / IDX_Names: Kent County Coal;
Daily Sun - Aug. 1, 1901 Sinking A Shaft. - The Canadian Coal and Manganese Company have men at work sinking a shaft on the coal property at Harcourt. The shaft is being sunk under the direction of Mr. Rees, a practical miner, and is located some distance from the spot where G.R. Jones carried on his operations. Only a few men are at work at present sinking the shaft, but more are to be put to work. C,G, Polleys and Geo. R. Haddock, who arrived from New York on Saturday last, went up to the mine yesterday. C.E. Northrup, at Mr. Polleys' request, also went up to the mine yesterday for the purpose of taking a number of views of the surrounding country, which is described as quite picturesque. - Times, 31st."

Richibucto Review - Dec. 5, 1901 The work of sinking a shaft at the Mount Carlyle coal mine, Coal Branch, is progressing favorably and the company will probably be taking out coal within a few days. The shaft has now been sunk through the sandstone and into the shale and it is expected to strike the first seam almost any day."

Richibucto Review - Dec. 12, 1901 and Weekly Record - Fri., Dec. ?, 1901The Canadian Coal and Manganese Company, who have been operating on their properties at Mount Carlyle, have reached the first seam of coal and the superintendent of the company, Mr. Rees, brought a box of coal to the city Saturday. The coal was tested and proved to be of a very superior quality. The company have been somewhat handicapped lately on account of the large amount of water running in the shaft. It is the intention Mr. Polleys, the General Manager to procure at once a large pump, when the work will be prosecuted more expeditiously. Mr. Polleys is to be congratulated on the result of his undertaking so far, and it is only a question of time when this will be one of the leading industries in the province."

Richibucto Review - Dec. 19, 1901 ADVERTISEMENT: Canadian Coal And Manganese Company Limited. - Notice of Special General Meeting. - Notice is hereby given that a special general meeting of the stockholders of the Canadian Coal and Manganese Company, Limited, will be held at the office of the said Canadian coal and Manganese Company, Limited, in the city of Moncton, Province of New Brunswick, on the eighth day of January, A.D., 1902, at the hour of two o'clock in the afternoon to consider and deal with a proposition made by Charles G. Polleys to the said company to purchase four thousand seven hundred shares the balance of the unissued capital stock of said company in consideration of the transfer to said company, certain mining licences to be issued under the General Mining Act of New Brunswick, to him, the said Charles G. Polleys such shares to be issued fully paid up and nonassessable and for the consideration of such other business as may lawfully come before said meeting. Dated this thirteenth day of December, A.D., 1901. By Order,

Richibucto Review - Dec. 19, 1901 Canadian Coal and Manganese Company, Limited. - Notice of Special General Meeting. - Notice is hereby given that a Special General Meeting of the Stockholders of the Canadian Coal and Manganese Company Limited will be held at the Office of the said Canadian Coal and Manganese Company, Limited, of the City of Moncton in the County of Westmorland, Province of New Brunswick, on the eighth day of January, A.D., 1902, at the hour of two o'clock in the afternoon to consider and deal with a proposition made by Charles G. Polleys to the said Company to purchase four thousand seven hundred shares the balance of the unissued Capital Stock of said Company in consideration of the transfer to said Company, certain mining licences to be issued under the General Mining Act of New Brunswick, to him, the said Charles G. Polleys such shares to be issued fully paid up and nonassessable and for the consideration of such other business as may lawfully come before the meeting. Dated this thirteenth day of December,

Richibucto Review - Dec. 19, 1901 A special general meeting of the Canadian Coal and Manganese Co. Ltd., will be held in the city of Moncton on Wednesday, the 8th day of January, 1902, when important matters are to be discussed. See Advt.

in another column."

Moncton Daily Times - Jul. 29, 1901 Canadian Coal and Manganese Company. - Mr. Chas. G. Polleys, general manager of the newly organized Canadian Coal and Manganese Co., who have acquired the coal property at Coal Branch, arrived in the city Saturday. Messrs. Geo. Haddock and J.M. Rees, who have had considerable experience in coal mining in the United States, have been here for the past week. They have examined the property of the company and are well pleased with the prospects for successful mining."

Richibucto Review - Jun. 6, 1901 ADVERTISEMENT: Canadian Coal & Manganese Company, Limited. -- Notice of Meeting -- Notice is hereby given that a meeting of the stock holders of the Canadian Coal and Manganese Company, Limited, a corporation duly incorporated under the New Brunswick Joint Stock Companies Act, 1893, will be held at the office of E. Albert Reilly, in the City of Moncton, in the county of Westmorland, and Province of New Brunswick, on Saturday the twenty second day of June, A.D., 1901, at ten o'clock in the forenoon; the object of such meeting being the organization of said company and the transaction of such other business as shall lawfully come before such meeting. Dated this Fifth day of June, A.D., 1901. (Sgd.) Charles G. Polleys, Gurney R. Jones, Alexander Gibson, E. Albert Reilly, Provincial

Daily Sun - Jun. 7, 1901 The Canadian Coal and Manganese Co. Ltd., with capital stock of one million dollars in $100 shares, has been incorporated under the laws of New Brunswick. The incorporators are: Chas. G. Polleys of Elizabeth, N.J.; Gurney R. Jones, Alex Gibson and E.A. Reilly of Moncton; Jas. P. Geddes of New York City, and Joseph H. Rogers

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Jun. 27, 1901 A correspondent of the St. John Sun writing from Moncton, says: Chas. Polleys, a New Jersey mining engineer who is interested in the company developing the coal mine at Coal Branch, has returned from a trip to Pennsylvania, where he has succeeded in interesting a sufficient amount of capital to warrant the beginning of operations on a large scale. He is bringing a mining expert from Pennsylvania and will commence work at once. An analysis of the coal proved to be of excellent quality for steam and furnace, giving a heat equal to the Pennsylvania percentage of volatile hydrocarbon high, making it also first class for manufacture."

S.J. Daily Sun - Mar. 22, 1901 Moncton. - Finding Good Coal in Kent Co. - Moncton, March 19. - Work is progressing quite actively at the Mount Carlyle coal mine, in Kent County, recently bonded to G.R. Jones of Moncton for $15,000. The coal is of a good quality and finds a ready market. As yet mining is conducted in a rather primitive way, but seven men are steadily employed, and it is said the indications are good."

Richibucto Review - Mar. 28, 1901 Mr. C.C. Carlyle goes to Queens Monday to engage a crew of experienced coal miners to work at the Carlyle mine, at Harcourt, which is being operated by Mr. G.R. Jones. The new gang of men will be put to work opening up a new slope. - Moncton Times, March 23rd."

S.J. Star - May 24, 1901 and Daily Sun - May 24, 1901 New Coal Co. - Moncton, N.B., May 23. - Application has been made for letters patent under the joint stock company's act of New Brunswick for the incorporation of the Canadian Coal and Manganese Company, Limited, with a capital of a million dollars. The principal object of the company is to acquire and operate coal mines at Mount Carlyle, at Coal Branch, Kent county. The applicants for incorporation are James P. Geddes, banker, New York; Charles G. Polleys, mining engineer, New Jersey; Gurney R. Jones, lumber dealer; Alexander Gibson, contractor; Joseph H. Rogers, agent, and E. Albert Reilly, barrister, of Moncton. Two good seams of coal have been opened and it is the intention of the company to put in a first class mining plant on a large scale."

St. John Star - Nov. 1, 1901 The coal areas at Mount Carlyle in Kent Co. are being tested by the American company which has been organized to develop them."

Richibucto Review - Nov. 7, 1901 Testing the Coal Areas At Mount Carlyle. - Moncton, Oct. 31. - Whether or not the coal areas in New Brunswick are of such a character as to warrant mining on a large scale, according to modern methods, is in a fair way of being demonstrated at Mount Carlyle, which is about five miles from Coal Branch station of the Intercolonial Railway, and about thirty miles north of Moncton. Coal was discovered at this point some years ago by C.C. Carlyle, after whom the place is named, but he lacked capital to operate a mine, and nothing was done until last winter, when the property was bonded to G.R. Jones, one of Moncton's enterprising citizens. Mr. Jones went to work on the surface in a rather primitive way, and last winter got out about 400 tons of coal of fair quality. During the early spring the area was examined by C.G. Polleys, a mining engineer of considerable prominence in New York, who at once took hold of it and succeeded in organizing a company to develop the property. The company is known as the Canadian Coal and Manganese Company, the president being Jas. P. Geddes, of New York, G.R. Jones of Moncton, vice president, and C.G. Polleys, general manager. A perpendicular shaft, 12 by 20 feet, is being sunk at a point about a quarter of a mile from where Mr. Jones operated, and it is hoped to strike a six foot seam at a depth of 100 feet. Operations at sinking the shaft have been somewhat delayed by the breaking of the pump, but they are down now a depth of 60 or 70 feet. In the meantime the most improved machinery is being procured, a boarding house capable of accommodating sixty people has been erected, and also half a dozen other buildings, including office, boiler and engine houses, and blacksmith and machine shops. So confident are the managers that the enterprise will be successful that arrangements are now being made to lay off streets and lots for the building of the town that it is thought will be built up. The superintendent of the works is J.W. Rees, a practical miner from Pennsylvania."

S.J. Daily Sun - Nov. 9, 1901 The work of sinking a shaft at the Mount Carlyle coal mine, Coal Branch, is progressing favorably and the company will probably be taking out coal within a few days. The shaft has now been sunk through the sandstone and into the shale, and it is expected to strike the first seam almost any day. - Moncton Times."

St. John Star - Nov. 20, 1901 The N.B. Coal and Manganese Co. are sinking a shaft at Mount Carlyle and expect to strike the first seam of coal this week."

Richibucto Review - Oct. 10, 1901 A seam of hard coal has been found at the head of the Little North West River about two miles and a half from Richibucto, and is reported to be about two feet deep. A company has been formed and now have several men at work digging, and report having struck coal in abundance and of the best quality. All that is required is some capital to make this a success, as those who are at work say that there is plenty of coal and a fine chance to get it."

Weekly Record - Fri., Oct. 18, 1901 A seam of hard coal has been found at the head of the Little Northwest River about two miles and a half from Richibucto, and is reported to be about two feet deep. A company has been formed and now have several men at work digging, and report having struck coal in abundance and of the best quality. All that is required is some capital to make this a success, as those who are at work say that their is plenty of coal and a fine chance to get it.

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Apr. 17, 1902 Mount Carlyle Coal Mine. - The Canadian Coal and Manganese Co. operating the Mount Carlyle Coal Mine at Coal Branch, are at work taking out coal and expect to make some shipments shortly. About sixty tons have been mined and the management expect to be taking out a carload a day in about three weeks time. Mt. J.P. Geddes, President of the company, visited the mine on Tuesday and returns to New York to-day."

N.B. Reporter - Dec. 17, 1902 The large boarding house at Coal Branch, Kent County, owned by the Canadian Coal and Manganese Company, was destroyed by fire Friday night. It cost $3,000 and was insured for $1,500. The mine has not been working for some time and the building was only occupied by a watchman."

Weekly Record - Fri., Jan. 24, 1902 Mr. Jas. P. Geddes, president of the Canadian Coal and Manganese Co., arrived in Moncton from New York on Tuesday and attended a meeting of the shareholders and directors in the office of the company yesterday. Work at the mine Mt. Carlyle, Kent Co., is progressing favorably but the large pump recently purchased in New York, is not yet in working order. It is the intention to bore through the second seam before sinking the shaft any deeper. Mr. Geddes is accompanied by his wife, and will visit the mine today in company with Mr. Polleys."

S.J. Daily Sun - May 8, 1902 and Richibucto Review - May 15, 1902Sussex (7th). - Samples of coal, said to be from the Mount Carlyle coal mine in Kent County, were seen in Sussex yesterday, and if there proves to be a good paying body of it, the owners have struck it rich. The coal is albertite of a first class nature, and its being found in this region is somewhat

S.J. Star - May 17, 1902 Sale of Coal Mine. - (Moncton Transcript). - Sometime ago the option given by G.R. Jones in the Canadian Coal and Manganese Co., on the Mount Carlyle Mine having lapsed Mr. Jones sold the property to j.p. Geddes, of New York. It is understood Mr. Jones received $25,000 for the property. Mr. Geddes has sold the property to the Canadian Coal and Manganese Co. At the outset of the operations of the Canadian Coal and Manganese Co. an option on the property was secured from Mr. Jones who had been working it on a small scale, and the prospecting done by the company has decided to take it over. The company has been mining coal from a small seam for some time and already 290 tons or more of coal is ready for shipment."

Weekly Record - Fri., Apr. 24, 1903 The Imperial Coal Company, operating at Beersville, Kent County, has been organized and it is proposed to mine on a larger scale than ever during the coming year."

Richibucto Review - Apr. 30, 1903 The Imperial Coal Company has made application to the governor in council for license to search for mineral on Coal Branch and also on Trout Brook."

Weekly Record - Fri., Jan. 9, 1903 Charles G. Polleys, a mining engineer of experience, is showing his confidence in the coal areas of New Brunswick by putting his own money into development work. Mr. Polleys has opened a mine about eight miles from Coal Branch station in Kent Co., and is now taking out coal with results that are more than satisfying him. He says the greatest drawback is the lack of railway facilities as to haul the output to Coal Branch Station of the I.C.R., costs over a dollar a ton. He has, however, opened a shorter route, to Adamsville station which will reduce the cost. Mr. Polleys has the plan for a railway by means of which he hopes to connect with the I.C.R. on one direction and to tidewater at

Kingston on the other. The length of this line would be about 16 miles, with the coal areas lying about midway."

Richibucto Review - Jul. 30, 1903 Death of Mr. C.C. Carlyle. - The news of the death of Charles C. Carlyle which occurred at the Moncton Hospital last Friday, was heard with surprise and sincere regret by his friends in Kent County. Mr. Carlyle had been suffering from diabetes for some time past, but no one in this section knew until a few days ago that he was in a dangerous condition. A few days ago he was operated upon for a carbuncle on his neck. Deceased was a native of Kent County and spent the greater part of his life here. He was for several years engaged in the agricultural machinery business, but of late has devoted much of his attention to coal mining. He did much to open up and develop coal mines in this County and at the time of his death was interested in the Mount Carlyle mine near Coal Branch. Mr. Carlyle was well known as a contributor to the press of this province on the current topics of the day and was also a poet of no mean ability. The signature C.C.C. to his contributions was familiar to most people who read the newspapers. At the time of his death he was engaged in collecting his poems with the intention of publishing them in one volume. He was also the author of the American war song, 'John Brown's Body'. This he wrote and sent to his brother who was at that time engaged as a telegraph operator with the federals and who was afterwards captured and starved to death in a confederate prison. The song, with some additions and variations was et to music and became the well known war song of the northern forces in that gigantic struggle. Deceased was sixty-two years of age and leaves a widow residing at Shediac, and a son Frank, in the employ of the Record Company, Moncton. His body was brought to Bass River and buried in the Presbyterian burying ground there on Sunday last."

Richibucto Review - Jun. 4, 1903 The annual meeting of the Canadian Coal and Manganese Company, Limited, will be held at the office of E. Albert Reilly in Moncton on Tuesday, the ninth day of June, at 10 o'clock a.m., to receive and consider the annual statement of accounts and balance sheet and the reports of the directors thereon; to elect directors and other officers, and for the consideration of such other business as may come before this meeting."

Codes: S6 / IDX_Names: Kent County Coal;

Richibucto Review - Mar. 19, 1903 Coal Branch. - Mr. Thos. Swift, who is engaged in hauling coal for the Imperial Coal Co., Adamsville, spent Sunday with his parents here."

Richibucto Review - Nov. 12, 1903 About twenty five miners came to Beersville coal mines last week to assist in the work of opening up the mines."

Richibucto Review - Nov. 19, 1903 The Canadian Coal and Manganese Company is resuming operations on coal areas at Coal Branch. The company has imported nine experienced miners from British Columbia and the work of pumping out the tunnel is now going again."

Weekly Record - Fri., Nov. 20, 1903 The work on the Beersville road, Kent county, is progressing well. The rails have been laid for a distance of nearly three miles from Adamsville and it is expected to have it ready for the hauling of coal by December 1st. The mining operations are being successfully carried on at Beersville, two collieries being opened. A number of miners have been brought from British Columbia and a thorough survey of the ground will be made by the companies

Richibucto Review - Nov. 26, 1903 The Beersville Coal Mine. - Mr. John McLaren, the genial foreman of the Beersville Coal Mine was in the city last night and returned home today. Mr. McLaren, in conversation with a Transcript reporter, was asked how things looked up this way. He replied that everything was most encouraging. The road is being pushed forward as rapidly as possible, and Mr. McLaren looks forward to a bright future for that district. When the writer visited the mine in company with Mr. Polleys, manager, about a year ago, it was only in its infancy. At the present time, according to all reports it has grown rapidly; but from the prospects it will be many, many years before it will be of age. At present there are fourteen men employed, but when the road is completed there will be a stir unprecedented in the county of Kent. -

Richibucto Review - Oct. 8, 1903 Operations at Imperial Mine. - Operations are progressing favorable at the Imperial Coal Co.'s properties at Beersville. In the first opening made by the company mining has been carried on to a distance of nearly 1000 feet in the main level, and the side levels have been worked for a considerable distance. The coal being mined at present is of an exceedingly superior quality, and is being housed in a shed near by. The company expect to have several thousand tons ready for shipment at the completion of the railway. Men are at work now laying a track to the new opening recently started, where the main seam of coal is quite visible and is large enough to warrant the permanent and substantial structure which is being made at this second opening. Mr. Polleys, general manager of the company, visited the mine Tuesday and is well pleased with the progress that is being made in mining and in the construction work that is going on preparatory to the increase of the output of coal in the future. In Mr. James McLaren the company have an expert man in his line, and one that is thoroughly conversant with every detail in mining coal. Mr. Brown, who is connected with the construction work of the railway from Adamsville into the mine, informs the Times that his company expects, if they have favorable weather, to complete the line by the early part of December. - Times."

Richibucto Review - Sep. 3, 1903 Mr. C.G. Polleys, accompanied by a number of New York gentlemen, including

Commissioner Hemle, Dr. Myral, W. Lee, Dr. Von Hagen, and Isaac Purdy, and Hon. C.W. Robinson of Moncton, paid a visit to Beersville mine last week. The visitors were greatly impressed by the possibilities of the mine which is being rapidly

Richibucto Review - Sep. 24, 1903 Notice of Meeting. - Notice is hereby given that the first meeting of the shareholders of 'The Beersville Coal and Railway Company' will be held at the office of C.W. Robinson at Moncton, in the County of Westmorland, on Saturday, the third day of October next at the hour of twenty o'clock. M.F. Keith, C.G. Polleys, F.C. Robinson, Provisional Directors. Moncton, N.B., September 11th, A.D., 1903."

Richibucto Review - Sep. 24, 1903 A contract has been let for the construction of a railway from the coal mine at Beersville to Adamsville, on the I.C.R., and the first sod was turned on Tuesday. The contractors, who are Brown Brothers, of Richibucto, have engaged to have the road completed and ready for operation by the first of January next. In the meantime there is about a thousand tons of coal at the mine awaiting transportation, and the management intend to open another main level at once in order to be able to greatly increase the output as soon as the railway is completed."

Weekly Record - Fri., Sep. 25, 1903 The contract for construction of the branch railway to connect the Beersville coal mine in Kent County with the I.C. Ry., has been let to Messrs. J.C. Wilmot and Gilmore Brown, the well known railway contractors and engineers and the work is to be pushed forward as rapidly as possible."

Weekly Record - Fri., Sep. 25, 1903 Mr. Isaac Purdy, treasurer of the Imperial Coal Co., and Dr. Von Hagen another director of the Company, have taken $200 stock in Moncton Exhibition Association ..."

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Aug. 4, 1904 The Seeley-Polleys Case. - Preliminary Investigation Commenced Before Stipendiary Kay Thursday. - The preliminary investigation in the case brought by Mr. Paul S. Seeley against Mr. C.G. Polleys in connection with stock of the Imperial Coal Co., was commenced before Stipendiary Kay of Moncton, Thursday afternoon. Messrs. W.B. Chandler and E.A. Reilly appeared for the prosecution, and Messrs D.I. Walsh and F.J. Sweeney for the defence. The complainant in the case is Paul S. Seeley, student, now of Harcourt, who alleges that Polleys fraudulently represented to Mrs. Affa S. Seeley, widow, of New York, that he and Isaac Purdy jointly owned 51,000 shares of stock in the Imperial Coal Co., that a certificate of stock was deposited in a bank, and thereby induced her to purchase 200 shares for $600. All the afternoon was taken up with the examination of Mr. John Bedford, secretary of the company, in proving the records of the company. Mr. Bedford told Mr. Chandler that he had been acting as secretary of the Imperial Coal Co., Ltd., since April 14, 1903. The letters patent incorporating the company were produced by the witness and put in evidence. The stock ledger, stock certificate book and minute book of the company were produced and put in evidence. Witness was then questioned concerning the stock issued to Mr. Polleys and certificates of stock issued under his signature. Witness would not swear to the signature of Mr. Polleys except in the case which he witnessed. Witness was cross examined by Mr. Sweeney with reference to the signature of Mr. Polleys to certificates, and would not swear to Mr. Polleys' handwriting with the exception of the cases in which he was witness. The witness was then examined by Mr. Chandler with reference to the stock issued to Mr. Isaac Purdy, as recorded in the company's stock book. Mr. Chandler asked the witness if he found any entry in the company's certificate books of the issue of 51,000 shares of stock of the company to Chas. G. Polleys and Isaac Purdy, jointly, to which he replied that he did not. To his knowledge there was no such entry of stock issue in any of the company's books. At this stage the court adjourned until Friday morning. The preliminary examination in the Seeley-Polleys case was continued in the Moncton police court Friday. John Bedford, secretary of the company, was under examination all day and gave evidence in reference to the issue of stock. His evidence was interesting. Polleys is charged with inducing Affa S. Seeley, of New York, to purchase 200 shares of stock for $600, by fraudulently representing that he and Isaac Purdy jointly held 51,000 shares of stock or a controlling interest in the property. The evidence showed that Mrs. Affa S. Seeley had purchased considerable stock, some thousands of shares, that the shares she purchased were mostly treasury stock upon which Mr. Hugo Von Hagen, director of the company, had an op...?... a share; that the 200 shares referred to in the information came from Polley's certificates but Von Hagen's name appears on the stub in the stock book as having received certificates for Affa S. Seeley. Paul S. Seeley, son of Affa S. Seeley, and complainant in the case, also holds 400 shares in the company, 250 of which he bought from the Von Hagen option. Affa S. Seeley holds 3,060 shares and had purchased 1,300 shares of this from treasury stock held by Von Hagen under option before the 200 referred to in the complaint. The secretary of the company said that Dr, Von Hagen had told him that he was selling this treasury stock, on which he had an option of $1, for $5 and $10 and giving some away. The stock book showed that at the time of the division of stock, Polleys received 72,980 out of 100,000 shares. On 13th July, 1903, the date of the issue of the stock to Affa S. Seeley referred to in the information, it showed Polleys held 62,000 shares and Purdy 10,000 shares. According to the secretary's evidence everything was harmonious in the company up to the annual meeting, in April last, when Dr. Von Hagen took exception to the meeting being held. Since that time there had been differences among the directors and shareholders, which appear to have led to the present proceedings. In the Moncton police court Saturday morning the complainant in the Seeley-Polleys case was called as witness. He told of coming to Moncton from New York and interviewing Dr. Von Hagen and buying stock in the Imperial Coal Company through him. Witness was acting for his mother. Witness got two certificates - 100 shares each - from Dr. Van Hagen. Mr. Polleys visited the complainant's home and talked about the affairs of the company. Complainant's mother asked him to come to

New Brunswick in May. She told him to come to New Brunswick and see the mine and to meet the president, Mr. Polleys, and investigate all the matters connected with the company, and particularly to find out about the stock and the control from the president, and, if everything was satisfactory, to buy some stock. The complainant had a talk with Mr. Polleys, after seeing Dr. Von Hagen about the purchase of stock. That was the first time witness ever met Mr. Polleys. Witness had been told previously that there was a certificate of 51,000 shares made out to Isaac Purdy and Charles G. Polleys, which represented the control of the company. This was before Mr. Polleys told him. Witness saw the stock certificate book. He did not look through it. He saw no other books of the company. Witness believed the statement by Mr. Polleys.

Richibucto Review - Dec. 15, 1904 The Beersville mine is in a most encouraging condition. The coal supply is first class grade and the daily output is from forty to fifty tons. This will be generally increased as the property is developed."

Richibucto Review - Feb. 4, 1904 Dr. Hugo Von Hagen of New York, has applied for mining licenses to search for minerals on eight lots at the head of Salmon River and its branches lying to the west of Adamsville station."

Richibucto Review - Feb. 4, 1904 Notice. - Notice is hereby given that at the next session of the Local Legislature of the Province of New Brunswick, application will be made for the passing of an Act to incorporate the New Brunswick Central Railway Company, with authority to construct and operate a line of railway from a point on the Intercolonial Railway at or near Coal Branch to the Coal Mines of the Canadian Coal and Manganese Company, Limited, and thence to Richibucto; also to construct and operate a Line of Railway westward from the point of junction of the above mentioned line with the Intercolonial Railway and the New Brunswick Coal and Railway Company's line at or near Chipman with power to lease, amalgamate with or acquire the said last mentioned line as may be mutually agreed on. Dated at New York, United States of America, December twenty first, 1903. James P. Geddes, For self and other Applicants."

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Feb. 11, 1904 The St. John Telegraph of Thursday says:- Hugo Von Hagen of New York, president of the Beersville Coal and Railway Company, was at the Royal Hotel yesterday accompanied by W.R. Townsend, of New York, and Isaac Purdy, of Purdy, N.Y. They were on the way to Kent county to visit the company's coal property and railway there. They were met here by Hon. C.W. Robinson, M.P.P., of Moncton, and Dr. Keith, of Harcourt, and all left for Kent county last evening. There is in mind a project for a railway from their property to connect with the N.B. Coal and Railway Company's line in Queens county and with the idea ultimately of having a route through Fredericton for shipment

Richibucto Review - Feb. 18, 1904 On Wednesday the local government heard a delegation consisting of Dr. Von Hagen, Isaac Purdy, W.R. Townsend, of New York; Hon. C.W. Robinson, of Moncton, Mr. Gilmour Brown, C.E., of Fredericton, and Dr. Keith, of Harcourt, of the Beersville Coal and Railway Company. They were promised a subsidy already earned, and return of deposit of our thousand dollars. The application for a line to Richibucto River, six miles, is to be considered."

Richibucto Review - Feb. 25, 1904 Belgians Quit At Beersville. - Moncton, Feb. 18. - A party of twenty four Belgians arrived in town this afternoon from Beersville, where they have been working in the Imperial Coal Company's mine. The Belgians are on strike for higher wages and are en route for Sydney to try their luck in Cape Breton collieries. The Belgians say they were brought to Canada under misrepresentation. They were told by the steamship agents they would get from $3 to $4 per day but they have only been getting $1.50 per day at Beersville mine. They have worked nearly a month at $1.50 but have now demanded more pay. The Imperial Coal Company offered so much per ton but the men refused this offer and left the mine yesterday. About fifty men altogether were at work at Beersville. Some of the Belgians are so dissatisfied with the condition of things compared with what they were told that they will return home via St. John. Moncton, Feb. 20. - Eleven of the Belgian miners, who came down from Beersville mine Thursday, left yesterday morning for Sydney. The balance of 24 went to St. John with the intention of taking passage back to Belgium. Mr. Polleys, manager of the Imperial Coal Co., told a Times reporter yesterday that the dissatisfied Belgians had been paid exactly what they were promised and were offered just what is being paid the men now at work in the mine. What the strikers asked was so much per day and they declined to accept so much per ton as is being paid other miners. Mr. Polleys says the company pays 80 cents per ton on the broad works which means that the men can mine three to five tons a day without any trouble. Thirteen Belgians refused to join the strikers, and are satisfied to remain at the wages being paid. Mr. James McLaurin, superintendent, at the Beersville coal mine, and Mr. Charles McLaren came down from the mine yesterday."

Richibucto Review - Feb. 25, 1904 Feasted On Cats. - Belgian Miners Are No Respecter Of Animals. - The Belgian miners at Beersville are no respecter of animals in times of feasting. On Sunday last, it is stated, the Belgians at Beersville indulged in a feast, and in consequence of their impartiality with respect to the dishes served, some of the good people of Beersville are mourning the loss of their pet felines. According to the story told concerning the feast, the variety of dishes in the meat line included pork, cat and fox. it is not known that the Belgians have any decided preference for any one of these animals for feasting purposes, but on this occasion they were handy and they were made to do service. The pork was secured from the neighbors, the cat strayed in and one of the miners was fortunate enough to trap a fox a few days before. The fox skin was taken to Moncton and disposed of by the striking Belgians. Richibucto could contribute a few animals of the feline tribe for a Belgian feast and throw in a canine or two at the same time."

Weekly Record - Fri., Feb. 26, 1904 A party of fifteen Belgian miners, who have bee working the coal mines at Evansville, Kent Co., recently, were in St. John Saturday on their way back to Belgium. These men, some of whom are accompanied by their families, came here by different steamers during the last few weeks and are disgusted with the country. They claim to be expert miners and expected to earn three or four dollars a day at the start, but in accordance with the usual custom they were put on the simplest work first to show what they could do and were paid on an average one dollar and a half per day. This did not suit some of them. Others state that the extreme cold is injuring their children's health. They sail on return to Belgium on the Lake Champlain."

Richibucto Review - Jan. 14, 1904 Application for Another Railway. - The local government in session at Fredericton yesterday, 6th instant, were asked for a railway charter which the promoters point out, means a great coal business in Kent county and which at the outset, they say, means the shipment of 500 tons of coal a day. James P. Geddes, of New York, manager of the Canadian Coal Mining Company, asked the government to approve legislation to obtain a charter to build a road from their mine in Kent county to Richibucto, eight miles, and also a road to the I.C.R. six miles to Coal Branch; they also propose to build to Chipman. Mr. Geddes says the company is backed strongly by American capitalists, and has acquired licenses over eighty miles of ground which their claim is, contains 60,000,000 tons of coal of excellent quality. It is of about the same thickness as is found in the Queens county fields, but is continuous for miles. The company intend to build the road to Coal Branch early in the spring, and endeavored to do so this winter, but the engineers advised that that would be too costly an operation because of the frost and for other reasons. As soon as the line to Coal Branch is completed, which they expect will be early next spring, they say they will ship 500 tons a day. They claim they have already spent $140,000 in prospecting and development. The government asked the company to prepare plans of the proposed lines of railway, and to submit a memorial setting forth the facts and showing the financial ability of the company to complete the work. Favorable consideration was then promised. - Telegraph."

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Jan. 14, 1904 Kent County Coal Mines And Railways. - James P. Geddes, manager of the Canadian Coal and Manganese Company, was before the local government in session last week, asking for legislation to obtain a charter to build railway lines in the coal areas of Kent and Queens. He informed the government that the coal beds owned by his Company in the county of kent have been prospected, and contain by estimation, sixty million tons of coal. His proposition is to construct a line of railway from a point on the Intercolonial near Coal Branch Station to the Company's mine at Coal Branch and thence to Richibucto River, a distance of eight miles, which would give them a water terminus at or near Brown's Yard. The Beersville Railway has already been constructed to a point within two miles of the Company's mine, and the question naturally asked is, why Mr. Geddes' Company desire a parallel line to Coal Branch? Why not extend the Beersville line? If we are correctly informed, the Beersville Railway Company's charter contemplates the extension of their line to Mr. Geddes' Company's mine and thence to Richibucto River. The survey of the proposed line has already been begun and its junction with the Intercolonial is within two miles of Beersville Railway junction. The line, as surveyed, extends parallel or nearly so with the Beersville Railway at a distance no greater than two miles from the latter line and at one point approaches within half a mile of it. Of course if Mr. Geddes' Company propose to construct the railway at their own expense, there is no reason why a charter should not be granted then to do so, but if they expect to receive the usual subsidies, the government would not be justified in spending public money on an enterprise which can only result in an injury to a line already subsidized and in operation. The proposal is also made to construct a railway from Coal Branch to Queens County, connecting with the line of the New Brunswick Coal and Railway Company at Chipman. A charter has already been granted to extend the Kent Northern Railway to Chipman, and there would be the same objections to building two parallel lines through the same district. Indeed it was claimed by some of the members when the bill was before the legislature last session that the Kent Extension would interfere with the Canada Eastern, though the two lines traverse altogether different sections of the province. The government, which has always striven to encourage and promote the development of the mining industry, will no doubt do all in its power to encourage any legitimate attempt to open up our coal fields. It has asked Mr. Geddes to furnish reports of the experts and he has promised to do so. He has also promised to prepare plans of the proposed lines of railway and to submit a memorial setting forth the facts and showing the financial ability of the company to complete the work. This will, however, be only a matter of form, as it is understood that several wealthy men are behind the scheme. Mr. Geddes further assures the government that on the completion of the branch to the Company's mine an output of five hundred tons of coal per day will speedily be increased to one thousand tons. The work already done and the enterprises in view justify the conclusion that Kent County will soon become a great coal producing district."

Richibucto Review - Jan. 14, 1904 Mr. Chas. G. Polleys and the heirs of Wm. Polleys have made applications for mining licenses to search for minerals on one square mile to be selected from license to search No. 542 Coal Branch."

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Jan. 28, 1904 Imperial Coal Co.'s Operations. - Mine Almost Ready for Working on a Large Scale. - A Times representative visited the coal company's mine at Beersville the other day in company with Mr. C.G. Polleys and was considerably surprised at the change which has taken place in that part of the country within the last few months, both

as regards the development of the coal areas and the means of transportation between the I.C.R. and Beersville. As readers of the Times are already aware, the Beersville railway, the construction of which was commenced a little over three months ago, has been completed. The road runs from Adamsville to Beersville, a distance of seven miles, and the Imperial Coal Company has the transportation facilities necessary to the successful operations of their mine. The Beersville road runs through a well wooded country for the most part and in time there will be no doubt be considerable traffic in the wood business. On the Beersville end of this line, there is a very considerable quantity of hardwood, and at Beersville surrounding the Imperial Coal Co.'s mine the country is quite thickly settled and the farming section in a good state of cultivation. Up to the present time the operations of the Imperial Coal Co. have been almost wholly confined to developing their property. A considerable quantity of coal, however, has been taken out, and the development stage may now be said to be about through with. Since the Beersville railway has been opened about three hundred tons of coal from the Imperial Co.'s mine has been shipped over it, and previous to its opening some twelve hundred tons had been shipped from the Beersville mine. Mr. Polleys, the manager, feels very sanguine as to the prospects of the company and his views are shared by the superintendent of the mine, Mr. James McLaurin. Commencing on the bank of the Coal Branch river the Imperial Coal Company has run one level a distance of nearly one thousand feet and a second level about fifty or a hundred feet, while a number of trial pits have been opened up for a considerable distance along the face of the mountain, from which coal is now being taken. The main level, as well as the side levels, are substantially timbered, and all of the work that has been done is of a permanent character and bears the stamp of paving the way for extensive working of the property. The splendid natural drainage has the effect of keeping the mine very dry and thus removes one of the great drawbacks in coal mining. The work in the main tunnel is well advanced and in a short time it is expected that the company will be taking out 200 tons a day. The best of facilities are afforded for inexpensive mining. Being on the side of a mountain there is a natural dump for refuse that greatly decreases the cost in this respect. At present a bank head on the top of the hill about midway between the two levels, is under course of construction and is well on towards completion. A hoisting engine and other up-to-date machinery will be put in and when in operation will be capable of hoisting a large quantity of coal. The process of raising the coal to the bank head is very simple and inexpensive. After being brought to the mouth of the levels the cars will be run along the face of the hill a distance of twenty five or thirty yards and the coal dumped into the cars on the incline railway to be hoisted to the bankhead. By an automatic arrangement the coal on reaching the bankhead will be screened and classified and loaded into cars without much of the expense incurred in most coal mines at the bankhead. All the work about the mine is of a substantial character, and the company has good reason to feel that they have just begun the development of a coal area that will ultimately be mined on an extensive scale. Eleven Belgian miners arrived at the mine the other day, and Manager Polleys and Superintendent McLaurin are so well pleased with their work that an effort will be made to get another lot of them as soon as possible. Mr. Charles McLaren, formerly with the N.B. Petroleum Co., has been an been engaged as accountant at the mine. -- The following are the officers of the Beersville Coal and Railway Company: Dr. Hugo Von Hagen, New York, president, Dr. M.F. Keith, Harcourt, vice president, Hon. C.W. Robinson, Moncton, secretary, C.G. Polleys, Moncton, general manager, Isaac Purdy, New York, treasurer. Messrs. Von Hagen and Purdy hold large interests in both the railway and coal properties and have made frequent visits here during the progress of construction. They have worked indefatiguably with those locally interested for the success of both concerns and are much pleased with the results so far attained. Messrs. Von Hagen and Purdy are here at present in the interests of development of both the coal and railway properties. - Times."

Richibucto Review - Jan. 28, 1904 Fifty Belgian miners, who recently arrived in this province, have been engaged to work in the Beersville coal mines. Most of them are married men. They intend sending for their wives and families next spring."

Richibucto Review - Jul. 28, 1904 Mr. C.G. Polleys returned on Saturday from a business trip to New York. He was accompanied here by Mr. John Schreyer, Mr. and Mrs. Chas. F. Achenbach, and Mr. Louis Wendel, jr., prominent business people of New York. The above gentlemen have interested themselves in the Imperial Coal Co., of which Mr. Polleys is President. Messrs. Schreyer and Wendel have visited the property at Beersville and Mr. Achenbach and Mr. Polleys go up today. - Moncton Times."

Richibucto Review - Jun. 16, 1904 At the annual meeting of the Canadian Coal and Manganese Co, in the office of Mr. E.A. Reilly, Moncton, Tuesday, the old board of directors were re-elected."

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Mar. 10, 1904 The Case of The Belgian Miners. - Surveyor General Shows Government Free From Criticism. - A good deal has been said about the alleged grievances of some Belgian miners who came out to this province to work in the coal mines, and some of whom have been sent home again, at the expense of the Belgian government. The story told by the miners was to the effect that advertisements inserted in Belgian papers by the C.P.R. at the request of Mr. Duff-Miller, agent general for N.B. in London. offering men $2 per day and stating that wages ran as high as $4; and that they were convinced they were asked to come out here to work for the government. They say they came here, were sent to Chipman, but were not wanted there and came back and were sent to Beersville, where they found the highest wages were $1.50 per day. Later they were informed they would have to work by the ton, but refused, claiming they could only earn $1 that way. Twenty five went on strike, got their time checks and came to Moncton. Here they sat they refused their money at the company's office. Thirteen sold their time checks at 5 per cent discount and went to Nova Scotia. The

other twelve came to St. John. One went from here to Montreal, and the other eleven, through the agency of the Belgian consul, were sent home to Belgium, sailing last Sunday. The Telegraph has been permitted to see the correspondence which has taken place between Surveyor General Dunn and the management of the Imperial Coal Company in reference to this subject, and has also had an interview with the surveyor general on the matter. The letter from Dr. Keith, of the Imperial Company, to whom the surveyor general wrote as soon as he learned of the alleged grievance of the miners, states that these men became dissatisfied without any apparent reason and also that a number of other Belgian miners have remained in the company's employ and are well satisfied. The Telegraph also learns that at the adjoining mine, owned by the Canadian Coal & Manganese Company, of which Jas. P. Geddes, of New York is prominent, are also a number of Belgian employees who are proving to be good men and seem to be thoroughly satisfied. The surveyor general also informed the reporter that, upon arrival of these men here, everything possible was done to secure them employment as speedily as possible and that when they went to Kent county they thoroughly understood the wages which they were to receive and his information from the officers of the company was that, as far as the company was concerned, the understanding had been carried out in good faith. The government had nothing to do in the matter, he said, beyond having its agent general in England issue an advertisement stating that employment would be given in New Brunswick for 100 miners and he had been careful to instruct the agent general to inform all applicants what wages would be received. The portion of the party referred to in the Globe's article were evidently without means and he had gone as far as he felt justified in doing in assisting them. It was one of the difficulties connected with immigration that there would always be a certain proportion either unwilling to work or who were easily dissatisfied and, while there were complaints from these people, there were a considerable number not only of Belgian but English coal miners, who had obtained employment in the mines of Queens and Kent counties and who seemed to be perfectly satisfied. I.J.D. Landry, Belgian consul here, wrote to Ottawa in connection with the matter placing the blame on Mr. Dunn and his department. Mr. Dunn was asked by the Ottawa authorities to state his side of the case and he has done so. There the matter is at present. - Telegraph."

Richibucto Review - May 19, 1904 P.S. Archibald, C.E., has completed a survey of the proposed branch from the I.C.R. to the Canadian Coal Company's mine at Mount Carlyle, Kent Co. The length of the line will be six miles. Brown Brothers, contractors for the Beersville Railway, have about 35 men clearing the sides of the railway along its entire length. They will have quite a quantity of wood as a result of their labor."

Richibucto Review - May 19, 1904 ADVERTISEMENT: Notice of General Meeting. -- Canadian Coal and Manganese Company, Limited. -- Notice is hereby given that a General Meeting of the Shareholders of the Canadian Coal and Manganese Company, Limited, will be held at the Office of E. Albert Reilly in the city of Moncton in the County of Westmorland and Province of New Brunswick, on Tuesday, the Fourteenth day of June, A.D., 1904, at the hour of Three o'clock in the afternoon for considering and sanctioning a Bye Law increasing the number of Directors of the said Company from Five to Seven. The transfer Books and Register of the members of the Company will be closed on the Third day of June, A.D., 1904, to the Fourteenth day of June, A.D., 1904, both days inclusive. Dated at Coal Branch in the County of Kent in the Province of New Brunswick, this sixteenth day of May, A.D., 1904. By order E. Albert Reilly,

Richibucto Review - Nov. 17, 1904 Application has been made to the Surveyor General, for license to search for minerals on mining block, No. 354 on Molus River."

Richibucto Review - Oct. 6, 1904 ADVERTISEMENT: Wanted. - At once, at Imperial Coal Company's Mines, Beersville, Kent Co., miners and mine laborers. Apply at mines. J.F. Modadrin."

Richibucto Review - Oct. 6, 1904 Milledge VanBuskirk, of Harcourt, has applied for license to search for minerals on four square miles of land known as Mining Block, No. 270, on Richibucto at the mouth of the Molus River; and Melissa McLeave has applied for license for same purpose on five square miles situated on the Molus River above the first grant."

Richibucto Review - Sep. 13, 1904 Dr. Hugo Von Hagen has applied for license to search for minerals on mining block No. 257 on Richibucto river below Coal Branch and Bass River."

Codes: S6 / IDX_Names: Kent County Coal;
Richibucto Review - Sep. 15, 1904 Beersville Railway Opens For Business. - Time Table is Out For The Nine Mile Road. - Harcourt, Sept. 12. - The time table for the Beersville railway is announced. The line runs from Mount Carlyle to Adamsville, nine miles. A mixed train leaves Mount Carlyle at 11 and reaches Adamsville at 11.40; returning leaves Adamsville at 13 and arrives at Mount Carlyle at 13.40. At present there are thirty men employed at the Beersville coal mine. The coal sells quickly, about all the available output of the mine being contracted for in advance. The mine at Mount Carlyle, which owing to litigation between Messrs. Polleys and Seeley, had been closed down for a time, has reopened. A full staff is not yet engaged, but last week about seven men were working on the premises."

Richibucto Review - Sep. 29, 1904 Mr. J.R. Wilson, superintendent of the Canadian Coal and Manganese Co., at Harcourt, is in the city. It is the intention of the company to thoroughly develop this property. The railroad from Adamsville has been opened up to the mines and about three cars of coal are being shipped daily. Mr. Wilson is a thoroughly competent man, having had experience throughout British Columbia. He was also for a while connected with the Springhill mines. -

Richibucto Review - Jan. 5, 1905 Mine Kept Busy Now. - Manager Polleys Tells of the Very Rapid Development of the Property at Beersville, Kent County. - (St. John Evening Times.) - C.G. Polleys, president and general manager of the Imperial Coal Co. Ltd., which is operating in Beersville, Kent Co., is at the Royal and will return to Moncton tonight. Mr. Polleys, in conversation with a Times reporter, says that the company is increasing its tonnage output right along. There have been some detentions due to breaking down of, or accidents to trains which have had a tendency to handicap the mine in shipping coal as promptly as would be desired; but of late the conditions promise to be more favorable and the output will be materially increased. The occasional tie ups in the Beersville railway, which has only been built within the past three years, have, during the past two or three months, interfered with the shipment of the coal to the I.C.R. at Adamsville, whence it is transported to destination. Mr. Polleys says the coal bins are full and contain 300 tons. When the bins are full there is no receptacle for the surplus coal, consequently the coal might as well be left in the mines and not have it deposited, promiscuously and re-shovelled into the cars. From the mine the coal is taken to the bank head and shot into cars on the Beersville railway, and from there carried to the I.C.R. Mr. Polleys says the daily output is between 30 and 40 tons. About three months ago when active operations were resumed in the mine, the output was between 8 and 10 tons a day. The next month it increased to 18 tons. Today it runs in the neighborhood of 30 tons. Next month this output will be increased proportionately providing the branch railway is kept in operation. At the present time there are about 22 men underground and 10 men on the outwork. In the course of time and with the development of the property the number of employees will be increased as occasion demands."

North Shore Leader - Aug. 9, 1907 A Rich Coal Find. - Prospectors Said To Have truck Eight Foot Seam on Caraquet Shore. - Messrs. Milledge Vanbuskirk and John Fearron of Harcourt, have had men at work, for some time on the Caraquet shore in Gloucester county, prospecting for coal areas taken up by them. They received word last week that the drill has passed through eight feet of coal and if this is verified, it would likely prove a bonanza. Mr. Vanbuskirk, is quite confident that the men are not mistaken and that coal exists in large quantities on the Gloucester coast. He is so confident that he and his partners are taking up further areas."

North Shore Leader - May 8, 1908 Trouble Over Mine Property In Kent. - New York Merchant Prince Figures In It. - Fredericton, May 6. - Troubles existing in the Imperial Coal Company, owning a coal mining property, reached a climax when, last week, Surveyor General Grimmer had a hearing on the question of ratifying a mortgage and chattel mortgage given by the company to Katherine G. Polleys, wife of the manager of the property. The mortgage is for $30,000, and was given on two mining leases issued by the crown lands department, and the surveyor general was asked to ratify the transfer of lease. Protest against the transfer of the leases in accordance with mortgage was filed by Mr. William O'Neill, one of the heavy stockholders, the New York merchant prince, with large establishments on 6th avenue, and he was to have been represented at the hearing which took place on Friday by W.B. Chandler, K.C., of Moncton, who, however, did not appear. George Harris, of Moncton, appeared for the company. Mr. O'Neill claims fraud and some time ago started a suit in the equity court, but at the hearing Mr. Harris claimed that this suit had not been followed up and was now out of court. The surveyor general made a proposal that if the company paid $600 owed in royalties and took the risk of an equity court case by Mr. O'Neill, he would ratify the transfer of leases, which Mr. Harris was glad to accept."

Campbellton Graphic - Sep. 3, 1909 Coal Discovery Made in Kent. - Farmer in Act of Boring Well When He Strikes Seam. - Rexton, Aug. 31. - Coal has been discovered on the farm of Thomas Murphy, jr. at South Branch. A few days ago Mr. Murphy was in the act of boring a well when he struck the seam of coal. It was 12 feet from the surface and was 4 feet in depth. Mr. Murphy came to Richibucto and staked his claim, and the prospects will be looked into at once."

Telegraph Journal - Sep. 18, 1923...The Premier predicted extensive development during the next year of the coal fields of this province as a result of the construction, now underway, of the Canadian National Railways branch line from Chipman to Minto, and the reopening of the Beersville mines with substantial capital behind the enterprise."

Codes: S6 / A6 / IDX_Names: Kent County Coal; Westmorland County Coal;

Moncton Transcript - May 15, 1893 and Richibucto Review - May 18, 1893 Indications of Coal Deposits. - Mr. S.J. Wilson, of Shediac, an artesian well borer, was in town to-day.In conversation with a Transcript representative as to experiences in boring, he said that recently on one of the islands 2 miles off the north shore of Westmorland he sank an artesian well for a lobster factory. At 200 feet there was salt water, and at 240 feet an overflow of fresh water. Speaking of coal deposits he said from observation in boring he should think the most likely place for coal in this vicinity is at Grand Digue in Kent Co., opposite Shediac. There was 31 feet of shale and several inches of clear coal; and where there is so mich shale I should think there would be coal if one followed the lead in the right direction. On Cocaigne Island about 23 feet from the surface I found coal and iron mixed for three or four feet. At Cocaigne Bridge I also came across coal at a depth of forty feet from the surface. It was rather dirty very fine and mixed with shale. I came across nineteen inches of clear coal in one of the borings. At Lewisville on the Francis property I found coal and manganese. The coal almost looked like

Moncton Daily Times - Mar. 29, 1910 Canadian Consolidated Mines Company in Receiver's Hands. - Organized With Authorized Capital of $5,000,000, And Has Coal Areas In New Brunswick; Some Of The Stockholders From This Province. - (Special to The Times). - Boston, Mass., March 28. - Charging that the corporation has become insolvent through negligence or gross mismanagement, Alvin D. Woodbury, of Portland, a stockholder, today petitioned the Supreme Court at Augusta for a receiver for the Canadian ConsolidatedMines Co., Ltd., a five million dollar concern, which owns extensive soft coal areas in New Brunswick. The question of appointing a receiver will be decided Wednesday. The court issued a temporary injunction to prevent the company's officials from holding any stockholder's meetings, issuing or selling any bonds or proceeding with its business. New York, Boston and New Brunswick people own stock in the company, which is incorporated under Maine laws. New York, March 28 - Being unable to meet its obligations, the Canadian Consolidated Mines Co., Ltd., with offices in this city, and an authorized capital stock of $5,000,000, a holding company for several mining companies in New Brunswick and Nova Scotia, was placed in the hands of receivers today. The liabilities are $50,000, the assets were not announced."

Codes: T3 / IDX_Names: Dover Oil;
Moncton Daily Times - Sep. 12, 1879 Dover. - The Oil company who are engaged inpreparing to bore for oil in this place, are rapidly pushing their work along and expect to be able to commence in about another week. - Post."

Moncton Daily Times - Sep. 24, 1879 Boring Commenced. - The parties prospecting for oil at Dover, have recently commenced boring. There are said to be no surface indications, at least none of much importance, in the section at present being worked, but oil no doubt exists, whether in paying quantities or not, in that region. Mr. John Elliott, of Moncton, is associated with a number of Americans in the present operation."

Codes: T3 / IDX_Names: Dover Oil;
Moncton Daily Times - Sep. 30, 1879 Boring for Oil in The Wilderness of Dover. - The bare fact that parties had commenced boring for oil at Dover, has been frequently mentioned in the Times, as the project assumed various phases. Since boring has actually commenced, the interest taken in this speculation has rapidly increased, and now almost every day the scene of operations is visited by a number of people from various sections. The place where boring is now going on, is on the farm of Mr. Christian Colpitts, in Lower Dover. Thisfarm is on a cross road leading from the Dover Road to the Dorchester road, and is probably not more than six miles below the gravel beds that are worked by the Messrs. McFarlane. The parties have cut a road about a mile and a quarter in length through the forest on this farm, to a valley of about one hundred feet in width, through which a small stream runs, called Colpitts run, by the prospectors. At the foot of this valley, then, with its natural walls rising to a height of about 50 feet, and one of the most beautiful localities in the world to witness a sunset, these speculators have taken up their abode for the purpose of making a protracted siege on the bowels of the earth - to speak more plainly, boring for oil. The company have quite a range of buildings erected and the sight of the machinery in such a strange place is certainly novel enough. The buildings are ranged on either side of the run before referred to, and consist of a boiler of about twenty five horse power; an engine house which contains a compact engine capable of being run up to twenty horse power; a long shed in which are the shaft for operating the walking beam and the sand pump wheel and gear; and a derrick, in which the drilling is going on. In order to prevent accident from gas, should the parties be successful in striking the sand beds in which the oil is supposed to exist, the boiler house is situated about thirty feet from the engine house, and the engine house is also about twenty feet from the derrick, being connected by the sand pump shed before referred to. The boiler gets water from the creek by means of a pipe, and another pipe conveys the steam to the engine house. The walking beam, - the lever that raises and drops the drill, is of massive proportion, being 20 feet long, 18 inches square, and is hinged in the centre on an upright post called a samson post, 20 inches square. The derrick is 72 feet high, 20 feet square at the base and 3 1/2 feet square at the top. The tools necessary for boring, a drill, jars and sinker, weighing over 2000 pounds, are in the derrick. There is also a blacksmith shop in the derrick, for pointing the tools. In the above we have as nearly as possible described the location of the present operations, and the mode of boring. Drilling has only been going on a little over a week, the company being delayed owing to trouble they had in procuring a suitable boiler to carry on operations, and a depth of 60 feet had been reached up to Saturday. Thirty to eighty feet per day of twenty-four hours can be accomplished in good rock cutting. The company has not yet got fairly settled to work. OnSaturday a bed of bastard limestone or flint rock was touched, and only two feet bored out. The practical borer is Mr. Freebury, an Englishman, but who has operated in Pennsylvania for a number of years. Among those interested in prospecting are Mr. R.S. Merrill and other gentlemen who own wells in Pennsylvania. Both these gentlemen and two other Americans are at present staying at Colpitts run. It is the intention to bore till the oil sands supposed to exist are struck, if in the neighborhood of 2000 feet of cable, capable of being stretched some three of four hundred feet more.

The hole that has been made by the drills heretofore, is eight inches in diameter. This, however, was to have been reduced to five and one half inches before operations commenced yesterday. With a smaller space to drill, and intended arrangements to secure dry boring carried out, it is expected much better progress will be made hereafter. It may be explained that there are not the slightest indications of petroleum where the present operations are being carried on. This, however, is nothing either way, as in the Bradford oil district, Pennsylvania, where the American parties here now have operated, there are no indications. The prospectors take their cue from the operations of speculators in the Dover district some thirteen years ago, at which time such an excitement existed. At that time three wells were opened by Messrs. John Elliot of Moncton, and Shutterly, an American, one in Memramcook and two in Dover, which have yielded oil in quantities ever since, though not sufficient to make it an object to gather the products. The place where operations are now being carried on lies between these wells, as it is supposed that the old Memramcook and Dover wells are merely the tributaries where the oil has found vent, and that a great mass of petroleum exists in the intervening space. Should the parties ultimately be successful, it is proposed to refine the oil on the shore, which is not two miles distant, and the find will be an

Chignecto Post - Nov. 16, 1882 Memramcook.- The American Company who were boring for oil, in rear of St. Joseph's College, lost all their working apparatus by fire on Saturday night. The origin of the fire is not known."

Chignecto Post - Oct. 26, 1882 Mr. Rufus S. Merill, also of Boston, has taken upconsiderable land near St. Joseph's, Dorchester, for the purpose of boring for oil. They have several wells bored and in one, at the distance of thirteen hundred feet, they broke their drill, and have experienced no little difficulty in getting it out. Mr. Merill has obtained the services of a Bradford gentleman, and they hope in a short time to either drill through the old drill or get it out. Last Friday they unfortunately lost their pump with five hundred feet of rope attached, which will delay them some considerably; though in spite of thirteen hundred feet of water, a heavy iron drill and pump and rope, they manage to get about thirty gallons of lubricating oil per day, which flows to the surface. Mr. Merrill has returned to Boston for the purpose of forming a Company and obtaining machinery and will return in a week's time."

Chignecto Post - May 31, 1883 and Moncton Daily Times - Jun. 1, 1883 Memramcook.- The Oil Co. are still working at their well, they are about 1,600 feet deep now. Good results are expected."

Chignecto Post - Jul. 17, 1884 The Americans, who are prospecting for oil at Dover intend to suspend operations; the low price of oils in N.S., offering no inducement to continue."

Codes: T3 / IDX_Names: Dover Oil;
Chignecto Post - Jul. 8, 1886 A company of Americans are boring for oil between this place and Memramcook. They have six or seven men employed."

Moncton Daily Times - Oct. 20, 1891 Rich in Coal and Oil. - John Duncan, brakeman of St. John has obtained a mining license to search over five square miles of land in the parish of Dover, Westmorland County. Part of the land covered in the lease is owned by Mr. Duncan, and experts have informed him that the area is rich in coal and oil. - Telegraph."

St. Andrews Beacon - Sep. 24, 1903 The game season has opened at St. Joseph's, Memramcook. An oil well was 'shot' the other day."

Weekly Record - Fri., Sep. 25, 1903 Mr. M. Lodge of the N.B. Petroleum Co. received word from Dover recently that well No. 29 has filled up with oil and is steadily flowing. This is the only flowing well yet struck. The Dover district promises better than any of the other so far."

Weekly Record - Fri., Sep. 25, 1903 The New Brunswick Petroleum Company have had a very pleasant experience in connection with well No. 29 at Dover. The well was bored within a few days and the oil sands struck on August 6th, and the boring rig was then removed to another site, and a pump attached to the new well. On Thursday it was discovered there was no necessity for a pump, that the oil had risen under natural pressure, above the level of the pump and was flowing away. A pipe was laid as quickly as possible, and the oil is now running under natural pressure into a tank. It is the first case of an overflow well struck in the entire field. - Moncton Transcript."

Codes: T3 / E2 / IDX_Names: Dover Oil; Oil and Gas - Kings Co.;
Gazette - Sep. 21, 1899 Preliminary work for oil boring has commenced near Dover, about six miles from Moncton. The boring will be carried down 3,000 feet, and the first well, it isestimated, will cost $7,000. The experts say that boring in previous tests of this section of country was not deep enough."

Codes: T3 / P1 / IDX_Names: Dover Oil; St. Joseph Oil;
Chignecto Post - Nov. 13, 1879 Boring for oil at Dover has been suspended. The machinery has been put in operation on the Dominic Gaudet farm at Memramcook."

St. Croix Courier - Apr. 12, 1883 Dorchester is excited over the discovery of aflowing oil well on the property of Mr. John Dickey, a mile and a half from the corner. The oil runs at the rate of six gallons a day."

Moncton Daily Transcript - Aug. 18, 1891 A Westmorland Oil Well.- Quite recently a crude oil well was discovered in Westmorland county, and the owner of the property has sent samples of it to St. John for analysis. This oil is used extensively as a lubricant, and when put through a refining process could be utilized for lighting purposes. The oil, it is said, gushes from a spring of water and has been running to waste for a long time. Some 10 years ago a similar oil well was discovered at Memramcook, and it is believed now that if borings were made oil could be found in many places in

Moncton Daily Times - May 30, 1894 and S.J. Gazette - May 31, 1894 To Bore for Oil. - A number of American capitalists are making preparations for boring for oil at Belliveau's village, Memramcook. Mr. Griffin of New York,"

Codes: T8 / IDX_Names: Gloucester County Coal;
Daily News - Mar. 9, 1877 The Gloucester and Restigouche Coal Measures. - In the conversation that took place in the Assembly over the item in the estimates for the use of the Diamond Borer which Mr. Tweedie found such a sparkling subject, Mr. Phillips made an assertion the accuracy of which ought to be tested as early as possible. He asserted that there were first rate indications of coal in Restigouche and Gloucester. We know nothing of Mr. Phillips' geological and mineralogical acquirements. Nor do we know whether in making the declaration noted he was expressing a conviction based on his own observations and inductions or on the testimony of experts. But presuming that he knew well what he was saying, and realized the responsibility attaching to him in making such an assertion, it seems to us highly desirable that the so-called first-rate indications should be thoroughly tested. The discovery of a workable deposit of good coal in a situation favorable to transportation by rail or by sea, in either Gloucester or Restigouche, might prove of immense value to the Province. A large and well situated coal deposit of superior quality brought to light in one of those counties, would probably become the seat of a most valuable industry. A discovery of this sort might go far to solve the problem of the establishment of a flourishing trade between the Upper and Lower Provinces. A good and easily worked coal mine in one of the two Northern Counties named would have decided advantages over any worked in the Cumberland, Pictou and Cape Breton coal basins, for the prosecution of a trade with Quebec and Ontario, and might be able successfully to compete for the supply of those Provinces with any of the American soft coal mines. If such might be the case the indications spoken of by Mr. Phillips cannot be faithfully tested too soon. If the government should not be able to dispose of the Borer, so fruitful, at least, of jokes in Supply at something like its value, it would be well for them to send it to the Northern Counties to work amid the indications boasted of. And if the Government should part with the Borer, possibly private enterprise might be induced to subject the carboniferous strata of the Northern Counties to examination. By some agency or other at all events, we trust, the coal mine question up North will be early settled."

Evening Gazette - Feb. 10, 1893 Coal in Gloucester. - Ottawa, Feb. 8 - Mr. Burns, M.P. for Gloucester, had a long interview today with Hon. Mr. Daly, minister of the interior, concerning the discovery of large seams of coal on the line of the Caraquet railway. The minister asked for samples of the coal before replying to Mr. Burn's request that a member of the geological staff be instructed to make an official examination and report, but intimated that the matter would be very favorably considered and promptly acted on. Mr. Burns informed the minister that a sixteen inch seam had been located within easy distance of Shippegan harbor, and that the coal was pronounced first quality by experts, and that it was now being used to heat the Caraquet road's cars. He pressed on Hon. Mr. Daly the importance of the trade being of the coal mines hundreds of miles nearer to Montreal by rail or water than the Nova Scotia pits, as well as the fact that they would render the I.C.R. independent of the newly constructed Nova Scotia coal syndicate."

North Shore Leader - Sep. 20, 1907 Caraquet Coal Seam. - Mr. J. Kelly, provincial inspector of lighthouses and other lighting arrangements along the coast, was in the city yesterday, enroute from Caraquet to Cape Tormentine. Mr. Kelly while on his official trip to Caraquet, visited the coal seam recently uncovered there and says it is a particularly good one, being near the surface and four feet in depth. - Moncton Times."

North Shore Leader - Aug. 28, 1908 Coal Found At Tilley Road. - A Boom For Tracadie Should The Mine Turn Out Good. - A correspondent of the Leader at St. Isadore writes:- A large quantity of coal has been found in small seams in the Tilley Road Coal mine but not in body enough to pay. The Tracadie Coal Co. who owns the claims, are very hopeful of their success. Mr. Bourgeois, the manager, has decided to bore down until a 7 foot seam is found, and from the last report of Mr. York, the engineer, a few days time will suffice to show the depth desired as the seams found in drilling are increasing in thickness every layer. It will be a boom for St. Isadore and Tracadie. A railroad will be built to the mine if it turns out

Campbellton Graphic - Feb. 19, 1909 St. Isadore Coal Mine. - Wm. Fahey, of Bass River, Kent Co., passed through Bathurst on Monday for St. Isadore, Gloucester County, in connection with the coal mine being opened there. Mr. Fahey is associated with John Fearon, M. Vanbuskirk and the Robertson Brothers. The government steam drill has been at work there for some time. At present a seam of 30 inches has been found which at the water's edge crops out at 15 inches. The company feel assured of having a valuable property."

Campbellton Graphic - Feb. 26, 1909 Gloucester Coal Is Turning Out Well. - Large Seam Stuck At Less Than 500 Feet From Surface. - Drill At Work. - Wm. Fahey of Bass River, Kent Co., and M. VanBuskirk of Moncton, spent last week at St. Isadore, Gloucester Co., in connection with coal mining development in that section. Others interested in the operation are J. Ferron and Roberston Bros. The Government steam drill is at work, and at depth of 24 feet, they went through six inches of coal, while at 36 feet a seam of 30 inches was struck. At a depth of 498 feet last week the drill went through a seam of four feet. In consequence of this latest strike, the company are naturally feeling quite jubilant over the outlook."

Campbellton Graphic - Mar. 9, 1909 Big Coal Strike At St. Isadore. - Prospectors at Work Drill Through Four Foot Seam of Good Coal. - Are Enthusiastic. - That there was coal at St. Isadore has been known for some time, but it was thought that only small seams were to be found. A number of gentlemen were confident that coal existed there in abundance and a company was formed, in which several Gloucester and Kent County men are interested to explore the district at St. Isadore. Considerable preliminary work was done last fall and this winter the government drill has been at work for some time. At various depths seams of coal have been bored through, some of them only a few inches and one at least over two feet deep, but last week at a depth of about five hundred feet a seam four feet thick has been bored through. The promoters are very enthusiastic and no doubt a strong company will be organized to develop the property. With abundance of coal and iron in Gloucester county, with its present fishing and farming wealth, that county bids fair to be the most

Codes: T8 / IDX_Names: Gloucester County Coal;
North Shore Leader - Mar. 12, 1909 Coal at St. Isadore. - George Robertson of Bathurst has struck a seam of coal at St. Isadore, near Lower Caraquet, four feet nine inches thick, at a depth of five hundred feet from surface."

Campbellton Graphic - Feb. 8, 1910 Mining Prospects in N.B. - Mr. M. Lodge, of Moncton, the well known mining promoter, arrived in thecity yesterday en route home from Montreal. When asked with reference to the reported discovery of coal in Gloucester county, Mr. Lodge said that he anticipated great development along other lines in the near future. He thoroughly believed that the prospects for mining were better in New Brunswick today than they were in Nova Scotia or Ontario. - Standard."

Codes: U1 / IDX_Names: Sunbury County Coal;
Miramichi Gleaner - Sep. 17, 1864...We learn that valuable deposits of coal of a superior quality have been discovered in the neighborhood of Oromocto Lake in close proximity to the line, which promises to yield abundant supplies; preparations are now being made to work these mines, and there is every prospect that their yield will afford large employment to the

Moncton Daily Times - Apr. 28, 1892 Coal in New Brunswick. - A Fredericton despatch says: Prospecting for coal near Cork and Tracy stations, on the Canadian Pacific railway, will soon be begun on a large scale by New York capitalists. Shale has been found there similar in appearance to that overlying the famous Albertite deposit in Albert County."

Weekly Record - Fri., Aug. 3, 1894 It is proposed to form a company with $500,000 capital to operate the coal veins recently discovered at Fredericton Junction."

S.J. Daily Sun - Aug. 31, 1894 Parker A. Nason and Wesley D. Nason, of Gladstone; Edward Moore, of Fredericton, and Luke E.M. DeWitt and Daniel DeWitt, of Blissville, seek incorporation as the Oromocto Coal Mining company, with a capital stock of $40,000 in ten dollar shares."

S.J. Daily Sun - Jul. 24, 1894 Great Faith in the Coal Mines. - Fredericton, July 23. - Edward Moore of this city has great faith in the coal mines lately discovered at Fredericton Junction. The others interested in this new mine are Daniel Dewitt and Wesley Nason. A prospectus is now being prepared, and the stock will soon be put upon the market."

St. Croix Courier - Jul. 26, 1894 Coal in paying quantities and of good quality has been discovered about four miles from the C.P.R. station at Fredericton Junction."

S. J. Gazette - Nov. 26, 1894 The Oromocto Mining Company have resumed operations at their coal mine at Centre Blissville. They are working at a seam of coal ten feet below surface and about twenty inches thick. There are two thin layers between this seam and the surface. The company intend to have a diamond borer at work in a few days."

N.B. Reporter - Jan. 2, 1895 Oromocto Coal Mining Co. - The Oromocto Coal Mining Company elected the following officers last Thursday; Edward Moore, president; Wesley B. Nason, vice- president; Parker A. Nason, secretary; Luke C.M. DeWitt, treasurer."

S.J. Daily Sun - May 18, 1896 Blissville. - The Oromocto Coal Mining Co. while boring for coal lately, found a vein twenty-two inches thick, seventeen feet below the surface and another vein thirty-eight inches thick, ninety feet below the surface, in a distance of a quarter of a mile."

Chignecto Post - May 21, 1896 The Oromocto Coal Mining Co., while boring for coal lately, found a vein twenty two inches thick, seventeen feet below the surface, and another vein a quarter of a mile away twenty eight inches thick, nineteen feet below the surface."

Weekly Record - Fri., May. 29, 1896 The Oromocto, N.B. Coal Mining Co., while boring for coal lately, found a vein twenty-two inches thick, seventeen feet below the surface, and another vein a quarter of a mile away twenty-eight inches thick, ninety feet below surface."

Codes: U7 / IDX_Names: Queens County Coal;
St. Andrews Standard - Jan. 12, 1870 Valuable Coal Discovery. - A week or more ago a some what extensive bed of coal was discovered in Clones Settlement, in Queens County. A portion of it is on land belonging to Mr. Wm. Wilson, but it is seen to crop up through the surface at places extending over a mile square. The place where the discovery has been made is in the upper part of the Parish of Petersville on the banks of one of the tributaries of the Nerepis Stream, and about three quarters of a mile from the road running through Clones Settlement. This road runs at right angles to the Gagetown Road. There is no doubt that the deposit is large, and that the article is of a fair quality, but the chief difficulty appears to be the distance from the market, a distance so great as to render the coal, at present, valueless, except for local consumption; but this is not much of a consequence in a well wooded district. The Western Extension Railway is the most convenient means of conveying the coal to market, and the nearest point on this road is at Welsford Station, a distance of about 15 miles. Since the discovery of the coal the blacksmiths in the vicinity have been using it in their forge, and they pronounce it superior for their purposes to the article they have been getting from St. John, as it does not contain the same amount of sulphur. A fair sample of the coal, brought from the spot by Mr. Oliver Emery, who visited it a few days ago, may be seen at this office by those interested. - Globe"

Daily Telegraph - Jan. 12, 1870 More Coal. - A specimen of coal found at Clones Settlement, Queen's County, a mile or two off the Gagetown road, has been left at this office by Mr. Oliver Emery, of South Wharf. It appears to be good specimen of house coal. We understand it is found in considerable quantities, and crops out at intervals over a tract of

Moncton Daily Transcript - Jun. 15, 1888 A new coal field has been discovered near Otnabog, Queen's county, by Mr. John E. Jones, of that place. The seam is supposed to be about 15 miles in length and several miles wide. It starts at the head of Otnabog Lake, and extends in a westerly direction. The coal is above ground in four places. Near the lake is a mountain, on the north side of which the coal is also above ground."

S.J. Globe - Jun. 22, 1888 Some American capitalists have acquired the mining rights in Queens County, with the intention, it is thought, of mining the coal deposits on the neighborhood of Clones."

S.J. Daily Sun - Jun. 26, 1888 The Clones Coal Deposits - The people of Clones, a settlement in Queens County, about fourteen miles form Welsford station, believe they have valuable coal deposits. The coal is found in three seams, one within a few feet of the surface. Some six years ago St. John parties prospected the ground and had men boring. About that time the local blacksmiths commenced using the native coal, employing men in the fall to raise enough for their winter supply. This practice was continued for two or three years. Owing, however, to the want of the requisite machinery for hoisting coal and pumping out water, it has of late been found cheaper to import coal for blacksmith's purposes. The Sun was yesterday shown a specimen of Clones coal, which appears to be an excellent article. Interest in this deposit has been revived ny the fact that certain American capitalists have acquired mining rights, with the intention, as it is hoped, of commencing operations. The gentleman from Clones who was seen by the Sun believes that the surface seam is two feet thick and that the second seam, which lies four or five feet lower, may be four feet thick. The future of this region depends greatly on the construction of the proposed river railway. If this line should connect with the N.B. railway at Welsford it would pass very near this coal field. The specimen of coal shown the Sun is to be forwarded to California."

Evening Gazette - Jul. 8, 1893 To The Coalfields. - The necessary surveys for the extension of the coal fields of Queens County over the Central railway have been made by engineers. Manager Evans goes to Philadelphia to complete arrangements for the extension."

Evening Gazette - Jun. 28, 1893 The coal lands of Queens County will be offered for sale on Tuesday morning next at Gagetown. There are some seventy thousand acres of the best coal lands in the county."

S.J. Daily Sun - May 20, 1893 Gagetown. - …the Mines. - … Speaking of coal, Mr. Hall stated that at Foxtown, Messrs. Geo. And Isaac Fox had struck a seam of 18 inches at a depth of between 50 and 60 feet. The spot where they were prospecting was above the ordinary level, from which the seam would be about 30 feet down. Coal outcrops in brooks along the Otnabog. At Clones a shaft was sunk some 80 feet when a vein of water was struck and spouted up some five feet above the level of the ground, continuing to flow until someone dropped a big stone down the hole and choked the passage. Thus far the coal prospectors in that region of Queens have not struck anything that would warrant development."

Moncton Daily Times - Nov. 9, 1895 To Open Up the Coal Fields. - Mr. James Barnes, M.P.P., of Buctouche, has entered into a contract with Dr. L.G. de Bertram, of New York, to build eighteen miles of railroad from Chipman to Newcastle, Queen's County. The work will commence early in December. Dr. de Bertram is prepared to complete the road to

St. John Star - Mar. 1, 1901 Legislature. - ... Mr. Hazen ... suggested that if the government wanted to develop the Queens county coal mines they could best do it by securing the extension of the Central railway to the mines and thence to Fredericton ..."

Weekly Record - Fri., May 22, 1903 E.L. Parsons, a former St. John man and L.L. Forbes ... have under consideration the operation of alarge coal field in Queens County. Parsons & Forbes say they are to meet some of the local government members in Fredericton soon regarding these proposals."

Codes: X1 / IDX_Names: Grand Lake Coal;

1641/42. - In ""The River St. John"" by W.O. Raymond, 1950, p. 40. The Tribune Press, Sackville. La Tour was not idle (went to Boston and returned with 4 vessels and 50 men and 92 soldiers) to the relief of his fort. While at St. John, the Bostonians captured a pinnace belonging to Charnisay, laden with 400 moose and 400 beaver skins. Their own pinnace went up the river to Grand Lake and loaded with coal. This shows that the coal mines of Queens County were known and worked more than 250 years ago."

1643 - Copied form: Kings County Record - Mar. 2, 1967 Shipped Coal From Grand Lake 300 Years Ago. -Members of the Kings County Historical Society enjoyed an address by A.P. Hetherington of Codys and Sussex. As early as 1643 coal was being shipped by way of Grand Lake to Boston".
After 1764 In ""The River St. John"", by W.O. Raymond, 1950, Keystone Press, Saint John, p. 196. Joseph Garrison it may be observed was the grandfather of William Lloyd Garrison, the celebrated advocate of the abolution of slavery. He was one of the original grantees of Maugerville and drew lot No. 4, opposite Middle Island in Upper Sheffield. He was on the River St. John as early at least as July, 1764, and is said to have been the first of the English speaking race to work the coal mines at Grand Lake."

Royal Gazette - Jul. 31, 1827... follow up the Fisheries and open your Coal mines on the Grand Lake and Nashwaak

Novascotian - Aug. 3, 1831 A company has been formed at Fredericton, with a capital of œ600 for the purpose of working the Coal Mines, on the Grand Lake - the Coal being only about 4 feet below the surface, and in situations convenient for shipment. It is calculated that 400 chaldrons will be brought to market this season."

N.B. Courier - Jul. 23, 1831 and Miramichi Gleaner - Jul. 26, 1831 and Weekly Observer - Jul. 26, 1831 Grand Lake Joint Stock Coal Company. - We have much pleasure in informing the public, that a company has lately been formed and organized in Fredericton, under the above designation, for the purpose of working the Coal Mines on the Grand Lake. The Stock consists of 120 shares of 5œ. each, Seventy of which shares are taken in Fredericton, and fifty in this city. W.F. Odell, Esq. President, Hon. Thos. Baillie, Vice President, I.S. Saunders, Esq., Secretary and Treasurer, – Beckwith, Assistant Secretary, Agent in this City, T.L. Nicholson, Esq. and Mr. Henry Harvey, a gentleman of Cornwall, England, Superintendent of the works. Twenty per Cent of the Stock is paid in, Mr. Harvey with a number of men, tools &c. have proceeded to the scene of operation, and in two or three weeks a cargo of the Coals may be expected to arrive here. The facility with which Coal may be procured, being but four feet below the surface, and where any of the river craft may lay along side and receive them, prevent the necessity of a large outlay of Capital to set the work in operation and when the Coal once begins to come to market it will support itself. Notwithstanding the lateness of the time when it commences, it is confidently expected that 400 chaldrons will be brought to market this season. We congratulate the public upon having a sufficient supply of Coal furnished in the Province, not 2 only to supply our wants, but also to furnish the staple for a valuable export trade to any extent which may be required. This will have the advantage of keeping the price of fuel within the means of the poorest of the people, and as it will furnish employment, for many persons at the Mines, and to river crafts and also to vessels on the sea board. The Coal Mine will be found of more permanent advantage to the Province than Mines of gold and silver. For House use, these Coals are stated to be superior to the best Liverpool Coals imported here, and for the use of blacksmiths and forges, to be greatly superior. A sample may be seen at the store of Mr. Nicholson, corner of Ward street and Peter's Wharf. We have also to state that there are now two foundries one of Messrs. Harris and Allan, at Portland in the immediate vicinity of the City, and the other of Messrs. Foulis, Ross and Hogg, at the foot of Duke Street in the city, where all the apparatus necessary for the use of Coals, comfortably and economically, may be had in such form and style, as may suit the taste of every purchaser. - City Gazette"

N.B. Courier - May 14, 1831 Coal Mines. - A scientific gentleman, recently from England, who has visited the Coal Mines at Grand Lake, in this Province, gives it as his opinion, that were the mines properly worked, Coal of a superior quality would be found in the sub-strata, well suited for all purposes for which the article is used. It is much to be regretted that public enterprise has not hitherto been directed to so valuable a source of wealth as that likely to be found in working these mines, which, it is thought, at a trifling expense, and with little risk of capital, might be done with advantage to the country as well as profit to those who should engage in it. The arguments which might be used to urge further investigation into the subject, are so numerous and feasible, that we will not at present go further into them; but trust that, as persons every way capable of undertaking the necessary labour are now here, so good an opportunity of at least actually ascertaining the practicability of theundertaking, will not be allowed to pass without some steps being taken towards its accomplishment."

Codes: X1 / IDX_Names: Grand Lake Coal;
Weekly Observer - Oct. 25, 1831 Sydney Coal Mines. - Twenty vessels, with cargoes of Coal, cleared from the Sydney Mines for the United States, during the month of September; also, fifteen coasters for Halifax and one for Newfoundland. - The character and importance of these mines appear to be now fairly established, and there is every probability that they will become a great source of wealth not only to the island of Cape Breton, but to the Province of Nova Scotia generally. - We hope that similar success awaits the undertaking at Grand Lake, in this Province."

Miramichi Gleaner - Sep. 6, 1831 St. John. - Joint Stock Coal Company. - As noCoals, except the samples, have as yet appeared from the Grand Lake Coal Company, we have frequently been enquired of as to how the Coal business was progressing; and we are happy to have it in our power from undoubted authority to state; that the work is progressing as well as can be desired. The upper Stratum of Coals is found to be deeper than it was originally supposed to be; a wharf has been erected, upon which is deposited a large quantity of Coals, which had it not been for the unusually low state of the water, would ere now, have been in the market. As soon, however, as the waters in the lakes begin to rise, which may be expected shortly, shipments will begin, and confident expectations are still entertained that the quantity originally mentioned, (400 tons) will be brought to market before the closing of the season."

Weekly Observer - Sep. 20, 1831 and City Gazette - Sep. 21, 1831 and Miramichi Gleaner - Sep. 27, 1831 and N.B.

Courier - Sep. 17, 3 1831 Grand Lake Coal. - We have much satisfaction in announcing the arrival of a cargo of nearly 50 chaldrons of coal from the companies mines at Grand Lake. The quality of the article is said to be equal if not superior to the best English Coals. Another cargo we understand is in readiness for shipment, and the whole quantity that will be brought to market before the closing of navigation is yet expected to be very considerable. - Courier"

Novascotian - Sep. 22, 1831 50 chaldrons of Coal have been brought into the St. John Market, by the Grand Lake Coal Company."

Miramichi Gleaner - Jul. 3, 1832 St. Andrews Courant. -... We are also gratified to learn it is the intention of the Government to give every facility and encouragement to the views of the Coal Mining Company engaged in the extensive establishment at the Grand Lake."

Miramichi Gleaner - Jul. 17, 1832 NB NS Land Co. incorporated ...Mines of Coal are worked in the provinces of New Brunswick and Nova Scotia...."

N.B. Courier - Jun. 30, 1832 ADVERTISEMENT: N.B. & N.S. Land Co. ... Mines of coal are worked in the provinces of New Brunswick and Nova Scotia..."

Novascotian - Nov. 14, 1832 and Weekly Observer - Nov. 20, 1832 and City Gazette - Nov. 23, 1832 New Brunswick Mines. - We are informed by a letter from New Brunswick, that the Mining Company there has received a death blow. The application to the government at home for an exclusive Mining privilege, hasbeen refused. We understand that the answer from the Colonial office is, - that the Government will only grant part of the Mines to one Company, and that for twenty or thirty years - and the duty required on the coal raised is three shillings a chaldron. The company has therefore abandoned its project; and thus the development of the mineral treasures of the Province of New Brunswick will probably remain in statu quo for another half century. The adventurers will however avoid spending an immense capital in search of Mines, which is consequent on large mining establishments, particularly in new countries, but the public will lose an incalculable advantage by the action of an extensive circulating medium, caused by the employment of a great number of workmen, which mining concerns always require. Cape Breton knows and feels the advantage most sensibly! - Sydney (Cape Breton)

Codes: X1 / IDX_Names: Grand Lake Coal;
N.B. Courier - Nov. 24, 1832 New-Brunswick Mines. - A paragraph which originated with the Cape-Breton Herald, stating that the Mining Association of this Province had received a ""death blow"", in consequence of the hard terms proposed by Government, having been copied by some of the other Colonial papers, and even into those of our own city, without any explanation or refutation; we insert the subjoined letter, for the purpose of contradicting the erroneous and interested statement which has gone forth. ""To the Editor of the Royal Gazette. ""Sir, -""Having noticed in the Novascotian on the

14th instant, an extract from the Sydney Gazette, which infers that the Mining Association of N. Brunswick had virtually received its death blow, from the hard terms prescribed by his Majesty's government, I beg, through the medium of your paper, to correct the unfavourable impression which may be made by the above erroneous statement. ""The New Brunswick Mining Association originated with a few persons unconnected with mercantile pursuits, 5 but anxious to contribute their mite in developing the resources of this highly favoured province by acting as pioneers to the formation of a Company. The capital invested was œ600 in 120 shares of œ5 each; they have taken great pains to collect information respecting the Coals and Minerals of the province; they have opened and worked the upper vein of coal in the vicinity of the Grand Lake, and made attempts to discover lower veins, but not as yet with the success they confidently anticipate, when an increased capital will insure the prosecution of the work in a more vigorous manner. ""An application was made to his Majesty's government in October, 1831, setting forth the views and intentions of the Company, and praying for a reservation in their favour; - to this application an answer has been received through his Excellency the Lieutenant Governor, of as favourable a nature as could have possibly been anticipated, and in which it is stated ""that every reasonable encouragement should be given to the proposed Company."" Shortly after the receipt of this despatch a meeting of the Association was convened, and it was resolved to invite the public to join in the formation of a company on what is considered very liberal terms, in order that the benefits to be derived by such Company might be as general as possible, and that nothing like any attempt at monopoly might appear in the conduct of the members of the pioneer association; such invitation has gone forth, Mr. Editor, in the columns of your paper, and I feel certain that capital invested in a Coal Mining Company will be not only a source of wealth and emolument to the stockholders, but an inestimable benefit to the Province, by furnishing an article of export which will assist to pay our American neighbors for the quantities of flour and other articles which we are daily purchasing from them."" ""A Member of the N.B. Mining Association. ""Fredericton, Nov. 20"" In addition to the above, we have been informed that Coal has lately been discovered on the northern bank of the Grand Lake, little more than two feet below the surface of the earth, and where there is sufficient water for vessels of considerable burthen to load. This gratifying information will be an additional stimulus to induce many to take shares in an undertaking which is likely to prove of great benefit to the Province generally, and a vastly profitable speculation to those more immediately concerned in it. - A notice respecting the Company, has been published in our paper for some weeks past, and will be found on the first page of the present number, to which we would direct public attention."

Miramichi Gleaner - Nov. 27, 1832 From a Correspondent of the Fredericton Gazette. 6 - Having noticed in the Novascotian of the 14th inst. anextract from the Sydney Gazette, which infers that the Mining Association of New Brunswick had virtually received its death blow, from the hard terms prescribed by His Majesty's Government, I beg, through the medium of your paper, to correct the unfavorable impression which may be made by the above erroneous statement. The New Brunswick Mining Association originated with a few persons unconnected with mercantile pursuits, but anxious to contribute their mite in developing the resources of this highly favored province, by acting as pioneers to the formation of a company. The capital invested was œ6000 in 120 shares of œ5 each; they have taken great pains to collect information respecting the Coals and Minerals of the Province; they having opened and worked the upper vein of coal in the vicinity of the Grand Lake, and made attempts to discover lower veins, but not as yet with the success they confidently anticipate, when an increased capital will ensure the prosecution of the work in a more vigorous manner. An application was made to his Majesty's Government in October, 1831, setting forth the views and intentions of the Company, and praying for a reservation in their favor;- to this application an answer has been received, through his Excellency the Lieutenant Governor, of as favorable a nature as could possibly have been anticipated, and in which it is stated 'that every reasonable encouragement should be given to the proposed company.' Shortly after the receipt of this Despatch, a meeting of the Association was convened, and it was resolved to invite the public to join in the formation of a company, on what is considered very liberal terms, in order that the benefits to be derived by such a company might be as general s possible, and that nothing like any attempt at monopoly might appear in the conduct of the members of the pioneer Association; such invitation has gone forth, Mr. Editor, in the columns of your paper, and I feel certain that capital invested in a Coal Mining Company, will not only be a source of wealth and emolument to the Stockholders, but an inestimable benefit to the Province, by furnishing an article of export, which will assist to pay our American neighbors for the quantities of flour and other articles which we are daily purchasing from them."

Codes: X1 / IDX_Names: Grand Lake Coal;

Novascotian - Nov. 28, 1832 New Brunswick Coal Mines. - The remarks which we recently copied from the Cape Breton Herald, relative to the Coal Mines of New Brunswick, have elicited a contradiction through the Fredericton Gazette. We received by Saturday's Mail, several private letters upon the same subject. A correspondent at St. John, under date of the 21st, says:- ""I was not a little surprised at noticing in your last paper an article headed ""New Brunswick Mines,"" copied from the Cape Breton Herald, in which it is stated that the Mining Company in this Province has received a death blow. So far from being the case, the concerns of the company were never in a more flourishing state; and his Majesty's ministers have offered the company leases of the coal district in this Province, on very advantageous terms, provided a sufficient sum is raised to carry on the work effectively. As a Proprietor of Stock in the present concern, I feel anxious to have the statement from the Cape Breton Herald contradicted. You will find in the St. John Courier, and also Fredericton Royal Gazette, an advertisement signed ""Wm. F. Odell"", requesting a meeting at St. John on the 20th Dec. next, for the purpose of forming a new company, which shall be incorporated, the present one being ""joint stock"" only. ""Somebody has either been bamming the Cape Breton Editor, or else he wishes to have it believed we are doing nothing here. I believe, however, the latter is the case, and the object we suppose is to prevent the work people from deserting the Sydney Mines, and coming over here for employment, many of them having done so during the last summer. The quality of Grand Lake Coal is excellent, the round sort being fully equal to Orrel. Owing to the coal beds being close to the shore of the Lake, and quite on the surface, the expense of raising and sending it to market is very trifling. There is neither boring nor draining, nor any a pensive apparatus required, and the facility of bringing it to St. John is such that we shall always be able to undersell the Sydney coal. This, with the advantage of our port being accessible at all seasons of the year, and greater proximity to the American market, will always give us a decided preference."" We have the following from a Gentleman at Fredericton:- ""By the bye, I am sorry you took that article from the Sydney paper about our Mines; it is wholly without foundation - not a word of truth in it. The government have promised a lease of the Mines for 60 years, at half the price quoted, and we expect it for less. By our papers you will see a prospectus for an increase of stock to œ10,000 - the thing cannot fail, for the present company, of whom I happen to be one, with a capital of only œ500, have raised a considerable quantity, and now have it laid on the wharf at 9s. per chaldron, free of all expense except the tools - it is taken to St. John and Fredericton at 5s. freight, and sold at 30s. There is no land carriage; the wheelbarrows discharge it immediately on the wharf. Our Sydney friends seem jealous of us, perhaps you had better mention this for their information."""

Royal Gazette - Sep. 31, 1832 and Miramichi Gleaner - Nov. 13, 1832 and N.B. Courier - Nov. 23, 1832 and City Gazette - Nov. 23, 3 1832 ADVERTISEMENT:Coal Company. His Majesty's Government having upon the application of the associates formed at Fredericton, July 1831, proposed to grant Leases on very advantageous terms, of any District or Districts in which Coal may be found, and to extend every reasonable encouragement to a company formed for mining purposes, with a sufficient Capital; the Members of the association are desirous of forming a company under the sanction of the Legislature with a capital of Ten thousand Pounds. To be divided into One Thousand Shares, of Ten Pounds each; and are willing to surrender to such Company, any particular privilege to which they might entitle themselves; on the following conditions:- First - That the present proprietors, be allowed Credit in the New Stock, for the amount they have already paid, with Interest - and that any who desire to relinquish their stock, shall receive back the amount so paid with interest. Second - That the New Company shall become possessed of all the rights and property of the association; and entitled to all the profits or proceeds of coal, subject to all the charges and expenses paid or incurred. Third - That no individual shall be allowed in the first instance to subscribe for more than Ten Shares of the new stock. As it will be necessary, that a Petition to the Legislature for an Act of incorporation should be prepared, and the provisions of the Act determined as soon as possible; it is deemed advisable that a Public Meeting should be holden, and a Subscription List for the New Stock opened, without delay; I do therefor pursuant to a Resolution of the association passed on the 15th inst. hereby request a meeting of such persons as are disposed to unite in the adventure, at the Masonic Hall in the City of Saint John, on Thursday the 20th day of December next at noon, for carrying the aforegoing measure into effect. A subscription paper will be prepared and submitted to the meeting - and in order to afford every facility to persons at a distance, it is proposed that the subscriptions may be made, and subscribers allowed to vote, by Proxy, at that or any subsequent meeting. Wm. F. Odell, President of the present Association. Fredericton, October, 1832. N.B. - The whole amount of the present Stock, is only œ600; and there is a large quantity of Coal on hand; besides mining Tools and other Property; a full statement of which, and of all proceedings and accounts of the association will be laid before the Meeting on the 20th 4 of December next."

Royal Gazette - Apr. 3, 1833 ADVERTISEMENT: New Brunswick Mining Company. The first general meeting of the Stockholders of the New Brunswick Mining Company, pursuant to the Act of Incorporation, will be held at the Masonic Hall in the City of Saint John, on Tuesday the thirtieth day of April next, for the purpose of making, ordaining and 5 establishing Bye Laws, Ordinances and Regulations, for the good order and management of the affairs of the Company, and also for the purpose of choosing Thirteen Directors for the year ensuing according to the provisions of the said Act. N.B. Stockholders may vote by Proxy, provided the authority be given to a Stockholder. No Stockholder, under the age of twenty one years, is entitled to vote. Saint John, March 25, 1833. Form Of Proxy. I, A.B. (place of residence and profession or occupation of the Stockholder), holder of ____ Shares in the Capital or Joint Stock of the New Brunswick Mining Company, do hereby nominate, constitute and appoint C.D. of ______, also a Stockholder in the said Company, in my name, and in my absence, to vote or give my ascent or dissent to any business, matter or thing, relative thereto, which shall be proposed at any General or Special Meeting of the Stockholders of the said Company, or any adjournment thereof, at all times hereafter, until I shall revoke this appointment, by notice, in writing, under my hand, to the Secretary or Clerk of the said Company. In Witness whereof I have hereunto set my hand, the ___ day of ____ in the year of our Lord One thousand eight hundred and _____. A.B. Signed in presence of E.F."

Codes: X1 / IDX_Names: Grand Lake Coal;
Weekly Observer - Apr. 30, 1833 Coal Company. - Pursuant to Notice, the Election for thirteen Directors of the above company, took place this day, when the following gentlemen were chosen:- Robert Parker, High Johnston, Nehemiah Merritt, R.W. Crookshank, Robert F. Hazen, John Ward, jr., Henry Gilbert, Stephen Wiggins, William Leavitt, John M. Wilmot, George D. Robinson, James Kirk, and E.D.W. Ratchford, Esquires."

Weekly Observer - Aug. 6, 1833 and N.B. Courier - Aug. 10, 1833 and Royal Gazette - Aug. 14, 1833 Spontaneous Combustion of Coals. - On Saturday afternoon, the Coals belonging to the New-Brunswick Mining Company, deposited in a building on Mill Bridge, were discovered to be on fire. An alarm was immediately sounded and exertions made to extinguish the fire. About midnight, however, it was discovered that the smothered embers had again ignited, and were burning fast. The coals were then removed; the floor of the building was also considerably burnt. The fire was produced by spontaneous combustion. - Observer."

N.B. Courier - Feb. 16, 1833 Saturday, February 9. New-Brunswick Mining Company. - The bill for incorporating the New-Brunswick Mining Company was committed; but excited no discussion till the limitation clause was read, when Mr. Simonds moved that the blank be filled with the word ""sixty"" years. Mr. Harrison and Mr. Allen objected to so long a term. Mr. Cunard supported the motion. Mr. Simonds said, that the capital stock of the company would be so small, that there would be very ittle danger in allowing them 60 years operation. There were many places in the Province where coal abounded; but the operations of this company would certainly be confined to Grand Lake; so that any other persons might speculate elsewhere. He (Mr. S..) did not think it would prove a profitable speculation to the shareholders; but that on the contrary, they would sink a large portion of their capital in the exploration; while they would confer a great deal of benefit on the Province, by developing its mineral resources at their own expense, œ100,000 would not be too much to carry such a project profitably into operation; but the stock of this company was only œ10,000, and could never be allowed to exceed œ30,000, which would be mostly swallowed in the attempt. Mr. Slason thought sixty years too long for any monopoly; because the company might establish works any where, wherever they could find coal. Mr. Allen said, his only reason for not opposing the Bill, was, on the understanding that, if any petition were presented against it, it would be thrown out at the third reading. - He wished to ask, how this mining company intended to get their coals over the shoals at the mouth of Grand Lake; whether those obstructions would be removed by them, or at public expense. Mr. Gilbert said that he had understood the company would have a steam boat, and flat boats, for the purpose of towing the coals down to the mouth of the Jemseg. - He thought no body of people would be found willing to embark their capital in a speculation of this kind, with a less term than sixty years; because, if the time were shorter, they might just get fairly embarked, and begin to find their scheme valuable, and then be dispossessed of all their advantages. Mr. Slason said, that the legislature could at any time extend this term, if it were found necessary. He understood that the vein of coal found at Grand Lake extended all the way up to the mouth of the Nashwaak. Perhaps, in less than 20 or 30 years it might be found necessary to open coal pits there; where the coal could immediately be put into large vessels, and exported at once; while the shoals at Grand Lake would considerably increase the expense of transportation. - He was therefore for a shorter term. Mr. Simonds contended, that if the bill should pass for sixty years, it would not prevent others from obtaining the like privileges, to work at the Nashwaak or anywhere else. He very much feared that His Majesty's government would not grant a lease of the mines for less than sixty years. A large portion of 30 years would be consumed, before the works would fairly get into operation and if a lease should be obtained for that time only, the mines might sooner become fairly established, than they might be taken out of the hands of the company. Mr. S. Humbert objected to granting any exclusive privileges, for so long a term as 60 years. He would not object to thirty years; but he could not consent to a long monopoly. Mr. Harrison thought that this company might perhaps, obtain a lease from his Majesty of all the mines in the Province, and thus monopolize every thing of the kind. Mr. Simonds replied, that the amount of their capital would utterly prevent that. It was impossible that they could work all the mines of the Province with such a capital. If the bill were to give them liberty to increase their capital to an unlimited extent, there would be danger; but they were strictly confined to a maximum of œ30,000. Mr. Slason followed up Mr. Harrison's idea, and again expressed his fears of a monopoly. Mr. Partelow said, that even if the company were to get a lease of all the mines in the province, and work them, it would be a public benefit; because it was clear, that in the present state of the Province, if they could not work them, nobody else would. They came forward for the patriotic purpose of developing the natural resources of the province; and ought therefore to be encouraged. Mr. Harrison pressed his objections, and moved as an amendment to Mr. Simond's motion, that the blank be filled with ""thirty"" years, which amendment was carried. The bill was then agreed to, with amendments."

N.B. Courier - Feb. 16, 1833 ADVERTISEMENT: Coal Company. In pursuance of A Resolution passed at the Meeting of Subscribers of the Stock of the New Brunswick Mining Company, authorising the Committee to call for an installment on the Stock, not exceeding 2 1/2 per cent., in order to continue the Works now in operation until the Spring; - The Committee hereby give notice, that an Installment of Two and one half per cent. is required to be paid up on or before the 13th day of February instant. The Subscribers are requested to pay into the hands of the Secretary, T.L. Nicholson, 3 St. John, 1st

Codes: X1 / IDX_Names: Grand Lake Coal;
Weekly Observer - Feb. 21, 1833 and N.B. Courier - Feb. 23, 1833 Legislature. - Saturday, February 16. - Mining Company. - On motion of Mr. Harrison, the bill for incorporating the New Brunswick Mining Company was recommitted, and the petition (lately presented by the hon. member,) against it, from certain freeholders of Queen's County, read. Mr. Harrison said that it appeared to him that the bill had not been understood by some hon. members; but in his opinion, it went to incorporate a company of persons and to give them the power, to do, what? - To monopolize all the coal mines in the Province. He was opposed to the bill, on the broad principles of justice; because it tended to interfere with the private rights of individuals. The signers of the petition against it were the offspring of the old loyalists, and had the same loyal blood in their veins as their forefathers. They had long been settled on the spot where the Mining Company intended to operate; and should the House, by any act of theirs, deprive them of what they had so long enjoyed, and of that which they were so well entitled to? He (Mr. H.) had understood from one of those petitioners, that he had actually applied to His

Majesty's government, about twelve month's ago, for permission to work or enjoy the Mines under his own soil; but he had not obtained an answer. He (Mr. H.) therefore hoped, that the matter would receive further consideration from the Committee; and that, at all events, time would be given the petitioners, before passing any such bill as the present, to lay their claims at the foot of the throne. They certainly had a greater right to consideration then the intended company, as owners of the soil where the mines were situated. [Much discussion followed; and several resolutions and amendments thereto having been proposed.] The question was finally taken on Mr. Simonds' amendment to Mr. Harrison's amended amendment; viz. as to confining the company to ungranted lands, for a certain term of years; and was negatived 15 to 8 - Names as follows: Yeas - Messrs. Simonds, Gilbert, Harrison, Allen, Miles, Slason, Clinch, Hill - 8 Nays. - Mr. Speaker, Messrs. Brown, Wyer, Kinnear, J. Humbert, Taylor, Connell, Barlow, Ward, Partelow, Weldon, Vail, Smith, Chandler, Scott - 15 The Chairman then left the Chair, and reported the resolutions and division; the bill remaining as before agreed to."

N.B. Courier - Feb. 23, 1833 Coal Company. - We understand that the Bill to incorporate the New-Brunswick Mining Company, has passed 4 the House of Assembly and goes up to the Council for concurrence; and that His Excellency the Lieutenant-Governor, in anticipation of the Bill passing, has already written to His Majesty's Government on the subject, - so that in all probability the Company may go into efficient operation during the ensuing summer."

N.B. Courier - Mar. 23, 1833 From Royal Gazette - A Bill for the incorporation of the New Brunswick Mining Company."

N.B. Courier - Mar. 30, 1833 ADVERTISEMENT: New Brunswick Mining Company. The first General Meeting of the stockholders of the New-Brunswick Mining Company, pursuant to the Act of Incorporation, will be held at the Masonic Hall, in the City of Saint John, on Tuesday the 13th day of April next, at noon, for the purpose of making, ordaining and establishing Bye Laws, Ordinances and Regulations, for the management of the affairs of the Company; and also for the purpose of choosing Thirteen Directors for the year ensuing, under the regulations contained in the Act. N.B. - Stockholders may vote by proxy; but no stockholder under the age of twenty-one years is eligible as a Director or entitled to vote. Saint John, 26th March, 1833"

Weekly Observer - May 7, 1833 New Brunswick Mining Company. - The Directors of this Company met at the Masonic Hall on Wednesday last, for the purpose of electing a President, when Nehemiah Merritt, Esquire, was unanimously chosen, and T.L. Nicholson, Esquire, appointed Secretary to the Company."

Royal Gazette - May 8, 1833 Coal Company. - Pursuant to Notice, the election for thirteen Directors of the above Company, took place this day, when the following gentlemen were chosen:- Robert Parker, Hugh Johnston, Nehemiah Merritt, R.W. Crookshank, Robert F. Hazen, John Ward, jr., Henry Gilbert, Stephen Wiggins, William Leavitt, John M. Wilmot, George D. Robinson, James Kirk, and E.D.W. Ratchford, Esquires. - St. John Observer."

N.B. Courier - May 11, 1833 ADVERTISEMENT: New-Brunswick Mining Company. Ordered, that Ten per cent. of the Capital Stock of thesaid Company be paid at the Office of the Company, in the City of St. John, on or before the twentieth day of June Next N. Merritt, President. T.L. Nicholson Sec'y. N.B.- The Stockholders will be entitled to credit for whatever may have already been paid in, pursuant to the orders of the late managing committee.- Payments will be received at the Office every Monday and Thursday between the hours of 12 and 2.St. John, N.B. 11th May, 1833."

N.B. Courier - May 11, 1833 ADVERTISEMENT: Office of the New-Brunswick Mining Company. Tenders will be received at this office, until Wednesday the 15th instant, from persons wishing to contract for bringing COAL to this city, from the Company's Works, at Grand Lake.- Tenders to specify the price per chaldron, at which they will deliver it on board of vessels in the Harbour, or at the wharves of the Company. T.L. Nicholson, St. John, May 4 Sec'y."

Weekly Observer - May 14, 1833 New Brunswick Mining Company. -- Ordered, that Ten Per Cent, of the Capital Stock of the said Company be paid at the Office of the Company, in the City of Saint John, on or before the 20th day of June next. N. Merritt, President. T.L. Nicholson, Sec'y. N.B. - The stockholders will be entitled to credit for whatever may have already been paid in, pursuant to the orders of the late managing Committee. - Payments will be received at the Office every Monday and Thursday between the hours of 12 to 2. St. John, N.B. 11th May, 1833."

Codes: X1 / IDX_Names: Grand Lake Coal;
N.B. Courier - Mar. 22, 1834 ADVERTISEMENT: Coal Miners. The subscriber wants some men, perfectly well acquainted with driving levels, timbering, and accustomed to Mining Machinery, The advantages offered to each head of a family, will be the occupation of four acres of Land, with facilities to erect a Dwelling House, on paying an acknowledgement of 1s. per year; and to an industrious Man, daily earning of at least a Dollar per day. - Application to be made at St. John, to Mr. Truro, Circulating Library, near the Post Office. T.S. Beauchant. March 22d, 1834"

N.B. Courier - May 3, 1834 Salmon River Coal. - A quantity of Coals, from anew vein recently opened on the banks of Salmon River, at the head of Grand Lake, have been brought to town during the week. These Coals, we are informed, are even superior to those raised at the Grand Lake Mines, and when burned last winter at Government House, Fredericton, were considered preferable to Orrel Coal, then in use in that establishment. As the quantity got out is very considerable, our citizens will have an opportunity of supplying themselves with this necessary article of fuel, of domestic production, at a moderate rate. Mr. Christopher Robinson, Union street, is agent for the proprietors."

N.B. Courier - Apr. 4, 1835 ADVERTISEMENT: New-Brunswick Mining Company. Notice is hereby given, that a General Meeting of the Stockholders of the New-Brunswick Mining Company will take place on Thursday the 30th day of April next, at the office lately occupied by the Marine Insurance Company, in this City, at noon, for the purpose of electing directors for the ensuing year, agreeably to the Act of Incorporation. T.L. Nicholson, Sec'y. City of Saint John, March 28, 1835."

N.B. Courier - Jan. 24, 1835 We understand that the President of the New-Brunswick Mining Company has received the copy of a Dispatch from His Majesty's Government to Sir Archibald Campbell, tendering to that Company a lease for working the coal mines of this province for fifty years, in terms so liberal that we trust there will be no delay on the part of the company in accepting them, - and thus bring speedily into operation the means of availing ourselves of one of the most valuable staples of our country."

N.B. Courier - May. 2, 1835 New-Brunswick Mining Company. - At the annual meeting of the Stockholders on Thursday last, the following Gentlemen were re-elected Directors for the ensuing year: Hon. Judge Parker, Robert W. Crookshank, Hugh Johnston, Henry Gilbert, John M. Wilmot, Stephen Wiggins, John Ward, junior, Robert F. Hazen, George D. Robinson, Wm. Leavitt, James Kirk, and E. DeW. Ratchford, Esquires."

Nicholson, Esq., in St. John, on or before Monday the 26th day of December next. Henry Chubb St. John, November 19, 1836. President"

Codes: X1 / IDX_Names: Grand Lake Coal;
N.B. Courier - Oct. 1, 1836 Coals. - We called the attention of the public lately to the high price of firewood, and we now have to advert to the dearness and scarcity of Coals. Some mornings during the past week have reminded us feelingly of the approach of winter, and induced us to look out for the necessary supply of fuel. But lo! on enquiry we found that coals at œ2 2s 6d to œ2 5s per chaldron, and not readily procured at those prices. It reflects disgrace on this Province, that containing as it does an abundant supply of excellent coals, readily got at and raised, that coals should be allowed to attain their present high prices. During the past season, coals have been delivered at the mines on the bank of Salmon River at Ten Shillings per chaldron, and although raised in the most unscientific manner, and almost without mechanical aid, they yielded a fair profit to the Miner. Why then cannot some ..?.. measures be taken to for working the mines? They will be sure to yield a good profit at all times on a small investment, and at present prices, prove a source of unbounded wealth to the fortunate proprietors. The great increase in the number of Steamers, all consuming coals, has caused the present scarcity, and the supply which reaches us yearly from England falls far short of demand. The time has arrived therefore when our Coal Mines can be worked to great advantage for home consumption; the export of the article would no doubt prove highly profitable also. We trust some enterprising individuals will soon take up this business, as we can promise them a special reward. Let our mines be once properly opened, and worked in regular manner and on a sufficiently extensive scale, and we should soon see a large portion of that numerous fleet constantly coasting the dangerous shores of Nova Scotia and Cape Breton to obtain a supply of coals for the American market, bending their course to this Harbour, which they would at all times find open, and where they ought constantly to find an article equal in all respects to the best ever furnished from the Sydney Mines."

S.J. Weekly Chronicle - Oct. 7, 1836 The Coals of New Brunswick - This a matter inwhich all classes of the community are more or less interested, and it is high time that something should be done to remedy the existing evil, by reducing the price of fuel, or at all events bringing a sufficient supply into market, even at the present exhorbitant rates. We do not profess to be well acquainted with the extent of our Coal Mines, but we know that Coals of an excellent quality have been raised near Grand Lake and the Salmon River, and it is generally admitted that they can be brought to the surface and prepared for shipment at Ten Shillings per Chaldron, at which rate they are said to yield fair wages and reasonable profit to the Miner. With such a fact before us, we cannot conceive how it has happened, that the Coal Mines have been so long neglected, nor why the hidden treasures of the earth have not been sooner brought to light. Coals are now worth œ2 5s. per Chaldron, and we believe that no better business could be done in this Province than working a Coal Mine. It is said that every encouragement will be given by the Government to the parties who first succeed in reaching deeper strata than has hitherto been worked, and get a Mine in efficient operation; peculiar advantages are also promised to them, under instructions from the Colonial Secretary. The veins of Coal hitherto worked have been from 10 to 20 feet only below surface, but it is quite certain from the indications, that a deep bed of superior quality exists below, which will repay the labour of reaching it. If there are any enterprising individuals possessed of a moderate amount of capital, who can command the intelligent and scientific as well as practical men, and are willing to engage in an undertaking not altogether speculative, we would recommend them to try the Coal Mines of New Brunswick. We can promise them a profitable investment for their Capital, without risk, and with the certainty of a speedy return and handsome profits. We trust we shall not long have reason to complain of the neglect of this important branch of business, and in another season we shall expect to see the Market constantly supplied with our own Coals at a fair price, and be provided with an article of export to our Western Neighbours, equal, if not superior to anything of the same kind furnished by Nova Scotia, and at a much less rate."

Codes: X1 / IDX_Names: Grand Lake Coal;
N.B. Courier - Oct. 22, 1836 Dear Sir. - In your paper of the 1st instant, you made some remarks respecting the Coal mines of this Province, and the probable advantage that would ensue to the individuals that would come forward to work them. Your remarks are just; but your zeal for the public good is not backed up by such a knowledge of the Coal country as to enable you to give that information to the public which would already point out the value of that portion of the country; and I hope it will not be deemed presumption in me enlarging upon the subject, having, as you well know, employed myself among the Coal Mines for the last four years. The length of the Grand Lake, from the mouth of the Jemseg to Newcastle, is about 25 miles. - Coals have never been discovered beyond seven miles from the head of the lake, or 14 miles from the entrance by the Jemseg. In all the creeks and estuaries above Cox's Point, coals exist; but there are situations, where the locality of the water for shipment, and the bed of the coal, render them very valuable for commencing works. - There have been many complaints made of the Grand Lake coal - but fair specimens have not been produced; the seams of coal that have been worked for many years past, generally speaking, have not been more than 12 or 14 feet from the surface. This nearness thereto has caused surface water to decompose the solidity of the mineral, and, being highly bituminous and sulphurous, water applied to a large body withdrawn from the pit, will cause it to slack, or go into powder, and, if confined from a free circulation of air, the same will spontaneously ignite. - These are sufficient evidence of a better coal existing, which, according to all observations I have been enabled to make, is about 60 feet under the second vein or seam - and may present workings I believe to be within seven or eight feet of that seam, as I have sunk two shafts near 30 feet below the present surface of the Lake - one only three feet, and the other 130 feet from the margin. All the seams of coal at the head of the Grand Lake underlay to the north. The two upper ones come to the surface at the upper end, the deeper one above mentioned about seven miles below, as far as it can be traced by pieces of excellent coal brought up by the anchors of the wood-boats, an occurrence which happened not more than a month ago. Now, dear Sir, having given you some fair idea of the situation of the coals in the Grand Lake, I will just mention their intrinsic value and the expense of raising. The two first strata of coals are good enough for Blacksmith's work, and much of it might be used in private homes, if pains were taken to screen it. The second stratum is generally from eighteen inches to two feet in thickness, and forms an unbroken horizontal sheet, underlaying (as before observed) a little to the north; each square yard of surface produces three quarters of a chaldron of coal, and there being 4840 yards of surface in an acre, it follows that each acre will produce 3630 chaldrons of coal, worth at least œ3000, after deducting the expense of raising. As I have only been a week from the Grand Lake, I can speak confidently of what is doing there in the Coal works, which, I am sorry to say, is not worth mentioning. My works are at rest, in consequence of being overpowered by the water, and will require some considerable outlay to resume, but I am confident of meeting a good stratum of coals within a week of the shafts being dry. If you wish any farther information, Mr. Editor, in my power to give, you may command me. I suppose you know that Government gives to all Landholders permission to dig for coals on their own lands, granting at the same time such liberal terms as ought to satisfy anyone. I am, dear Sir, Your very

N.B. Courier - Oct. 29, 1836 ADVERTISEMENT: Estate of Theophilus S. Beauchant. Notice is hereby given that We, the Subscribers, have been duly appointed Trustees for all the Creditors of Theophilus S. Beauchant, late of the City of Saint John, (in this Province of New-Brunswick), Gentleman; an Absconding Debtor, and have been duly sworn to the faithful execution of the said trust, pursuant to the directions of the Act of Assembly in that case made and provided; and we do hereby require all persons indebted to the said Theophilus S. Beauchant, on or before the first day of November next ensuing the date hereof, to pay to us or some one of us all such sum or sums of money, or other debt, duty, or thing which they owe to the said Theophilus S. Beauchant, and to deliver the other effects of the said Theophilus S. Beauchant, which they or any or either of them may have in his, her or their hands, power or custody, to us or some one of us aforesaid; and we do also desire all the Creditors of the said Theophilus S. Beauchant, on or before the same first of November next, to deliver to us or some one of us foresaid, their respective accounts and demands against the said

Theophilus S. Beauchant, in order that right and justice may be done agreeably to the form of the said Act of Assembly in such case made and provided. Given under our hands at the City of Saint John aforesaid this thirtieth day of September in the year of our Lord one thousand eight hundred and thirty-six. James Robertson I.L. Bedell James William Boyd."

N.B. Courier - Apr. 15, 1837 ADVERTISEMENT: New-Brunswick Mining Company. Notice is hereby given, that a General Meeting of the Stockholders of the New-Brunswick Mining Company will take place on Monday the 1st of May, at the Office of the Subscriber, at noon, for the purpose of electing Directors for the ensuing year, agreeably to the Act of Assembly. T.L.Nicholson March 30, 1837 Secretary."

Novascotian - Aug. 23, 1837ADVERTISEMENT: Coal Miners Wanted. The subscriber, Proprietor and Crown Lessee of Coal Mines in New Brunswick, wishes to engage a large number of Coal Miners, to whom constant employment and liberal wages will be given, at the Salmon River Mines. These Mines are about twenty miles distant from St. John, near the head the Grand Lake - and the Steamer Woodstock is engaged to ply to them once in each week, during the present season. Three shafts have already been sunk, and the mines are now in full operation, under the superintendance of Mr. Andrew Fleming, to whom applications for employment may be made, or in St. John, at the office of M.H. Perley, St. John, April 29.

Miramichi Gleaner - Aug. 29, 1837 Geological Survey. - We copy the following paragraphs from the St. John Courier of the 19th instant: ""Surveying Party. - We understand that Dr.Gesner, the well known and talented Geologist of Nova Scotia, left this city on Wednesday morning last in the steamer Woodstock, for Salmon River, with the intention of making a Geological reconnaissance on that river - thence proceeding overland to the head waters of the Richibucto, and following that river down to the gulf of St. Lawrence. The Doctor is accompanied on this route by Capt. Egerton, Mr. Levinge, and the Hon. M. Cholmondely, of the 43d Light Infantry, and M.H. Perley, esq. of this City - with a party of five Indians, and the like number of canoes. We believe it is also intended to examine the line of country between the Grand Lake and Richibucto, with a view to opening the proposed communication between those points. As the line of country this party propose examining is in the heart of the Coal District, and supposed to be rich in mineral wealth, we think the route well chosen; and from the character of the party, we have no doubt much valuable information will be obtained, which we trust

N.B. Courier - Jun. 24, 1837 and St. Andrews Standard - Jun. 29, 1837 Dr. Gesner, the Geologist of Nova Scotia, who isat present on a tour in this Province, arrived in town a few days ago from Cumberland, where he has lately been pursuing his scientific researches. He is now about to examine the coal formation on the Grand Lake. We trust the learned Doctor will not withhold from the public the result of his enquiries in New Brunswick.- The Observer."

Royal Gazette - May 10, 1837 At a general meeting of the Stockholders of the New Brunswick Mining Company, held pursuant to notice on the 1st instant, the following Gentlemen were elected Directors for the ensuing year:- Thomas Barlow, Edward J. Budd, Henry Chubb, R.W. Crookshank, Henry Gilbert, John Kerr, James Kirk, E.D.W. Ratchford, Robert Ray, William Scammell, James Vernon, John Walker and Isaac Woodward, Esquires."

N.B. Courier - Sep. 2, 1837 and Royal Gazette - Sep. 27, 1837 ADVERTISEMENT: Estate of T.S. Beauchant. - Notice is hereby given that on Monday the 4th of September next, at noon, will be sold at public auction, in the Market square of the City of St. John, by Thomas L. Nicholson, all the estate and interest which Theophilus S. Beauchant, late of the said City, Gentleman, an absconding Debtor, had on the 9th day of March 1836, in, or out of ""all that certain messuage or dwelling house, lot, piece or parcel of Land, situate, lying and being at the corner of Sydney and Sheffield streets - comprising a moiety or equal half part of the two Lots known and distinguished on the Map or Plan of the said City, on file on the office of the Common Clerk thereof, by the numbers four hundred and seventeen, and four hundred and eighteen"" - Also - in, or out of a certain tract of land in the Parish of Canning, in Queen's County, containing four hundred and fifty Acres, more or less, including an allowance for waste land; bounded as follows, to-wit - beginning at a marked Ash tree, standing on the northern bank or shore of Newcastle Creek at the most eastern angle of the Lot number One, granted to Henry Peck and James Horsefield; thence running by the magnetic needle, North 42 deg. 40 m.; West 23 chains of four poles each, to a marked Spruce Tree, thence North 52 chains, thence east 150 chains, or to the rear line of Lot number Two, North side of Salmon Bay; thence South 61 deg., East, 130 chains along the said rear line and its prolongation; thence South 12 deg. 10m. East 21 chains, 50 links to a stake, standing on the said Bank or stream; and thence, following the several courses of the same up stream to the place of beginning-- Also - in, or out of, a certain tract of Land in the Parish of Kingsclear, and County of York, bounded as follows, to wit - beginning at a stake placed on the West side of Dead Water Brook, (which empties into Oromocto Lake) and at the mouth thereof; thence running by the magnetic needle, North 45 deg. W. 42 chains of four poles each, and 50 links, thence along the North eastern side of a reserved road of four poles in width, till it strikes another reserved road, and thence along the line of the last mentioned road, N. 15 deg. E. 91 chains; thence South 45 deg. E. 80 chains crossing the said Dead Water Brook, thence South 15 deg. W. 111 chains to the eastern bank or edge of the Lake aforesaid, and thence following the several courses of the said Lake North-westwardly, crossing the said Dead Water Brook at the mouth, to the place of beginning:- Also - in, or out of, a small island in the said Oromocto Lake, called Kelley's Island; the said last described tract and Island, containing five hundred Acres more or less - Also - in, or out of, all 3 buildings, erections, and improvements on the said described premises, or any of them standing and being, and the rights, members, privileges, and appurtenances thereunto belonging. We being vested therewith, under, and by virtue of an Act of the General Assembly of this Province, entitled ""an Act for relief against absconding Debtors, that the same may be sold for the payment and satisfaction of the Creditors of the said Theophilus S. Beauchant. Isaac L. Bedell James Robertson James William Boyd. Trustees for all the Creditors. Saint John, July 22d. 1837 The sale of the above described Property is postponed until Monday the ninth day of October next, at noon, when it will positively take place in the Market Square aforesaid; - At the same time and place, will also be sold, all the interest which the said Theophilus S. Beauchant had on the said 9th day of March 1836, in all, and every mine or mines of Coal on the said described tract of Land in the said Parish of Canning, and all the right which he then had to work the same, and to take and dispose of the Coals produced therefrom; subject to the conditions in his License from the Crown expressed - which said License was granted for the term of 50 years, from the 18th day of March 1835. Isaac L. Bedell James Robertson James William Boyd. Trustees for all the Creditors. Saint John, Sept. 2, 1837"

Royal Gazette - Feb. 21, 1838 ADVERTISEMENT: The Salmon River Coal Company, Have now on hand at their Mines on the Salmon River, a large quantity of good coals for family use, which will be sold at Twenty Shillings per Chaldron, deliverable at the Pit mouth. As they have recently engaged an additional number of Miners, and have made arrangements for carrying on their operations to a considerable extent during the winter, they expect to have sufficient supply of coals constantly on hand, which they can confidently recommend as being of a better quality than any heretofore raised in New Brunswick, and they therefore solicit for them a fair trial. Apply to W.H. Cunningham, Agent at the Mines. Salmon River,

Codes: X1 / IDX_Names: Grand Lake Coal;
N.B. Courier - Jun. 16, 1838 The Coal Trade. - The Packet Schr. Thistle, of this port, which plies hence to Boston, went through the Falls on Wednesday the 6th inst. and proceeded up the River St. John, through the Jemseg and up the Grand Lake to the Salmon River Coal Mines, where she took in a full cargo of Coals, and returned to this Harbour on Thursday last. This morning she sailed for Boston for the purpose of there delivering her Cargo; this is the first cargo of Coals shipped at the Salmon River Mines direct for a foreign port, and we are induced to notice it, with a hope that an export of Coals on a very distant day be made direct from the Mines of New Brunswick to foreign parts, and a very valuable branch of trade be added to the business of the Province."

N.B. Courier - May 20, 1838 ADVERTISEMENT:Salmon River Coal Company. At the first Meeting of the Stockholders, held this day, two assessments were made amounting to Five Thousand Two Hundred and Fifty Pounds, or Five Pounds Five Shillings per share, payable on or before the first day of July next. The Commercial Bank, Saint John, and the Commercial Bank, Boston, are the Bankers of the Company. M.H. Perley, Treasurer St. John, 15th May, 1837"

N.B. Courier - Oct. 13, 1838 Coals. - Mr. Chubb. - Sir: I, in common with the majority of house-keepers in this city, have had an unfavorable opinion of the Coals from the Grand Lake Mines, as not being equal to those ""far and dear bought"" But, Sir, I was induced lately, to give the coals offered for sale by Messrs. Barlow & Ketchum a trial, and the result is that I shall look for no better for my use, while I can obtain them for the money asked for the best Orrel Coals, which I believe is 35 s. a chaldron - while our own coals are selling at 25s. and a trial only, I think, is necessary to bring them into repute. Respectfully Yours 13th October A Patriot"

N.B. Courier - Sep. 22, 1838 and Miramichi Gleaner - Sep. 25, 1838 Spontaneous Combustion of Coals. - Between 9 and 10 o'clock, on Sunday evening, the cry of Fire was resounded through our streets, when it was found that a quantity of Grand Lake coals deposited under a shed at York Point, had taken fire by spontaneous combustion. - The fire, which had communicated to the wood work, was, after considerable labour, thought to be extinguished; but on Monday evening, it again ignited and began to burn. The coals have since been removed, and the fire effectually subdued. - Observer."

N.B. Courier - Apr. 6, 1839 ADVERTISEMENT: New-Brunswick Mining Company. Notice is hereby given, that a general meeting of the Stockholders of the New-Brunswick Mining Company will take place on Tuesday the 30th of April next, at the Office of the Subscriber, in this City, at noon, for the purpose of electing Directors for the ensuing year, agreeably to the Act of Assembly. March 23, 1839 T.L. Nicholson, Sec'y."

N.B. Courier - Jan. 5, 1839 ADVERTISEMENT: Salmon River Coal Company At a meeting of shareholders held this day, it was ordered that an assessment of one thousand pounds, being one pound on each share of stock in this company, be made; and notice is hereby given that payment of the same is required within thirty days, pursuant to the charter. Dated the twenty-second day of December, 1838. M.H. Perley, Treasurer"

S.J. Weekly Chronicle - Jul. 17, 1840 William Foshay, to explore a road from Cumberland Bay to Coal Creek; œ15 having been granted for the service."

N.B. Courier - Sep. 5, 1840 and St. Andrews Standard - Sep. 11, 1840 Coal in British America.- Under this head, the Liverpool Albion of the 13th July remarks:- ""It has been ascertained, by survey, that New Brunswick is one of the richest coal districts in the world"". We are glad to find such important facts relative to the mineral riches of our Province, attracting attention on the other side of the Atlantic."

Novascotian - May 19, 1842 New Brunswick certainly possess great advantages in the vast extent of her soil and mineral resources; and to these we have frequently directed public attention. But at the present time, notwithstanding the information on the subject, which has resulted from the Geological Survey, her extensive Coal Mines are still lying dormant. Neither has Agriculture been prosecuted to the extent which would have been advantageous to our interests, notwithstanding the soil is good, and the climate 10 favorable, for the extensive cultivation of the necessities, if not the luxuries of life. To these subjects, therefore, should the energies of the Province be directed."

Morning News - May 16, 1849 ADVERTISEMENT: Grand Lake Coals. The undersigned are now prepared to furnish Grand Lake Coals of first quality, in any quantity, to merchants, shipbuilders, and to foundries, at 20s per chaldron, and when 20 or more chaldrons are required, they will be delivered on any wharf in this City free of additional charge. Cargoes will be furnished for export at a discount upon the price for cash or approved endorsed paper, at 3 months. Depot on Custom House Wharves. May 14 Berton Brothers."

Morning News - Oct. 20, 1851 Geological Survey. - J.W. Torrey, Esq., a young gentleman well known in literary circles, left this city for St. John's, yesterday, in the steamer Admiral. He goes for the purpose of making a geological survey of a large tract of land in which the coal formation is said to abound. Though quite young, Mr. Torrey is known as one of the best geologists in this part of the country and particularly, in the article of coal, his knowledge is rarely equalled. - Boston

N.B. Courier - Sep. 13, 1851 Colonial Minerals, &c. - The London Times of the 15th August, in noticing the Minerals of various countries, as exhibited in the Crystal Palace, alludes to those of these Provinces in the following terms:- ""We see no specimen of coal from Canada, and if the absence of such correctly leads us to conclude that no basin of that mineral has yet been discovered in the Province, we may assure the Canadians that they will some day be made aware of the importance of connecting themselves more closely with New Brunswick and Nova Scotia, where this mineral is abundant. Without cheap fuel of strong quality and small bulk, the process ofsmelting, forging, and raising steam can be carried on only to disadvantage, and the industry of Canada must be exercised principally on raw material until she puts herself in a position to command a good supply of that all powerful stimulator - coal. ""The sister Province of New Brunswick has not been entirely idle amid the general excitement to contribute to the show of industry of all nations; but this is all we cane say, inasmuch as the samples of iron ore, manganese, plumbago, and pitch coal, which composes her entire list of minerals specimens, are most paltry as an index of the mineral wealth which really exists in that fine province. New Brunswick is somewhat larger than Ireland; the greater part of her soil is fertile, and is covered with fine forests. Two thirds of her boundary line are formed by the sea, and, as a consequence of these conditions, the energies of her inhabitants have been absorbed by timber cutting and by fisheries. She possesses, however, vast stores of coal, of ore, and of stone, applicable to building and to the arts, and as soon as the temptations to ""lumbering"" (cutting timber) and fishing on the small scale diminish before the advance of population and the demand for produce of more skilled labour, then will the star of New Brunswick take its place amid the more solid and valuable jewels of the chaplet which adorn the brow of our Imperial Victoria. ""Nova Scotia has been more industrious, and has sent us a fine collection of iron ores and iron products through the medium of one of her most enterprising inhabitants, Mr. C.D. Archibald. The mineral property of this gentleman is exhibited in the rough ores, which appear not only rich in quantity of metal, but of excellent quality; and a systematic arrangement of pig, bar, steel, tinplate, ware, and manufactured articles, (knives, grates, &c.) deserve high credit, as evincing energy and skill as well as methodical industry, to exhibit these very valuable productions in a young colony. ""There are also exhibited by the same gentleman various samples of marble, some of which are fine in texture and of good colour, but apparently not sufficiently close and even-grained to compete with the marbles of Italy. Excellent freestone is exhibited, and also gypsum and its crystallized variety called selenite. Large quantities of this mineral are raised in this Province and exported for manure. Gray copper-ore and native copper, of fair quality, appear on this table, and some oxide of manganese. Some interesting fossils of the carbonaceous series have been sent by the Central Committee of Nova Scotia, and one lump of coal of good bituminous quality. But where are the specimens of the General Mining Association, which company leases the Crown minerals reserved by ancient Crown right in Nova Scotia, and which comprise by far the larger portion of the mineral property of the Province? Property has its duties as well as its rights, and we cannot be surprised that a name so distinguished as that of our leader of Transatlantic steam navigation should not have been attached to a copious and well-arranged series of freestone, coals, iron ores, and limestones from the basins of Pictou and Cape Breton, where that gentleman has the principal direction of the affairs of the General Mining Association. ""Let us hope that the omission will be rectified as soon as another opportunity is presented; and sure are we that no effort of the Mining Association will be disregarded which may show to the inhabitants of this fine Province that their mineral wealth is skilfully handled, and its products are available for their use, in competition with those of all the world beside."""

N.B. Courier - Feb. 14, 1852 Grand Lake Coal. - On Friday last, a quantity of Grand Lake coal was brought to the Province

Hall, for the use of the Legislative Council, by Berton Brothers & Co., which attracted considerable attention. The specimen was certainly superior to any that has hitherto been presented from that quarter, and we were assured by Mr. Bailey, the party in charge, that it had not been culled, but was a fair sample of the article as it came from the mine. If an adequate supply of such coal can be had in the Province, there cannot be a doubt that the necessity for the importation of this article must speedily cease, and its exportation must soon become an important branch of Provincial commerce. -

Daily Telegraph - Aug. 26, 1864 The Coal Measures. - The coal district of New Brunswick is accessible through a tributary of the River St. John known as Grand Lake, and is reached by schooners of large burthen. The mines appear to be inexhaustible and are constantly worked; but neither are the coal mines of New Brunswick or Nova Scotia at present worked to a comparatively great extent, from the want of a market. The United States possessing unlimited supplies within their own territory, and superior facilities for mining and transporting the article, these Colonies have only to excavate the necessary quantity for home consumption; while Canada is today requiring supplies which she can only procure by paying the war tax of the United States and large commissions and transportation charges. The New Brunswick coal is bituminous, and is said to be of a superior quality; it is easy of access, the strata being near the surface and yielding heavy."

Daily Telegraph - Feb. 3, 1866 The Coal Creek Coal Company have organized, with Messrs. James Harris, John McMillan, J.C. Brown, W.H. Olive and Dr. Hamilton, directors. Mr. Harris is President, and Mr. P. Besnard, Jr., secretary. The Journal states that the company possesses several very good seams of coal, which can be shipped to the city at remunerative

Morning Journal - Feb. 14, 1866 Coal Creek Coal Company. - The Directors, we understand, have already commenced operations by driving their first main level. Before the end of this month there will be quite a number of hands employed, and when navigation opens the shareholders and our citizens, generally, will have an opportunity of buying the coal and seeing how it burns. The Company have taken an office in Princess street, above the premises formerly occupied by Messrs. Gray & Kaye, where the Secretary, Mr. Besnard may be met with on the business of the Company, or on professional matters. So far the Directors seem to have acted energetically. We shall be glad to hear of the entire success of this and similar efforts to develope our resources, and give additional employment to our people."

Morning Freeman - Feb. 17, 1866 Coal Creek Coal Company. - The Directors, we understand, have already commenced operations by driving their first main level. Before the end of this month there will be quite a number of hands employed, and when navigation opens the shareholders and our citizens, generally, will have an opportunity of buying coal and seeing how it burns. The Company have taken an office in Prince Street, above the premises formerly occupied by Messrs Gray & Kaye, where the Secretary, Mr. Besnard may be met with on the business of the company, or on professional matters. So far the Directors seem to have acted energetically. We shall be glad to hear of the entire success of this and similar efforts to develop our resources, and give additional employment to our people. - Journal."

Daily Telegraph - Feb. 24, 1866 New Coal Company. - The Provincial Secretary certifies that Thomas R. Jones, B. Lingley, Thos. Coram, Andrew Moffitt, William Colwell, Jas E. Hamm, W.H. Tuck, and Geo. A. Bayard, all of Saint John, have filed in his Office a Memorandum of Association for the incorporation of a company to be styled the ""Ridge Coal Company"", for the purpose of mining coals and shale, with such other things as are incident to the attainment of that object; with a capital of Twenty Thousand Dollars, to be divided into four hundred shares of fifty dollars each; and that the Office or principal place of business will be in the City of St. John. The company, we understand, hold coal lands in Queens County - a portion of the Province that is receiving special attention from capitalists."

Daily Telegraph - Feb. 27, 1866 The Corporators of the Ridge Coal Company propose to meet on the 10th March for the purpose of completing the organization of the Company. We understand that the company's coal lands on Salmon River, Queen's County, include some five hundred acres, near to excellent loading ground, and in a commanding location in every respect. There is a fine, workable seam, overlaid with a bed of valuable fire clay five feet thick."

Daily Telegraph - Feb. 27, 1866 ADVERTISEMENT: Notice of the Meeting of the Ridge Coal Company We the subscribers to the Memorandum of Association of the ""Ridge Coal Company,"" a certificate of the filing of which under the hand of the Hon. A.H. Gillmor, Provincial Secretary, was published in the Royal Gazette on the 21 st Feby. Inst., do hereby call a meeting of the said corporation on Saturday the tenth day of March next, at 20 four o'clock in the afternoon to be holden at the store of Mr. T.R. Jones, Market Square in the City of Saint John. Dated the 26th day of Feby., 1866. Thomas R. Jones B. Lingley Andrew Moffat Thomas Coram W.H. Tuck Geo. A. Bayard J.S.E. Hamm Feb 27 William C. S.J. Daily News - Jan. 12, 1866 and S.J. Morning Freeman - Jan. 13, 1866 The ""Coal Creek Mining Company"" has filed in the Provincial Secretary's office, the necessary papers to secure incorporation. The capital of the Company is $30,000, the number of shares 3,000 of $10 each. St. John is to be the principal place of business."

S.J. Daily Globe - Mar. 12, 1866 and Daily Telegraph - Mar. 13, 1866 The Ridge Coal Company was organized on Saturday last, by the choice of Messrs. Thos. R. Jones, R. Lingley, Thos. Coram, Jas. E. Hamm and George A. Bayard, as

Directors. The Directors subsequently elected Mr. Jones President."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Evening Globe - Sep. 22, 1866 The Grand Lake Coal Mines. - We have received the report of Mr. Semmons, employed permanently at one of the Albert County Mines, a reliable and practical Mining Engineer, upon the Coal Mines at Coal Creek, Grand Lake. The Company which owns this mine procured Mr. Semmons's service with the object of testing the value of their property, and he reports most favorably. As anything connected with wealth which lies hidden in the soil must be interesting to the public, we give Mr. Semmons's opinions:-I find the average thickness of the Seam of Coal to be one foot four inches, lying in a horizontal position, cropping out in the bank of the Creek, with from twenty to thirty feet of rock lying over it. The Coal near the outcrop seems a little rusty, and contains small thin seams of slate; but I think both slate and rust will leave the coal as it goes farther into the bank, for already in one of the main levels which is now driven, one hundred and sixty feet from the bank, the Coal is very bright and black, and free from rust and slate. The Coal Beds on Coal Creek are not so thick as at Newcastle, but the Coal is harder and stronger, and if it be properly mined I have no doubt but that it will meet with a ready market. Your Secretary, Mr. P. Besnard, Jr., informed me you owned some six hundred acres of coal property. The Coal being nearly horizontal, your property (the Coal being one foot four inches thick) would yield twelve hundred chaldrons of Coal to the acre, or seven hundred and twenty chaldrons in the block. Estimating the Coal to sell in St. John for five dollars a chaldron, the value of your Coal would be three millions six hundred thousand dollars. There would be some preliminary expenses in effectually opening the mine, such as building wharves (which I may here state is necessary to be done at once); driving adits, sinking shafts, driving main levels, procuring tools, and other things connected with mining operations that are not worthy of notice here. When this is completed I think the Coal can be sent to St. John for three dollars, as follows: Mining ...$1 60 Screening and Shipping ... .40 Freight ... 1 00 --$3 00 Now deduct from the $5.00, (which is the market price) 50 cents per chaldron for royalties and agency expenses, and you have the net profit of one dollar and fifty cents per chaldron. I may here add, if you can obtain barges that will stand the weather on the Grand Lake you will save fifty per cent on the transport of the Coal, besides having your Coal in a much better condition. The great drawback to the successful working of the mines is the same as in many similar cases with our people. There is a lack of capital. Those who have surplus earnings are careful as to how they invest them; and must have it proved to a demonstration that a handsome profit will be secured before they can be induced to take stock in any new enterprise. Prudence is commendable; but generally our people work with suspicion upon any thing of the kind, holding off until some Yankee comes along, takes hold of it, and makes a fortune. Then we discover when too late that we have been misled by a short sighted policy and growl because Americans are coming in and monopolising the wealth of our most valuable natural resources. In the case of this Coal Mine there is a fine opening for those who have spare funds to invest as the most expensive and least lucrative part of the labor has already been performed by the company, and we believe that a handsome profit will accrue to any one who may hereafter take stock in the concern."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Telegraph - Sep. 25, 1866 A Queen's County Coal Mine. - Several of our City newspapers have recently referred to the mining property of the ""Coal Creek Coal Mining Company"", their remarks being chiefly based on a circular, in which a mining engineer, Mr. Stephen Semmons, offers his opinion of the value of the property. As the company have adopted this means of bringing their property under the notice of the public, and have furnished the press with copies of a circular intended to elicit public expressions of opinion, of course they expect to be dealt with candidly and honestly. To entertain a contrary opinion would involve the supposition that the company have put forth this circular to entrap the unthinking into the purchase of stock, and that anything in the shape of sound criticism as regards the value of the property would be distasteful. We do not believe that they desire one-sided action in the matter. We feel that when they sent their printed circular, to the several newspaper offices, they were desirous only of eliciting from the press a candid opinion of the merits of the statements contained in that circular; and that is what we propose here to offer. The principal facts stated in Mr. Semmon's report on the Coal Creek property are these; The company ""own"" 600 acres of coal lands; the seam is 16 inches thick; the quantity to the acre is 1,200 chaldrons or 720,000 chaldrons to the block; slate and rust are mixed with the coal at the out crop, but these disappear as the levels advance. Mr. Semmons estimates the coal as worth $5 a chaldron in the St. John market, and calculates the expense of getting it to market as follows: Mining, $1.60, screening and shipping, 40 cents, freight, $1, royalties and agency expenses, 50 cents - leaving $1.50 per chaldron profit. - Mr. Semmons, no doubt, understands pretty thoroughly the expense of mining; we doubt, however, if he is equally well posted on the cost of transportation and the market value of the coal. During the last fortnight some of this coal has sold here as low as $4 a chaldron, instead of $5, while freight from the mines was $1.40 instead of $1 - thus causing the $1.50 per chaldron profit to disappear almost instantaneously. But Mr. Semmons has asserted that it is necessary ""at once"" to erect wharves at the mines; to drive a main adit 17 on the lower part of the property for drainage purposes, which may be a ""little expensive"" - besides driving other adits, and levels, sinking shafts, procuring tools, etc., all of which, Mr. Semmons intimates, are yet necessary for ""effectually opening the mine"". He further states that the purchase or hire of barges (which, of course, must be towed by steam power), will be desirable. These expenses must all be provided for out of the product of a seam of coal fourteen inches thick, whose value must necessarily fluctuate according to the supply of English and Nova Scotia coal in the market. As some city newspapers improved the hint given them by the receipt of the circular, and have published laudatory notices of the company's property, the writer, who is a stockholder, may be pardoned for bringing under the notice of the stockholders generally a few facts which can scarcely fail to interest them. The company, in the

first place, have made a mistake in purchasing from Mr. Besnard, their secretary, the mining rights in a certain piece of land, while Mr. Besnard continues to hold a large block of the same description of property immediately contiguous, which, of course, is being increased in value by all the expenditure that is being laid out on the company's land. In short, by the time the company, after large investments, find themselves in a position to refund to the stockholders a portion of their capital in the shape of dividends, they will probably also find a rival company at work alongside of them. Again: it is known that a number of the stockholders have agreed to advance the Directors funds to spend in boring for a second seam of coal on the property. This was quite a step proper to be taken, but it would have been better if, before the borings had commenced, the Directors had sought to induce the other companies interested in the coal lands in Queen's county to aid in the search and bear a portion of the expense, as the investigation, whatever its results may be, involves the interests of all who hold coal property in that district. At present, however, if we are not greatly mistaken, the Coal Creek Coal Company are doing the work of other parties and bearing the expense alone. It is known that the engineer has property of his own in the neighborhood, and that parties most active in urging upon the company the necessity for boring a second seam are interested in another company recently formed, who intend to work Mr. Semmons property in case the borings which the Coal Creek Company have undertaken turn out successful. Pretty sharp practice appears to be going on, the Coal Creek Coal Company paying for the whistle all the while. Our own impression is that a workable second seam will not be found; still, we hope that the company's enterprise may falsify our theory and be abundantly remunerated, in which case a large amount of capital will be required to develop the property while mines will be opened on all sides, leading to brisk competition and low prices in the St. John market. We have grave doubts respecting the accumulation of gigantic fortunes thro' coal raising in Queen's until some means, as yet unknown, is discovered for keeping the coal of other

Morning Journal - Jan. 7, 1867 ADVERTISEMENT: Coal Creek Mining Co. Notice is hereby given that the Annual Meeting of the above Company will be held at their Office, 17 Princess Street, St. John, N.B., on Wednesday, the 9th day of January next, at 4 o'clock, p.m., for the Election of Officers for the ensuing year, and for the transaction of any other business that may legally come before the meeting. Morning Journal - Jan. 16, 1867 The Grand Lake Coal Beds. - As to a Second or Lower Seam Being Found. -We give the remainder of Mr. Matthew's valuable remarks on this point:- It has long been a vexed question, and one that still remains to be settled, whether there are any thicker seams, below that now worked on the Grand Lake, or in other words whether there may not be a probability of larger and more valuable seams in the New Brunswick Coal Field, analagous to those which exist in the Eastern part of Nova Scotia. The first Geological explorer of New Brunswick, Dr. Gesner, asserted confidently his belief of the existence of large beds, underlying the present seam, as he terms it, the superficial coal stratum. Following him, the late lamented Dr. Robb, a much more able man, and one not given to misleading others by putting a coleur-de-rose upon observations did not warrant it; gave it as his opinion, that such an expectation could scarcely be entertained from any observations that he had made, and showed, conclusively, that Dr. Gesner's assertions were entirely without foundation. Neither of these gentlemen, however, had any opportunity of making anything like a thorough survey of the central carboniferous area, owing to the dense woods with which it was and still is covered, and the large mass of debris which, even in cleared districts, is generally distributed over its surface, thus concealing the strata from view, and up to the present time no accurate survey has been made of the district. Even now, so generally are the rocks hidden by the soil, such a survey as would settle the point is almost a matter of impossibility and could not be accomplished without great expense. Professor Hind, in his survey, only traversed the outer rim of the basin, where, supposing workable seams of coal to exist in the middle carboniferous in this province, he could not possibly expect to fall in with them, while Professor Bailey has not yet had the opportunity of giving his attention to the central carboniferous area. At the present time, therefore, we have no sufficient data whereby we can decide this point; but a few important facts we have, which though they still leave us in a state of doubt, yet warrant us entertaining the hope that thicker seams of coal may be found, and I shall endeavor, in as plain a manner as possible, to place these facts before you. In the first place then let me remind you that the carboniferous rocks of Nova Scotia again a thickness, according to the measurement of Sir William Logan, of about 16000 feet or more than three miles. In that province they have been without difficulty separated into the three great divisions. The upper carboniferous, in which only thin and unimportant seams of coal are found, having a thickness of 2267 feet. The middle carboniferous (in which there, as in England, France and the United States, all the most important seams of coal are found) attaining a thickness of 10,670 feet, and the lower carboniferous, which in those countries, and elsewhere generally, is barren of any valuable deposits, about 3000 feet thick. Reasoning by analogy, we would expect to find valuable seams of coal, if any in New Brunswick, in the middle carboniferous. Here the question resolves into two: viz:- Is the middle carboniferous or productive coal measures represented in the New Brunswick coal field? And what is its extent or thickness? In the answer to the first question we see the utility and value of scientific geological observation. Few persons would think that those simple little plants, so delicate in their nature, yet so carefully preserved in the shales at Newcastle, would answer this question for us. But so it is. These little and apparently insignificant relics of a far distant era, like many other little things, are of great importance, and handled aright can impart more information than one would imagine. You are all aware that the contained fossils have always proved the best means of identifying the age of a rock; and that strata, very different in appearance, and widely remote from each other, are, through their containing the same characteristic fossils, confidently and justly ascribed to the same period of time in the earth's history. A collection of these fossils was transmitted to Dr. Dawson (than whom there cannot be a better authority

on Acadian Geology) and by him examined and compared with those of the Nova Scotia carboniferous area. The result was that about eighteen of them were found to belong to the middle carboniferous, three to the upper carboniferous, and four more common to both. Basing his conclusion then on this, Dr. Dawson has expressed his opinion that the superficial strata of the Grand Lake, are on the horizon of the middle carboniferous, or productive coal measures, though the flora shows that they tend to the upper. We may assume then that at Newcastle, and all over the upper part of the lake, the strata represent the top of this division of the carboniferous, or at least cannot be far distant from it. Thus then we have the answer to our first question, and may rest assured that the productive coal measures are present in our coal field." Morning Journal - Apr. 17, 1868 Royalties. - Within a short time Government have been looking into the matter of Royalties on Coal, and ascertained that there had been none collected for many years. They accordingly, some time since, sent an agent to Grand Lake, who has succeeded in securing, so I am informed, about $5,000 of back royalties. As regards Grand Lake coal, a gentleman of veracity and good information informed me that there is one third more coal got to the man there than there is in the Nova Scotia mines."

St. Andrews Standard - Aug. 26, 1868 Two cargoes of Grand Lake coal have recently arrived from St. John for the Calais Gas Light Co. This coal is said to be well adapted to the production of gas."

N.B. Reporter - Feb. 28, 1868 With reference to Mr. Wetmore's mining leases, it certainly seems only honest that if the other leases, obtained on like conditions of sale, have issued to the respective purchasers, Mr. W.'s should issue likewise, and then let the Government take care that no such sacrifice of valuable lands shall occur again. When the Government grant 17 square miles, as in this case, for the nominal sum of $320, they expect to reap reward on behalf of the public, not in the paltry purchase money, but in the working of the mines and the consequent opening up of the resources of the country. But let these lands be held as monopolies, and the lessee compelled neither to raise coal nor return royalty, then the grand idea becomes abrogated, and that too without remedy. Our mines and minerals are too valuable to be thus

Chignecto Post - Dec. 15, 1870 Coal in New Brunswick. - The ""Telegraph""speculates as to the probability of the existence of thick seams of coal below the thin seams now worked, and thinks our Local Legislature should consider the expediency of exploring and developing it."

Daily Telegraph - Mar. 7, 1871 Grand Lake Coal Operations. - The operations of the Queen's Mining and Manufacturing Company, in boring for lower seams of coal at Grand Lake, are progressing in a manner which, it is hoped, will result in success to their enterprise. They have a large tract of land near the mouth of Salmon River, the leases of which were obtained nearly a year ago by C.W. Wetmore, Esq., of Prince William street, and assigned to the company which was then formed. It was the company's intention to work only the top seam - which is about twenty inches in thickness - but they were induced to make further investigations and, accordingly, determined to spend a moderate sum in searching for an under seam or bed. An agent was sent to the United States for the purpose of ascertaining the best system of boring, and it was decided to adopt the mode in general favor in the oil regions of that country, and the Dominion. A set of tools and a ten horse power engine were at once procured, and boring commenced in the latter part of May. Difficulties had to be overcome, which at first seemed quite serious, the men employed being entirely new to the business, and their labours, therefore, attended by mishap of one kind or another. The work of boring is performed by a joint-bar, composed of several short pieces of iron, which, together, measure forty-four feet in length and weigh about half a ton. The drills are two in number, about three feet in length, the first making a hole four inches in diameter, and the second enlarging it to six inches. The machine is attached to a rope which passes over a wheel at the top of a derrick, which is high enough above the surface to admit of the whole length of the drill being lifted clear of the surface. After a certain amount of drilling is performed and the debris is to be drawn, a tubular instrument with a valve at the bottom is let down. By means of an exhausting apparatus pulled upward from the surface, through the tube, the bottom valve is lifted, and the sand, stones, water, etc., are drawn up and conveyed out of the boring in the tube. Up to the present time the company has expended about $3,000, one half of which has been paid for necessary buildings, machinery and tools, and the balance for wages and fuel. Three men are employed, and the expense of boring is about $6 a day. After the boring had got nicely underway and the men were getting accustomed to their work, some of the boring tools got jammed in the well when it was ninety feet in depth. All efforts to draw them failed, and boring had to be commenced over again. A depth of two hundred and eighteen feet has now been reached. The works are located on the eastern side of Salmon River, near the mouth, about a mile above where the Salmon River Coal Company bored in 1837. Specimens of all that has been passed through in boring, have been preserved, and although they have not 4 been submitted to a practical Geologist, yet the Company feel sanguine of striking a bed of importance, the borings being of the character usually found in the vicinity of the best coal beds of the Province. Brown and grey sandstone predominate, with occasional beds of conglomerate, shale, fire clay, and thin seams of bituminous coal. The most important of the latter is six inches in thickness, and rests on three feet of fire clay, ninety feet from the position occupied by the twenty inch seam. Professor Dawson, one of the best authorities on the subject in the Dominion, referring to the appearance of the coal area of New Brunswick as compared with that of Nova Scotia, says that the prevalence of sand stones and the flat, undisturbed condition of its beds are remarkable. He says the beds in New Brunswick are of less thickness than those of Nova Scotia, and that they include only two principle groups, one near the base and the other near the summit. To the former he refers the coals of the coast near Bathurst - of Richibucto, and of the vicinity of Fredericton; to the latter, those of Miramichi, and possibly those of Cocagne and Grand Lake. The fossil evidence found in these places goes to indicate that the coal formation of Bathurst is of the lower and that of Grand Lake is more akin to the upper formation. Professor Dawson says:- ""As the Grand Lake beds seem to belong to the upper series, and borings already made would indicate that the lower series may be reached there, it would be desirable that effectual measures should be taken to ascertain their actual value either by boring or by searching for their outcrops, and also that the Grand Lake beds themselves should be proved in their extension, both east and west."" It is quite probable that measures will be taken by the Local Legislature, during its coming session, to ascertain something more definite than is already known with reference to the value and extent of the Grand Lake coal deposits. The Queen's Company, having machinery, etc., on the ground and in operation, would, no doubt, render any assistance in their power in forwarding the views of the Government in the matter. A certain sum is also set apart annually for the Geological Survey of the Dominion, and if a portion of it were added to what the Province might furnish, and a corresponding or proportionate amount were contributed by the company, important results might follow. The Queen's Company have accomplished a portion of the work, and we hope that in their locality their work will not be done over again, at the expense of the Province,

N.B. Reporter - Aug. 28, 1872 A Diamond Borer. - It will be remembered that last session the House passed a very respectable grant for the purpose of aiding certain mineral researches in the Counties of York, Sunbury and Queens, but especially to explore for an underlying stratum of coal at the Grand Lake Mines. It was recommended by the miners to expend the money in sinking a shaft on the English principle, but more scientific advice persuaded the government to expend the grant in purchasing and working a diamond borer, first discovering by this means whether the results would justify the sinking of a shaft on some future occasion. The borer works cheaply and effectually. It pierces through every obstacle, even the most flinty rock, and brings up a core of 1 1/4 inch in diameter, thus showing a perfect section of the interior of the earth to any depth the company may wish to penetrate. Hon. Mr. White will purchase the new implement in New York, and we believe has already left Fredericton for that purpose."

S.J. Daily Telegraph - May 11, 1872 Mining in Queen's. - We learn that a meeting is to be held to-day in Queen's County, with a view of taking preliminary steps to form a Company to commence boring for coal and iron, at or in the vicinity of Newcastle, Grand Lake."

Daily Telegraph - May 23, 1872 Mining In Queen's. -Newcastle, Co. Q., May 22nd, 1872. 3 Mr. Editor: Local excitement is up with the contemplated undertaking of the Coal Mining Company who you will remember obtained a charter at the last sitting of the Legislature and who have also been granted subsidies by the Provincial and General Governments. The Company have had under consideration the propriety of making explorations by boring, and have been in correspondence with professionals in the art, who agree to bore to the required depth for $3000. But as the cost of boring was great, and as they have not much doubt of there being coal, they have determined to sink a shaft at once. Accordingly the auspicious ceremony of first sod turning will be duly celebrated on Saturday next at 4 p.m. Mrs. G.P. Bailey, will handle the spade on that occasion. Yours, etc., Vox"

S.J. Daily Telegraph - Nov. 29, 1872 Grand Lake coal. - As regards the borings at Grand Lake, we are informed that the Government has secured the services of Mr. Ells, a competent geologist from Montreal, who is to superintend the operations and report regularly to the Provincial Secretary's office. The borer is to commence work immediately. - Reporter"

N.B. Reporter - Oct. 2, 1872 The 'diamond-pointed borer,' purchased in NewYork by Hon. Mr. White and others for the Government to be used in developing the mineral resources of Queen's and Sunbury counties now lies on the North Wharf, St. John, having arrived a few days ago in a schooner."

S.J. Daily Telegraph - Oct. 16, 1872 The Diamond Borer purchased by the local Government is now at Grand Lake, and will soon be put in operation there, in order to test the existence of the much talked of seam of coal. It is intended to bore down one thousand feet, if the seam is not struck before that depth is reached. Many persons are sanguine ever the prospect of a thick seam being found, while others doubt its existence."

Carleton Sentenil - Aug. 2, 1873 The Grand Lake Mining Company. - Messrs. Caleb D. Wetmore, of St. John, Gideon D. Bailey, David Robinson, Joseph Wasson, Charles McMahon, Walter S. Butler, of the Parish of Canning, County of Queen's and James Kennedy, of Northfield, County of Sunbury, and Alfred A. Stockton, of this city, have filed in the office of the Provincial Secretary, a memorandum of association for the incorporation of a Company to be styled ""The Grand Lake Mining Company,"" for the purpose of prospecting for, developing and mining coal, salt, iron ore, stone of all kinds, and all kinds of minerals and metals, with such other things as are incident to the attainment of that object, with a capital of $50,000. to be divided into two thousand five hundred shares of $20 each. - The office or principal place of

Morning Freeman - Aug. 26, 1873 Mining Companies. - A correspondent thinks that Mr. Bailley, who is Secretary and Treasurer to the Queen's and Sunbury Coal and Iron Mining Company should have resigned before he joined the Grand Lake Mining Company, which he seems to regard as a rival association. Our correspondent discourses at some length what he thinks are the motives of Mr. Bailly and others, but his conjectures may do injustice to these parties. We would gladly assist in preventing all monopolies and improper land grants, but we can deal only with public transactions. Our correspondent and all others interested, if they entertain such apprehensions, should apply to the Government directly at

S.J. Daily Telegraph - Dec. 6, 1873 Grand Lake Coal.- The Express says several loads of coal were hauled into Fredericton this week from Grand Lake."

Codes: X1 / IDX_Names: Grand Lake Coal;

Colonial Farmer - Dec. 22, 1873 The Diamond Borer at Grand Lake has struck a seam of coal 6 or 7 inches thick, one hundred and twenty feet below the surface."

Daily Tribune - Jul. 17, 1873 Formation of the Grand Lake Mining Company. - Caleb. W. Wetmore, of this city, Gideon D. Bailey, David Robinson, Joseph Wasson, Charles McMahon, Walter S. Butler, of the parish of Canning, County of Queen's, and James Kennedy, of Northfield, County of Sunbury, and Alfred A. Stockton, of this city, have filed in the office of the Provincial Secretary a Memorandum of Association for the incorporation of a Company to be styled ""The Grand Lake Mining Company"", for the purpose of prospecting for, developing and mining coal, oil, salt, iron ore, stone of all kinds, and all kinds of minerals and metals, with such other things as are incident to the attainment of that object, with a capital of fifty thousand dollars, to be divided into two thousand five hundred shares, of twenty dollars each, and stating that the office or principal place of business will be in the city of St. John."

Colonial Farmer - Jun. 28, 1873 Diamond Borer. - The Diamond Borer has been moved to Little River, about four miles down the lake from Newcastle. It is to be hoped that it will find coal somewhere."

N.B. Reporter - Apr. 1, 1874 We have before us the Geological Survey of Canada, including a most interesting and valuable Report by Prof. L.W. Bailey and Mr. G.F. Matthew on the mineral resources of New Brunswick. We must regret that want of space prevents the publication in this issue of results in regard to our coal formations, and the productiveness of the same, which must startle every reader who understands the real wealth of this precious substance. For the present it must suffice to say that the possible yield of coal embraced in the coal area of New Brunswick is estimated at not less than 3,510,436,357.12 tons."

S.J. Daily Telegraph - Aug. 26, 1874 Killed in a Coal Mine. - On Monday morning, as Mr. Yeomans, of Newcastle, Grand Lake, was at work in a coal seam, the earth, gravel, etc., not having been properly secured, fell on him and crushed him to

Daily Tribune - Jul. 10, 1874 A New Coal Mine. - Some very fine specimens of coal have lately arrived in this city from Salmon River, and are now on exhibition at the office of Mr. C.L. Richards, North Wharf. Good judges of coal have examined it and pronounced it equal in burning qualities to the best Sydney and at the same time very brilliant. The mine from which the coal was obtained is owned by Dr. Smith of Boston. At present he is sinking a shaft (from which the specimens were obtained) very near the river, and but a few yards from where the coal will be shipped. Dr. Smith is sole owner of the property, and the mine is being opened under direction of Mr. Boutellier, a practical miner, and who is to be manager at the mine. The present owner, a man of ample means, does not intend to form any Company for the development of the mine, but will have it done on his own account. The work has already so far progressed that the present expectation is to have the coal in this and the United States markets in a few weeks. The low rate of freights will

Morning Freeman - Jul. 11, 1874 Some specimens of coal, apparently of very excellent quality, were exhibited at the office of Mr. C.L. Richards, North Wharf, yesterday. The mine from which the coal was taken is owned by a Dr. Smith, a wealthy gentleman, of Boston, and is situate at Salmon River, Chipman, Queens Co."

S.J. Daily Telegraph - Jun. 12, 1874 Mining Company. - A company of United States capitalists has been formed, and will shortly commence mining coal on Salmon River, about 25 miles above Newcastle, Queens Co. The manager, Mr. Boutellier, is in the city at present, and will leave for the mine on Saturday."

S.J. Daily News - Jul. 3, 1876 Notes from Newcastle, Queen's Co. - ... Coalmining, the chief business here, is suspended for the summer, as the prices realized will not pay to mine it. ... a bear fight ... nearly proved fatal to Mr. John Temperly, an Englishman, well known as a miner, explorer and engineer. As he was exploring on No. 18 Brook, some five miles distance from Newcastle ..."

S.J. Daily News - Sep. 5, 1876 Grand Lake Coal. - Mr. W.H. Gibson has the general agency for this coal and is prepared to furnish it in any quantity to customers. This coal is now being used extensively by manufacturers and smiths in this city and is found to work well."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Telegraph - Aug. 24, 1877 The Trade and Railways of New Brunswick. - No. 2. - ... Our New Brunswick coal supply, and its quality, is underated by most of our people. According to the estimate of Professor Bailey and Mr. Matthews, to be found in their joint report to the Dominion Government, and contained in the geological survey of 1873, there are near the head of Grand Lake, in the counties of Queens and Sunbury, 112 miles of coal area, containing an aggregate of 153,000,000 tons of coal, which is equivalent to a supply of 1000 tons a day for 500 years. They further say that the discovery of additional outcrops, and the opening of other pits, may increase their estimate to two or three times the quantity named. Where accessible, this coal is used generally in this province, for forge purposes, in preference to any other kind. For house use, it has long been sold in Fredericton, in large quantities, and to some of the first families there, at prices but little less than the best English and Nova Scotia coal has demanded. In the winter season, farmers and others come to the mines from every quarter of the surrounding country, a distance of thirty to forty miles, for this coal, for homes and other purposes. Although the seam at the Lake is but 20 inches thick, yet being near the surface, and requiring no expensive machinery to drain the mines or raise the coal, it can be as cheaply mined as can coal in Nova Scotia, where the seams are so much thicker. Hitherto mining at the Lake has been prosecuted under very great disadvantages. The system of mining has been imperfect and expensive, and the want of care, in some of the mines, as to getting the coal pure, has always more or less affected the character and price of all the coal raised. There has also been the further disadvantage of having to haul the coal from three to six miles, at an average cost of 70 cents per ton, from the mines to what is known as the Bank, from where it is scowed to deep water; the frequent handling, decreasing the value of the coal, by breakage, almost as much as the long carting adds to the cost. The Central Railway, passing as it will for many miles through the coal fields, can take the coal from the pit's mouth, direct to the place of consumption, or it will deliver it at the head of the Lake, at a saving of cartage of 40 cents per ton, and vessels can there load, in as many hours, as they now require days. The saving of labour in loading, and the quick dispatch, will make a saving in the freight to this city of 30 cents per ton. Dr. Johnston in his report in 1849, on the agricultural capabilities of New Brunswick, says:- If the Province has no coal deposits, then such a quantity of woodland must be reserved for fuel purposes, that a population of 3,500,000 only can be sustained, but if the Province has a sufficient supply of coal, then such a supply of woodland need not be reserved, and the population may be increased to 5,800,000. If there is much force in the question of coal supply, there is no less importance in the enquiry as to how it may be brought within the reach of all. This question of fuel has the same weight for the adjoining State of Maine and Province of Quebec. They, unlike New Brunswick, have no coal deposits. They are nearer the Grand Lake mines than to any other by 150 miles, which represents an advantage in favor of Grand Lake, in freight, of at least $1.50 per ton. The Central Railway, by its connection with all our other existing railways, and our waterways, will bring this coal within easy reach of every section of the province, and it can be delivered in this city and at Miramichi at such low rates as will ensure large shipments to a distance. Hitherto the output of coal at the Lake (averaging 10,000 tons per annum) has been governed by the demand for fine or small coal, for forge purposes. By coking the surplus fine coal, for which purpose it is well adapted, as unlimited supply of coarse, or house coal, can be obtained. The coke will find a ready sale for steam and heating purposes. If it has been possible hitherto to prosecute this mining industry under the disadvantages named, by the large saving on the present cost of getting the coal to market, and with facilities to send it in all directions, and at all seasons of the year, is it not probable that this industry, on the completion of the Central, may assume large proportions. Yours, &c. C.W. Wetmore. St. John, Aug. 24."

SJ. Daily News - Jun. 5, 1877 Coal Mining at Grand Lake. -To the Editor of the Daily News, Sir, - A very important meeting was held at Newcastle Bridge on the ninth and tenth of this month to consider for the best method of regulating the sale of coal mined in the neighborhood of Newcastle and Grand Lake. The coal miners wished for a moderate advance in the price of coal, and they saw no way of procuring an advance except through combination, and it is extreme necessity drove them to it. And after a deliberative consideration they came to the conclusion they were still open to be victimized betwixt the users of coal and the wood boatmen; and the meeting was unanimous in agreeing to sell their right of the coal for five years to secure a sufficient agency, as you will find by the following document. You will oblige every party concerned, and confer an everlasting favor on the coal miners of Newcastle, by publishing it. Newcastle, Canning, Q.C., May 29. This Indenture made this ninth day of May, one thousand eight hundred and seventy-five between _____ of the first part, of the Parish of Canning, County of Queens, and Province of New Brunswick, and Hugh McLean, merchant, of the Parish of Chipman, of County of Queens, of the second part, Witnesseth, that the said _______ agrees for himself, his executors, administrators and assigns to transfer and sell, and dispose of all coal he may mine or cause to be mined in the Province of New Brunswick for the term of five years, from the above date, for the consideration of the sum of one dollar lawful money of the Province of New Brunswick, to the aforesaid _____ and the said ______ agrees for himself, his executors, administrators and assigns to sell all coals for the aforesaid ______ for five per cent commission per every chaldron of coal; and the said ______ further agrees to make returns of all sales immediately after sold, deducting commission, all cost and charges for the aforesaid sales; and the aforesaid _______ also agrees to use all the means in his power to advance the price until the coal shall reach three dollars per chaldron on the bank of the aforesaid place; and I ______ do for myself, my heirs, executors, administrators and assigns, covenant and agree to and with the said party of the second part, his executors, administrators and assigns to warrant and defend the sale of the said coal made unto the party of the second part, his executors, administrators and assigns against all and every person and persons whatsoever, etc."

Moncton Daily Times - Jan. 15, 1878 The Proposed Coal Duty ..."

Daily Telegraph - Jun. 3, 1878 A geological exploration has shown that near the head of Grand Lake in the counties of Queens and Sunbury, there are 150,000,000 tons of coal or a supply of 150,000 tons yearly for a thousand years."

Codes: X1 / IDX_Names: Grand Lake Coal;

S.J. Daily Sun - Nov. 25, 1880 Newcastle Coal Mines. - A Serious Accident. - Newcastle, Q.C., Nov. 18. - Mr. Hanford Sowers, of Newcastle, met with a serious accident yesterday morning, while engaged with his hired man, Wm. Rogers, in lowering into his coal mine through the shaft some wood to cover a drain in the mine below. The coal is raised to the surface in two frames, called wagons, which are worked by means of a windlass and sweep, and the hired hand had hold of the sweep while Mr. Sowers knocked the key away that held the wagon loaded ready to be let down. The hired man was unable to hold back the sweep, and let it go before Mr. Sowers had time to come to his assistance, and it revolved unhindered, striking Mr. Sowers full force in the hip and throwing him violently against the shaft house. Mr. Sowers suffered a good deal from concussion and other serious injuries he received in the fall, but under the medical treatment of Dr.

Daily Telegraph - Oct. 22, 1880 Coal from Salmon River. - Some time ago a coal seam was discovered on the farm owned by Mr. Robt. Elkin, at Salmon River, but was not worked until last spring, when a cargo was mined and sent to this city on speculation. The coal proved to be a good article both for house and steam purposes, but in consequence of the low prices which other dealers were receiving, Mr. Elkin did not then consider the enterprise would prove a paying one, and he accordingly directed his attention to the lumbering business. During the mining operations a considerable quantity of the coal was got out, and which has since remained near the mouth of the pit. Another cargo was shipped to this city a few days ago, and is now being disposed of at Indiantown dock. The mine is situated about two miles from a point where vessels could load with but little difficulty. The rates asked for the coal are very reasonable. The best quality rates at $4 per chaldron, and the finer grade at $3 per chaldron."

Daily Telegraph - Dec. 10, 1882 Newcastle. - It is hoped that a railway may be built from Gibson to intersect the Intercolonial between Moncton and St. John, which will greatly assist in developing the mineral resources of this part of Queens and Sunbury counties, as there are extensive beds of bog iron beside the coal which has been tested and found to

Fredericton Capital - Jun. 3, 1882 The Duty on Coal. - About $15,000,000 are invested in the coal industry in the Maritime Provinces. The Opposition in New Brunswick and Nova Scotia say little or nothing about the duty on coal; but the free-traders in Ontario and Quebec argue that it is a sectional tax, which operates unjustly in favor of the Maritime Provinces. But, by the same reasoning, they were themselves responsible for a tax of 150 per cent. upon petroleum, which is found only in Ontario. They have argued that the Maritime Province coal is not fit for use, and Mr. Snowball, whose political career is now atan end, is reported as having said that he would not use it in his tugboats. Such a speech was characteristic of his party, whose object seems to be to cry down everything Canadian. It is unnecessary for us to say a word in favor of the Maritime Province coal, which is pronounced by factory owners and captains of ocean steamers to be equal to the North Country coal of Great Britain; but we wish to quote a few facts showing the increase that occurred in the coal industry from 1878 to 1882, two years after the imposition of the duty. In 1881 there were 184,918 more tons of coal shipped from Nova Scotia to Montreal than in 1878; and the extra number of men employed in the mines was 465. The coal shipments from Cape Breton to Montreal and Quebec in 1881 were 118,014 tons more than in 1878. These figures show how greatly the coal trade of the Maritime Provinces has been fostered by the National Policy. It is argued that the duty on coal has increased the price. We, in the Maritime Provinces, know that this is not the case; and it has been shown that at competing points the duty has not added to the price. Even if the price were increased, it would be cheaper for the mechanics of Ontario and Quebec to pay the increase, under the general system of protection of which it is a part, then to return to Free Trade and find themselves reduced to the extremities that existed between 1874 and 1878. Despite the duty on coal, it is now more imported more cheaply than it was in the anti-tariff days; for a while the Anthracite coal imported into this Province from the United States, in 1877, cost $4.00 a ton, that imported into New Brunswick in 1881 cost only $3.70 a ton. Not only in the old tariff days did coal cost more a ton than it does now, but the purchasing power of the people was less than it is now under the old tariff which has developed old industries and established new ones, and generally caused good times in the country."

S.J. Daily Sun - Mar. 13, 1882 Queen's Co. - Coal. - Mr. James Brown, who livesat the Coal Mines on the Salmon River, 5 miles below King's, has discovered on his farm a new seam of coal six feet in thickness, which is the largest seam found in Queen's County thus far. He has men now employed in digging a tunnel to it from near the river bank so as to convey the water from and give him opportunity of opening the mine."

Daily Telegraph - Aug. 1, 1883 Queens County Coal Mines. - An occasional correspondent sends the following from Salmon River, Queens County:- I noticed a reference in your paper a short time ago to the coal fields of Grand Lake. As the coal fields of this district are generally supposed to be in the neighborhood of Newcastle let me give you some idea of a coal field about a mile and a half east of Salmon River, some 10 or 12 miles from Newcastle. Some 10 years ago coal was dug here by a company that became discouraged, being so far from a market and the seam not over 12 or 15 inches at the point then worked. The property, some 400 acres, was purchased by Mr. Robert Elkin and is now worked by him. The seam is from 18 to 24 inches thick. The quality of the coal is good, surpassing much of the coal dug in other parts of Queens county. From excavations that have been made in a circuit of a mile or more in extent around the base of the table land that stretches for a long distance back from the river, it is estimated that a vast coal field here of excellent quality, both as to hardness and combustion. Mr. Elkin last fall sent some of this coal to Fort Fairfield and other points up the river, and only waits railway facilities to fill as many orders as he can supply. He naturally is anxiously looking for the advent of the long-talked-of road, which, following the old Fredericton road to Newcastle, would pass within a few rods of the coal mine. There being here a level space, an excellent spot for a station is afforded, which would be conveniently situated for the accommodation of the Range people further down the lake."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Aug. 6, 1884 The Coal Fields of Queens and Sunbury. - MAP Now that the construction of the Central Railway is no longer a problem but is likely to be entered upon in a few weeks at farthest, attention is being diverted to the vast and long neglected coal region of Queens and Sunbury, which should soon become the field of extensive business operations. Hitherto the mining of coal in this Province has been conducted by men, for the most part without experience, and in consequence, the product has been of a character calculated to give an erroneous impression with regard to its value. In coal mining, as in everything else, both knowledge and experience are requisites for success. Coal mining in Queens and Sunbury has, up to the present time, for the most part been conducted by farmers and others, who when work was slack on the farm or in the shop, have in the most primitive manner imaginable, sunk a shaft or uncovered a level at some point chosen at random, from which the black diamonds were removed by hand or horse power, tediously and slowly, and in consequence of lack of facilities for transportation, sold with little profit. To be sure, during the past 18 or 24 months some enterprising shippers have encouraged these small miners to use more care in their work, and to adopt the use of inexpensive labor-saving appliances, so that the reputation of Grand Lake coal as it is called, has largely advanced, but the business is still in its infancy. Its youth and manhood will rapidly develop on the opening of the railway, by means of which the coals of Queens and Sunbury can be placed in fair competition with those of other sections of the world. With a view to gain some personal knowledge of our coal-producing capabilities, the Coal Region, which for the most part, lies to the westward of Grand Lake and Salmon River, was thoroughly traversed by a Sun reporter a day or two since. It comprises an area 10 to 12 miles square (120 to 144 square miles), the appearance of which is strikingly similar to that of the bituminous coal- producing districts of Pennsylvania. Driving from Douglas Harbor the coal region is entered near the mouth of Grand Lake Little River, about one mile south of Flower's Cove, within a short distance of which several mines have been opened and worked with success at intermittent periods. From Flower's Cove a road extends in a northwesterly direction, almost parallel with the northwest limit of the coal fields, but about one mile within it, to the great road leading from Sheffield to Salmon River, a distance of three miles. About a quarter of a mile south of the Sheffield road and a half a mile west of the Flower's Cove is the location of the Green mine. The coal here, as in all the other mines that have been opened, lies in a horizontal position with a slight elevation to the westward. The seam, which is 32 inches thick, and almost as smooth as a piece of pottery on its upper and lower surface, is covered with about 10 feet of earth, which is removed before it is taken out in huge buckets with a windlass worked by hand. The Green mine is three quarters of a mile from the proposed railway route. Coal to the amount of 7,000 chaldrons has been taken here from an area of three acres, and it has acquired a high reputation for steam and blacksmith purposes. The O'Leary mine is one mile from the Green mine, one quarter mile from a route proposed for the railway, and but a few steps from the Sheffield and Salmon River road. The seam here penetrates a hill near its base, and the roof of the mine is supported by posts, which are put in place as the drift advances. The coal, which is somewhat harder than that obtained at the Green mine, and, perhaps, better adapted for house purposes, is elevated by means of a tramway and winch. Not dissimilar from the mine last referred to are the Coakley and McDonald mines, which are less than a mile distant, while the Nightingale mine, on Newcastle Creek, which, with its present facilities, is capable of producing 75 chaldrons of coal per week, is the only one visited by the reporter

from which the coal is raised by means of horse-power. The Kennedy, Yomans, Sowers, Sullivan, Fulton, Cox, and other mines that were visited by the reporter, and which were scattered in nearly every section of the coal area were worked, or had been, on nearly the same principle as those referred to and with almost identical results. All these mines have been opened at random - all have yielded a similar quality of coal and in all the products have been between 2,000 and 3,000 chaldrons per acre. Limiting the coal area to 10 miles square and the coal product to 2,000 chaldrons, the grand total amounts to more than 150,000,000 chaldrons, and this without making any allowance for a second or third seam which many believe to exist below the first. In consequence of the depressed state of the coal market, and, as said before, of the absence of economical modes of shipment, business is slight, but when the Central Railway is completed, there will be a boom here which will surprise even the most sanguine. The coal has been tested at the Londonderry Steel Works with most satisfactory results; it is in use by the N.B. Railway, Fleming & Son, Chesley Bros., Wm. Lewis, and George Waring of St. John, Jaffrey's furniture factory at St. Mary's, and by many other prominent manufacturers who consider it for their purposes equal to any other coal that is in the market. With extended facilities for transportation its use will extend, until at length, and that within a few years, it is hoped that the mines of Queens and Sunbury will become as extensive and as

S.J. Daily News - Jan. 7, 1884 Mr. Edward Jack says that there is an immense amount of coal at Grand Lake which can be developed when the Central Railway is built."

Chignecto Post - Jun. 5, 1884 The Coal Fields of Queens.- Our enterprising contemporary, the Telegraph, publishes a map showing the coal fields of Queens' County and in an editorial pictures the time when Grand Lake coal, by means of the proposed Central Railway, will be delivered to Montreal. We are afraid the Millenium will arrive some months before the golden prophesies of the Telegraph are realized. Our contemporary places the thickness of the seam from 3 ft. to 4 ft. This dimension is double the size given in the report of the Geological Survey of Canada. Our contemporary may be correct, but many persons would perhaps prefer the report of the Government Survey. Our contemporary gives countenance to the supposition there are underlying seams. This is purely idle and fanciful. The borings by the Local Government, only a short time ago, went into the Devonian rocks, some distance below where coal is ever found. Our contemporary flatters itself that the coal having no dip is an advantage, and in this it is also greatly misinformed. A little thought will enable our contemporary to be convinced that a small seam can be worked much more profitably when it has a dip than otherwise. It is truly to be regretted that this Province has no promising coal fields, but it is better the people should recognize the fact than be deluded by imaginative writers into speculations based on their existence."

Codes: X1 / IDX_Names: Grand Lake Coal;

Daily Telegraph - May 31, 1884 MAP - of Coal Fields.The Coal Fields of Queens. - Now that the construction of the Central Railway may be regarded as assured, it becomes interesting to inquire into the extent and value of the coal fields of Queens County. For the purpose of giving an idea of the locality and extent of the coal deposits, we give elswhere a sketch map of the country. The area of the coal region shown on the map is one hundred and twenty square miles. The actual area may be, and probably is, even greater than this, but enough is known to justify the statement that there is a bed of coal of that extent. It begins on the shore of Grand Lake, at Flower's Cove, and extends up a few miles above the mouth of Salmon River and thence back to the head waters of Little River. All over this area coal is found at a depth of from six to thirty feet from the surface, and in a bed of an average of from three to four feet in thickness. The total known deposit, measured in tons, cannot be less than, and is generally thought to exceed 160,000,000 tons. This is the surface seam only. Whether there is or is not a deeper seam remains yet to be ascertained. Borings were made at Flower's Cove, but they were stopped before the bottom of the coal measures had been reached and in a rock which in England is generally found to overlie coal. But even if there is no lower deposit, the immense extent of the surface bed is of itself sufficient to develop a great mining industry. Four considerations determine the value of a coal deposit - its extent, the quality of the coal, the facility of mining and the means of transportation. The above figures demonstrate the extent of the deposit and place beyond doubt the value of the Queens county deposit in that particular. As to its value there is much excellent evidence. For coking it is admitted to be of the best quality; as a blacksmith's coal it has no superior, and as a steam generator its qualities have been so well established that the New Brunswick Railway Company use it largely and will probably use it exclusively. The readiness with which it may be mined is shown by the fact that it lies near the surface. It is deposited in a continuous bed, which would be nearly level if it were not for a slight dip to the westward, which is not more than enough to secure good drainage. The facilities for transportation are at present poor, but the Central Railway will pass over the largest deposits and afford the best possible means of getting the coal to market. At present the best coal has to be hauled several miles in teams which adds to the cost, besides damaging the coal so far as appearance goes. Our information, derived from the best possible source, is to the effect that the construction of the Central Railway will be proceeded with at an early day. The people along the proposed route, between Fredericton and Salmon River, are acting very liberally in reference to the right of way, and it is expected that the location of the road will soon be begun. This road will bring the coal field within twenty five miles of Fredericton, and on the completion of the Short Line to Montreal will afford a ready means of reaching that market. We have no fancy picture to draw, but simply present the above facts, which are deeply interesting, especially to the people around Grand Lake, but almost equally so to the business men of St. John. The Kings county branch of the Central will enable this coal to be landed in St. John cheaply, and there is reason to believe that it will be a powerful competition with other soft coals in this market. After the road has been built there is little doubt that considerable capital will be invested in mining. It is not too much to estimate on an output of 100,000 tons annually for local consumption, that is for the use of the N.B. Railway, and other local purposes. This would mean an annual outlay of fully $100,000 for labor alone. If the coal should find the place on the western market, which it seems fitted to take, this yearly expenditure would be vastly increased."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Globe - Oct. 23, 1885 Grand Lake Coal. - by Edward Jack. - Experience has often shown that some of the most valuable deposits of mineral wealth have in various countries long lain neglected. This holds true with regard to other natural productions as well as to minerals. The writer can well remember when the timber lands of the Nashwaak were looked upon as of little value, so much so that the privileges which commanded this stream were bought by the present owner, Mr. Gibson, for a comparatively trifling sum. A similar case is presented to us by the Grand Lake coal fields, which, had they had as much mind and ability bestowed upon them as have been bestowed on the development of the Nashwaak, would today have been not only yielding great profits to those working them, but would also be affording a large market for the agricultural productions of the country adjoining the Grand Lake. As there were no analyses of Grand Lake coal to be had at the office of the Geological Survey in Ottawa, nor in any of the public offices at Fredericton, the writer took a piece of this coal (taken by himself from the top of the O'Leary seam at Newcastle) to Great Britain and had this done at the city of Glasgow by a chemist recommended by one of the leading iron workers there. The result is as follows: Per cent. Volatile matters ... 32.12 Coke{ Fixed Carbon ... 56.44 { Ash ... 6.70 Sulphur ... 4.10 Moisture ... 0.64 – 100.00 As this in some respects resembles the analysis of the coal of the Gowrie mine at Cape Breton, I give this so that the two may be compared: Volatile matters ... 27.08 Fixed Carbon ... 60.45 Ash ... 7.25 Sulphur ... 3.42 Moisture ... 1.80 – 100.00 Of the Gowrie coal, Brown in his work on the coal fields of Cape Breton says Notwithstanding the large quantity of ash in this coal it is much esteemed for raising steam, as it does not form a clinker on the furnace bars. On reference to the reports of the Geological Survey of Canada for 1872-73, page 224, we find the area of the Grand Lake coal fields estimated at about 112 square miles and the total amount of coal within this area at not less than 154,948,147 tons. The thickness of the Grand Lake coal beds is said to be from 2 feet to 2 « feet. They occur usually a few feet from the surface and are mined by the people living in the neighborhood, with the rudest appliances. When there, some years since, I was informed by competent authority that coal was delivered from the beds, on the surface at about $1 per ton. There are no tramways to convey it to water carriage, but it is hauled in wagons drawn by horses over rough roads a distance of from three to five miles, where it is dumped at the head of the wharf at Newcastle, and where it is again loaded in barrows and wheeled on board of the schooner, which is ready to receive it. In order to obtain the latest information relative to this coal and its uses, the writer called, a few days ago, on Mr. Anderson, of McFarlane, Thomson & Anderson, of Fredericton - a well known, reliable and extensive firm, engaged in the manufacture of iron - who informed him that their firm had been using Grand Lake coal for 15 years, chiefly for blacksmith's uses, that for forge purposes it is a very suitable coal, the better grades of it comparing favorably with the coals around Glasgow. There has, Mr. Anderson says, been heretofore great carelessness in mining this coal in not getting it free from shale. What we have got this year, he said, is generally, however, free from shale and there is but little sulphur in it. There is a manifest improvement in getting it of late. The price which we have been paying for it on the wharf here lately, has been $2.75 per chaldron, which we consider very cheap. Twenty eight hundred weight, or as it is measured here 13 bbls., make a chaldron. The heavier and harder grades of this coal are the best for heavy forgings. It is a very fair coking coal, and will no doubt make fairly good coke. We have used it all summer for steaming purposes and find it as good as much of the coal around Glasgow. About 3 « bbls. per day will drive our engine of about 20 horse power. It is very much to be regretted that more of a practical nature is not known about this extensive deposit, and that examinations were not made of the coal where it has been exposed, and analyses of it taken from various places made, and a plan of the district prepared upon which these could be placed, so that a person could at a glance see where the best qualities were to be found. As matters are there is no practical information to be had regarding the Grand Lake coal beds. A gentleman from Buffalo, who visited this Province lately for the purpose of investing in coal mines, remarked to me, when he found how little information was to be had regarding this great mineral deposit: You have got an old country but it is a new one, meaning new in knowledge and information."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Telegraph - Feb. 11, 1886 Grand Lake Coal. - Edward Jack. If cheap fuel be a great aid to the advancement of a country, the development of the coal fields of Grand Lake, said to contain more then 150,000,000 tons in close proximity to the surface, is a matter of vital importance to the cities of St. John and Fredericton. When the Central railway is completed this fuel can be delivered on the cars at $1.25 per ton, to which add 40 cents for freight to St. John at half a cent per ton a mile and we have coal delivered there on board of the cars at $1.65 per ton, and at a cheaper rate in Fredericton. This coal is undoubtedly well adapted to the purposes of raising steam as well as to these of heavy forgings. In the transactions of the American Institute of Mining Engineers for 1884-5, page 518, it is stated that the North Carolina department of agriculture recently determined to have the deep river coal fields in that state thoroughly explored in order to determine the extent, thickness and quality of the coals. Only two of these beds (of much the same character as those of Grand Lake) were of workable thickness - the upper containing 3 feet and the lower, which was about 22 to 24 inches thick. The analysis of the upper bed gave in our instance: Ash 7.40, sulphur 2.89. The lower bed, which Dr. H.W. Chance says was undoubtedly a strong seam coal, gave in one instance, ash, 14.69; sulphur, 7.08. In its most favorable analysis the per centage of these were: Ash, 5.35; sulphur, 3.69. The lower bed was opened by shafts 18 and 25 feet deep and 100 tons were mined and sent to Raleigh to be experimented upon. There seems to be a striking similarity existing between this

North Carolina coal and that of Grand Lake, as well in the quantity of ash and sulphur which it carries as in its proximity to the surface, and it would be well if the province of New Brunswick would do just what the state of North Carolina has been doing. Messrs. Bailey, Ells and others of the geological survey of Canada have examined and reported on the coal districts of New Brunswick, and have afforded the country much valuable information concerning these. It should be the duty of the provincial government to supplement this work by further observations respecting the area covered by this coal and its thickness, and to cause proper analysis and tests of its economic value to be made, the latter on a somewhat large scale. A series of cheap borings might be readily made, which would convey much information to the public. This is a very important matter, as it is said that the Short Line Railway, which will in all probability cross these coal fields, is shortly to be commenced. These coal fields are largely situated on crown lands, and should it happen to be discovered that the beds there were of good character their development might be made use of to provide a fund in aid of the payment of the subsidy bestowed by the provincial government upon the construction of this railway. Besides ascertaining the extent of country underlied by the coal beds of New Brunswick, analyses should be made of specimens taken from the various localities where borings might have been made, a matter which has been much neglected. I found on inquiry at the headquarters of the geological survey in Ottawa that there were no analyses of coal at that date; that, indeed, the only one that I have ever seen was one which I caused to be made at my own expense, in 1884, in Glasgow. The character of the coke made from coal taken from the several beds should also be tested by analyses as well as by use, and when persons have been in the habit of using Grand Lake coal for steam or other purposes, their experience should be noted, so that when the railroad, whose construction is now contemplated, shall have been completed, the public would know to what uses this coal and its products could be applied. The expense attending all of these investigations would be small, and after they were completed the results should be given to the public in a pamphlet of 15 or 20 pages, accompanied by a sketch map showing the extent of the coal fields, etc., and the proximity of railways and towns, such information to be disseminated through the various towns of Ontario and Quebec, as well as in the adjoining states, where cheap fuel is in great demand, and this is the poorest deposit of bituminous coal in the provinces to Ontario and Quebec, as well as the nearest to the eastern states. Indeed were such a pamphlet and map published, it might be possible that after the construction of the Short Line Railway some of the large Ontario manufacturers who need much fuel in their mills might be induced to extend

S.J. Daily Sun - Jul. 25, 1887 Grand Lake Waves. - The Timber and Coal Interests. - (Special Correspondent of the Sun). - ... More than a century ago, Garrison (grandfather of the celebrated William Lloyd) surveyed the coast of Grand Lake, traversed its woods and traced its tributary streams. He is said to have named the Newcastle in consequence of viewing the outcropping coal seams from its banks. ... Men like Edward Jack ... forestry ... The coal mines of Queens and Sunbury are extensive, though the seams are there, but much of the coal lies within less than 20 feet below the surface. The advancing railways are expected ti give fresh impetus to that industry, and bring coal more into requisition. There may come a time when more visitors from the neighboring republic may prefer this lake section as a summer resort. ..."

Fredericton Capital - Jun. 4, 1887 Iron Ores of the Maritime Provinces. - .... The nature of our Grand Lake coals, which we hear has been successfully employed in the manufacture of coke, to which use it is said to be specially well adapted. .... Dr. Bailey, Professor Hind and other geologists of note, have spent much time and labor in investigating the various rock formations of the Province. Let their works be supplemented now by those of the mineralogist. There are a number of localities in New Brunswick where iron ores occur, the character of which are as yet unknown. This fact is one to which we now especially wish to direct the attention of the public."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Nov. 12, 1887 Grand Lake Coal Mines (For the Sun). - By Edward Jack, C.E. - The great difficulty attending the production of Grand Lake coal heretofore has been the want of proper transportation to the lake, which now costs on the average $1 per chaldron. This could be reduced to less than one half that sum and a reasonable allowance provided to meet a sinking fund and interest on the construction of a tramway leading from the chief mines and to the waters of Grand Lake at Flowers or McManus' Coves. Such a tramway could start from a wharf to be constructed at that point and thence run back a distance of five miles. This could take in all of the principal mines - that is to say, Green's, O'Leary's, Coakley's, McDonald's, Kennedy's, Nightingale's and Sullivan's, which are all the principal mines which are now being worked. This district covers all of the Rapid's coal, so far as known, the quality of which is better than that of any other coal mined at Grand Lake. There are about 6,000 tons raised annually in this district which, were a tramway built, would be easily doubled or trebled in quantity. It is a strange thing that while the provincial government has been granting hundreds of thousands of dollars to unimportant railways in the province, this portion has been so neglected. It is probable that a sufficient tramway could be built over the route named for the distance of five miles for the sum of $1,000 per mile, making in all the sum of $5,000. Assuming that the quantity of coal which passed over this tramway to the wharf at the lake would amount to 6,000 tons annually, an impost of 20 cents per ton would produce $1200 annually in payment of sinking fund and interest. A wharf could be built at Flower's Cove sufficient for all purposes for the sum of $1,000. This would increase the outlay on the utilization of the Grand Lake coal fields to the sum of $6,000, (not every alarming sum) an investment which would readily pay for itself in a few years. It is certain that all the mine owners above mentioned would agree to use such road and pay the sum named for the use of it. It is very likely that application will be made to the Dominion and local governments at their next session to aid in this most desirable matter. Mr. Green, whose mine is situated about three miles from Flower's Cove was the nearest mine to it in operation. He is the first and only person at

Grand Lake who has made use of steam power for the purposes of pumping water, hoisting coal and sawing timber for his mine. His engine, built by Mr. Waring of Indiantown, is of 20 horsepower and does its work well. His coal bed has a depth of from 22 to 24 inches of good coal. This is a solid seam without any parting. There are from 8 to 12 inches of inferior coal beneath this, which either is left, or if mined at all is mined separately, for which reason his coal ranks first in the market. Others mining about the Grand Lake neglect the precautions adopted by him and take all of the coal out in a body, and hence the bad reputation which the Grand Lake coal has gained. The actual cost of raising Grand Lake coal to the surface with the precaution of leaving the inferior behind is $1.50 per chaldron or $1.25 per ton. Mr. Green says that he gets his best blacksmith coal nearest the surface; as it extends back it becomes harder and better for steam and house coal. It is much freer from sulphur than most other coals about Newcastle and Grand Lake. Sulphur in Grand Lake coal is usually in those seams between the layers. The coal carrying the most sulphur lies in the valley of the Newcastle stream. Miners have found that which lies west and southwest of Newcastle freer from sulphur than it is on the shores of Grand Lake or Salmon river. There are, however, some excellent beds of coal lying to the east and northeast of the Newcastle river. Were a proper wharf erected at Flower's Cove, connecting with a tramway such as is mentioned above, the cost of carrying coal to St. John or Fredericton by schooner, which is now $1.00 per chaldron, would be reduced to 80 cents. It now takes 4 men a day to load 40 chaldrons of coal; sometimes, indeed, this number of men can only load 20 chaldrons per day, but with proper appliances the boat men would need to have no labourers as the coal would be dumped immediately

Daily Times - Sep. 5, 1887 Grand Lake Coal. - If there are workable deposits of coal in New Brunswick, the fact is important. Coal crops out at a great many points, and is in need for local consumption, but mining on a large scale has not yet been attempted at any place in this province. The quantity of coal has been estimated at 150 millions of tons. It is easy, however, to make an estimate of anything that is hidden under the earth, and it can be made large or small to the fancy. Grand Lake coal has been used for a number of years, not only as fuel in dwellings in the vicinity of the beds but for industrial purposes and with more or less satisfaction. The coal is in abundance close to the surface, but this is not the best indication of a deposit sufficiently extensive to warrant expectations of an important future industry. What would seem to be needed is a thorough investigation and analysis. So little interest has been taken in this rather important matter that the only analysis of Grand Lake coal which ever has been made was one that was executed for Mr. Edward Jack at his own expense in Glasgow, the result of which showed but 5 per cent of ash, although the sulphur in it was high. The specimen thus analyzed was from the O'Leary bed, Newcastle. Mr. Jack thinks further assays should be made, and as railways now in course of construction bring the coal area within easy reach of the centres of population, we shall doubtless hear more of them before very long."

S.J. Daily Sun - Sep. 6, 1887 Grand Lake Coal (Moncton Times). - If there are workable deposits of coal in New Brunswick, the fact is important. Coal crops out at a great many points, and is used for local consumption, but mining on a large scale has not yet been attempted at any place in this province. The quantity of coal contained in the Grand Lake coal beds has been estimated at 150 million tons. It is easy, however, to make an estimate of anything that is hidden under the earth, and it can be made large or small according to the fancy. Grand Lake coal has been used for a number of years, not only as a fuel in dwellings in the vicinity of the beds but for industrial purposes and with more or less satisfaction. The coal is in abundance close to the surface, but this is not the best indication of a deposit sufficiently extensive to warrant expectations of an important future industry. What would seem to be needed is a thorough investigation and analysis. So little interest has been taken in this rather important matter that the only analysis of Grand Lake coal which ever has been made was one that was executed for Edward Jack at his own expense in Glasgow, the result of which showed but five per cent. of ash, although the sulphur in it was high. The specimen thus analyzed came from the O'Leary bed, near Newcastle. Mr. Jack thinks further assays should now be made, and as railways now in course of construction bring the coal area within easy reach of the centres of population, we shall doubtless hear more of them before long."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Sep. 20, 1887 Grand Lake Coal.- If Mr. Edward Jack succeeds in convincing mining investors abroad that the Grand Lake coal region is worthy of their best attention, he will win the approval of a good conscience. The coal industry adds materially to the prosperity of Nova Scotia, and there are those who believe that with proper equipment coal can be produced much cheaper at Grand Lake than at Springhill."

Royal Gazette - Aug. 8, 1888 Notice. Notice is hereby given, that application will be made for Letters Patent by the undersigned, under The New Brunswick Joint Stock Companies' Letters Patent Act for incorporation as follows:- 1. The proposed corporate name of the Company is The Grand Lake Coal Company. 2. The object for which incorporation is sought are the following:- The sale and purchase of real estate, and the right to acquire by purchase, lease or otherwise, the right to mine and deal in Coal and other Minerals; the right to buy and sell merchandise, and to carry on a general Mining business, with all powers incident thereto. 3. The chief place of business is to be at Chipman, in the County of Queen's. 4. The amount of the Capital Stock is $200,000. 5. The number of shares is be 2,000, of $100 each. 6. The names, addresses and calling of the applicants, (of whom the first three named, that is, Louis G. DeBertram, John P. Ilsley, and Thomas M. Williamson, are to be Provisional Directors), are as follows:- Louis G. DeBertram, of the City of New York, in the State of of New York, Doctor of Medicine. John P. Ilsley, of the City of Philadelphia, in the State of Pennsylvania, Engineer. Thomas M. Williamson, of Buctouche, in the County of Kent, Civil Engineer. Edward W. Clark, Junior, of Philadelphia, in the State of Pennsylvania, Banker. Edward E. Denniston, of Philadelphia, in the State of Pennsylvania, Banker. C. Ford Stevens, of Philadelphia, in the State of Pennsylvania, Banker. Dated this 8th day of August, A.D., 1888."

Moncton Daily Transcript - Aug. 10, 1888 and Daily Telegraph - Aug. 10, 1888 The Grand Lake Coal Company is to apply for letters patent. The chief place of business is to be Chipman, Queens County. The amount of capital stock is $200,000, in 200 shares of $100 each. The applicants are:- Louis B. DeBertram, of New York, Doctor of Medicine; John P. Isley, of Philadelphia, Engineer; Thomas M. Williamson, of Buctouche, Kent Co., Civil Engineer; Edward W. Clark, jr., of Philadelphia, Banker; C. Ford Stevens, of Philadelphia, Banker."

S.J. Daily Sun - Aug. 10, 1888 The Grand Lake Coal Company gives notice in the present week's issue of the Royal Gazette that application will be made for letters patent. The objects for which incorporation is sought are the following: The sale and purchase of real estate, and the right to acquire by purchase, lease or otherwise, the right to mine and deal in coal and other minerals; the right to buy and sell merchandise, and to carry on a general mining business, with all powers incident thereto. The chief place of business is to be Chipman, Queens County. The amount of capital stock is $200,000, in 200 shares of $100 each. The applicants are: Louis G. DeBertram of New York, doctor of medicine; John P. Illsley of Philadelphia, engineer; Thomas M. Williamson of Buctouche, Kent County, civil engineer; Edward W. Clark, jr., of Philadelphia, banker; Edward E. Denniston of Philadelphia, banker; C. Ford Stevens of Philadelphia, banker."

S.J. Daily Sun - Aug. 16, 1888 A large enterprise is looming. Coal hauling on sleds from Newcastle in the winter season may now be numbered among the things of the past.-[Gleaner"

Daily Times - Aug. 17, 1888 New Brunswick Coal Field. - A large enterprise is looming up in the Grand Lake coal fields, which will in a few months be opened up to traffic by the Central railway. New York and Philadelphia capitalists are the leading stockholders in the new company that is being formed to operate these coal fields, and they claim they have a bonanza. The coal lies near the surface and it is claimed can be mined and sent to market at a great profit. Coal hauling on sleds in the winter season may now be numbered among the things of the past."

S.J. Daily Sun - Nov. 23, 1888 Queens Co. - The Coal Business Booming at Coal Creek. - T.W. Williamson, C.E., has a number of men employed in the coal business at Coal Creek. Several borings have been made with good results. A number of shafts are in construction and one has been completed at a mean depth of 50 feet and a vein of coal of four feet in thickness has been discovered. Mr. Williamson intends extending his business immediately in the way of erecting coal sheds, dwelling houses for the miners, a large store and hotel. The inhabitants of the place feel as if the veil of oblivion is rent and prosperity reigns supreme."
Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Nov. 29, 1888 Grand Lake Coal. - A Visit to Green's Modern Equipped Mines. - The Revolution that is Taking Place in the Workings. - Large Seams of Fine Coal. - (by Edward Jack, C.E.). - To assert that we had in New Brunswick coal as good for many purposes as any of that which is raised in our sister province of Nova Scotia, and much better for some might be regarded by certain individuals as a questionable matter. It is, however, a fact of which the most sceptical can convince himself by giving our own honestly-raised mineral a fair trial. And here, indeed, is the cause why so much fault has been found with coal from the Grand Lake - that is to say in dishonest mining, where good and bad beds lying in close proximity to each other, instead of being mined separately, have been removed from the mine together, placed in one common pile and sold together. The Green coal mining property, owned by Messrs. Green, Waring and Tapley, is situated in and near New Zion, in the counties of Sunbury and Queens, at a distance of between two and three miles from Flower's Cove, and not far from the mouth of the Newcastle River, Grand Lake. Mr. Green was about the first person to introduce steam machinery in the working of any Grand Lake coal mines, and the company of which he forms a member is about to introduce the innovation of a tramway three miles long, from the mines to the wharf at Grand Lake, whereby the cost of transportation will, at small expense, be so cheapened that under reasonably fair management a large profit will be left to those engaged in the enterprise. Owing to the formation of the country the construction of a tramway here will be cheaply and easily done. Having examined the route a few days ago, the writer speaks with absolute certainty in this matter. The shaft at present operated by Mr. Green is situated at the distance of twenty rods from the Hardwood Ridge road, where it is intersected by the road from Flower's Cove, and 2 1/2 miles distant from Newcastle bridge at Yeoman's. Here there is a 20-horsepower double cylinder engine, with tubular boiler. The engine also drives two saws (a rotary and cut-off), so that all wood needed about the mine can be cut and made ready. There are likewise two pulsometer pumps - one discharging 20 gallons per minute, the other 175 gallons per minute. These pumps entirely avoid all need of the expensive drains, whose construction has drawn so heavily upon the resources of Grand Lake miners. The hoisting of course is also done by steam. All of this machinery can easily and cheaply be moved from place to place as circumstances may require, the surface of the country being very level and smooth. The depth of the shaft from the surface to the top of the coal is about 27 feet. This deposit is 34 inches in thickness. The top, which is from 22 to 24 inches thick, is coal of excellent quality. The writer has seen it burning both in an open grate and in a close stove and found it to be excellent in either case. John Edwards of the Queen Hotel, Fredericton, has been using it in his laundry stoves and finds it equal to any soft coal that he has ever had, although he has used both Old Mines Sydney and

Springhill. For the purposes which he uses it he considers it even better than the former coal. Mr. Taylor, Engineer of the Fredericton water works, says:- Mr. Green's best coal is a very good steam coal. It burns quickly when first thrown into the fire, and gives as good results as to amount of steam generated as any coal we have used. We have made use here of both Spring Hill and Joggins coal. The bottom is of inferior character and between the two beds there is a parting of from one-half an inch to three inches of soft shale. In the upper bed there is said to be but little sulphur, this being confined chiefly to the lower seam. Below the 34 inches there is about six inches of fireclay, and then there is a small bed of coal about nine inches thick. This is said to vary much in quality, sometimes being very good and at others equally bad. This, however, is not mined by Mr. Green. I am informed that these coal beds, at this shaft and elsewhere on the Green property, are underlaid by a bed of fire clay five feet and upwards in thickness. I am also told, and believe, that fire bricks of good quality have been made from it. Mr. Green's calculation is that an acre of coal land will yield 2,250 chaldrons of coal of the best quality. The coal beds on the Green property are situated at depths varying, it is said, from 5 to 40 feet from the surface. It is estimated that a man will average a chaldron of the top seam, and half a chaldron of the lower seam per day. A chaldron of coal at the mines represents in weight a ton and a half. At the shaft where I was a full crew represented 15 men underground and three on top, including among them the engineer and fireman. As the beds on the Green property lie so near the surface, and as there is no very hard rock above them, there is no trouble about ventilation, as an air shaft can be readily made at any desired point. No explosives are made use of in mining the coal here, the rock being easily removed without their aid. Heretofore Mr. Green has hauled coal to the wharf at Flower's Cove by horses, ordinary farm wagons being used. Although the levels on this road are very good, as remarked above, yet owing to the wetness of the season he did not in three months succeed in hauling a boat load of coal to the wharf. When the road was dry and a good pair of horses took a chaldron at a load, making four turns a day. Six Feet of Coal. From several parties about the mine I learned that a bed, or series of beds, of coal six feet in thickness, had been worked on the Green property for some time. From Fred Syphers who worked on it, I received the following narrative: About seven years ago Robert McLellan sank a shaft on the edge of the valley at a point about six hundred feet southeast of where the engine now stands. At that depth he struck 28 to 30 inches of coal. He followed the bed about 125 feet. At the distance of about 100 feet it increased to six feet in thickness. He followed the side of the bank in one drift, only angling in a little, but had he gone directly back from the side of the bank he would probably have struck the big body at the distance of 20 to 30 feet. The top was firm and good, and the bed preserved its thickness so far as I worked on it. I saw it worked to one side as far as 60 feet. It was there also of the same thickness (6 feet). It was all good coal, with the exception of occasional emery streak. Of these there were sometimes two. The size of the larger of these steaks was 4 inches, and of the smaller about an inch. By emery, I mean a soft black substance that will crumble in the fingers. It will also burn. There were no other partings and no clay streak that I could see in this bed. We ceased working it because another party claimed the property. Owing to the softness of the emery streak we could remove it with our picks and thus break down the coal very easily. There is no doubt of the occurrence of this large deposit of coal on the Green property. Its extent has never yet been traced out. Whether it be a single bed or the union of several, or an overturn of a peculiar character, is a matter worthy of Weekly Record - Fri. Nov. 30, 1888 Quoted from the Halifax Critic: The work of prospecting and developing on the Grand Lake coal fields is being vigorously prosecuted at present. The DeBertram syndicates have acquired rights on 30,000 acres of land, and testing is being made under the direction of Thomas Williamson, M.E. The prospects are good for the raising of large quantities of coal in this vicinity."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Telegraph - Sep. 4, 1888 MAP of Coal Fields.The Coal Fields of Queens. - Now that the Central Railway is progressing toward completion, interesting as it does the coal fields of Queen's county, and promising early connection with Fredericton on the one hand and with the Intercolonial Railway at Norton, on the other new interest is naturally drawn to the coal regions referred to. As recently mentioned in these columns a large area of land has been acquired for mining purposes by the DeBertram syndicate who intend developing the coal deposits extensively, with a view of supplying local and railway demand as well as manufacturing coke for export on a large scale. The syndicate referred to are understood to have acquired the options of mining rights from some 200 persons owning lands covering an area of some 20,000 acres. They intend to prepare for work at once and be in full operation next spring, giving employment to several hundred hands. We reproduce from the Daily Telegraph, of 31st May, 1884, an outline map of the coal district and the following portion of an editorial article giving some idea of the location, extent and value of the deposit:- [See 21 May, 1884 for article]"

S.J. Daily Sun - Sep. 7, 1888 Grand Lake Coal Fields. - The Montreal Trade Review of the 31st ult. Says: A large enterprise is looming up in the Grand Lake coal fields, New Brunswick, which will in a few months be opened up to traffic by the Central Railway. New York and Philadelphia capitalists are the leading stockholders in the new company that is being formed to operate these coal fields, and they claim they have a bonanza. The coal lies near the surface and it is claimed can be mined and sent to market at a great profit."

Daily Telegraph - Sep. 28, 1888 and Moncton Daily Transcript - Sep. 29, 1888 Letters patent have been issued by the local government to Messrs. Louis G. DeBertram, of New York, E.W. Clark, jr., E.E. Denniston, and John P. Isley, of Philadelphia, and Thomas M. Williamson, of Buctouche, to carry on a general mining business under the name of the Grand Lake Coal Company. The capital of the company is $200,000, divided into shares of $100 each."

S.J. Daily Sun - Sep. 28, 1888 and Daily Times - Sep. 29, 1888 Grand Lake Coal Co. - Public notice is given that letters patent have been issued under the great seal of the province, incorporating Louis G. DeBertram, of New York, doctor of medicine, C. Fred Stevens, banker, E.W. Clark, junior, E.E. Denniston, bankers; John P. Ilsley, engineer, of Philadelphia, in Pennsylvania, and Thomas M. Williamson, of Buctouche, in the county of Kent, civil engineer, for the purpose of the sale and purchase of real estate, and right to acquire by purchase or otherwise the right to mine and deal in coal and other minerals; the right to buy and sell merchandise, and to carry on a general mining business, by the name of the Grand Lake Coal Company, with a total capital $300,000, divided into shares of $100 each."

S.J. Daily Sun - Apr. 3, 1889 St. John's Coal Trade. - ... (history) ... The Grand Lake coal fields are now tapped by railway. Representatives of mining companies have already explored the ground, and the primitive methods of mining are to be succeeded by modern systems. If the New Brunswick coal region has not been greatly misunderstood the province will not much longer depend on other parts of the dominion for its coal supply."

Daily Telegraph - Apr. 4, 1889 New Coal Company. - A company composed mostly of St. John gentlemen is being organized for the purpose of developing the coal at Green Mine, Grand Lake, Queen's county. Some of this coal has been used in St. John during the past winter and has been found to be a very free burning coal. Those who have used the coal for steam purposes say it is fully equal to any they have ever burned. Specimens of the coal on exhibition at the board of

Moncton Daily Transcript - Apr. 5, 1889 A company composed mostly of St. John gentlemen is being organized for the purpose of developing the coal area at Green Mine, Grand Lake, Queen's County."

Evening Gazette - Aug. 8, 1889 Grand Lake Coal A Superior Article. - During the first day of the electric exhibition, some difficulty was experienced with the furnaces. The fault was laid to the Grand Lake coal which was being used. A quantity of Springhill coal was at once procured, but this proved even worse. A quantity of Springhill coal was at once procured, but this proved even worse. The Grand Lake commodity was again resorted to, and an efficient stoker put to charge. No more trouble was experienced, and the exhibition committee are loud in their praises of the Grand Lake coal as compared with coal from other parts. A certificate recommending it will be issued."

S.J. Daily Sun - Aug. 12, 1889 A Day on Grand Lake. - And an Exploration of the Bonanza Coal Mine. - .... After making several futile attempts at securing a conveyance, they start in what they have been told is the direction of the Bonanza coal mine, otherwise known as Green's mine, a distance of some four miles. Arrived here, after a casual survey of the place, we were lowered bodily into those sacred depths, and began, each with a borrowed jacket and a lamp, to explore the underground passages. We here get a rather sudden change of temperature, but not so great as to make it uncomfortable. After winding along a series of tunnels, we are brought to that portion of the vein being worked. Here we find a seam of a good quality of coal, in the vicinity of thirty inches in depth, and extending we are told for many miles. The company operating this mine is doing its business on a scale heretofore unknown to the miners in this section, having introduced modern appliances for all the mining work, and are now constructing a railroad in the place and partly built last year. When this is completed the expense of shipping will be materially reduced. ... Yours, Squeers."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Telegraph - Feb. 23, 1889 Queens County. - The coal business at Coal Creek is still booming, and a shaft, which of late has been in course of construction is about completed. A small amount of coal has been brought to the surface and proves to be of an excellent quantity. When winter's chilling hand is removed by the animating and sunny spring, the mining business will be greatly extended and a large number of men will be employed. The boarding house for the miners is about completed, adding much to the pleasing and enchanting scenery of Coal Creek."

Moncton Daily Times - Feb. 26, 1889 New Brunswick Coal. - A correspondent of the Telegraph says: The coal business at Coal Creek is still booming, and a shaft, which of late has been in course of construction is about completed. A small amount of coal has been brought to the surface and proves to be of excellent quantity. The mining business will be greatly extended in the spring, and a large number of men will be employed. The boarding house for the miners is about completed."
Evening Gazette - Jul. 12, 1889 Good Coal. - It is reported that Samuel Green has lately discovered a new seam of coal, about five feet in thickness, on his property at New Zion, Grand Lake."

Evening Gazette - Jun. 5, 1899 and Fredericton Capital - Jun. 8, 1889 A Mining Boom In Queens. - The mining industry is about to boom in Queen's Co. The Grand Lake Coal Co. will begin operations on an extensive scale in their new mines at Coal Creek, in the Parish of Chipman, just as soon as the Central Railroad is opened for traffic. A shaft was sunk last winter, fifty deep, entries driven, and everything is ready for the work. Quite extensive hoist houses with engines and boilers have been erected on top and also a blacksmith shop. The mines are situated about six miles south of the terminus of the railroad, and the company are simply waiting until traffic is opened before beginning work. The company are building their own cars on a new model, so that no others than themselves can unload them. Quite a village is being built up at Coal Creek as a result of this new enterprise. Already about a dozen miners' houses and a store have been erected in the locality. The vein is a rich one, and the coal is said to be excellent for steam purposes."

Evening Gazette - Mar. 9, 1889 The Coal Lands of New Brunswick. - We are informed, a short time since, that a standing offer had been made to the local government of $3 per acre for all of the coal bearing lands in the vicinity of Grand Lake. When the Central Railway is completed, as we presume it soon will be, these beds of coal, thin though they may be, from the proximity to the surface, and the cheapness with which they can be worked, will become of great value. It is a subject for very serious consideration how this matter with regard to their disposal, should be dealt with. But little capital is required to work a Grand Lake coal mine, and if these valuable deposits are kept out of the hands of large speculators, whose interests demand monopolies, many opportunities will be offered for numerous associations of our own people to operate them on a small scale, the only way indeed by which they can be worked to the greatest advantage. We have looked in vain for a complete and proper description of the Grand Lake coal beds, and of the character of their coals. This should not have been so, for they form the nearest deposit of coal on the line of the railway to Montreal. We should by this time have had an exhaustive description as well of the character of the mineral, in so far as its coking qualities and the uses to which it can be applied, as to the cost of placing it upon the surface ready for delivery. Thus we might be prepared to show Quebec or Montreal manufactories of articles demanding a large amount of fuel, that we had in New Brunswick coal, suitable for fuel, either as raised from the pit or when coked. The fact is the general public know but very little about this coal. One party will tell you that it is very bad, and others, that it is very good. So far as we can learn, while some of the Grand Lake coal is bad, much of it is of excellent quality. The public should know where the good is and where the bad. As these coal lands are largely in the hands of the Government, it would appear to be its interest, as well as duty, to have the whole matter fully investigated and reported on in such a practical manner that the manufactories of the Upper Provinces would be placed in full possession of all the facts necessary to be known regarding the character, extent and value for manufacturing purposes of the Grand Lake coal deposits. This would also be a great benefit to the manufacturers of our own city, some of whom are already directing their attention to Grand Lake as a source of coal supply for works located in Portland."

Moncton Daily Transcript - Mar. 15, 1889 The coal mines near Grand Lake, Queens Co., are being worked and a large number of men are employed in them. The new American Company is sinking new shafts for coal and building a large store and some houses. The new business at Coal Creek, Grand Lake, is attracting men from different countries, some of the skilled miners coming from Wales."

Daily Telegraph - Mar. 15, 1889 Grand Lake Notes. - A correspondent of the Advance writing from Chipman sends the following: The Short line is in operation in Queen's county, and quite a large number of men and horses are at work on it at Newcastle, Grand Lake, making the cutting there. The coal mines are being worked and a large number of men are employed in them. The New American Company is sinking new shafts for coal and building a large store and some houses. The new business at Coal Creek, Grand Lake, is attracting men from different countries, some of the skilled miners

S.J. Evening Gazette - Nov. 2, 1889 Coal from Queens County is rapidly coming into use in Kings, and the central railway, after all, will be in a large measure utilized for transporting this article to market. Instead of sending to Nova Scotia for her supply, Kings County will be supplied nearer home, and in the same province. This is particularly good news to those interested in the Central Railway. - Sussex Record."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Nov. 28, 1889 The Grand Lake Coal Co. are shipping large quantities of coal via the Central from their works at Pennlyn, Queens Co. They have shipped a good deal to the N.B. railway company and to R.P. McGivern, St. John. The local demand is also quite extensive. The engines on the Central and St. Martins roads use this coal and it is used to heat the cars, giving every satisfaction. T.M. Williamson, the genial manager of the Grand Lake Coal Co., and treasurer of the Central railway, has removed from Chipman to his new and spacious residence in Pennlyn."

Weekly Record - Fri. Nov. 29, 1889 The Mining Industries of New Brunswick. - We havehad occasion from time to time to speak of the mining industries of N.B., and we again refer briefly to the subject as we are aware that a new departure has taken place in the matter of introduction of Grand Lake coal to Sussex recently. For years we have heard of Grand Lake coal and it has always been supposed to be somewhat mythical, but now that an American syndicate in connection with the Central Railway Company, have secured large areas, and gone to a heavy expense in prospecting and building residences for their general manager and workmen near Chipman, it seems as if the mining of coal would become a permanent and paying industry. While the seams are not large they lie so near the surface that it is stated they can be mined with a margin of profit and there is a prospect of mines being worked here permanently hereafter. The coal, while not perhaps as good a quality as Nova Scotia coal, with careful screening makes a fairly good fuel, and can be laid down somewhat cheaper than the N.S. product, and there is no doubt that the local consumption will be considerable in the near future. Other mining industries are also being prosecuted with more or less vigor, and we shall expect to see our manganese deposits worked very extensively before very long, as American capitalists are now on the look out for these deposits and are quite largely engaged in developing and working the same in several quarters, while other deposits will soon change hands it is stated. There is a boom in silver mining in Carleton county as a new silver vein has recently been discovered there and work of development is proceeding vigorously. The chances are from all that can be gleaned that it will prove a good paying property. Numerous other silver and lead deposits exist in other parts of the province which require machinery and capital to make them pay well. Copper abounds in this province and should the copper market hold as firm as it is at present, or fortunately advance a little, there is no reason why the copper deposits of N.B. would not pay handsomely to work. Iron is also abundant in N.B., and we hope with the iron boom that is now going on all around us in Canada and the United States, that capitalists will once more open up the iron deposits of Woodstock which are beyond question worthy of attention. In the northern part of N.B., good magnetic iron exists, and one property is now being developed, and finally we live in hopes of seeing the day when gold mining may be carried on in New Brunswick with success and made to pay. Indications all over the province show that gold exists, and probably in paying quantities, but as yet no decided steps have been taken towards searching for it in regular manner, but we trust it will be found on proper examination that leads or belts of quartz tracts exist in the province that will repay the capitalists in the production of the precious metal. The Geological reports of Prof. H.Y. Hind and Professor Bailey speak of gold in several points in New Brunswick, and in such manner as to justify the expenditure of some time and money in the search for it. The first steps, however, necessary to give the mining interests more attention is the changing of the mining laws of the province in a number of points which it is understood has already received the promise of being attended to at the next session of the local house if those interested will only take the time and trouble to place before the government their views on the subject in a clear, intelligent, and mutually beneficial manner. This being done we apprehend that the mineral wealth of New Brunswick will receive more attention than it has hitherto done at the hands of the miner and the capitalist."

S.J. Evening Gazette - Nov. 29, 1889 Grand Lake Coal. - Coal from the Grand Lake is being sold all along the line of the Central and I.C.R. from Sussex to St. John. The coal burns very well, and its use in one place generally brings an order from some other."

Moncton Daily Transcript - Nov. 30, 1889 Coal from Grand Lake is being sold along the line of the Central and ICR from Sussex to St. John."

Kings County Record - Oct. 25, 1889 Our Mineral Resources. - The attention of capitalists in both the United States, Upper Provinces and England, is fast being called to the mineral resources of the Lower Provinces, particularly New Brunswick and Nova Scotia. The coal, iron and gold of Nova Scotia are being largely developed, and in New Brunswick iron, manganese, silver, lead and copper are in good quantities, and if capital can once be directed here there is no doubt as to the ultimate results. In the Grand Lake coal districtconsiderable capital has been spent of late, and with the opening of the Central Railway good, fair, house and steam coal can be laid down at very cheap rates. In view of these facts, we think it becomes necessary for our local legislatures to see if it cannot be arranged to modify and change our mining laws, so that they will be more satisfactory to the investor and capitalist. One point in particular is reduction of royalties on certain minerals. The royalty on gold and silver in Nova Scotia, is 2 per cent. According to our laws they call for 5 per cent. Another point is the method of acquiring mining rights on gov't or crown lands. The system now in vogue is unsatisfactory and should be changed so as to be more in conformity with the mining laws of other provinces. We feel that there is an era of prosperity dawning on our Maritime Provinces. And we believe it is the bounden duty of our people and our governments to make the most of it and embrace any opportunity that will lead in any channel to the general welfare of the country."

Codes: X1 / IDX_Names: Grand Lake Coal;
Evening Gazette - Sep. 13, 1889 The Grand Lake Mining Company. - The Royal Gazette contains notice that application will be made for the incorporation of the Grand Lake Mining Company, whose object will be - The prospecting for, developing, mining preparing, manufacturing, shipment, and dealing in coal, oil, salt, iron ore, minerals and metals, etc. This company will have its headquarters in St. John, and its capital stock will amount to $50,000 in 2,250 shares of $20 each. The provisional directors are:- Joshua S. Turner, of the city of St. John, merchant; Alfred A. Stockton, barrister-at-law; Caleb W. Wetmore, broker; Wm. B. Wallace, barrister-at-law; G. Frederick Fisher, of the city of Fredericton, barrister-at-law."

Daily Telegraph - Sep. 13, 1889 The Grand Lake Mining Company. - (See Royal Gazette of Sep. 11)."

S.J. Globe - Sep. 19, 1889 Another Mining Company. - Application is to be made for the incorporation of the Newcastle Mining Company - capital stock $50,000 in 2000 shares of $25 each. The names of the applicants are: - David K. Tapley, city of St. John, merchant; George H. Waring, city of St. John, founder; Samuel D. Green, Newcastle, Queens County, New Brunswick; James Straton, city of St. John, barrister, and J. Douglas Hazen, city of St. John, barrister."

Daily Telegraph - Sep. 20, 1889 Newcastle Mining Co. - (See Royal Gazette of Sep. 18)"

S.J. Daily Sun - Sep. 20, 1889 and S.J. Evening Gazette - Sep. 20, 1889 Newcastle Mining Company. - Notice is given that application is to be made for the incorporation of the Newcastle Mining Company - capital stock $50,000, in 2,000 shares of $25 each. The names of the applicants are: David K. Tapley, city of St. John, merchant; George H. Waring, city of St. John, founder; Samuel D. Green, Newcastle, Queens County, New Brunswick, miner; James Straton, city of St.

John, barrister; and J. Douglas Hazen, city of St. John, barrister."

Fredericton Daily Gleaner - Dec. 24, 1890 Grand Lake Coal. - This coal is being hawked about the streets, and brings from six dollars and fifty to seven dollars per chaldron. It is sold at the mines at two dollars per chaldron, and has to be hauled about thirty five miles to get it here. There is no profit in it for the truckman as it takes two days work of horses and man, besides stable and hotel bills, therefore it is only brought here when men wish to come to the city on business. There is no doubt that there is a large quantity of coal in that region, but very little capital has been spent to open up the mines, and the expense of export crushes out miners of small capital. The deepest shaft as yet is but forty five feet but borings have been made to a depth of one hundred and fifty. Most of the mining is done by the farmers, who do it in the winter when they cannot work on the farms. The whole cry is for the railroad. Besides being a benefit to that section of county it will also prove of immense advantage to Fredericton as with cheap coal anything in the manufacturing line is possible."

S.J. Globe - Mar. 5, 1890 Fredericton. - At tonight's meeting of the City Council Mr. Edward Jack, C.E., appeared before the council and showed the advantages that would accrue to the city in particular and the Province generally by the construction of the Short Line via Fredericton. He dwelt at length on the important results that would result from opening up the Newcastle coal fields."

Evening Gazette - Sep. 9, 1890 Grand Lake. - .... It can be seen that farming is not the chief end of man at Newcastle, for at the steamboat landing great heaps of coal cover the banks for a considerable space and a large number of teams are to be seen hauling it there from the mines, three or four miles back, for shipment to St. John or Fredericton. At Upper Newcastle, about three or four miles from where the steamer lands, almost every farmer for several miles around has a coal mine of his own, and the general rule is to work on the surface at farming in summer and go below the surface and pick from nature's pocket book in winter. In a few places the work of mining coal is carried on all summer. These coal fields which extend over a very large area contain coal of a very superior quality for manufacturing purposes but, owing to the poor facilities for shipping it the average output of all the mines in the vicinity does not exceed from 10,000 to 15,000 a year. The coal seam varies from 18 to 36 inches in thickness and is from 5 to 50 feet below the surface, lying almost on a level. Slope shafts are used at many of the mines, the coal being hauled out in small cars that hold about two barrels each, but perpendicular shafts are the most used and horses do the work of hoisting. Where a level is run in, the excavation is about four feet high and ten to fifteen feet wide. In digging the fire clay and shale is removed from the top of the coal seam for a foot or more in height, the whole width of the load and for about 18 inches in. Then a timber or piece of split spruce spar is studded up to keep the earth from falling down. The coal is then dug out for that space and another reach is made in the same way. When the main lead is being run in, all the clay and shale taken off the top of the coal has to be hauled out to the surface, but, after a long excavation has been made, the coal is dug out in narrow passages or leads each side of the main one and running at right angles to it. These are run in thirty or forty feet and then levels are run parallel to the main level in such a way that the earth that has to be taken off the top of the coals seam can be thrown to one side, thus saving the work of removing it to the surface with the coal. A visit to these mines is well worth the trouble of going there, and there are few better places for partridge hunting or trout fishing than on Newcastle stream which flows down through the coal district."

Codes: X1 / IDX_Names: Grand Lake Coal;

Evening Gazette - Sep. 11, 1890 Our First Coal Mine. - The Montreal Gazette, in the course of an interesting article on the first discovery and utilization of coal on this continent claims precedence for Canada in the matter of coal production on the ground that the coal of Cape Breton had not only been discovered but had to some extent been mined before the end of the first quarter of the eighteenth century. Our Montreal namesake says that the coal seam opened lay on the north side of Cow Bay and that frequent shipments of coal were made from Cape Breton to the French West Indies as early as 1724, and continued to be made until the taking of Louisburg in 1745. The Sun, which republises this article, claims priority for the Joggins mine, which, it states, was recognized as of considerable importance as early as in 1720, being mentioned by Peter Mascarene in his description of Nova Scotia written that year. The Sun is no doubt quite correct in thinking that coal had been obtained at the Joggins before 1720 both for blacksmith's use and also for use as fuel, both by French and English. Governor Philipps, in a letter written in July 1720 to the English Secretary of State, complains that New England vessels were in the habit of coming every year, and taking away coals from the upper part of the Bay of Fundy, without paying duty or even asking permission. This can only refer to the Joggins mine. That the Joggins coal trade was of much earlier date then 1720 is evident from a letter written by Villebon, the French Governor of Acadia, dated 4th Oct., 1698. It was addressed to the French government, and after referring to the English trade in furs with the French settlements in Acadia, states that the Bostonians wish to trade in coal, but this trade could be of little consequence, as Boston would not consume over four cargoes a year beyond what they got from England in ballast. It is probable indeed that the Joggins coal trade commenced very soon after the appointment of La Valliere as commandant in Acadia in 1678. La Villiere had a settlement at Chignecto, and carried on a large trade with the English of Boston for many years, so that it would not be singular if this trade did not include coal. The Montreal Gazette, however, greatly underrates the antiquity of the Cape Breton mines. They attracted attention fifty years before the date which it assigns to them and were worked prior to the year 1677. This is proved by an order issued in that year by Duchesneau, the intendant of New France, which recognizes and establishes the right of M. Nicholas Denys as grantee of the lands in 1654 to exact a duty from all persons who took coal from Cape Breton. The duty was fixed at 20 sous for each ton of coal. There is, however, an earlier reference to coal mining than even this, and the New Brunswick reader will be glad to know that it relates to a New Brunswick mine. In 1643, when La Tour's fort at the mouth of this river was beseiged by Charnisay with two ships and a galliot and five hundred men, the former hastened to Boston to obtain aid against his enemy. He succeeded in enlisting there a sufficient force in ships and men to drive Charnisay home to Port Royal and to defeat him there. When the New England vessels got back to Fort Latour, after disposing of Charnisay, one of them went up the St. John River some twenty leagues and loaded with coal. This statement is made on the authority of Governor Winthrop of Massachusetts whose diary, kept from 1630 to 1648, is the most interesting as well as the most authentic record of that time which is now extant. This shows that Grand Lake mines were known and worked in the first half of the seventeenth century, from them to Boston in the year 1643. The people of Queens county can therefore claim the possession of the oldest coal mine in America."

Daily Telegraph - Jan. 7, 1891 Newcastle, Queens Co., Jan. 5- This section of the country is noted for its extensive coal fields and for the superior quality of its coal. Large numbers of men and teams are employed in the work of digging and hauling the coal to the shores of Grand Lake, whence it is shipped to St. John and other cities. The lack of a ready market is a great hindrance to the development of this industry. A railroad would be an inestimable boon to this place."

S.J. Daily Sun - Jul. 24, 1891 Valuable Coal Discovery. - a valuable discovery of coal has been made on an area owned by R.G. Leckie, adjoining the area of the Cumberland Railway and Coal Co., about one mile northwest of the slope now being worked. The seam is nine feet thick, of excellent quality. This is supposed to be a continuation of what is known as the Aberdeen seam. The mineral wealth of Springhill is surely increasing, and this is likely to become a great mining centre at no distant day.- [Sackville Post."

St. Andrews Beacon - Mar. 20, 1891 Our Timber Lands and Mines. - The Management of the Crown Lands Exposed by Edward Jack, C.E. - ... Grand Lake Coal Better than the Nova Scotia Article for Steam Purposes. - (Written by Edward Jack, C.E., for the Sun). - ... The Labor Act has been very extensively used as a means of defrauding the revenue ..... This act has also been made use of for the purpose of securing mining rights. A few years ago 100 acres of land was granted to a party under the Labor act. On this lot there was a metalliferous deposits at which time was considered of great value, and there were parties who stood ready to bid $3,000 for it had it been offered for sale at public auction. By the use of the Labor act this was prevented and the revenue lost all chance of getting this $3,000. (This occurrence took place before the present government took office). It has also been used for the purpose of securing fishing privileges, and this very lately. ... preparation of county maps ... To this might be added the points where metalliferous ores had been found, and all other such information as might be made use of for the good of the people. The Mines and Minerals of New Brunswick. - New Brunswick owns lands which are of much value in respect to the minerals which they bear. The laws regulating mines in this province are in such confusion and so inadequate that this subject should receive immediate attention. All of these should be repealed and a proper mining law enacted. Should such be attempted it would be well for the provincial government, prior to action being taken, to submit a draft of the bill to the officers of the geological survey of Canada for their criticism. These officers have already noticed the absurdity of our mining laws, and I have heard it suggested by some of them that it would be well for the different provinces of Canada to adopt, in framing their mining regulations, a similar system in so far as the same would be practicable. It may not be out of place here to say a few words regarding the New Brunswick coal fields, whose area is given by the officers of the geological survey as being about 112 square miles; the average thickness of the coal seam, by the same authority, is 20 inches, and the total amount of coal contained in this area is given by them at not less than 154,900,000 tons. It seems to be generally conceded that the best quality of Grand Lake coal is to be met with in the Newcastle fields; here it lies usually near the surface. Mr. Green, who has been engaged in coal mining at New Zion, Grand Lake, says that he can deliver good blacksmith coal on the surface for $1.50 per ton; that the seams which he is working are not more than from nine to twelve feet beneath the surface. Peter McFarlane, of McFarlane, Anderson & Thompson, iron founders and agricultural implement makers of Fredericton, says that his firm uses Grand Lake coal altogether for steam and forge purposes, that it is good for both, that he knows of no coal so good for heavy forgoings, that his firm use it for all of their steel work and do not want any better."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Mar. 20, 1891 Our Timber Lands and Mines. - The Management of the Crown Lands Exposed by Edward Jack, C.E. - Some valuable Suggestions as to How Best to Preserve Our Forests. - Grand Lake Coal Better than the Nova Scotia Article for Steam Purposes. - (Written by Edward Jack, C.E., for the Sun). - To any one who has sufficient knowledge of the crown lands of New Brunswick to enable him to form a just judgement of the system which has been pursued for a very considerable time, in their management, it must be clear that these lands have been nearly always unwisely and often dishonestly dealt with by the governments in power and that in many instances public rights have had to yield to the demands of individuals, such individuals being either members of the legislature or strong supporters of such. There is one great evil in the regulation of crown land affairs, one in fact from which nearly all wrongs which have been perpetrated on the country have had their source. It is this. Their management is placed in the hands of the executive government instead of having been governed by a special act of the legislature, which would suffice to control the dishonest action of politicians and which would prevent such an improper and unjust use of the resources of the country as

was the case last winter when one-fifth part of the indebtedness of individuals for crown timber dues for that year, which were secured to the public by carefully prepared documents, was rebated to such persons. The sooner therefore that an act is passed changing this system, which shall also determine the rates of stumpage, length of leases. etc., the better for the interests of the country. ... Without going into details as to what system should be pursued in respect to the crown forest and farming lands, the preparation of county maps on a large scale might be suggested. These should in a general way show rivers, settlements, roads, etc. so far as known. On these maps which might be kept in the crown lands office, should be placed from time to time all the information obtained by such forester, to be acquired either by his own actual travel or that of his employees, describing the character of the lands whether hilly or level, where the various heaths and barrens are situated, where the country has been burned, whether the growth is of hard or soft wood, and the age or size of such growth, and whether such lands were adapted for farming purposes. To this might be added the points where metalliferous ores had been found, and all other such information as might be made use of for the good of the people. The Mines and Minerals of New Brunswick. - New Brunswick owns lands which are of much value in respect to the minerals which they bear. The laws regulating mines in this province are in such confusion and so inadequate that this subject should receive immediate attention. All of these should be repealed and a proper mining law enacted. Should such be attempted it would be well for the provincial government, prior to action being taken, to submit a draft of the bill to the officers of the Geological Survey of Canada for their criticism. These officers have already noticed the absurdity of our mining laws, and I have heard it suggested by some of them that it would be well for the different provinces of Canada to adopt, in framing their mining regulations, a similar system in so far as the same would be practicable. It may not be out of place here to say a few words regarding the New Brunswick coal fields, whose area is given by the officers of the geological survey as being about 112 square miles; the average thickness of the coal seam, by the same authority, is 20 inches, and the total amount of coal contained in this area is given by them at not less than 154,900,000 tons. It seems to be generally conceded that the best quality of Grand Lake coal is to be met with in the Newcastle fields; here it lies usually near the surface. Mr. Green, who has been engaged in coal mining at New Zion, Grand Lake, says that he can deliver good blacksmith coal on the surface for $1.50 per ton; that the seams which he is working are not more than from nine to twelve feet beneath the surface. Peter McFarlane, of McFarlane, Anderson & Thompson, iron founders and agricultural implement makers of Fredericton, says that his firm uses Grand Lake coal altogether for steam and forge purposes, that it is good for both, that he knows of no coal so good for heavy forgings, that his firm use it for all of their steel work and do not want any better. The mechanical superintendent of the Northern & Western Railway, P.A. Logan, says that the best quality of Grand Lake coal is better than that received from Springhill mines as his company received it, and it leaves less ash, that as blacksmith coal there is none in Nova Scotia equal to it, that the best quality of Grand Lake coal is all right for locomotive as well as for stationary engines, that in fact there is none better, that it lights quickly and lasts long. Owing to the narrowness of the beds much of the Grand Lake coal has been very badly mined and hence the whole product of this district has received a name which it does not deserve. The engineer of the Fredericton water works says: In our pumping we have used both Springhill and Joggins coal, but we find Green's Newcastle coal better than either, as we consume a less quantity to do the same work (pumping) and find it a cleaner coal. In February, 1889, when we were burning Joggins coal we used 54,000 lbs. In Feb., 1890, when Green's Grand Lake coal was used the quantity consumed was 45,800 lbs., leaving in favor of Grand Lake coal 8,250 lbs. During either month about the same quantity of water was pumped. The crown still owns a large area of coal fields which might be developed at a cheap rate by the construction of a tramway to some good harbor on the shores of Grand Lake, such as Flower's Cove. This coal is now hauled some miles by ordinary cart to a point of shipment; 75 cents per ton and much useful time could be saved were there a tramway constructed across the beds. The provincial government could not do a better thing for the interests of Grand Lake than the agreeing to guarantee the interest on the bonds to be issued by a reliable company to be formed for the purpose of constructing such a tramway, the principal and interest on such bonds to be met by a charge of so much per ton or chaldron for all coal carried over the same, the whole matter to be done in an honest manner, and care taken that there should be no selling out of stock or other improper means to extract money from the public treasury. Under honest management the provincial government would lose nothing by such guarantee. It would be well that the government should have an investigation made regarding the Grand Lake coal and the readiest and best means to be adopted to aid in reducing its cost of transport from the pit's mouth to water or railway communication. Inspection of Mines. - New Brunswick, like the other Canadian provinces, should have in its employ a properly qualified inspector of mines, to whom might be referred all questions relating to metalliferous or mineral deposits with the power of framing or altering mining regulations from time to time as circumstances might occur. One of the chief duties of a mining inspector should be that of preserving the result of his observations on mineral beds or veins in New Brunswick as well as the collecting of all information possible regarding the subject from the writings or labors of others, among other things all the practical knowledge of this subject which is scattered through the pages of the various reports of the geological survey of Canada should be collected together in a pamphlet and freed as much as possible from technical terms, so that the same could be understood by the ordinary individual, with references in the margin to the various reports, so that the scientific reader could refer to the original sources for information. The want of an exhaustive report on the ores and minerals of New Brunswick has long been felt. Such report when made could be published as part of the surveyor general's annual report. In order to show the need of such an officer we may point to the want of knowledge of the constitution of the limestone and dolomite which line the harbor of St. John. The want of knowledge of the character, extent and output of our manganese deposits, of our building stones, and of the points where the ores of various metals have been found in New Brunswick has prevented the introduction of mining capital. It is highly probable that at some no very future day New Brunswick, like

Nova Scotia, will become a gold- producing country, as its occurrence in this province is an undoubted fact. The report of the Ontario Mineral Commission is an important document, and the following suggestions made in it are very applicable to New Brunswick: Mineral lands should be held for development, not for speculation. A bureau of mines should be established to make a complete geological survey of the province and a museum of geology and mineralogy to represent its rock formations, minerals and metallurgical products, together with an efficient plan for the collection of yearly statistics of the mining and metallurgical industries of the province. For the education of mining engineers and metallurgists a thorough system of instruction is called for which can only be provided by establishing a school of mines or enlarging the course of studies at the schools of practical science in connection with the provincial university. Prospectors and explorers should be enabled to secure the kind of information which would enable them to prosecute their arduous labors to the best advantage, and for that purpose the adoption of a scheme such as has been tried with gratifying results in the colony of New Zealand is recommended. Of course these suggestions might be modified in so far as New Brunswick is

Moncton Transcript - Dec. 31, 1892 Coal Mines at Chipman. - This year the output of the coal mines at Chipman, Queens County, owned and operated by Messrs. E.C. and I.H. Elkin, has been about 3,000 tons. These mines supply the Central and the Buctouche and Moncton Railways and send considerable coal about Queens County and to St. Martins. Fifteen men are now employed at the mines and during the coming year the Messrs. Elkin intend to increase the output and will necessarily employ more men. The firm calculate that if continually operated the mines will yield coal for four years yet. -

N.B. Reporter - Jan. 27, 1892 Several loads of Grand Lake coal in market this week."

Evening Gazette - Apr. 3, 1893 Board of Trade. - ... Some interesting facts relative to Grand Lake coal are to be submitted to the meeting, by Mr. Edward Jack, C.E., at the suggestion of the Central Railway Company, and it is understood that Mr. Jack will have several other suggestions to make relative to the interests of St. John and the province generally."

S.J. Daily Sun - Apr. 3, 1893 Lease of the Grand Lake Mining Property and Mr. Whitney. - Boston, March 31. - .... It has been mentioned in the columns of The Sun before that capitalists after the New Brunswick mines were giving President Whitney and other heroes of the Nova Scotia combine no end of worry. It is now said in Boston that the purchase or lease of the Grand Lake mining property in Queens Co., known as the Green mine, together with other New Brunswick property, is a sure thing. The Grand Lake property is now owned by Walter McFarlane of St. Mary's. The people after the property are half American, the other half being made up of capitalists from the lower provinces. American capitalists have been looking over the values of valuable property in Pictou Co. not yet under the grasp of Whitney et al. In the meantime the West End president is exhibiting considerable anxiety. He communicates with Ottawa daily, and is also kept posted as far

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Sun - Apr. 4, 1893 Coal Fields of Queens. - Some Facts About the New Brunswick Coal Company Bill. - The Gentlemen Who Are to Develop the Grand Lake Coal Mines. - Fredericton, April 3. - The coal fields of Queens county are receiving some attention in the legislature this year. There are two bills before the House for the incorporation of companies for the development and working of the Grand Lake coal areas. The New Brunswick Coal Company bill has passed the House. This act creates Frank Todd, John J. Dunne, Chas. A. Boardman, Jas. G. Stevens, jr., and Henry F. Todd and their associates a body corporate with general powers incident to better develop the coal areas in Queens county. The capital stock of the company is to be $300,000, in shares of one dollar each, with head office in Queens, with the right to purchase, lease or erect wharves along the Grand Lake, and erect thereon buildings, coal shoots and pockets for carrying on the operations of the company. The company are authorized to locate and construct and complete, alter and keep in repair, a railroad and branches from a point on Grand Lake in the Parish of Canning, in the county of Queens, to Little River in the parish of Sheffield, in the county of Sunbury, and to connect with other railroads now or hereafter to be built in said counties for the purpose of transportation of coal or other mineral and such other property as may be necessary in carrying on the operations of the company, and if found expedient and advisable in the interest of the company for the transportation of persons and of goods and property of all descriptions, and the said company shall be and are hereby invested with all the powers, privileges and immunities which are or may be necessary to carry into effect the purposes and object of this section of this act, and for this purpose the said company shall have the right to purchase or take and hold so much of the land and other real estate of private persons or corporations as may be necessary for the location, construction and convenient operation of said railroad and branches thereof, and stations connected therewith. This company is also authorized to borrow to the extent of $10,000 a mile, and to issue bonds to that extent on their railroad. They may also borrow to the extent of $10,000 on their wharves, coal pockets and shoots, and may also lease from any other railway company any line already built, connected with or near their proposed road. Joseph Bullock, Frederick A. Jones, William Murdoch, Samuel B. Folkins and Byron G. Taylor and others are also seeking incorporation for a company with capital stock of $100,000 in $50 shares, and head office at St. John, to work and develop the Grand Lake coal mines. The promoters of this company ask the legislature for power to layout, construct and operate a railway from some point or points on the Grand Lake or adjacent railway. They also ask for power to purchase, work, manage, hold, lease and sell coal mines and mining rights, and all kinds of coal mining property, real and personal, and to open and work the same, in the county of Queens, in the Province of New Brunswick, and to search for coal in the said county, and to purchase, hold, use and convey real estate, and also to construct, purchase, hold, use and convey vehicles, vessels and

other property and machinery for raising and manufacturing coal, and to raise, manufacture and sell coal, coal oil and other substances from coal, and to construct, hold, purchase, own and operate roads and tramways, wharves and piers necessary for the proper carrying out of the purposes and objects of the company, and to transport coal, coal oil and other substances, goods and chattels to and from the mines and other places of operation of the said company, and to use the same for the purpose aforesaid, and all other purposes for which roads and tramways, wharves and piers may be used, and to acquire, purchase, construct, hire or hold all such wharves, water lots, docks and piers as may by said company be deemed proper for the working of their mines, the storing, breaking and shipping of coal and other substances, or for the protection and safety of shipping, and to construct and to hold dwellings and their works and buildings for the miners and other employees of the said company, and to do all other things which the company may deem essential or conducive to

Daily Sun - Apr. 4, 1893 Board of Trade. - ... Edward Jack, C.E., is expected to attend the meeting to supplement some correspondence which he has had with the manufacturer's committee. He has also been requested by the Central Railway to lay before the board some information relative to the Grand Lake coal district. ..."

Evening Gazette - Apr. 5, 1893 Board of Trade. - Mr. Edward Jack Talks About Grand Lake Coal. - ... (also Best on lumber industry) ... A letter was read from the manager of the Central railway stating that Edward Jack, C.E., had been requested by them to lay before the board their views relative to the freight charged on coal carried from Norton to St. John over the I.C.R. They claimed that the charges was excessive. Mr. Jack, who was present, was invited by the president to address the board, which he did at considerable length. He began with a reference to the advantage St. John possessed as a manufacturing centre. Cheap coal was a necessity for successful manufacturing. This could be obtained from the Newcastle (Queens County) coal fields. St. John had at a distance of sixty miles, a great deposit of coal. It was not the Salmon river, or, as it is best known, the Grand Lake coal. He referred to the coal fields on the Newcastle river. The deposit was some 32 miles square and the coal was of a very superior quality. The Central railway proposed to extend their road to the coal deposits, the contents of which, taking the specific gravity as was given in the geological reports, would amount to more than 50,000,000 tons. On the 5th ult. he visited the Newcastle coal fields. The main seam at New Zion was 24 inches in thickness. The coal was very good. Mr. Green assured him that it could be mined and delivered at $1.30 per ton, and offered to mine and deliver 25,000 or 30,000 tons at that figure. Mr. Green took some 600 tons out of a quarter of an acre. In speaking of the superiority of the coal over all other soft coals, Mr. Jack read letters from the following gentlemen, each of whom declared it to be better than any other coal ever used by them: Thos. Hoben, Peter McFarlane, P.A. Logan, Engineer Taylor of the Fredericton water works and W.A. Chesley. All that this coal required was to be mined cleanly to make it a first class steam and blacksmith coal. It would be transported to St. John by rail and water in summer and by rail alone in winter. It would be carried by two railways, the Central and the I.C.R. The board of trade could do a lasting benefit to this city by means of their representations to the dominion authorities; they could obtain from the management of the I.C.R. the same rates per mile for coal as were customary in the United States. The charge now for bringing it in from Norton, some 33 miles was 65 cents per ton. On motion of Mr. Hall the whole matter was referred to the freight and transportation committee."

Codes: X1 / IDX_Names: Grand Lake Coal;
St. Croix Courier - Apr. 6, 1893 The New Brunswick Coal Company is a company which has been incorporated by act of the legislature this session. The act creates Frank Todd, John J. Dunne, Chas. A. Boardman, Jas. G. Stevens, jr., and Henry F. Todd and their associates a body corporate with general powers incident to a corporation to enable them to better develop the coal areas in Queens County. The capital stock of the company is to be $200,000, in shares of one dollar each, with head office in Queens, with the right to purchase, lease or erect wharves along the Grand Lake and erect thereon buildings, coal shoots and pockets for carrying on the operations of the company. The company are authorized to locate and construct and complete, alter and keep in repair, a railroad and branches from a point on Grand Lake in the parish of Canning, in the county of Queens, to Little River in the parish of Sheffield, in the county of Sunbury, and to connect with other railroads now or hereafter to be built in said counties for the purpose of transportation of coal or other mineral and such other property as may be necessary in carrying on the operations of the company."

S.J. Daily Sun - Apr. 10, 1893 Queens County Coal Fields. - A gentleman who is in a position to know all about such matters says the Newcastle (Queens County) coal fields will within a short time be a busy place. The New Brunswick Coal Company, who owns a large tract of land up there, mean business, and are going to work at once. The Central Railway company are having some specimens of coal taken from the place analyzed. If the analysis shows that the coal is as good as it is said to be the company will begin mining at once. This gentleman says that if the I.C.R. give a proper rate of freight on coal brought in from Norton, where the Central line joins the other road, the coal can be landed here at $2.50 per

Evening Gazette - Apr. 17, 1893 Coal Fields of Queens. - Newcastle and vicinity on Grand Lake, Queens, will be a busy place this season, as the coal industry will be boomed. It is evident that till lately the fine beds of coal found there were not well known even to the people of this province. Now they have got a reputation in the United States and it is likely that the demand will be large."

Kings County Record - Apr. 21, 1893 Newcastle and vicinity on Grand Lake, will be a busy place this season, as the coal industry will be boomed. It is evident that till lately the fine beds of coal found there were not well known even to the people of this province. Now they have got a reputation in the United States and it is likely the demand will be large. -

S.J. Daily Sun - Apr. 21, 1893 Grand Lake Coal. - It is believed that the Queens County coal will have a much larger scale this season than formerly. This is an excellent quality of coal for blacksmiths, and, in fact, for all furnaces. Last year the electric company used very much of it. The mines will be under new management this season and it is thought the output will be much larger. There is one great disadvantage to captains and owners of boats; Indiantown has no coal sheds and consequently they are obliged to wait till cargo is disposed of, which is often several days."

Moncton Transcript - Aug. 26, 1893 A Queens County Coal Mine. - Messrs. Elkin's coal mine at Chipman, Queens County, is now giving employment to about 10 men. A new track has recently been laid to the mine to enable the firm to load their coal on the spot, and another shaft is being operated. This fall Messrs. Elkin intend going more extensively into the mining of coal, and will place large quantities on the market. - Telegraph"

S.J. Daily Sun - Jan. 25, 1893 Grand Lake Coal. - Eight team loads of Grand Lake coal reached the city on Thursday and retailed at fifty cents per bushel. -[Fredericton Herald."

S.J. Daily Sun - Jul. 3, 1893 ADVERTISEMENT: Valuable Coal Property at Sheriff's Sale. - On Tuesday next, July 4th, at noon, there will be sold at Gagetown, to satisfy a judgement against the Grand Lake Mining Company, 7,040 acres more or less, of some of the best coal lands situated in Queens County, a large portion thereof being near navigable water and the Central Railway. For full particulars see posters at the offices of W.B. Wallace, A.A. Stockton and E.T.C. Knowles, Esquires. J.S. Turner, 745 Secretary of said Company."

Evening Gazette - Mar. 23, 1893 To Buy A Grand Lake Coal Mine. - A syndicate of American capitalists have been negotiating for some time past for the purchase of the coal mining property at Grand Lake known as the Green mine now owned by Mr. Walter McFarlane, of St. Mary's. A representative of the syndicate has been down looking over the property with Mr. McFarlane and Mr. Edward Jack, C.E., and is understood to have been greatly pleased with the prospect. He is now in the city and it is understood that arrangements have been about completed for the transfer of the property. Of course if the syndicate takes the mine in hand they will work it for all it is worth; and the residents of the district are looking forward to lively times. - Fredericton Gleaner."

S.J. Daily Sun - May 13, 1893 Queens County Coal. - The schooners Lady of the Lake and Inspector, laden with coal from Newcastle are in York Point slip. Yesterday a Sun reporter had an interview with a prominent gentleman in reference to the quality and sale of this coal. He said, when the Queens county coal is properly screened it makes first rate fuel, but the trouble with it is that there is altogether too much dirt in it, and until it is placed on the market in a proper state it will not meet with a ready sale. It is an excellent quality of coal."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Nov. 23, 1893 Queens Co. Coal Fields. - A gentleman who resides in the vicinity of the Queens County coal fields was in the city yesterday. Referring to the work done in and around the mines during the past season, he said there had been a much larger amount of coal mined this summer than during any previous season within his remembrance. Between seventy-five and one hundred men have been employed in the mines during the summer. The seam varies in thickness from six to twenty-four inches. It extends over a very large area, so that the supply is practically inexhaustible. The greater part of the coal is best calculated for forge purposes and is pronounced by experts to be ahead of anything in the maritime provinces for that purpose. There is a quality which is used for house purposes, but as the miners are not at all particular in digging, and the machinery used in screening it is of a very crude character, it is not so extensively dug for the latter purpose as it otherwise would be. A large amount has been shipped to St. John, and the sale in Fredericton has been large. A number of men and teams will be at work all winter, so as to get a sufficient quantity ahead when spring opens, as many of the employees are otherwise engaged at that season. The gentleman referred to thinks the extension of the Central railroad so as to take in the mines would be a paying investment. Every winter a large quantity of this coal is hauled to Chipman and shipped by the Central railroad to persons living along the I.C.R."

S.J. Daily Sun - Oct. 18, 1893 Hardwood v. Coal. - Dry hardwood is selling on the railway lines at $2.75 per cord by the car load. This is fifty cents higher than ever before reached and will make it $4.50 or more this winter when delivered in the city. It is time that something was done in the way of securing coal from the Grand Lake mines by rail. Walter McFarlane and other members of the coal company have been at Newcastle on business connected with the McFarlane mine. They report a large output of first class coal.- [Fredericton Herald"

S.J. Daily Sun - Aug. 22, 1894 R.G. Leckie Has Great Faith in the Grand Lake Coal Fields. - R.G. Leckie of Londonderry, Nova Scotia, returned today from an inspection of the Grand Lake coal fields. He expressed great confidence in these mines and their capability to produce good coal at a lower price than any other maritime mine. All that is wanted he says is proper railway facilities for the development of this industry. With good railway privileges Mr. Leckie says he is prepared to invest one hundred thousand dollars in this enterprise."

Moncton Transcript - Aug. 24, 1894 Newcastle Coal Fields. - A Chipman (Queens County) correspondent writes: Mr. R.G.E. Leckie and his staff of assistants are actively engaged in making a survey of the coal fields in the region round about Newcastle. In several places where they have dug down to ascertain the general dip of the coal they found abundance within three or four feet of the surface, and occasionally a blow up is found scarcely a hand span from the top of the ground. Mr. Leckie expresses himself as well satisfied that a profitable business is in prospective for his company, and intends to utilize all the slack coal that has hitherto been allowed to go to waste by manufacturing it into coke. This will ensure the extension of the Central Railway as far as Newcastle."

Daily Times - Jul. 13, 1894 The N.B. Coal Fields. - The St. John Gazette says: A purchase of 20 square miles of the coal producing district near Grand Lake, was recently made by R.G. Leckie of Londonderry, who passed through the city last evening on his way to that place, where he intends beginning operations at once. Hitherto, he says, the coal in Queens county has been worked in defiance of all known rules of mining engineering. It has never been screened, and the system on which the miners were paid was so much per chauldron; consequently it was to their interest to put out the first thing that came to their shovels, whether it was coal or refuse, and they looked fully after their interests. This was the cause of the limited production and poor reputation of this coal, which was in reality of as good a quality as any found in Nova Scotia. The consumption would, doubtless, be much increased, now that an improved system of mining and management

S.J. Daily Sun - Jul. 20, 1894 A Coal Mine Railway. - The federal subsidy for the extension of the New Brunswick Central railway to traverse the Grand Lake coal fields should materially assist in the development of an important industry. It is hoped that the road may eventually be extended to Gibson, making an outlet in several directions for the product of these extensive fields of coal. By this connection the eastern section of the Canadian Pacific railway would have convenient access to a fuel supply. If the coking qualities of the Grand Lake coal are as good as is generally believed, the development of the mines would be closely connected with the establishment of an iron smelting industry at St. John. Mr. Leckie, who is taking some interest in the exploration of the Grand Lake coal field, has also, it is believed, been seriously considering the prospects of an iron industry on the western side of the harbor. This paper has already referred to the local advantages possessed by Carleton for this industry, in accessibility to the ore supply, as well as to lime and coal in convenience to market and in climatic conditions. The value of the enterprise to this city and province and to the country at large will be much increased if along with the establishment of a great industry in Carleton there is also the development of the coal mining and coking industry sufficient to supply one or more large blast furnaces. A matter of 50,000 tons of coal a year is not of so much importance in a well developed coal mining country, but this would give a start to operations on the Grand Lake. Mr. Baird and Mr. Wilmot, who seem to have pressed this matter on the attention of the government, may have their future reward in the view of a large coal mining community dispatching its products in several directions by more convenient and profitable routes than are now open."

S.J. Daily Sun - Jun. 23, 1894 Annapolis. - R.G. Edward Leckie may take charge of a coal mine near Grand Lake, N.B. He returned from there a few days ago, and considers the prospect excellent."

Codes: X1 / IDX_Names: Grand Lake Coal;

Daily Sun - Mar. 9, 1894 The Newcastle Coal Fields. - (Fredericton Gleaner, March 6th.) - The Gleaner announced yesterday that J.J. Dunne, representing Disston & Co., Philadelphia capitalists, had expressed a willingness to build the Central railway from Chipman to Gibson if a dominion and a provincial subsidy were made available. Mr. Dunne and Messrs. Disston place a high value on the Grand Lake coal fields, and are anxious to invest in them with a view of operating on a large scale. To make the investment profitable, however, the Central must be extended through the coal region to St. Mary's or Gibson, on the line of the Canada Eastern. In this connection some facts in regard to the Newcastle coal fields will be of interest. These coal beds, which are nearly level, cover an extensive area lying at distances of from five to forty feet from the surface. There are two beds, the upper one being about twenty-four inches thick. Below this are a few inches of shale, then comes the second bed, from seven to nine inches in thickness. The upper bed only should be mined, the lower being very sulphury and containing an inferior quality of coal. It has been the mining and marketing of this black shale parting (called by the miners bone) and the lower bed which has too often given a bad name to a really valuable article. There can be no doubt that, with careful and honest mining, supervised by competent persons, the markets of Fredericton, St. John, St. Stephen, St. Andrews, Woodstock, Chatham and Newcastle, and the larger markets west of us, can be supplied with the best and cheapest coal used anywhere for forging purposes and steam raising, provide of course that the line of the railway referred to above is constructed to carry it. The cost of mining and raising coal has been figured this winter by Walter McFarlane, whose mine is at New Zion, and from which only the good coal, or the twenty four inch seam, is being removed. His figures are for the chaldron of 2,800 pounds, and are as follows: Digging coal .... \$1.00 Hoisting to the surface .... .25 Timbers .... .10 Screening .... .10 Oil .... .10 ----- Total cost per chaldron .... \$1.55 This is equal to \$1.24 per ton of 2,240 pounds. Call the distance from the mines to the bridge, crossing the St. John river at this city, thirty miles (which is near enough for all practical purposes) and manufacturers in each of the towns named above can readily ascertain what ought to be the cost of this coal delivered to them by the proposed railway. As to the value of this coal for forge and heating purposes there need be no doubt whatever. Messrs. McFarlane, Thompson & Anderson, founders and engine builders, have used this coal from the date of their establishing business. They give it a high name. Peter McFarlane, one member of the firm, has expressed the opinion that seven tons of the Newcastle article will go as far in raising steam as ten tons of Springhill coal. Thos. Hoben, superintendent of the Canada Eastern, says, if the Newcastle coal be carefully mined, it is fully as good as any coal that his company have used for locomotive purposes. Alex. Burchill, superintendent of the water works here, says that when clean and free from shale, the engineers consider it at least as good as any coal they have used. In fact one of the engineers by experiments proved that the heating powers of Grand Lake coal was much superior to that of Joggins coal. There are about 6,000 tons per year of this coal mined now, under all the disadvantages attending transportation. As it is a fairly good house coal it has been much used for that purpose and, when properly mined, has given satisfaction. It is certainly the best blacksmith coal in the maritime provinces. All of the beds in the Grand Lake fields can be easily drained and cheaply worked, and by the application of skilled knowledge to the rude system of mining now followed out at Newcastle, the cost of production can be further reduced."

S.J. Daily Sun - May 19, 1894Queens County Coal. - The schooner Effie Maud, laden with coal from Newcastle, Queens County, is discharging at York Point slip. The cargo consisted of 70 chaldrons. She got in Thursday afternoon, and yesterday at noon all the coal was sold. The severity of the winter prevented the men from getting as large a quantity on the wharf as is usually the case. Last spring when the snow went off there were between 15,000 and 16,000 chaldrons at Newcastle ready to ship. There is not over 10,000 this spring. It will be understood that the mines are from three to five miles from the wharf and consequently all the coal has to be hauled that distance, and if it is not got out in the winter when the men have very little other work to do, it is seldom got out at all, for the miners have farms to look after in the summer. If the Central Railway were extended so as to take in these mines they could be largely developed and there would then be very little difficulty in getting the coal to market."

Gazette - Apr. 11, 1895 Mining In Queens Co. - A meeting of the Colonial Iron and Coal company was held in the office of the Hon. A.G. Blair yesterday for the purpose of organization. They decided to commence mining in Queens county at once but did not arrive at a decision about establishing a blast furnace at Carleton. A meeting will be held in two weeks when an election of directors will take place."

S.J. Daily Sun - Apr. 11, 1895 The Colonial Iron, Coal and Railway company met in the office of Vroom & Arnold yesterday afternoon and organized under the charter obtained at the last session of the provincial legislature with the provisional directors as appointed by the act. Work will be commenced on the survey of the railway from Grand Lake to Fredericton as soon as the weather permits. Active steps will also be taken to develop the coal areas under the supervision

S.J. Daily Sun - Apr. 12, 1895 Sunbury Co. - R.G. Leckie & Co. who acquired the incorporate powers of the Central Railway Co. at the last session of the local legislature, will further ask the central government at the next session for a subsidy to build the road from Fredericton to the coal fields of Sunbury and Queens. If a subsidy is given the work of construction will be commenced at the earliest possible time. Four surveys have already been made over the only practical route, and will not necessitate a further outlay in that direction. Either by the Burpee, Bright and Evans survey it will fill a long felt want by the people of Maugerville and Sheffield, and of Canning, Queens Co., as well as opening up a good section for settlement, and valuable blueberry plains, which are now a source of wealth. Here it may be of interest to say that upwards of $2,000 was distributed last season among the people of Rusagonis station, Lincoln, for picking berries."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Daily Sun - Feb. 2, 1895 New Companies. - R.G. Leckie applies for the incorporation of the Colonial Iron and Coal Company, Ltd., with a capital stock amounting to one million of dollars, having power to increase to two millions, one half the shares to be preferred and the remainder common stock, and having authority to issue bonds to the amountof the capital paid up. The objects of the company are to acquire coal, mineral and other lands in any of the counties of this province or elsewhere, work mines, etc., etc."

Weekly Record - Fri., Feb. 8, 1895 R.G. Leckie, who with his associates, has lately acquired extensive coal areas on Grand Lake, applies for the incorporation of the Colonial Iron and Coal Company, Ltd., with a capital stock amounting to one million dollars, having power to increase to two millions, one half of the shares to be preferred and the remainder common stock, and having authority to issue bonds to the amount of the capital paid up. The objects of the company are to acquire coal, mineral and other lands in any part of this province or elsewhere, and work the same."

Moncton Daily Times - Feb. 28, 1895 A Big Scheme. - The Colonial and Coal Company's Plans. - What is Said For and Against Them Before a Legislative Committee. - Fredericton, Feb. 26. - The corporations committee had an interesting hearing of friends and opponents of the Colonial Iron and Coal Company. J.H. Barry and Mr. Leckie and his son spoke strongly in favor of the scheme. They said they intended to spend nearly a million dollars in Queens County developing mines, and in Carleton, establishing works and improved appliances for extracting coal. They promised to spend $400,000 on Carleton works, and said, if given their charter, they would begin at once and have the works in operation next year. They declared they intended removing the Londonderry works because St. John was a better distributing centre. They would bring about half their ore from Annapolis county and get the rest in Queens and from about Musquash and from Albert. They would bring all the coal from Queens by water in summer and rail in winter. They wanted the right to build a road exclusively for coal carrying purposes from the fields in Queens to Gibson or to a point on the Penniac river joining the Canada Eastern. C. McMan, who has large interests in Queens, opposed the bill, saying that it would interfere with his rights. C.N. Skinner and Dr. de Bertram, of the Central Railway, were also heard. They have a charter for a road to Fredericton and say the construction of the line by the coal company rendered useless their whole service. They offered to extend their road to Fredericton as speedily as possible and make fair and reasonable arrangements with the coal company for running rights. The company, on their part, offer to give similar running rights to the Central. The Central people declare a half million has already been invested solely on the belief that they would get the benefit of the development of the coal fields."

S.J. Daily Sun - Jan. 22, 1895 Annapolis. - R.G.E. Leckie, manager of the Torbrook mines, says the outlook for coal at Grand Lake, N.B., is exceptionally good. He intends to push the mine for all it is worth, as he considers it will be a paying

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Sun - Jan. 24, 1895 Grand Lake Coal. - Edward Jack Tells About the Mines at Newcastle. - Which Are Operated by Walter McFarlane of St. Marys, York County. - The presence of several gentlemen in the city, the other day, more or less interested in the Grand Lake coal fields, led a Sun reporter to interview Edward Jack, C.E., on the coal question. So far as my observation or information goes, said Mr. Jack, the coal beds at Newcastle are the best to be found in New Brunswick. I have every reason to believe that the deposits south of the Salmon River are of an inferior quality and often lie at great depths. I have no financial interest, not even to the extent of one cent, in this coal, and what I am saying is for the benefit of the public at large. In th Newcastle district the coal in many places comes close to the surface. I have seen the earth removed from it so as to leave the bed exposed at a depth of six feet from the surface. This was on New Zion road, a few miles from Newcastle river, on property owned by Walter McFarlane of St. Mary's, York Co. Mr. McF. worked in that region all last winter and I think got out about 1,000 tons of coal. He began work systematically by running a drain for a considerable distance, thereby draining a large area of coal lands. How do the beds run? The beds of coal here run from 22 to 24 inches in thickness. Below this there is shale and small beds of inferior coal. Why then has Grand Lake coal such a bad name? That is entirely due to dishonest mining. Many of the miners, often poor men, removed the whole deposit, good, bad and indifferent. I do not say all have done so, but the practice has been so general as to materially injure the reputation of this coal. There is one honorable exception to the rule. Mr. McFarlane was particularly careful in his mining operations and allowed no shale or inferior coal to be mined. I speak of this from actual personal experience. Last fall I got from Mr. McF. a chaldron of his coal, which was hauled to my house at Fredericton, and I saw it placed in the cellar. This coal I carried to my room in a scuttle from time to time as required, put it on the fire myself, and carried the ashes down. I never found a particle of shale in these ashes. I have heard complaints about the quantity of sulphur in the coal from Grand Lake. What do you know about it? Much of the Grand Lake coal has more or less sulphur in it; in some places much more than others. a car load or so was sent to McAdam some years ago from a shaft sunk on the Central railway line, and it proved worthless, owing to the quantity of sulphur. It was taken, I understand, from a depth of 70 feet. This shipment in place of doing good to the Central R.R. did a great amount of harm. Mr. McFarlane sent about a barrel of his coal last season to Mr. Haggarty, their mechanical superintendent at McAdam, and Mr. H. told me it was very good coal, but said he preferred the Maryland coal, which I have no doubt is a better coal owing to its freedom from sulphur. At the same time, continued Mr. Jack, I consider the Newcastle article the best coal for forging purposes in the maritime provinces. Within six weeks I interviewed the blacksmith at Mr. Gibson's cotton factory, and he told me that for two years past he had been using Newcastle coal, which though not as good as Cumberland coal answered all the purposes of his work perfectly well. I called some time ago on Peter McFarlane, of the firm of McFarlane, Thompson & Anderson, of Fredericton, who told me that his firm used only Newcastle coal for heating as well as forging purposes, and that for raising steam he thought seven tons of it would go as far as ten tons of Springhill. How can this coal be shipped from Grand Lake? The coal beds at Newcastle can be made available for St. John and the rest of the province by the construction of a railway from the Canada Eastern in the vicinity of Marysville to Little River, and to Newcastle at the Grand Lake. I believe such a road would much better serve the wants of the people of Grand Lake than if 15 miles were built from the Central to Mr. King's at Newcastle. These coal beds lie about 20 miles from the Canada Eastern and continue thence seven or eight miles to Newcastle. The greater portion of the distance from Marysville to the coal fields is over a country as flat as it can be - heathy, barren land, the woods on which were about all destroyed by the Saxby gale and subsequent forest fires. What would be the distance by the route you mention to St. John? Say 20 miles from the coal fields to Marysville, thence six miles to Fredericton and 65 to Saint John. What would the coal cost at the pit? Mr. McFarlane tells me that Newcastle coal can be placed on the surface at one dollar per ton, and I have no doubt that with modern appliances and more capital, the coal would be considerably below that figure. In speaking of $1 I refer to the best quality of Newcastle coal. What is the area of these coal beds? It is large. I can give you no approximate figures, but it covers many square miles. It is estimated that an acre will yield 2,000 tons of coal. I feel that it is a great pity in the interest of St. John and the whole province that these coal beds are allowed to remain without a railway to them. No longer ago than this very week I saw teams hauling this coal 20 miles and delivering it at Fredericton. If it pays men and teams to spend two or three days hauling a chaldron of coal it should pay a railroad to handle it, provided there is a market for a large quantity. Is there a market for it? Yes. Mr. Gibson's mills would require hundreds of tons every year, and the CPR would also take a big

quantity at Fredericton, etc. Then the Miramichi pulp mills, which now get their coal over the Canada Eastern, would be large customers. There would likewise be the industrial markets of Chatham, Newcastle, Fredericton, Woodstock, St. Andrews, St. Stephen and other provincial points to be supplied, to say nothing of St. John, the greatest customer of all."

S.J. Daily Sun - Jul. 9, 1895 R.G. Leckie is now at Grand Lake. Walter McFarlane, who is mining coal there at present, is now turning out steam coal of the finest quality, as good, he says, as can be got anywhere. The Fredericton water works gets its coal from Mr. McFarlane."
S.J. Daily Sun - Jul. 12, 1895 R.G. Leckie has a number of men at work on his Grand Lake coal fields exploring the grounds and making preparations for more active work."

S.J. Gazette - Jul. 24, 1895 Coal Mine Sold. - Walter McFarlane of St. Mary'shas sold his coal mine at Grand Lake to American capitalists, for about $10,000. The sale was negotiated by Dr. March of this city."

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County News - Jun. 13, 1895 Grand Lake Coal. - The subject is one of which capitalists are giving much consideration at the present time. Within the last few years large interests have been involved in coal properties. This has been the case to no small extent in New Brunswick. The outlook is very bright for a largely increased development of the coal areas of Grand Lake. According to the geological survey of Canada the coal area of this district is estimated at about 52 million acres. This coal deposit is generally accepted to consist of what is commonly known as a surface measure at a maximum depth of about 50 feet, generally about 20 feet, in the neighborhood of present active mines, and cropping out on surface in many places on the hillsides. It is really a compound measure consisting of a top vein of about 24 inches in depth, with a close adherent layer of carboniferous shale about four inches in depth, underlying which there is another seam of coal about 9 inches making a total depth of 37 inches in the best localities. The top measure makes an excellent fuel as run of the mine for locomotives and general steam purposes; the lower one furnishes a good slack coal for low pressure boilers. Analysis of the coal shows as great heating properties as any eastern Canadian coal and has proven to be a most lasting fuel for locomotive use and most manufacturing purposes. In the past coal has not been intelligently mined and handled, by this is meant care in mining, judgment in grading coal, and proper transportation from mine to market; all these considerations for the establishment of coal upon the market. The coal can be graded in four classes; run of the mine, screened, screenings and slack, and blacksmith. The best blacksmith coal is taken from the croppings at the surface and where the seam lies at a depth of not more than four or five feet. This coal has been mined for the last sixty years, for the most part, by private parties, upon whose farms coal has been found. Mining has been carried on apparently, with only one idea, to get out all the coal possible, regardless of its quality, to sell for what it will bring. In this way a very poor grade of coal has generally been placed on the market. Two large corporations, to all appearances, have decided to operate extensively upon these areas. These operations will necessarily be carried on in a business- like way, thus insuring properly mined coal offered for sale, properly graded, and furnishing the market with a good produce. These proposed enterprises and the attending development in manufacturing that must necessarily follow, together with the increase of population in the coal district and the general business growth therewith, will no doubt have a beneficial result to the province, but more particularly to business connected with these enterprises. Time forbids dealing with this subject at the present time except only in these few general remarks. A detailed description of these coal fields, present system of mining, and a description of the proposed improved method of mining may prove of some interest to the public and will be dealt with in a future article."

N.B. Reporter - Jun. 26, 1895 Provincial Secretary Mitchell, Surveyor General Tweedie and J.G. Leckie are at Ottawa in connection with the Grand Lake coal and railway project. They are to meet Hon. Mr. Foster and lay before him a plan for the co- operation of the two governments in support of the enterprise. It is understood that the New Brunswick government proposes to guarantee the bonds of the company for ten years, and the Dominion government is asked to give an amount equal to the usual subsidy, except that the amount in ten equal annual payments, being on the completion of the work instead of the total payment at the completion of the ten mile sections."

Daily Sun - Mar. 1, 1895 Coal and Iron in This Province. - Mr. Leckie's project for the extensive operation of coal mines in the Grand Lake district, and for the establishment of smelting works at St. John, has been advanced a stage. The enterprise he has in hand is one of great importance to the province, and especially to the river counties and St. John. If the company should within a short time attain an annual output of 125,000 tons of coal, a considerable town would be built up in the neighborhood of the Grand Lake. This production is promised the first year after the construction of the proposed railway. Not less important are the proposed smelting works at St. John. The proposition is to expend at least a half a million in preparation for the manufacture of iron in this neighborhood. The solicitor of the company, speaking for the bill before the committee, said that the furnace and plant at Londonderry would be removed to St. John. This, we are informed, is a mistake. It would be impossible to move the plant, even if it were desirable to do so. Nor need the works at St. John interfere with those at Londonderry. We notice that the Hamilton Times throws cold water on the project for smelting works in that city. The works are, however, under construction, and it may be assumed that the proprietors do not expect to lose money by them. But the objections raised to the Hamilton scheme, that it is at a disadvantage by reason of the distance from coal, from ore and from lime, do not apply here. There is no place in Canada, not even at Ferrona, where coal, iron and lime can be brought together at so little cost as in St. John. The Pictou iron works use more or less ore from Annapolis, which is transported by a long land carriage over two railway lines from Torbrook to Ferrona. The cost of transportation to St. John would probably not be more than two thirds as much. Coal may be landed here almost, if not quite, as cheap as at Ferrona, and lime would perhaps cost half or one third as much as at Pictou. But Pictou county is properly held to have exceptional advantages for this industry. How much more should it be made a success in St. John? As against Canadian competition, smelting works at St. John would hold a strong position. But we cannot disguise from ourselves the fact that with the free admission of foreign pig iron at present low prices, and without a boundary, no Canadian industry of this sort could stand against the products of the United States. The cheapest iron in the world is probably in Alabama and Tennessee, and the tendency of late years has been to concentrate the iron production in the south or southern middle states. The Schuylkill and Lehigh Valleys were once the great centre of the iron industry, and New York was the scene of extensive smelting operations. But at present it appears that the Schuylkill Valley stands twelfth in the list of pig iron producing districts, while the Lehigh has a still lower place. In the first mentioned region only one blast furnace has been built in fifteen years, while 33 stacks have been abandoned. The whole of eastern Pennsylvania, according to the Philadelphia Record, is strewn with the wreck of iron works that have been abandoned. Meanwhile in other more favored places the industry has gone ahead at a tremendous rate. The production has increased with great rapidity and the price has been forced down to a point so low that the works in the northern region could not be maintained. Against such an onslaught as crushed out the Pennsylvanian works, owned by some of the richest men in the world, the industries of Canada would not stand long. The only chance of the maintenance of the iron industries that we have now or the establishment of new ones depends upon the continuance of the present tariff policy."

Codes: X1 / IDX_Names: Grand Lake Coal;
Gazette - Mar. 12, 1895 R. G. Leckie read a paper on the coal deposits of Grand Lake, N.B. before the Nova Scotia Mining Society in annual session at Halifax yesterday."

Weekly Record - Fri., May 24, 1895 R.G. Leckie, for a number of years manager of the Londonderry N.S. iron mines, has retired from that position. Mr. Leckie is interested in the Queens Co. coal fields and will probably remove to St. John."

Weekly Record - Fri., May 31, 1895 MINERALS OF THE PROVINCE.- It has been known for many years that coal, manganese, iron, salt, copper, gold and other valuable mineral deposits were to be found in various sections of the province, but so far few of these have been found in sufficient quantity to pay for working. It cannot be said, however, that very extensive or persistent efforts have been used to discover any of these minerals, but whatever success has been heretofore achieved has resulted from accidental finding and not from prospecting with the view to discovery. We are pleased to notice an unusual amount of activity is now being put forth by a considerable number of persons in different sections of the province for the purpose of ascertaining where, and to what extent the mineral deposits of the country are to be found. These efforts will doubtless be successful to a greater or lesser extent, but success will be largely due to intelligent efforts being put forth and not from blind speculation. The Queens County coal fields that have been very indifferently worked, have passed under the control of Mr. Leckie, who has been very successful in his mining operations in Nova Scotia, and expects now to succeed in Queens. He, as a practical man, has, after careful examination reached a conclusion that coal abounds in Queens County and has shown his confidence in such belief by investing largely in the purchase of mining areas. If it should be shown that coal could be mined in paying quantities in that section of country, other places in the province possessing favorable conditions will have closer attention. While coal is the principal mineral deposit in Queens, salt may be said to be an important one in this county and we are pleased to know that"

S.J. Daily Sun - Nov. 11, 1895 Grand Lake Coal Field. - The other day the Sun met a leading member of a Grand Lake Coal Mining company. He said: The article in one of our daily papers of last week in reference to the Grand Lake coal field and railway gives Mr. Leckie the credit of being the promoter of that enterprise. Silas C. McMann several years ago proposed the method of mining these coal seams by the coal stripper, and the converting of coal into coke and the recovery of the by-product of tar and ammonia, and first suggested the enterprise to Mr. Leckie. The proposed line of railway is the charter of the Central railway, which was compromised by our legislators last session giving the extension from Newcastle to the Central railway, and running rights over the remaining part from Newcastle to Fredericton, which part Mr. Leckie's company is supposed to build. The area of coal field referred to, of 45 miles square, would cover the whole distance from Chipman to Fredericton and from Grand Lake to Miramichi, but the area obtained is about 45 square miles (and not miles square), of which area Mr. McMann holds about one-half, and there are also other existing coal mines. The coal is only workable in places which Mr. Leckie and Mr. McMann principally control. A charted company, with all the privileges the same as Mr. Leckie's company, formed by Messrs. McMann, Skinner, Pugsley, Dr. DeBertram and others, propose to carry on the same kind of industry as soon as the Central railway extension is completed. Mr. McMann is organizing a trust company for the purpose of boring for a lower seam of coal, which is supposed to exist in the vicinity of Grand Lake, and not very deep below the surface, which, if found, would be of much greater value than the small surface seam, and be a greater boon to this province."

Kings County News - Dec. 17, 1896 The Elkin Coal Mine. - The latest aspirants for public favor in the coal line is the above company. After careful placing of a shaft in the Elkin mine and placing at the same time all the latest improvements for mining and placing the products before the public in the best manner possible. This company is now prepared to ship in any quantity all sizes of bituminous coal at short notice. This coal is guaranteed to be equal to the best Newcastle coal, and is remarkable for its heating power, a small quantity giving more heat than a small quantity of any other coal on the market. For blacksmiths and for domestic purposes this coal is unrivalled as also for cooking purposes. A trial order will convince the most skeptical and wholesaled from the office of the company, Hampton. Retailed by Arthur B. Smith and Company,

Weekly Record - Fri., May 8, 1896 E.A. Charters - ... While in New York Mr. Charters came into contact with capitalists who are seriously considering the acquirement of the Central Ry. System and the development of a portion of the coal fields in Queens Co."

Weekly Record - Fri., Nov. 20, 1896 The acquiring of the Elkin coal mine in Queens Co., by a syndicate connected with the Central Ry. Co. means that a passably good paying enterprise will beopened up and developed and thus create a large amount of traffic for the railway. The preliminary steps for formation of a company have already been taken and we trust that a vigorous development of coal may follow. It is said to be of good quality and for local markets ought to command a

Gazette - Oct. 23, 1896 New Coal Company. - The Elkin Coal Company applies for incorporation. The office is to be at Hampton and capital stock to be $10,000, with option to increase to $25,000. of the stock $5000 has been subscribed. The directors of the Company are John P. Ilsely, Philadelphia, Pa.; Edwin G. Evans, Hampton, King's Co.; Henry J. Fowler, Hampton, King's Co.; Thomas H. Peters, Hampton, King's Co.; J. Edward Elkin, Coal Creek, Queen's Co."

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County News - Apr. 1, 1897 E.G. Evans, manager of the Central Railway, went to the Elkin Mines on Tuesday to arrange for the arrival of a large gang of men who are to be put to work in the mine in order to keep up with the orders, which they are unable to fill with the stuff on hand."

Kings County News - Apr. 8, 1897 The Elkin Mines. - A correspondent had occasion recently to visit the new coal mines that are in course of development two or three miles from Chipman Station. These mines are approached by rail and land route - the latter by the way of the Coal Creek road, from which it is distant not more than a quarter of a mile. These mines and the surrounding lands have lately been purchased by a company known as the Elkin Coal Company, Limited. The former owner J.H. Elkin from whom the company derives its name, is superintendent. The other members of the company are J.P. Estey, of Philadelphia, president, E.G. Evans, of Hampton, vice president, J. Fowler, Hampton, secretary treasurer. A branch line which taps the Central three miles from Chipman runs to the mines, and this winter the company have done a brisk business, supplying coal to customers along the line as well as delivering it to Saint John, their chief market. Over the shaft, which is only 15 feet deep, the company has erected a large building, which is supplied with new machinery for working the mines. A fifteen horse power engine runs an improved Miller pump in keeping the mine free from water. The coal at present is raised by means of windlass turned by a horse travelling a circuit, but before long this will be replaced by steam power, in the shape of a hoisting engine. A long ell set up on high piers is attached to the main building where the coal is screened as it is raised from the mine in boxes. The screens, two in number consist of a number of long bars of iron placed in parallel rows in a slanting position over which the coarse coal passes and the finer or smaller parts of the coal fall down between the open spaces. The coal is made ready for market and divided into six different grades according to quality, as follows, viz.: 1. Run of mines, 2. Slack coal, 3. Nut coal, 4. Round coal, 5. Round and nut coal, 6. Blacksmith coal. The last named is found nearer the surface than the other kinds and is usually covered with clay stone, or what is called bone, shall not be allowed to be mined along with the coal, and a strict regard to this rule has already earned a splendid remuneration for the coal of these mines. The best proof of this is that the company never sold a ton but the parties they sold to gave larger orders afterwards as the demand is constantly there ..?.. to such an extent that not less than 50 tons a day could be disposed of at prices if this quantity could be mined. At present there about 12 men at work who work down in the mines. They make from $1.50 to $2 a day, and raise from 25 to 26 tons daily which is sold at the pit at the following reasonable rates. Round coal $2 a ton; run of mine $1.65; nut, $1.50; slack, 70 cents, round and nut $1.80, blacksmith coal, $1.65. The same is delivered at Norton at 50 cents a ton charges. The company have put up a large boarding house, 25x52 feet, with sleeping apartments overhead, capable of accommodating a crew of 40 to 50 men. At present there are 18 boarders, who are served the best manner possible by a first class cook, in the person of John McDonald, a Scotchman, but for some time has been a resident of Cocagne. One end of the boarding house is partitioned off for a store, which is well supplied with provisions of all sorts, as well as a great variety of goods kept usually in country stores. Mr. Howard Ryan, who was formerly conductor on the Central, is now agent at the mines. He has got up the book, acts as clerk and does the shipping."

Weekly Record - Fri., Apr. 9, 1897 The work of developing the Elkin coal mine in Queens Co. proceeds vigorously. Already quite a large scale of coal from this locality has been disposed of and gives very good satisfaction."

Kings County News - Jan. 28, 1897 The Elkin Coal Company, which has been mining extensively for the past two months find it impossible to keep up to the orders. The coal has during the short time found much favor with users and many others are ready to try it as soon as the local dealers can be supplied. Having purchased a car load we can speak from experience and have no hesitation in saying that it is equal to any soft coal we have ever used and we have tried them

Weekly Record - Fri., Jan. 29, 1897 We understand coal mined at the Elkin coal mine in Queens Co. and being shipped over Central Railway and sold at various points is giving first class satisfaction. The company, whose headquarters are at Hampton, are prepared to attend to any local orders they may be favored with."

N.B. Reporter - Mar. 31, 1897 Grand Lake Coal. - The Water Work engineers speak every favorably of the coal they are using, from Grand Lake. Its heating properties are excellent. It is expected that a large quantity will be brought from the mines this year. Mr. Walter McFarlane of St. Mary's supplied the city last year."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Sun - May 27, 1897 He is a Fraud. - Dr. Griffin, Who was to Build a Railway Through the Coal Fields of New Brunswick. - He Was Also Engaged in Booming British Mining Stock - Many New Yorkers Swindled. - New York, May 26. - The Journal and Advertiser tomorrow will publish the following: The many persons who were inveigled into all sorts of schemes by Dr. G.H. Griffin, who formerly had an office at No. 19 Broadway, are mourning the loss of their money and wondering what has become of the smooth tongued promoter. Dr. Griffin left town suddenly a short time ago, and only now is the extent of his scheming coming to light. The companies which he organized are too numerous to mention. Among them were the Nanaimo Coal Mining Co., of British Columbia; Central Islip Land and Improvement Company of Long Island; Massapequa Land and Improvement Company of Long Island; West Asbury Water Co., and the Panther Mountain Coal and Coke Company of West Virginia. In addition to these corporated concerns he was interested in a syndicate which intended to build railroads through the coal fields of New Brunswick, Canada. It was with this scheme that he first put in his appearance on lower Broadway. He said he had just arrived from Canada and was authorized to raise money with which to complete the railroad, a part of which had already been constructed in New Brunswick. One of the first persons which he interested in the railroad project was George DeMetz of 81 New street. Mr. DeMetz invested $10,000 in the railroad, and later turned over to Dr. Griffin $5,000 in addition. The road was never built, although DeMetz said yesterday: I hope to be able to recover at least some portion of my investment from the company, which owned a small bit of road there. Hardly had the deal been begun before Dr. Griffin announced himself as the owner of the large and valuable coal properties in British Columbia, and organized a company by the name of the Nanaimo Coal Mining Co. of British Columbia, under the laws of West Virginia. Stock was issued to the amount of $3,000,000 and bonds amounting to $1,500,000. Dr. Griffin was president of the company, and several New Yorkers were interested financially in the scheme. The bonds and stock were printed in Montreal, and the Western Loan and Trust Co. of Montreal registered the bonds of the company and guaranteed interest on them amounting to $180,000 per year. Dr. Griffin then went to London to dispose of them, but meanwhile the trust company investigated in British Columbia and cabled to London, which prevented his selling the bonds to investors there. As president of the Panther Coal and Coke Co. of West Virginia, Griffin received $500,000 in bonds, which he was to dispose of in London. He found it difficult to sell the bonds, and obtained a loan on them for something like $50,000. The Farmer's Loan and Trust Co., with whom the registration of the bond issue was arranged, has since received a query from London as to the value of the collateral, but have washed their hands of the whole business."

N.B. Reporter - Sep. 29, 1897 The Elkin Mine. - It is thought surprising developments in coal veins would result from the expenditures of a reasonable amount of capital in exploring the beds in some localities in Queen's County. Last week a number of Hungarian miners arrived in charge of a guide. They are under contract to work for the Elkin Coal Mining company at Chipman, Q.C. Already a number of miners from Springhill are employed there. The company is working two slopes and taking out about thirty tons of coal a day, much of the work being development."

S.J. Daily Sun - Jan. 10, 1898 Salmon Creek. - The new coal mine opened by George Burradge of Carleton is proving a success."

Kings County News - Jun. 16, 1898 The ponies sold to Mr. E. Evans to be used in the Elkin Coal Mines have been resurrected and are now doing duty on the streets here, looking as well as ever after their winter's work among the dusky

S.J. Globe - Oct. 27, 1898 The Elkin Coal Company are erecting five new buildings at the coal mines in Chipman. The contractor and crew arrived by train on Saturday and are stopping at the Chipman House."

Daily Sun - Nov. 6, 1899 Queens County Coal. - Not much is said about the Queens County coal mines, but the work of mining is going on at the mine a few miles this side of Chipman, and an order has lately been placed for 300 tons for the St. John market. It is said experiments are being made with this coal on the I.C.R. The coal vein is about 30 inches thick, at a depth of about thirty feet. It is hoped that the Central railway will ere long be extended to Fredericton and the Newcastle coal fields tapped by the line."

Weekly Record - Fri., Nov. 10, 1899 Queens County Coal. - Not much is said about Queens County coal mines, but the work of mining is going on at the mine a few miles this side of Chipman, and an order has lately been placed for 300 tons for the St. John market. N.B. Reporter - Mar. 7, 1900 English capitalists are sending out to New Brunswick an engineer to look over the Grand Lake coal deposits."

N.B. Reporter - Sep. 12, 1900 While a number of men were stripping coal from Bailey's mine at Newcastle, Queen's county, and were trying to get the leads out, the roof suddenly caved in instantly killing Duncan Akerley, a miner, and injuring Rudolph Sypher about the legs."

Richibucto Review - Apr. 11, 1901 The Legislative session ... First of all isthe act providing for the development of the coal areas in Queens and Sunbury. These areas are estimated to contain 200,000,000 chaldrons of coal. Many attempts have been made to develop them in the past, but so far without success. The government, recognizing that the construction of a railway from the present terminus of the Central railway at Chipman, through the rich coal deposits in Newcastle and vicinity, was the only sure means of bringing about the desired result, has obtained the authority of the legislature to grant such aid as will ensure the immediate extension of the railway, and the installation of a mining plant, capable of mining 500 tons per day. This plan will make certain the rapid development of the coal areas and would, doubtless, ensure a reasonable output of coal. The government, however, did not stop here. Recognizing the necessity for a market, the legislature has, at the instance of the government, provided that railway companies shall pay to the provincial exchequer a yearly tax not exceeding three per cent of their gross earnings; but if they use new brunswick coal, the government may grant an abatement of the tax. When it is borne in mind that the Canadian Pacific Railway Company alone uses about 50,000 tons of coal a year on its eastern division, and having in view the abatement of tax to the amount of from $5,000 to $7,500 per annum which will be allowed that company if it uses New Brunswick coal, it will be seen what an important factor the C.P.R. Company will be in the development of our New Brunswick coal fields. Inside of a year there will be a railway in operation between Norton and Fredericton, and the rich coal fields of Queens and Sunbury, which, in the past, have been have been comparatively dormant, will be the scenes of industrial life and activity, which will mean so much to the province. The liberal aid granted by the legislature toward the erection of a large coal storage warehouse in St. John, and of five smaller ones in central portions of the province, will, we know, ensure the erection of a warehouse of very large capacity at this port, and, we trust, of similar warehouses in various sections of the province in the near future. .... The concessions which the legislature has empowered the government to grant to the company promoted by Col. Calhoun, will, it is hoped, lead to important mining operations in Albert county. About $30,000 has already been expended in development work, with the result that the company was in a position to assure the government that if the concessions asked for were granted, it would expend at least half a million dollars in putting in a plant, sinking shafts, opening tunnels, and building a railway to the mines. While these operations will cost the province nothing, if the expectations of the company are realized, many thousands of dollars in royalties will come into the provincial exchequer."

Kings County Record - Aug. 16, 1901 Wake Up, New Brunswick. - ... Thousands and thousands of dollars are going out of N.B. to develop American and western Canadian mines, and even Nova Scotia gold mines, but no effort made to develop our mines! The important coal prospects of the Province bid fair to be a redeeming feature if they maintain their present favorable indications, but after all it was outside capital, American and Upper Province money that had to develop it, so far as it has gone. Now that it has been shown to be a fairly profitable field, will our own New Brunswick people back it up and bring it to the success it should be? I seriously doubt it. The fact would be justified in extending a fair sum every year in having the services of a thoroughly good mining engineer and expert, to examine the various deposits in the Province with a proper Assay office, so that the sources of our mineral wealth may be made up to the treasury by the increased royalties. We have coal, copper, iron, manganese, and from all I can see or glean good evidence of gold, but no one takes an interest in looking into it. Why should it be so? I know of my own knowledge of outcrops, showings, ledges, etc., in N.B. that were they in the West, or in Nova Scotia even, thousands of dollars would be invested in opening them up, and win or lose, the results would be ascertained. Here nothing is done save spasmodic attempts that sooner or later end in failure. It should not be so. However, I am spinning this out at too great length. Come New Brunswickers get a hustle on! Don't let the other provinces outstrip you so totally in the paths of progress and development. See if there is not some good solid ground for investigation and development in our own province and let us go in and develop the same, in a business like and hearty manner. With thanks for space. Yours, etc. Aug. 13th, 1901 C."

Daily Sun - Dec. 19, 1901 Coal and Railway Co. - Meetings of the New Brunswick Coal and Railway Company were held in this city yesterday afternoon and last evening. Tenders will be asked for the construction of the 30 miles of railway from Newcastle to Fredericton. At the evening meeting, Mr. Fleming submitted a report relative to the working of the Butler steam excavation and cable way which he had seen in operation at Danville, Ill. He spoke very favorably of the apparatus, the capacity of which was from 500 to 750 tons of coal per day. It took the coal out and brought it to the cars on which it was deposited. Three cars, carrying 3,200 tons each, were loaded in 50 minutes. Steps will be taken by the company to procure one or more of these machines for use in the Newcastle coal fields early in the summer. If possible the machine or machines will be built in this province during the winter, provided, of course, the patentee consents."

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Sun - Jun. 7, 1901 and Daily Sun - Jun. 10, 1901N.B. Coal Fields. - Official Visit of a Committee of the Provincial Government. - To The Newcastle Mines at Grand Lake, Queens Co. - How These Mines Are Operated. - A Bit of History. - (Cor. Montreal Herald). - St. John, N.B., June 4. - The Grand Lake coalfield has been known to the world for almost three hundred years. There is reason to believe that it was discovered by the French early in the seventeenth century, and it is recorded in the diary of Governor Winthrop of Massachusetts that a small vessel from Boston, in the summer of 1643, went twenty leagues up the St. John river and loaded with coal. As there are no other coal mines up the St. John river but those of Grand Lake, the conclusion is irresistible that the Grand Lake mines were being worked by the French two hundred and fifty eight years ago. It is probable, however, that at that remote period only the outcrop on the banks of the streams was utilized, and as wood was so plentiful there was but little inducement to dig for coal. It was not until the shores of Grand Lake came to be settled by people of the British race that the coal there became an article of commercial value and was regularly mined. ... (See Kings County Record - Jun. 14, 1901 for rest of story)"

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County Record - Jun. 14, 1901 Queens County Coal Fields. - Report of A Committee Sent to Examine Them. - Millions of Tons of Coal Available.- For sixty years or more Grand Lake coal has been sold in the city of St. John, but on a scale so limited as to have no practical influence on the trade, and its use has been restricted largely to blacksmiths who require strong, free burning coal for their forges. The men who produced this coal and carried it to market were not miners but farmers, the owners of the soil under which it was found, and their methods of working were crude and inefficient. This will serve to account for the backward state of Grand Lake coal industry. These methods not only increased the cost but impaired the quality of the coal and made it less able to compete with the other coals of the Maritime Provinces. Yet there never has been a time when Grand Lake coal if properly mined and produced in sufficient quantities, could not have more than held its own with the coals of the Nova Scotia mines. As a steam coal it has no superior, and the day is not far distant when every railway and steam boat in New Brunswick will be run by Grand Lake coal. This will be the logical result of the arrangements now being made for the development of the Grand Lake mines. Last year in common with the rest of Canada, the people of New Brunswick had to pay a much higher price than usual for their coal. A strike in the anthracite region, 1,000 miles away, not only increased the price of coal to every householder, but put up the cost of bituminous coal of the Maritime Provinces to a figure never before attained. Every man who used coal, whether as a householder or a manufacturer, had to pay for it at a rate which was almost double the usual price, and bound to make it difficult to obtain at any price. The coal supplied to the consumer was often of very inferior quality, so great was the demand, and even the Intercolonial railway which touches three different coal fields, found it difficult to obtain good coal. The event conveyed an impressive lesson to every thoughtful person, as to the folly of having to depend on foreign coal, while our own fields were so little utilized; but to none did it appear more strongly than to the Government of New Brunswick. Here was a vast coal field at their very doors, which was hardly known to the people who most required its products, and which did not produce one hundredth part of the coal it was capable of sending to market. For several years past the Grand Lake coal mines have not yielded more than from 6,000 to 8,000 tons of coal a year, yet there can be no question of their ability to produce annually 500,000 tons at least for a century to come. Railway Facilitation. - The great want of the Grand Lake coal field has been the lack of railway facilities by means of which the coal produced might be distributed over the whole province. Several years ago a railway was built from Norton, on the Intercolonial, to Chipman, on Salmon River, six miles above the head of Grand Lake, a distance of forty five miles; but this line did not touch the Newcastle coal region, which was the most productive of the Grand Lake area, and it only reached a single mine. The intention was to carry the railway through Newcastle and on to Fredericton, a farther distance of 45 miles, but this design was never carried out, and so the coal mines of Grand Lake have had to depend on water carriage by schooners, a means of transit which can only be used for about six months in the year. The government of New Brunswick has now decided that a railway must be built from Chipman to Fredericton, and that the company building this line shall be bound to develop the coal mining industry, so as to increase the output to 500 tons a day, or 50,000 tons a year. At the last session of the Legislature an act was passed to carry out these objects, and a company was incorporated under the name of the New Brunswick Coal and Railway Company, which is to build a line of railway from Chipman to Fredericton. This company, in addition to a subsidy of $3,200 a mile from the dominion government, will receive a subsidy of $2,500 per mile from the provincial government, and the latter will also guarantee the three per cent bonds of the company to an amount not to exceed $250,000. The company, in consideration of this guarantee, is bound to establish on its line of railway of railway a plant for mining coal, capable of mining an average of not less than 500 tons a day. This plant must be in working order before the guarantee is given. Inspected By Government Committee. - A committee of the provincial government, consisting of Surveyor General Dunn, Commissioner of Agriculture Farris and Hon. Geo. F. Hill, having been appointed to report on the Newcastle coal field of

Grand Lake, visited it a few days ago. They were accompanied by Senator King, Mr. I.W. Carpenter, M.P.P., Mr. E.G. Evans, C.E., manager of the Central Railway, Mr. Fred M. Tweedie and Mr. Thomas Pugsley. Mr. Tweedie had been a member of Mr. R.G.E. Leckie's staff for two seasons while the Grand Lake coal field was being explored in 1894 and 1895, and he was, therefore, eminently qualified to point out the localities where coal had been found. A week might well be spent in visiting the various places about Newcastle where coal has been found and where mines have been worked, but, by making an early start at 6:30 a.m., and working hard all day, the party were able to visit seven mines in actual operation and three other places where coal in paying quantities has been found. These last were openings which have been made by Mr. Tweedie on government land. The mines in operation were all on the lands of private parties, and the manner in which they were being worked illustrated the system which prevails in the Grand Lake district. None of them was distant more than four miles from the shipping place at Newcastle wharf, where about 2,000 tons of coal is now lying awaiting shipment. Up to the present time, this year, in less than four weeks of open navigation, 25 schooners have loaded with coal at Newcastle wharf. The Fulton Property. - The first mine visited by the party was Fulton's, which is about four miles from Newcastle wharf. Here the coal has been mined by the process of stripping, as well as by means of a shaft which runs into the side of the hill at an angle of about 30 degrees until it reaches the coal at a depth of 30 feet. There are two seams of coal at this mine, a condition which is quite common in the Grand Lake coal field, a top seam off 22 inches and a lower seam of six inches, with five inches of shale between them. A 22 inch seam will yield 3,326 tons of coal to the acre, and if we add 907 tons for the six inch seam it will be seen that each coal bearing acre of the Fulton property will yield 4,233 tons. As there are 100 acres of proved coal land on this property, its possibilities in the shape of coal production may be set down at 423,300 tons. The Cox Mine. - The Cox Mine, now the property of Mr. Geo. King, was next visited. There are 50 acres of proved coal land connected with it, and the coal is in two seams, a top seam of 24 inches, then four inches of shale, and beneath it six inches of coal. The estimated amount of coal on this property is 226,800 tons. Up to the present time it has been mainly worked by stripping, a form of mining that is common in the Grand Lake district. Coal can be mined by stripping where the depth of earth above the coal does not exceed nine or ten feet. The method of stripping which has been adopted at Grand Lake is as follows: A trench is dug eight or nine feet in width and of any length, 100 to 200 feet, and all the earth thrown out of it right down to the seam of coal. Then the coal itself is cut away and removed to the full width of the trench. The miner then takes his pick and cuts into the earth immediately above the seam of coal. This is removed as far as is pick will reach, so that when this part of the work is completed a mass of earth 100 to 200 feet long and perhaps four feet wide has been completely undermined. The next process is to drive in wedges on the surface, about four feet back from the trench, and when this is done the whole mass tumbles into the trench, leaving the top of the coal exposed. The coal is again removed and the process of undermining the soil above the seam is repeated as already described. The Coakley Property. - The Coakley mine, which was next visited, is situated so close to the road that the coal from it can be loaded into a cart standing on the highway. The main seam of coal is 22 inches thick, and there is also a six inch seam which is separated from the main seam by two inches of shale. The shaft of this main is 34 feet in depth and it was stated by one of the owners that two men could take out three chaldrons a day. In other words, the rate of production is about two tons a day for each man employed. About a dozen men were working at this mine, but 50 could be employed there without difficulty and the output increased to a hundred tons a day. The area of the proved coal land in connection with the Coakley mine is 100 acres, so that there are 423,400 tons of coal on the property. O'Leary Property. - The O'Leary mine has a thicker seam of coal than any of the other mines that were visited by the party, the main seam being 30 inches, with eight inches of shale and three inches more of coal. Leaving the latter, out of the account, the main seam of this mine will yield 4,536 tons of coal to the acre, or 680,400 tons for the 150 acres of proved coal land on the O'Leary property. The shaft which is now being worked is 22 feet deep, Mr. O'Leary states that at his mine 11 men will put out 20 chaldrons of coal a day, and that 40 men could dig at 150 tons a day. To this may be added the fact that forty or even 50 men could work in this mine without difficulty. The mine is operated by horse power, in the same fashion as the Coakley mine. New Zion District. - Mr. Tweedie now conducted the party to the New Zion district, where he had opened three trial pits on land belonging to the province. The first of Mr. Tweedie's test pits that were reached had 19 inches of coal in one seam, then four inches of shale and five inches of coal. The seam was covered by 5 1/2 feet of earth. At the second pit there was 22 inches of coal covered by nine feet of earth, and at the third pit there was a 25 inch seam of coal covered with 4 1/2 feet of earth. The coal at all three pits was of excellent quality, hard and bright, and the observations made by Mr. Tweedie go to show that the main seam averages 22 inches in thickness and lies perfectly flat and very close to surface. Mr. Tweedie estimates the coal bearing area in the vicinity of Newcastle and New Zion at eight miles square, or 64 square miles. If there is a seam of coal 22 inches thick over this whole area, and Mr. Tweedie's figures only refer to lands proved to contain coal, this field contains 136,168,960 tons of coal, or enough to keep the railway supplied with freight, at the rate of 500 tons a day, for 900 years. Mining Estimate.- Mr. E. Gilpin, chief inspector of mines for Nova Scotia, who visited the Grand Lake coal fields in 1894, estimated that the district lying west of the Newcastle River contained about 50,000,000 tons of coal. This is the conservative estimate of a wholly disinterested official from another province and it should be accepted as representing the minimum of the possibilities of this coal field. Yet even 50,000,000 tons represent an amount so vast that it is difficult for the mind to grasp it. The provincial government only requires the railway company to provide for the mining of 500 tons a day; but it would take 230 years to exhaust this field at the rate specified. And the area west of the Newcastle river is only a part of the vast Grand Lake coal fields, for there is plenty of coal east of the Newcastle river and one mine now in active operation is almost 20 miles east of it. At present, however, it is only necessary to establish the fact there is abundance of coal in the Grand Lake field to supply a railway with paying freight for many years to come. McFarlane Mine. - After viewing Mr. Tweedie's pits, the party visited the McFarlane mine, where there is a shaft 38 feet deep, the hoisting being done by steam power. The seam of coal is from 20 to 24 inches in thickness and its quality is excellent, as was proved by an examination of the immense heaps of coal which surrounded the mine. These heaps contained hundreds of tons of fine merchantable coal. The McFarlane property contains 100 acres of coal producing land. The Flower's mine at Flower's Cove, which was next visited, has a 10 inch seam and the area of coal land connected with it is 100 acres. It is close to Flower's Cove, a shipping point on the lake. Saw the McMann Property. - The McMann mine, near Newcastle Creek, was the last visited by the party the first day. Here there is an area of 100 acres of proved coal land, with a main seam 18 inches thick at the outcrop on the river, and 22 inches farther in. There is a smaller seam on top of the main seam, six inches thick, and five inches of shale between them. In addition to the mines visited that day particulars were obtained of three others which there was not time to see. These were the Kennedy, Sullivan, and McDonald mines, all of which are regularly worked. Their capabilities and those of the others in the way of coal production are shown by the following table: Area of coal Tons of coal Name of Mine land, acres Fulton ... 100 423,300 Cox ... 50 226,800 Kennedy ... 30 136,000 Sullivan ... 75 335,000 Coakley ... 100 423,000 McDonald ... 50 200,000 O'Leary ... 150 680,400 McFarlane ... 100 360,000 Flowers ... 100 270,000 McMann ... 100 335,000 — Total 855 3,389,900 The coal properties owned by private parties, and now worked, could easily supply the railway with 500 tons of coal a day for the next 22 years. Elkin Mine. - On the second day the party paid a visit to the Elkin mine, which is on the line of the railway from Chipman to Norton, about two miles from the former place and nearly 20 east of the Newcastle river. The Elkin mine has been worked for half a century. For several years it supplied the Calais gas works with coal, a fact that ought to be accepted as a proof of its high quality. This mine is now being managed by Mr. Evans, manager of the Central railway. It will throw some little light on the crude methods of mining in vogue at Grand Lake when I state that the Elkin mine is the only one with a tramway, the only one with a screen, and that it is one of two which uses steam power for hoisting the coal out of the mine. The seam of coal is 19 inches thick, yielding 2,870 tons to the acre, and there are 80 acres of proved coal bearing land, so that the total possible output may be placed at 230,000 tons. About 40,000 tons have been mined during the past three years and 30 men are employed when the mine is in full working. The output with this force is 75 tons a day. The larger the output the cheaper the coal can be mined. With an output of 100 tons a day this coal can be placed on the cars for $1.20 a ton. The mine is worked on the 'room' system, with a central gangway 2,000 feet long and rooms each 200 feet long and 40 wide leading from it. Each room is supposed to contain 500 tons of coal. The shaft now being used is 35 feet deep, but a new shaft is being sunk quite near it which will soon be brought into use. The coal of the Elkin mine was tested in 1899 by the Intercolonial railway for the purpose of comparing its steaming qualities with those of the Cape Breton and Springhill mines, and it proved its superiority to both. The test was made on two runs from Moncton and Truro and back, under precisely the same conditions, the same engines being used in each case and trains of the same weight. Taking the average of the two trials it required 14,020 pounds of Springhill coal and 12,415 tons of Cape Breton to make the round trip, but only 11,242 pounds of Elkin mine coal. The Elkin mine was more free from clinkers than either of the coals tested and more efficient in every respect. After this test the Intercolonial railway stands ready to take any quantity of it that can be mined. Yet this coal is no better as a steam coal than the coals from the other Grand Lake mines. Mr. Gilpin who has already analyzed the Grand Lake coals highly commends their excellent qualities. It cokes well, and, to use Mr. Gilpin's words compares favorably with other Maritime coals. The visit to the Elkin mine ended the work of the companies, which had proved beyond all question that the coal field of Grand Lake is of immense value and that its development by means of railway facilities is a duty which can no longer be neglected. The wisdom of the policy of the government has been amply justified in this matter, for there is no doubt that the development of this coal field opens up vast possibilities for the future. Mr. Gilpin, in his report, written in 1894, stated that Grand Lake coal 'can be laid down at St. john and Fredericton at prices a long way below any coals now selling at those points.' This statement is quite as true now as it was when made seven years ago, for the prices of other coals have increased since then, while there has been no increase in the cost of mining Grand Lake coal. The government, which has wisely taken the lead in helping to increase the production of Grand Lake coal, can look forward confidently to the time when it will be universally used by our manufacturers as well as by the railways and steamboats of the province. It is the opinion of men qualified to judge, that by means of Grand Lake coal, iron can be smelted in St. John as cheaply as at Sydney, and if that is the case

Daily Sun - Jun. 14, 1901 There was a meeting yesterday afternoon of the New Brunswick Coal and Railway Company, T.B. Winslow of Fredericton presided, and there were also present Attorney General Pugsley, James Barnes, M.P.P., R.A. Irving of Buctouche, Geo. W. Allen, M.P.P., of Fredericton, and A.P. Barnhill. Reports were received as to the coal areas, which were most satisfactory. It was decided to call for tenders for the construction of the railway, which will extend from Chipman to Fredericton, a distance of 45 miles."

Weekly Record - Fri., Jun. 14, 1901 Queens County Coal. - Kings and Queens Counties will benefit greatly by the development of the Grand Lake coal fields, which are now being exploited. An investigation into the possibilities of the coal deposits known to be there, has been carried on of late under the direction of the Local Government, a full report of which will be found on another page of this issue of the Record. Almost unlimited possibilities in the way of increased manufactures lie before this province if the Queens County coal can be found and mined in the quantities indicated in the engineer's report. Its nearness to the port of St. John and the ease and cheapness with which it can be mined will make it an important factor in manufacturing by reason of its cheapness. It has for years been recognized as possessing valuable properties for the manufacture of coke in which process the byproducts, it is said, will be almost enough to pay for cost of manufacture, leaving a handsome marginal profit. A gentleman who makes it his business to be well informed on such matters tells the Record that the use of coke as a fuel on the leading American and Canadian railways is rapidly coming into use because of its well known smokeless qualities, and there are prospects of a large and profitable market therefore being developed. Any effort on the part of the government leading to the successful working of the Grand Lake mines will, we feel certain, meet with the approval of the whole province and particularly of the people of the counties interested."

Kings County Record - Mar. 8 1901 The Central Railway. - Bill to Assist in its Completion Through to Fredericton now Before Assembly. - In the Local House at Fredericton on Monday, Premier Tweedie introduced a bill which will be of more than ordinary interest to the people of Kings, Queens and Sunbury counties. It provides for the development of the coal area in Queens and Sunbury. He explained that the bill was to insure the construction of a railway which would enable the coal of these areas to be taken to market. The government will guarantee the principal and interest of the first mortgage bonds of any company authorized to construct a line of railway from the terminus of the Central Railway, at Chipman, to Gibson in York, or a point at or near Penniac on the Canada Eastern Railway; the amount guaranteed is not to exceed 55 per cent of the actual cost of the company's railway, rolling stock and plant. The rate of interest on the bonds is not to exceed three per cent. No part of the guarantee shall be paid until the railway has been completely constructed and in running order, properly equipped and with sufficient rolling stock. The net profits shall be applied to the payment of the interest on the bonds and the creation of the sinking fund. The company shall bind itself to establish on the line of railway a plant for mining coal capable of mining an average of not less than 500 tons a day. This shall be in working order before the bonds are guaranteed. All railway companies hereafter receiving subsidies from the province shall bind themselves to use New Brunswick coal provided it can be procured at reasonable cost. The government is authorized, after the completion of the railway and the development of the coal areas, to impose a tax on the company and upon all other railway companies to an amount not exceeding three per cent of their gross earnings made within the province each year; but an abatement of such tax may be allowed to the amount of the royalty imposed by the province on all coal used by such railway companies or in connection with industries hereafter established along the line thereof. The guarantee will not be given until the government is satisfied that there can be mined at reasonable cost and placed on the market at least 150,000 tons per annum. The government may also require that the whole road from Norton to Gibson or Penniac be operated as one system. The railway shall pay a royalty of 10 cents per ton on all coal mined on granted lands, and 15 cents per ton on coal mined on crown lands. The contract for the construction of this road must be entered into before the first of January, 1902. Mr. Tweedie said that the coal was of excellent quality, the price of coal had been greatly increased and that there was np question in his mind that this New Brunswick coal would be in a position to compete with Nova Scotia coal. As regards a market, that has been already secured. The Intercolonial railway would take a great deal of the coal, which had excellent steaming qualities. He read at length from the official report of Mr. Gilpin, C.E., to the crown lands department in 1895. The report dealing exhaustively with the subject of the coal deposits in Queens and Sunbury, suggested the markets for coal and the best modes and routes for getting the coal to the market, and advocated the extension of the Central railway from its present terminus at Chipman to Fredericton. continuing, Hon. Mr. Tweedie said that the purpose of the bill was to develop the industries along the lines suggested by Mr. Gilpin. He thought that if the measure before the house passed, the development of the mines would be greatly assisted, and the coal mining industry assume tremendous importance in this province. In reply to Mr. Hazen, Hon. Mr. Tweedie stated that up to the present no company has been formed to develop the mines, in accordance with the provisions of offer of the bill. Hon. Mr. Pugsley called attention to the fact that, before a company can secure the guarantee provided for by the bill, they must have a running plant placed and be in a position to raise at least 150,000 tons of coal per year. The company must satisfy the governor-in- council of this before they can receive the benefits."

Codes: X1 / IDX_Names: Grand Lake Coal;
Weekly Record - Fri., Mar. 8, 1901 Queens County Coal. - If the bill which has been introduced at Fredericton by the Premier for the construction of the Chipman-Fredericton railway works out in the manner hoped for, it will be the most important piece of legislation in the session. A railway from Chipman to the provincial capital, apart from the service it will render in opening up the rich farming sections lying along the St. John river in the vicinity of Sheffield and Maugerville, will mark an important step in the development of an industry which has been before the public for many years. The presence of large bodies of coal in Queens county has long been an established fact, requiring only the impetus of capital to make it a feature in the industrial life of the country. It is for this reason gratifying to know that the government has taken hold of the matter in a business-like spirit, and by guaranteeing of the principal and interest of the first mortgage bonds of any company constructing the railway, put the undertaking in a fair way of being accomplished. The benefits to central New Brunswick from the proper development of the coal areas tapped by this line can hardly be ever estimated, and will put this section in line with the great industrial boom now being enjoyed by other parts of the Dominion. While there is a growing feeling broadcast among the people that the principles of railway bonusing must eventually give way to public ownership, we have in this case the suggestion of what is probably the next best thing to public ownership, namely, the exacting of certain requirements from the company receiving the bonus by which they are obliged to use New Brunswick coal, when procurable, and by the imposing of a tax on the gross earnings of the road. While this scheme has been talked of for some years there has apparently, never before been such good prospects of its being successfully carried out."

S.J. Star - Mar. 20, 1901 New Brunswick Coal. - 150,000,000 in Sight - Government to Aid in Exploiting the Field. -

(Montreal Herald). - Hon. H.A. McKeown, of St. John, a member of Premier Tweedie's New Brunswick administration, and Dr. William Pugsley, attorney-general of New Brunswick, were in the city this morning on the way to Ottawa. Mr. McKeown foreshadowed the New Brunswick budget which is to be delivered at Fredericton tonight. Mr. McKeown said the revenue would be shown to be a million dollars, and there would be a surplus of $46,000. He said the province was in good shape. It was not going to seek better terms from the dominion just yet, but a move of that kind might be expected soon. The next step in the development of the province would be the exploiting of the coal areas which had been examined and surveyed by geologists who reported 150,000 tons in sight. The deposits are in veins from two to four feet thick running through Queens and Sunbury counties. The government proposes to assist in the development of the coal field by subsidizing 45 miles of railway running from Gibson to the heart of the coal fields, thus connecting the output with the interior of the province. As the royalty on coal from ungranted lands is ten cents a ton, and from granted lands 15 cents a ton the government expects to be reimbursed for any aid given. That there is a demand for the coal is shown by the fact that the minister of railways has promised, if the coal is up to the department's test, to take 100,000 tons annually for the Intercolonial Railway. The Canadian Pacific is expected to take 50,000 tons and the Canadian Eastern 30,000 tons. The coal has been found to have superior steam producing qualities. Mr. McKeown said that there would likely be aid given toward the establishment of a steel ship building yard at St. John. There was a demand for this which was shown by the fact that a St. John firm was building steel vessels, William Thomson & Co., of St. John now owned thirteen steel ships. All had been built in Great Britain. Had there been a shipyard at St. John they would have been built there."

St. John Star - May 6, 1901 Indiantown. - The Grand Lake coal mines are doing a rushing business, their shipments at present being much larger than usual."

Daily Sun - May 11, 1901 N.B. Coal And Railway Co. - The New Brunswick Coal and Railway Company met in this city yesterday and elected the following board of directors: Ernest Hutchinson of Douglastown, C.A.C. Bruce of Chatham, R.A. Irving of Buctouche, A.P. Barnhill and F. Stetson of this city, and E.B. Winslow and W. Kitchen of Fredericton. Later on the directors chose the following officers: Ernest Hutchinson, president; F. Stetson, vice-president; Geo. W. Allen, M.P.P., of Fredericton, secretary and solicitor. This company proposes to build a railway from a point in the parish of Chipman, Queens county, to Gibson, a distance of 45 miles, and to develop the coal fields of Sunbury and Queens. One of the directors told A Sun reporter last night that the company was all right financially, and that a survey of the line would be made at once, with a view to an early commencement of the construction of the railway."

St. John Star - May 17, 1901 Fred M. Tweedie, of Chatham, has gone to Queens County, where he is engaged in connection with the development of the coal fields. He was on survey work in that region several years ago. - Advance"

St. John Star - May 29, 1901 Hon. Pugsley, Dunn, Hill and McKeown have returned from the Queens county coal fields. They were accompanied there by E.G. Evans and F.M. Tweedie, C.E., on the tour of inspection."

St. John Star - Nov. 9, 1901 A meeting of the New Brunswick Coal and Railway company was held in the city yesterday. Committees were appointed to purchase machinery for the development of the coal in Queens county, and in connection with the building of that part of the railway between Gibson and Newcastle. Those present at the meeting were Hon. Wm. Pugsley, Hon. C.N. Skinner, F. Stetson, A.P. Barnhill, R.A. Irving, C.A. Bruce, James Barnes, Willard Kitchen and E.

Codes: X1 / IDX_Names: Grand Lake Coal;
Daily Sun - Oct. 29, 1901 Newcastle Coal Fields. - Capitalists Interested Visit the Queens County Mines. - Geo. W. Allen, K.C., M.P.P., returned on Saturday night from a visit to the Newcastle coal fields, in company with other prominent members of the New Brunswick Railway and Coal Co. The party, which included Hon. Mr. Tweedie, Hon. Dr. Pugsley, C.N. Skinner, A.P. Barnhill, A.I. Trueman, Geo. Robertson, M.P.P., Dr. Smith, E. Hutchinson, F.M. Tweedie and Mr. Allen, left St. John on Friday morning on tugboat Murray and went to Newcastle, on Grand Lake. The steamer drew eight feet of water, and although the river and lake are now at very low level, no difficulty was experienced in getting to and from Newcastle, which is the shipping point by water for the coal fields of Queens county. The party spent a day in inspecting the several mines adjacent to Newcastle, which are worked in a crude, desultory and limited way by their owners, and also looked over the properties possessed by the company. The gentlemen express themselves as well pleased with what they saw, very hopeful of the future in regards the development of the coal mining industry of Queens county, and greatly encouraged with the prospects for a large and profitable business for the railway which the company is building from Chipman to Gibson. That part of the railway from Chipman to Newcastle is now under construction, and it is expected to have it in operation by the first of January. Much difficulty is being experienced in getting laborers, even though high wages for that class of labor are offered. Operations are being retarded on this account, and many more men than are now at work would be employed if they could be secured. As soon as the line is completed to Chipman the company will have an outlet for the coal, connection being had over the Central Railway from Chipman to Norton with the Intercolonial railway. It is anticipated that as soon as an outlet by rail to the markets is furnished for the coal, that the business will see an immediate and tremendous development. The line of the railway from Newcastle to Gibson is surveyed, and work upon the roadbed will begin as soon as laborers can be procured. It is expected to have the whole road from Fredericton to Norton in running order by the fall of 1902. The site of the bridge across the Nashwaak has been fixed near the mouth of the river

and only a few rods above the present highway bridge. The railway bridge will be a steel structure upon stone and masonry abutments and piers. After crossing the Nashwaak the railway will take a sharp turn to the left, connecting with the Canada Eastern track near the Gibson station and crossing the bridge to Fredericton, the new company to use the present C.E.R. station together with the present occupants. - Fredericton Gleaner."

S.J. Star - Oct. 29, 1901 Newcastle Coal Fields. - Geo. W. Allen, K.C., M.P.P., returned on Saturday night from a visit to the Newcastle coal fields in company with other prominent members of the New Brunswick Railway and Coal Co., says the Fredericton Gleaner. The party, which included Hon. Mr. Tweedie, Hon. Dr. Pugsley, C.N. Skinner, A.P. Barnhill, A.I. Trueman, Geo. Robertson, M.P.P., Dr. Smith, E. Hutchinson, F.M. Tweedie and Mr. Allen, left St. John on Friday morning on tugboat Murray and went to Newcastle, on grand Lake. The steamer drew eight feet of water, and although the river and lake are now at very low level no difficulty was experienced in getting to and from Newcastle, which is the shipping point by water for the coal fields of Queens county. The party spent a day in inspecting the several mines adjacent to Newcastle, which are worked in a crude, desultory and limited way by their owners, and also looked over the properties possessed by the company. The gentlemen express themselves as well pleased with what they saw, very hopeful of the future as regards the development of the coal mining industry of Queens county and greatly encouraged with the prospects for a large and profitable business for the railway which the company is building from Chipman to Gibson."

Weekly Record - Fri., Feb. 14, 1902 In a very short time coal will be mined by machinery in the Queens County coal fields at the rate of 1,000 tons per day. This was decided at the meeting of the New Brunswick Coal and Railway Company directors held lately when arrangements were completed to purchase two Butler excavating machines with a capacity of 500 tons per day each."

Daily Sun - Feb. 17, 1902 Long Neglected Coal Industry. - Dr. Pugsley also sees, or pretends to see, in Mr. Sproul's election danger to the coal industry of Sunbury and Queens counties. On what possible basis can such an idea be worked out? A government that had been alive to the interests of the province would long ago have taken steps to provide facilities for the shipment of the coal from the Grand Lake areas to the outside markets, and it is not creditable to them that it is only after having been for years in office that any step has been taken in that direction. Nothing was actually done until I had pointed out to the house at the opening of last session that the only way in which the fields could be developed was by the construction of a railway from the coal fields to the City of Fredericton. The legislation introduced and passed authorized the government to guarantee the bonds of the company to the amount of $250,000, which sum, together with the subsidies from both governments is sufficient to build and equip the road, and the charter was given to men who are very close to the members of the government, although another company promoted by Colonel Domville, sought incorporation for the same purpose. the development of these coal fields can in no way be prejudicially affected by any change of government, for no one can be more interested in their successful development than I am, as it means much to some of my constituents. In this matter, however, as in many others, the policy of the government was largely shaped by the opposition, for the original bill as introduced by the government, provided that the road should be built to Fredericton from Newcastle by way of Penniac or Gibson, and it was only when I pointed out how a road to Fredericton by way of Penniac would be of no local advantage to the river parishes in Sunbury county, that the bill was changes and it was made imperative for the company to build to Gibson."

S.J. Star - Feb. 24, 1902 Queen's Co. Coal. - (Fredericton Gleaner, Satur.) - Fred M. Tweedie drove to the city today from Grand Lake, where he has been for the past three weeks upon business in connection with the coal industry, and is a guest at the Queen. Mr. Tweedie reports the outlook for a brisk and successful business in the coal industry as exceedingly bright. As at present mined and marketed Queen's county coal is handled ten to a dozen times before it reached the consumer; whereas with the mining machinery and shipping transportation facilities to be introduced by the New Brunswick Coal and Railway Company the greater part of the handling of the coal will be done away with, and it will reach the consumer in much better condition than it now does."

Codes: X1 / IDX_Names: Grand Lake Coal;
Weekly Record - Fri., Jan. 17, 1902 The New Brunswick Coal and Railway Company will discuss at their meeting this week the purchasing of a Butler excavator for use in their coal mines at Newcastle. It will dig and load on the cars nearly 600

N.B. Reporter - Jan. 22, 1902 Grand Lake Coal. - In a short time coal will be mined by machinery in the Queens county coal fields in large quantities. This was decided at the meeting of the New Brunswick Coal and Railway Company directors held last Tuesday when arrangements were completed to purchase two Butler excavating machines with a capacity of 500 tons per day each. H.G. Butler, of Danville, Illinois, the patentee of the machines, was present."

Daily Sun - Jul. 9, 1902 Queens Co. Coal. - A large area of coal fields at Newcastle, Queens county, is being stripped by Senator King and his son who expect to ship several thousand tons within a few months. This place is about 15 miles from Chipman and a large force of men are at present employed perfecting the drainage, etc. A store and houses will also be

N.B. Reporter - Jul. 16, 1902 and Weekly Record - Fri., Jul. 18, 1902 A large area of coal fields at Newcastle, Queens county, is being stripped by Senator King and his son, who expect to ship several thousand tons within a few months. This place is about fifteen miles from Chipman, and a large force of men are at present employed perfecting the drainage, etc. A store and houses will also be built."

S.J. Star - May 15, 1902 Salmon Bay Coal Mine. - (Fredericton Gleaner). - The woodboat Harvest Home is in port with a cargo of coal from Salmon Bay, Queen's county. This is the first coal from that mine to come to this market. The Salmon Bay mine is owned by H.B. Spragg, of this city, and Geo. B. Crawford, of Salmon Bay. They have spent considerable money in opening up their mine and have struck a vein of superior quality coal at a depth of about forty feet below the surface, the coal vein being some three feet in thickness. Salmon Bay is eighteen miles from Grand Lake and the mine is a mile and a half from the line of railway now under construction."

Weekly Record - Fri., Sep. 19, 1902 Since the anthracite coal scarcity and higher prices in other lines of fuel, Grand Lake has taken quite a boom. Recently there were three schooner loads of it at the Indiantown wharves St. John, and the demand is brisk. In the Grand Lake district those who own mines are working them constantly trying to fill the exceptional

Weekly Record - Fri., Feb. 13, 1903 F.F. Dow and W.E. Cadwallader of Fredericton, are promoters of a company being organized to acquire and work the Crawford Coal Mine at Newcastle, Queens Co. The capital stock is $70,000 and a large number of local capitalists are interested."

Weekly Record - Fri., Jan. 9, 1903 Lebaron Skillen of the New Brunswick Coal and Railway Company says that the road from Norton to Chipman is in full operation at present, and is in better condition than it has been for eight years. Nearly all the bridges are new, and by spring every bridge on the road will be entirely new. Three miles of the section between Chipman and Newcastle has been laid, rails and all and the work of completing the road to Fredericton is being pushed forward rapidly. The section between Chipman and Newcastle a distance of 15 miles, is fast nearing completion, and will be open for operation about the last of February.- Moncton Transcript."

Weekly Record - Fri., Mar. 20, 1903 The development of the coal fields at the head of Grand Lake in Queens county had drawn their notice and, it appearing clear to them that those coal fields could be utilized not only for general commercial purposes as well, attention has been attracted to the Central railway with its connections with Fredericton and the I.C.R. They felt that the proper development of the centre of New Brunswick system was the best means of reaching the objective points on the Atlantic and therefore they proposed to extend this system through to St. John and to Halifax as

Weekly Record - Fri., May 29, 1903 The work of constructing the N.B. Coal and Railway Company's line from Chipman to Newcastle, Queen's County is progressing rapidly, and it is expected that this section of the road will be completed by August the 1st."

Weekly Record - Fri., Nov. 6, 1903 In the reference to the Minto coal mine in our last issue the name of W.C. King should have read George H. King, who is the owner."

Weekly Record - Fri., Nov. 13, 1903 Queens. - Shipments of coal from the Minto mine owned by Geo. H. King are increasing every week."

Codes: X1 / IDX_Names: Grand Lake Coal;
Weekly Record - Fri., Oct. 30, 1903 Chipman, Queens Co. - ... Possessing the only workable coal areas in the province ... With a regenerated Central railway running into the centre of the county and stretching out toward Fredericton, the coal mines of Queens will in the future be as valuable as her forest wealth. ... With rail as well as water communication and the close proximity of the coal fields its advantages as a trading centre have already been appreciated and made use of by shrewd and enterprising business men. ... Minto, the new mining town. Coal of a superior quality is now being mined at this latter place by W.C. King, and large quantities are being shipped. To persons familiar with the coal which was formerly put on the market as 'Grand Lake Coal', the output of the Minto mine would not be recognized as coming from that locality. It is a clean, free burning coal, entirely free from shale, and is meeting with a ready sale. The development of the coal properties at Minto and Newcastle bid fair to revolutionize the fuel situation in this part of the province. Chipman as the coal producing centre must eventually become a place of importance in the industrial life of New Brunswick."

Weekly Record - Fri., Sep. 11, 1903 Chipman. - ... The railway at Minto has been extended to Kings Mine and cars are now being loaded as the coal is brought to the surface."

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County Record - Sep. 18, 1903 There is a settlement in Queens county near Newcastle, which in future promises to stand high as a mining centre, under the name of Minto, being named as the present governor-general of Canada. The name of this distinguished person will long be preserved in this province especially, in this coal producing town in Queens county. Coal has been shipped from Newcastle to various parts of the province for some time but the limited facilities for

handling it very much hindered the extensive development of the mining industry there. However, such facilities have been much improved recently by the New Brunswick Coal and Railway Company, which company has refitted the old Central railway line, as well as extended the line from Chipman to beyond Minto some miles. The coal is found in large quantities in this section and with the increased facilities for mining and transporting, the output should considerably increase. There are a number of coal properties at Minto. When the mining of coal was first begun in the vicinity of what is now known as Minto, some time ago the work was mostly done in the winter when the coal was hauled to Sussex and other places on sleds. Coal was sent to St. John from this section as many as 50 years ago. About that time the government gave certain persons the right of mining coal on all properties where it could be found, but such right giving rise to trouble, the order was withdrawn and the miners were not allowed to break the soil on property owned by private parties. In olden times the coal obtained near Newcastle was known as Rapid coal, because it was first found on a place called the Rapids on James Sypher's farm on the Newcastle stream. During several years of the early coal mining in this section of Queens county, the annual output amounted to 6000 chaldrons. Probably the largest and busiest mine in the lot is the one owned by Senator G.G. King and his sons. A large quantity of coal is being mined at this mine at the present time. A number of the other mines are also in operation and more men will be placed to work in each of them in the immediate future. The quality of the coal mined is very high. Everything seems to be on the stir in Minto now and the visitors there meet a very interesting situation. All along the line of railway from Chipman to Minto men can be observed putting the finishing touches on the new extension. Houses for the accommodation of the hands are good all along the line. The Barnes construction concern have between 240 and 260 men in their employ, and 60 more will be added soon. The road extending from Norton on the I.C.R. to Chipman, was built and controlled by the Central Railway Company, until 1903 when it was purchased by the New Brunswick Coal and Railway Company which is composed largely of people of this province. Some of the leading persons interested in the road are: - Geo. McAvity, St. John, president, T.B. Winslow, and Geo. W. Allen, M.P.P., of Fredericton, A.P. Barnhill, C.N. Skinner and A.I. Trueman of St. John, Hon. H.L. Tweedie of Chatham and Hon. Wm. Pugsley of St. John. E.G. Evans who was in charge of the line under the old company, is the chief engineer. For a number of years the road was in a very unsafe condition, but under the ownership of the present company and superintendence of Mr. Evans much improvement has already been placed upon it. The sum of $80,000 has recently been spent chiefly in rebuilding bridges and repairing the road, and the improvement is not yet completed for it is the attention of the present company to considerably raise the standard of the road. The quantity of hard pine used in repairing bridges was in the vicinity of 600,000 feet, and over 130,000 cubic yards of ballast has already distributed over the road. The yard at Chipman has been enlarged and provided with greater facilities for the handling of freight. Sayre & Holly have in course of construction at Chipman's large and good looking general store, and it is thought they will also build a new saw mill to replace the one recently destroyed by fire. Everything points to a large increase in the trade of the railway at Chipman. The railway has already been extended beyond Newcastle and it is intended to continue it on to Fredericton. The material of which the new road is being built is of excellent quality and the nature of the work first class. A telephone line extends over the whole line of railway with connections with the New Brunswick Telephone Co., at Norton Station. Buildings have been erected at Newcastle and Minto as well as a large freight shed at Minto, a three-stall round house and other facilities including a tank house from which pipes will extend through the valley to supply the station and other buildings owned by the railway as well as other houses which may desire the water supply. There is ample accommodation for 250,000 gallons of water. The pump house fronting on the dam is fitted with a Northy pump with a capacity of 800 gallons a minute, with the possibility of increasing it to 1,000. The tank house is a large structure. The tank itself is built of four-inch staves of pine. It is circular, being 20 feet in diameter and 15 in length. It will contain 30,000 gallons of water. The foundation and supports are made of Southern pine with a concrete foundation. The Minto yard is a quarter of a mile long and is so graded that an additional siding can be got. The round house is provided with three pits of concrete. A feature in connection with the doors is a lever lock which not only keeps the door closed, but adds to its life because it prevents warping. The turn table, close by, is almost ready for use. The excavation has been completed and the table occupies a position close by. It is capable of handling 100,000 pounds. It will be placed in the pit soon. The yard is spacious and well drained and will be given water at all places where necessary. Banner switches are used here, as is the case all over the line. The sidings at Minto are numerous and cover a lot of area. The place is well graded, thoroughly drained and ballasted in good shape. What has stood in the past against the Newcastle coal, as it has always been known, was that the operators who got it out did not see to it that the best of the deposits was shipped to outside places. All sorts of stuff was included in the sales and shipments of some of the parties. This largely operated to give the coal a bad name, but now buyers can depend in future upon getting the best of the coal there obtainable when it is shipped over the N.B. Coal and Railway line. The railway management will see to it that nothing but the best of coal finds its way outside. The railway people intend to have a system of inspection adopted in connection with all coal shipped over their line, and it is felt this will insure a first class article for the consumers. A Boston Colonization Co., will bring 50 people to Minto and Newcastle, in a short time. The local government will give the newcomers some concessions to assist them in establishing themselves here. As it is there is quite a thickly settled country round about Minto, and the farmers one and all seemed to be in good circumstances. It is a beautiful country, well wooded and the farms on every hand show indications of prosperity. The Newcastle stream runs through the settlement being bridged by railway and highway bridges. In addition to the railway buildings located at Minto there is a large and well conducted hotel. The building is about a year old. It is owned by J.R. Kennedy and accommodates a lot of people. The deposits of coal at Newcastle and Minto are large. The coal areas aggregate about ten miles, with an average probably of 100 acres of coal which runs about 2,500 tons to the acre. The capacity of the mines is in the vicinity of 500 tons per day. The coal consists of two seams about 24 to 30 inches. Then there are 6 inches of carboniferous shale and then under it 8 or 9 inches of coal. There are several new houses near the station, which are occupied by the workmen engaged in the railway company's work. Joseph Boudrot runs the largest one in the lot, having 48 men boarding there. The men are of different nationalities and seem to be a hard working lot. The railway is well equipped with new rolling

Codes: X1 / IDX_Names: Grand Lake Coal;
Weekly Record - Fri., Sep. 18, 1903 Queens. - ... Michael O'Leary, one of the owners of the Newcastle coal mines, at Newcastle, Queens Co. ..."

Weekly Record - Fri., Jan. 29, 1904 The Coal Areas of Our Province. - (Specially written for the Record). - The writer is quite familiar with the coal bearing areas of the Province, having been over the ground very many times. The calculations of the amount of coal in the Grand Lake district are far too modest. Any of the natives of the place will smile when these calculations are discussed. The writer has pulled pieces of coal from the banks of streams in Northfield parish, Sunbury county, twelve miles from the worked mines; and has seen coal shovelled by blacksmiths, off the surface of the ground. The men simply stripped away the leaves and the top soil to bare the coal. On the head of Newcastle stream coal can be seen cropping out at many places along the banks and the same may be said of the Eastern branches of the Little River, Sheffield, Sun. Co. The area there is at least twenty miles in width, and extends from head of Newcastle river through Canning, Queens Co., up the Grand Lake, crosses the lower Salmon River, extends through Pennlyn Settlement up Coal Creek, crosses the Lake stream to Beersville and Coal Branch in Kent County. Thus the area has a length of at least seventy miles. Of course, as the seam is horizontal, it will be worked only where there are valleys and in hollows between hills as can be proven by observation of the banks of streams that have cut a bed through the coal and hills. Now at the lowest estimate an acre yields 3,000 tons; At this rate the amount for square miles is 1,920,000 tons. The writer predicts that there are 800,000,000 tons of coal that can be easily mined from these areas. The government estimation is very far below these figures. A word in regard to the formation of the coal beds and mode of mining - Whether the top soil be clay or sand foam there underlies next the coal seam, a hard peculiar white fire clay bearing a good percentage of aluminum. In past days the children whittled this 'rubbish' into slate pencils. Below this lies a seam of coal varying from 22 to 26 inches in thickness, next comes a layer of clay (rubbish) and then a seam of inferior coal from 2 to 4 inches thick. Formerly the miners dug both seams of coal including the intermediate fire clay; then mixing all together they shipped the mixture all together to St. John and elsewhere. In these places, owing to the presence of the fire clay, it got the name of 'Grand Lake Mud'. Two or three firms had honesty enough to screen the stones and fire clay from their coal; this gave use to the idea that coal was better in one section than in another. Where a shaft is employed the 'picker' sits on a stool about six inches high, and with his knees doubled up rises half arm movements to handle the pickaxe. There is barely room enough for a man to sit up right, and of course, standing up is out of the question. Every foot of the way, or mine rather, is propped with posts supporting 'leads' against the roof of the mine. Extreme care is used in this work and in the history of the mines no lives have been lost. The 'wheeler' handles a small wheelbarrow to carry coal from the mine. In some cases a horse is used to hoist the coal. In these cases there is greater room underground. 'Stripping' is another mode in use. To 'strip' coal; first a trench is dug down to the coal. and then the coal is dug out of the bottom of the trench. The men pick out the coal as far as they can reach underground, then get upon the surface and by means of shovels, (and wedges sometimes) they tumble the earth into the trench. Then they dig out the coal and proceed as before. A depth of 9 feet can be stripped as easily as 2 feet. Two miners, who own this mine, can dig from three to five chaldrons a day or from four to six and a half tons. Now modern methods are being adopted and the output can be easily placed at 500 ton a day. The top seam of coal is of good quality; being part way between the bituminous coal of Nova Scotia and the Anthracite of Pennsylvania. For steam purposes it is unexcelled. The miners, formerly, were compelled by their wives and housekeepers, to sleep and eat in the 'shanty'. A shanty is a small hut with a stone furnace and a coarse bed erected at the mine. As the men at work were soon soaked with inky water and it is very hard to remove the stains of the coal, the men were allowed to enter their homes only on Saturday when they quit work for Sunday. No matter how near the homes the wives were this rule formerly held good, and it does yet in many cases. 'Coal Mine Sam' and such like expressions gave the listener to understand that the individual named bore a blue scar, the result of a wound from a lump of coal. Since the introduction of the railway, a town, named after Gallagher's hotel, 'Minto,' Moncton, has been planned. At Minto the N.B. Coal & Ry. Company has seven miles of sidings. This will give some knowledge of the great hopes for, and faith in the future of the N.B. Coal area. 'The Boston Land Improvement Co.,' has already settled and further intend to settle a large number of Swedes and Italians in a colony near New Zion, Sunbury county. A town site for 100 houses is in consideration by the company. With the extension of the present railway system to Fredericton; with the establishment of connection between Chipman and Beersville; with the prospect of the G.T.P. passing near Chipman, and with the completion of plans in course of consideration the people of the province, generally, and in the Lake region, particularly, may hold bright hopes for the mining industry of this New Brunswick. Matthew G. Duffy, Peticodiac, N.B."

Kings County Record - Jul. 2, 1904 The New Brunswick Coal and Railway Co. have paid off all the employees and nearly all the creditors have been paid. The road has now a considerable freight business, chiefly in coal, but much repairs are needed before it can be called a good passenger road. It is understood that the bonds guaranteed by the government have not yet been sold, but are placed with the banks which have made advances."

Kings County Record - Jul. 8, 1904 The difficulties into which the New Brunswick Coal and Railway Company has been placed is about to be removed. Arrangements have been made whereby the company can pay off all its indebtedness. The provisional board of directors, as we might style Senator King and Mr, Scovil, have given up their responsibility and the company has again taken over the management. W.J. Hunter at present in the employ of the I.C.R. Moncton, will shortly be elected superintendent of the company's road."

Weekly Record - Fri., Jun. 3, 1904 The Central R.R. - ... At the coal mines there is also much of interest to tourists. The King mine reduced its output when the road shut down but there are now some 2,500 tons ready for shipment. Soon it is planned to raise 100 tons a day and J.S. Gibbon & Co. will also likely give the road 200 tons a day to haul."

Kings County Record - Sep. 22, 1905 ADVERTISEMENT: Coal. The New Brunswick Coal and Railway Company are prepared to place first class House, Steam or Blacksmith Coal F.O.B. on cars at Sussex Station at prices per ton of2240 lbs. that consumers cannot afford to ignore. A postal card to the Company's office at Norton will bring full information regarding rates on any quality of coal desired. W.C. Hunter, manager Norton, N.B., Sept. 15th, 1904"

North Shore Leader - Aug. 10, 1906 ... Companies to Be Formed. - St. John Man in Coal Enterprise. ... Fredericton, N.B., August 8. -Hammond J. Evans; G.C. Jordan; J.L. McAvity, St. John; W.B. Evans, Minto; E.G. Evans, Hampton: H.B. Hay, Chipman; H. Wilson, Coal Creek, Queen's County, apply for incorporation as the Rothwell Coal Co., with chief place of business at Minto, object to carry on trade of mining and mine owners. Capital $12,000 divided into 240 shares..."

Kings County Record - Dec. 9, 1906 Another coal mine is now being opened up in the Grand Lake Coal region. Jas. Barnes, Esq. M.P.P., for Kent and some St. John associates have acquired territory there and are vigorously developing same and will probably have their coal on the market at an early day."

Semi-Weekly Sun - Sep. 19, 1906 Will Develop Sunbury Mine. - Sullivan Coal Areas To Be Opened Up. - Work Will be Prosecuted on Large Scale at Once - James Barnes, M.P.P. Prime Mover. - Application has been made by James Barnes, M.P.P., and James M. Kennedy, of Kent Co., A.R. Barnhill, St. John, and C.J. Osman, M.P.P., for incorporation as the Northfield Mining Co. Their intention is to open up the coal areas in Sunbury county, known as the Sullivan property, for which a license has already been secured. This property has been only slightly developed, and nothing at all has been done on it since its acquisition by the present owners several years ago. The parties in original possession took out a little soft coal, but never went below the outcroppings. The visit of Mr. Barnes, who arrived in the city on Thursday, and left for home last evening was in connection with this matter, and it was decided to proceed immediately with the development of the property on a large scale. Next week the work of running the levels will be commenced and a shaft will be sunk at a depth of about 40 feet. Mr. Barnes estimates that there is at least 300,000 tons of coal on the property, and it is said to be of excellent quality. The mine is only a short distance from Minto and is near the property of George King, which is now being operated with considerable success. A spur track from the Central railway will be extended to afford shipping facilities."

Kings County Record - Feb. 8, 1907 Minto Coal Gets Praise. - Dr. R.W. Ells, of Geological Survey Speaks Well of the Fuel, Notes Improvements. - The coal after hoisting is carefully screened and inspected by an inspector for the Intercolonial Railway, before being shipped to Norton, fifty-nine miles distant by rail, where it is used on the locomotives running between Moncton and St. John, and gives satisfaction as a steam producer. A number of mines in the Minto area are connected by railway, all of which are apparently opened on the same seam, though only at four are the two seams worked, the others mining the upper or twenty inch seam only. The output of all the mines in this belt is shipped by rail, but from a number of others situated nearer the shore of Grand lake, the old methods of hauling to the wharf and shipping by water, as run of mine coal, is still maintained. But little if any attempt at cleaning this part of the output is attempted and the resulting output is dirty and unsatisfactory as a first class fuel, containing considerable slate and bunches of sulphur. About 4,000 tons of this variety is thus shipped yearly. The seam is sometimes worked by stripping off the surface rock and soil, but this is only possible when the coal lies near the surface. The entire coal output during the past year is about 40,000, which as compared with the annual, output under the old system of 8,000 to 10,000 tons, shows a marked advance. This output could be largely increased if miners could be readily obtained. The amount of coal taken per acre from the thirty-inch seam is estimated at nearly 4,000 tons, all the coal being removed as the mining progresses. It has thus been proved that the Grand Lake coal, when properly mined and handled, can furnish a fuel for steam or house purposes equal to that produced from most of the mines of Nova Scotia, and that by economic efforts it will yield a fair profit to the operator. This screened coal brings $3 per ton delivered to the I.C.R. at Norton station. Recent borings in this locality showed no trace of underlying seams to the bottom of the formation. In all, nine mines are operating in the Minto basin, shipping their product by rail and working all the year, while twelve mines are worked irregularly and are shipping by water. - Dr. R.W. Ells in annual report Geological Survey."

St. Croix Courier - Dec. 10, 1908 A carload of coal from the King mine at Minto, N.B., has been received during the week by the Maritime Edge Tool Co. and is giving excellent satisfaction in their furnaces."

St. Andrews Beacon - Jun. 25, 1908 The Minto coal mines which have come in for a large share of ridicule from some politicians in the past few years, are evidently of considerable value. If they were not the C.P.R. would not be after them. The experience of every day proves that the late government acted wisely in developing and assisting these coal

Kings County Record - Nov. 20, 1908 The Mineral Resources of New Brunswick. - The Laws of New Brunswick have sanctioned many companies whose object has been to carry on the development of mining properties throughout the province, but much ofour development as yet has been on paper. The coal mines of Minto represent the most ambitious mining scheme that has so far been placed on a practical footing, within our borders. There is much evidence, however, to show that New Brunswick is rich in mineral wealth but up to the present time there has not been attracted to our mineral deposits sufficient capital to develop it. Herein Kings County there are deposits of copper that are spoken of in high terms by persons competent to pronounce on their commercial value. On the North Shore discovery"

North Shore Leader - Oct. 2, 1908 Big Coal Company Has Been Formed. - The Capital Stock Is Placed At $2,500,000, And Is Divided Into Two Classes. - Fredericton, Sept. 28. - In the Royal Gazette last week there appears application for letters patent for the Maritime Coal Company, Limited, with power to purchase, lease, take over, hold, use, occupy and possess mines, minerals, manganese, oil, mining, prospecting and working licences and leases, etc. in this province. Those applying for incorporation are Dr. Hugo Von Hagen, broker, of New York; Isaac Purdy, banker, Purdy's Station, N.Y.; William G. Kennedy, accountant, and James Marvin Seeley, manufacturer, New York; Dr. M.F. Keith, Moncton; Eugene O. Seeley, superintendent, Maccan, N.S., and Eugene Mead, railway manager, Adamsville. The capital stock is placed at $2,500,000, and is divided into two classes with $1,500,000 of ordinary stock and $1,000,000 of preference stock. This company has taken over the mines and railway of the Imperial Coal Co., operating in Kent Co. License has been granted the Canadian Coal Lands Ltd., of Augusta, Me., to do business in this province, and they are now running the old Dowe mine at Salmon

S.J. Globe - Apr. 1, 1910 It is the intention of the New York Consolidated Coal Co. at Salmon Harbor to commence the erection of a hotel and several cottages for the use of the miners. The hotel will be large and commodious, so that it will accommodate a large number of both permanent and transient boarders. It is expected that between forty and fifty cottages will be built, together with a general store and also a number of coal sheds for the storage of the output of the mines. Mr. John C. Towers, the energetic carpenter of whom they could not get a better, has been engaged by the company to superintend the erection of the buildings at a remunerative salary. It is expected that work will be started in the

S.J. Standard - Apr. 11, 1910 Queens County Coal Company. - Alex. McM. Thurrott, of Newcastle Bridge, Queens County, merchant and lumberman; Allan B. Wilmot, of Lincoln, N.B., barrister-at-law; Richard B. Hanson, of Fredericton, barrister; Parker Glasier, of Lincoln, farmer; and Luther B. Smith, of Central Blissville, lumberman, are applying for incorporation as the Thurrot Grand Lake Coal Co. Ltd., to deal in coal, etc. The capital stock is to be $98,000, and the head office in Canning, Queens County."

S.J. Globe - Apr. 14, 1910 New Companies. - Messrs. F.P. Shaw, St. John; Trueman Beckwith, Providence; Charles Rosenthal, boston; W.G. Lotze, New Haven, and T.T. Hazelwood, New York, are applying for incorporation as the Canadian Coal Corporation of New Brunswick, Ltd., with a capital of $300,000, in $1000 shares. The office is to be at Salmon Harbor, Queens County. The objects for which incorporation is sought are: To purchase or otherwise acquire, all the stock, bonds, leases, licenses, securities, lands, coal, coal areas, property, buildings, machinery, plant, tools, contracts, rights and interests of 'The Canadian Coal Corporation', a company duly incorporated under the laws of the State of Maine. To purchase, lease or otherwise acquire and to sell, mortgage or dispose of lands, buildings, mill privileges and real estate of all kinds and to purchase or construct thereon manufactories or saw mills, dwellings, warehouses and building of all kinds, to engage in the mining business."

S.J. Standard - Jun. 9, 1910 Miners Are Enjoying Life. - Standard Correspondent Finds Prosperous Village At Salmon Harbor. - ... Waterborough, Q.C., June 8. - Your correspondent visited the mines of the Canadian Coal Co. at Salmon Harbor, Q.C., yesterday, and was much impressed with the excellent quality of coal they are putting out. It is the best coal that has been procured in Queens Co. as yet, and it finds a ready sale wherever it is tried. The company have lately erected a number of houses for the miners, which are very comfortable indeed, and they have a large boarding house being built with amusement rooms and bowling alleys. There is a store at the mines and a rushing business is done. The miners play baseball and other sports. The company have a large tract of land under lease and it promises to be a big operation in the very near future. The manager and president, Frederick P. Shaw, in talking with your correspondent, said he felt confident they would be doubling the output before the end of the season."

S.J. Standard - Jun. 15, 1910 Valuable Coal Mine Property For Sale. - Tenders will be received up to July 1st, 1910, for the purchase of the Coal Mine Property belonging to the late Walter McFarlane. The property comprises upwards of six hundred and fifty acres of the best coal lands situate in the centre of the Grand Lake Coal District, and a right of way thirty feet wide for a tram or railway from the said coal lands to a wharf or landing at Fowler's Cove, thus providing means of making water shipment when desirable. Tenders will be received not later than July 1st, 1910, and should be addressed

'McFarlane Estate, Box 557, Fredericton.' The highest or any tender not necessarily accepted. For any further information address undersigned at Fredericton. Walter Limerick."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Standard - Jun. 17, 1910 Salmon Harbor Now Growing Little Town. - President of Canadian Coal Corporation Tells of Developments in Queens Co. - Mines Proving Very Valuable. - F.P.Shaw, president of the Canadian Coal Corporation, operating coal areas at Salmon Harbor, in the Grand Lake district, returned yesterday from Boston where he attended a meeting of the directors of the company. This is the last meeting prior to the annual meeting of the stockholders which will be held in July. In conversation with the Standard Mr. Shaw told of the progress which has been made on the property at Salmon Harbor. The company has applied for a provincial charter and will be registered in this province. The company entered the territory at Salmon Harbor a year ago last month and took over a barren property not even fit for farming land, but possessing valuable coal deposits. In all about 27 miles of coal lands in Queens county are held, and Mr. Shaw is convinced they are of much value. In the year the company has passed the development stage and is now engaged in actual production for the market. They have constructed a spur track of three miles to the line of the Central Railway and shipments of about 60 to 70 tons per day are now being made. Six shafts have been sunk to an average depth of 60 feet and work is being carried on at the lower vein of the load deposits. 100 Men At Work. - The mine level is about one mile in length and is connected and drained to one central pumping station. Three head houses have been erected and the company has literally transformed what was practically a hole in the woods to a thriving little town with 100 men at work in the mines. They have also cut quite a lot of lumber, while clearing the land and have got enough off to build 25 tenements and small houses for the men. An application is now being made for a school as there are 38 children of school age in the town. It is believed this will be granted. A post office will also be opened in a day or two under the name of Salmon Harbor. Seventy five additional houses will be built for the men and the number employed will be increased as the occasion demands. For these the work will be done by tender and contract. 150,000 tons a Year. - Investigation will be made of all opportunities for the investment of additional capital and tests taken of the actual profits from the mines. If the Central Railway should be extended to Fredericton, Mr. Shaw believes the mines will find a good market there for their product and that as much as 180,000 tons of coal can be shipped each year. This production will be enough to give $50,000 per year for freight earnings from the coal shipments alone and Mr. Shaw says he can land coal in Fredericton at a cheaper rate than residents of the celestial city now enjoy. In the little town of Salmon Harbor the company has installed a water system which gives a pressure of 60 pounds for fire protection purposes. On the Big Six areas which adjoin the former property tests of the coal are now being made and it is believed that this area will develop as good as the one now being worked. On the whole Mr. Shaw is very enthusiastic over the outlook and says the mines will eventually prove a most important addition to the mineral wealth of the province."

S.J. Standard - Jun. 29, 1910 Will Invest $200,000 In grand Lake Mine. - The Canadian Coal Corporation Expects To Do Big Things With Their Property at Salmon harbor. - The Canadian Coal Corporation held its annual meeting in Augusta, Me., on the 25th inst. All the officers were re-elected. The reports showed the company had accomplished all the work laid out for the year, that the mines at Salmon Harbor have started on a paying basis, and that contracts had been secured for 100,000 tons of coal. The corporation decided to secure incorporation under the laws of N.B. and place a manager of long experience in charge of the mines. It was also decided to increase the capital to $200,000. Frederick P. Shaw, president of the company when seen by the Standard said the company would put in extra equipment, provide houses for the miners and prepare for a greatly increased output."

Moncton Daily Times - Mar. 19, 1910 Grand Lake Coal Will Be Used By The C.P.R. - This Is Expected To Result In Development Of The Coal Fields: Big Company Will Take 10,000 Tons Annually. - Fredericton, N.B., March 18. - During the next few days some important events are expected to transpire in connection with the future development of the Grand Lake coal areas, and if signs point to anything there seems to be an era of prosperity for not only the Grand Lake district but also for the city about to commence. It is understood that investigations which the Canadian Pacific have been carrying on regarding the suitability of Grand Lake coal for commercial purposes generally, have been completed, and that the report from experts has been placed in the hands of Sir Thos. Shaughnessy, president of the C.P.R. The result of the investigations is said to have been favorable to the Grand Lake coal, which has been found well-suited not only for use for steam purposes on locomotives of the railway, but also admirable for steam purposes and commercial use generally. While no announcement has as yet been made it is generally understood that the C.P.R. is ready to enter into an agreement to take 10,000 tons annually of Grand Lake coal. The announcement is made that at this session of the Legislature application will be made for the incorporation of the Gibson and Minto Railway, with a capital of $898,999, and authorizing the company to construct a railway from a point on the Intercolonial Railway across the river from this city at or near Gibson to connect with the New Brunswick Railway Company, at or near Minto. This road will place the Grand Lake coal fields in close connection with Fredericton as a distributing point to the western marks of this province and eastern Canada."

Moncton Daily Times - Mar. 22, 1910 Good Outlook For N.B. Coal Areas. - (St. John Telegraph). - The proposed new railway from Gibson to Minto, and the agreement of the C.P.R. to use at least 100,000 tons of the Grand Lake coal every twelve months, should indicate a movement of first-class importance to the province. Mr. Hazen has not yet disclosed the terms, but the certificate of character for the steam coal mined in this province, and the increased mining activity promised, are of great interest."

Moncton Daily Times - Mar. 22, 1910 To Open The Coal Fields. - The bill to incorporate the Gibson and Minto Railway Company to build a railway from Fredericton to Grand Lake coal fields looks as if early construction is contemplated. Premier Hazen says the C.P.R. will take over and operate the railway, paying to the company 40 per cent of the earnings as a rental and that the C.P.R. has agreed to take at least 100,000 tons of Grand Lake coal annually. Incorporators of the company are H.P. Timmerman, A.R. Slipp, M.P.P., D. King Hazen, Parker Glasier, M.P.P., and A.B. Wilmot."

Codes: X1 / IDX_Names: Grand Lake Coal;

S.J. Standard - Mar. 29, 1910 Mines Company is Insolvent. - Canadian Consolidated Mines Company Limited With Interests in New Brunswick Placed in Receiver's Hands.- New York, March 28. - Being unable to meet its obligations, the Canadian Consolidated Mines Company, Ltd., with offices in this city, and authorized capital stock of $5,000,000, a holding company for several coal mining companies in New Brunswick and Nova Scotia, was placed in the hands of receivers today. The liabilities are $50,000; the assets were not announced."

Daily Gleaner - Nov. 13, 1911 Purchasing The Mining Machinery For Grand Lake. - Sir Thomas Tait's Company is Securing Estimates for Modern Mining Plant. - Air Compressors In The Equipment. - Additional Legislation To Be Secured During Session of Parliament. - The representative of a mining machinery manufacturing concern was in the city on Saturday afternoon and confided to friends here that his company were furnishing estimates for air compressors and other apparatus for carrying on the extensive development of the Grand Lake coal mines in which Sir Thomas Tait is interested. City Clerk McReady is in receipt of a letter from Messrs. Thompson & Burgess, barristers, of Ottawa, in which they state that the Fredericton & Grand Lake Coal & Railway company have power to buy coal from other collieries without having to acquire the mines and to then resell the coal."

S.J. Globe - Sep. 6, 1911 Grand Lake Coal. - At a meeting of the Rothwell Coal Company recently held in this city the following directors were elected: Messrs. Robert Reford and William I. Gear, of Montreal; H.C. Schofield, James L. McAvity and H.J. Evans, of St. John. The company controls a large area in the Grand Lake district and have just installed a modern mining plant which is superior to any in this province. Active operations are now in progress, and the company expects to be in a position at an early date to undertake large contracts."

S.J. Globe - Sep. 30, 1911 and Fredericton Daily Gleaner - Sep. 30, 1911 100,000 Tons Of Grand Lake Coal To C.P.R. Annually. - The Contract Said to Have Been Signed Already by Sir Thomas Tait. - Means Development On Extensive Plans. - Fredericton And Grand Lake Coal and Railway Co. Secure Control of Large Coal Areas. - That the contract has already been signed by Sir Thomas Tait for the delivery of 100,000 tons of Grand Lake coal to the C.P.R. annually, commencing next fall, is the report in semi- official circles today. Sir Thomas Tait is at the head of the Fredericton & Grand Lake Coal & Railway Company, which is undertaking the extensive development of the coal areas in Grand Lake as well as the construction of a railway from Gibson to Minto and the signing of the contract with the C.P.R. means that the project is sure to go through. Recently Sir Thomas and his associates have secured control of a large section of coal areas in the Grand Lake district to be tapped by the railway when constructed from Gibson to Minto and the plans for development will be rushed forward as rapidly as possible. In fact, the survey for the location of the railway is now going along with all possible speed under the direction of Mr. D.F. Maxwell, the chief engineer, and the actual construction will be commenced early next spring, as already stated in the Gleaner."

S.J. Globe - Apr. 13, 1912...The collapse of the bridge on the Central Railway may have a tendency to hang up the activity of the Queens County mines, but it is understood that arrangements may be made to haul the coal over the lines of the National transcontinental."

St. Andrews Beacon - Aug. 1, 1912 In the Royal Gazette appears the notice of application for letters patent incorporating Sir Thomas Tait, Montreal; Arthur R. Slipp, Richard B. Hanson, Fredericton; Victor E. Mitchell, Montreal; and John Henderson, Northfield; as the Minto Coal Company Limited. The capital stock is to be $400,000, and the place of business

S.J. Globe - Feb. 3, 1912 and Granite Town Greetings - Feb. 9, 1912 Electric Power From Grand Lake Coal. - A New Development That is Regarded as Probable. - One of the schemes in connection with the Queens county coal areas which there is reason to believe will materialize very soon, is the supplying of electric power for power and light. It is figured that the railroads would take all of the screened coal available. Coke ovens will, it is said, be built in which the slack coal will be made into coke. The gas, which is a byproduct of the coke ovens, would be utilized for gas engines to drive the necessary dynamos. It is claimed that this system of generating power is cheaper than the hydraulic. It is further pointed out that the Queens county coal areas are within a radial distance of sixty miles of every centre of population in the province. Electric power is now being transmitted twice that distance in Ontario. With this source of cheap power available and a large iron smelting works in St. John, the proposition of steel shipbuilding as well as many other important subsidiary industries

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Globe - Feb. 10, 1912 Lower Seams of Coal In Queens County Fields. - Extensive Surveys to be Made by Crown Land Surveyor. - The announcement made in the Globe the other day of the probable existence of lower seams in the Queens county coal areas has had the effect of stimulating interest in that promising section of the province. Crown Land Surveyor Wilson has received instructions to survey six square miles of crown lands on applications for licence to work. This includes several hundred acres of freehold in the best coal-bearing areas in Sunbury county. These lands lie on both sides of the railway to be built from Fredericton to Minto by Sir Thomas Tait. Surveyor Wilson also has orders to survey other areas for licence to work, including two blocks of one square mile each of the coal bearing lands on both sides of the line of the G.T.P. about due north from Minto. This work will be done as soon as the crews can be got on the ground. Borings will be made as early as possible, with the view of proving the location of deposits, preparatory to active development work. At the time the boring was made a great many years ago, which gave such strong indications of lower seams of coal, a number of gentlemen endeavored to form a company and secure a shaft to prove the discovery. this, however, would have been a very expensive process, and at the present time these lower seams can be proved much more cheaply with the aid of a diamond drill. A gentleman from British Columbia who was in St. John a couple of days ago said the conditions in the Queens county coal area were very similar to those on Vancouver Island a number of years ago. They had surface seams, but little credence was given to any statement about lower seams. It was said the C.P.R., or some organization working for them, was the first to put a hole down and so prove the existence of the wonderfully rich deposits which have been such a source of wealth to the island. It is understood that some time ago the C.P.R. expressed the intention of bringing drills from their western coal fields to Queens county, but apparently the company has since come to the conclusion that the surface seam is attractive enough. It remains to be seen if the C.P.R. or some other interest will be the first to put a drill on the grounds to discover the extent of the deposits."

S.J. Globe - Feb. 19, 1912 Queens County Coal Fields. - One of the principals of the party of English capitalists who are being induced to examine and exploit the Queens County coal areas is expected to be in St. John within ten days or two weeks. It is expected then that matters will assume a more definite shape and that preparations for the work of boring and testing the whole field will be begun."

Daily Gleaner - Jan. 27, 1912 Crushed To Death In A Minto Mine. - Edwin Whitehouse and a Companion Buried Under A Fall
Of Earth. - Minto, N.B., Jan. 26. - The people of this community were dumbfounded on Wednesday afternoon when the report reached here of an accident which occurred in Wellington Green's coal mine at New Zion, which resulted in the death of Edwin Whitehouse, of this place. It appears that the unfortunate young man and his companion, Harold Green, were at work in the mine when some of the timbering overhead gave way, and rocks and earth from overhead fell upon them and held them in the trap until assistance could be rendered. Wellington Green, the manager of the mine, was at work on the surface, and having heard no report from the two men for some time, went down to investigate. Upon reaching the place where they had been working he found them in this dreadful and helpless condition, and before they could be released, life had departed from Mr. Whitehouse. Harold Green, although he is bruised badly about the body and legs, will be able to resume his work in a few days. Mr. Whitehouse was a native of England and came here some eight years ago. He is survived by a wife and one child, to whom the sympathy of the community is extended."

S.J. Globe - Jan. 27, 1912 The people of Minto were dumbfounded on Wednesday afternoon when the report reached there of an accident which occurred in Mr. Wellington Green's coal mine at New Zion, which resulted in the death of Mr. Edwin Whitehouse. Some timbering overhead gave way, and rocks and earth fell upon him and held him in the trap until assistance could be rendered. A wife and child survive."

S.J. Globe - Jul. 24, 1912 New Coal Company Seeks a Charter. - Sir Thomas Tait is Head of the Syndicate. - Fredericton, July 24. - In todays Royal Gazette appears the notice of application for letters patent incorporating Sir Thomas Tait, Montreal; Arthur R. Slipp, Richard B. Hanson, Fredericton; Victor E. Mitchell, Montreal, and John Henderson, Northfield, as the Minto Coal Company, Limited. The capital stock is to be $400,000, and the place of business will be at Minto."

S.J. Globe - Jul. 25, 1912 The Minto Coal Company, Limited, organized to take over the coal interests acquired in Queens and Sunbury counties in the Grand Lake district during the past few months by Sir Thomas Tait, will have an authorized capitalization of $400,000. Sir Thomas Tait confirmed the report that he had recently concluded the purchase of the O'Leary mine at Minto. The price, it is said, was well on to $20,000. Previously Sir Thomas had acquired the Coakley and Tweedie mines and also an interest in the Gibbons mine, while he had purchased the Collins property, and the licenses to work held by Mr. J.S. Armstrong, C.E. The company are erecting between forty and fifty houses for employees and are preparing to ship coal over the Gibson and Minto Railway by the end of the present year."

Codes: X1 / IDX_Names: Grand Lake Coal;
S.J. Globe - Jun. 29, 1912 Deal in Grand Lake Coal Properties - Sir Thomas Tait Buys Another Valuable Mine. - Development Proceeding. - Fredericton, June 29. - One of the biggest deals in Grand Lake coal properties is now in progress and will, it is said, be closed within the next week or ten days. Sir Thomas Tait, acting on behalf of Fredericton

and Grand Lake Coal and Railway Company, is to acquire one of the most valuable and most extensive coal properties in the Grand Lake district in what is known as O'Leary's mine. The O'Leary mine is owned by several brothers of that name and contains, it is estimated, as much as three quarters of a million tons of coal. For some time Sir Thomas has been carrying on negotiations for this property, the price asked being as much as $20,000. It is now said that $16,000 will be the price paid for the property, and that Sir Thomas has an option on the mine for that price. With this property acquired the company's holdings in Grand Lake district will have an estimated output of about two million tons. The Michael Coakley, the J. Simeon Armstrong and the Tweedie mines have already been purchased at a total cost of between $20,000 and $25,000. That the Grand Lake district is already reaping the benefits of the great development work being undertaken by Sir Thomas Tait and his company is the statement made today by a resident of Northfield who is in the city and who gave the Gleaner the above information. Extensive preparations for carrying on mining work are being made, cottages are being erected for the miners and the people are pleased with the progress which is being made by Messrs. A.E. Trites & Son in the construction of railway from Gibson to Minto."

S.J. Globe - Mar. 1, 1912 Queens County Mines May Be Purchased. - Sir Thomas Tait Has Important Conference at Fredericton. - (Special to Globe) - Fredericton, March 1. - James Barnes, manager of the Northfield Coal Co., arrived in the city last evening and this morning had a conference with Sir Thomas Tait, president of the Fredericton and Grand Lake Coal and Railway Company. At the conclusion of the conference Sir Thomas declined to make any statement, and Mr. Barnes said he had nothing to say, but finally admitted that there was a possibility of the Northfield Company's property, consisting of about 1,550 acres, being turned over to Sir Thomas Tait's company. Negotiations to this end have been proceeding for some time. Mr. John Midgley, a Scotch expert mining engineer, who has for the past couple of years been engaged with the Dominion Coal Company at Sydney, has been conferring with Sir Thomas Tait today. Mr. Midgley declined to talk about his visit here, referring enquiring reporters to Sir Thomas Tait. It is believed that Mr. Midgley has been consulting with Sir Thomas Tait upon the best means of mining coal in the Grand Lake district. In the old country they are accustomed to mining with seams not more than 17 to 20 inches deep and the seams at Grand Lake are not as thick as in some parts of Canada. In the old country electric coal cutters and conveyors are used to a large extent on this work."

S.J. Globe - May 23, 1912 New Brunswick Coal And Freight Rates. - Now that there is so much talk about developing the resources of New Brunswick, the matter of freight rates over the I.C.R. to New Brunswick coal as against that granted the Nova Scotia miners is one that it is understood is receiving serious consideration of politicians. The rate on Queens County coal over the Central Railway is 65 cents a ton, ten cents of which amount is royalty. For this amount it is hauled to Norton, but the further haul to St. John costs another 40 cents, making a total of $1.05 a ton delivered in St. John. As against this the Nova Scotia miners have a rate of 80 or 83 cents from Maccan to St. John. The Queens County miners claim that this difference is unwarranted and amounts to an unfair discrimination against them. The Robert Reford Company, some time ago, interested itself sufficiently in the matter to petition for the same rate for this province as was enjoyed by the Nova Scotia miners, but unsuccessfully. Other protests have been made, but so far the matter stands just where it did. The Queens county operators claim their coal is at least equal in quality to the other, but the discrimination in freight charges prevents them taking as much advantage of the market as they would wish."

S.J. Standard - Oct. 16, 1912 Marketing Grand Lake Coal at Fredericton. - First Shipment From Sir Thomas Tait's Mine. - Fredericton, Oct. 16. - The first car load of coal from Sir Thomas Tait's new mine at Minto for commercial use reached Fredericton this morning, the commencement of the marketing of the product of the Minto Coal Company's operations. The shipment was made via the Central and Intercolonial Railway, which route will be used for shipment until the completion of the Gibson and Minto Railway. Just how soon the new line will be ready is as yet unknown, as the exceptionally favorable weather conditions of the season have delayed the work to some extent. However, the contractors are taking advantage of the weather now and the work is being pushed along as rapidly as possible. The coal is of a clean bright variety and besides being used to the extent of more than 100,000 tons annually by the C.P.R., promises to supplant Nova Scotia coal for steaming and general purposes hereabouts."

Campbellton Graphic - Sep. 25, 1913 Messrs. George Sergeant, jr., Robert M. Clair, Webster F. Williams, Malcolm B. Davis, and W.E. Conklin, all of New York, have applied for incorporation as the Canadian Coal Co., Ltd., with the intention of purchasing and operating the mines of the Canadian Coal Corporation of New Brunswick, Ltd. The capital is $150,000 in $100 shares. The head office to be at Salmon Harbor, Queens Co."

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County Record - Mar. 6, 1914 Queens County Coal Mines to Boom. - Big Development Plans at Minto. New Coal Fields to be Opened Up. Output of the Mines in January 7,000 tons. New Shaft Opened. - It is said that the Minto Coal Company of which Sir Thomas Tait is connected with has lately had under consideration a proposition to open up new coal areas above Minto and which the company controls. It is estimated that there is fully six million tons of coal in this new territory, and its development, when it takes place, will mean fully as much activity as there was during the past season and including the construction of a railway line a mile or more in length into the ne mines. The opening up of this big area will mean much for Minto and no doubt will prove a bonanza for residents in the new territory. Sir Thomas Tait has been in Fredericton at the opening of the Legislature conferring with the Provincial government relative to the development projects

in connection with the coal areas at Minto. The output of the Minto Coal Company mines in January was about 7,000 tons. Five shafts were in operation, but since then a sixth shaft is being operated. Ninety houses which the company built last season are all now occupied and there are upwards of 220 men on the company's payroll. In the district to which operations have thus far been confined there are about 900 acres of coal lands, the amount of coal to the acre averaging about 4,000 tons, or a total of 3,600,000 tons. The company plans to bring its total production up to not less than 150,000 tons a year. Things look bright for a big boom in the coal areas of Queens county next summer."

Kings County Record - Oct. 9, 1914 Will Disarm Foreigners at Minto. - Dominion Police are to be Sent to the Coal Mining District to Disarm Foreigners. Minto Coal Company Fear no Trouble From Employees. - The problem of dealing with the foreigners at Minto, Bothwell and Canning, Queens County, N.B., which has been giving the authorities considerable trouble and worry during the past few weeks, will probably be solved by officers of the Dominion police being sent to these places to disarm the foreigners. In the above mentioned parishes there are a large number of Austrians, Germans and Belgians, and since the outbreak of hostilities, on many occasions heated arguments over the pros and cons of the war have occurred and at times it looked as if trouble would follow the spirited debates but up to date nothing serious has happened. Last week the resident of the parishes of Canning and Chipman became so alarmed over the action of the foreigners that they appealed by petition to the acting colonel of the 71st Regiment, to send a company of militia to disarm the warlike aliens. The Minto Coal Company declare the reports of the trouble with the foreigners to have been greatly exaggerated and declare that they will be responsible for the conduct of the men in their employ. A Belgian, under the influence of liquor, ran amuck recently and tried to shoot up a few things in sight but was arrested and is being tried this week in Chipman. The fact is that any trouble that has occurred in the past in the mining districts around Minto, in which foreigners have been mixed up has been caused by 'booze'. The Scott Act Inspector of Queens County, however, has been particularly active of late and with the aid rendered him by the Scott Act Inspector of Kings County; who keeps a sharp eye on goods shipped over the Central Railway, very little liquor has found its way into the 'war zone' district of late. Since the outbreak of the war a number of the foreigners have gone about armed, each one fearing an attack from the other, and the situation has been one of unrest with the residents, as it was not known at what moment trouble of a serious nature might arise. It is said that several persons have narrowly escaped being shot during the past few weeks by the careless discharge of firearms. Notwithstanding the fact that the Minto Coal Company feel that the miners in their employ will raise no trouble; the people of Minto and vicinity will breathe easier when the Dominion police pay them a visit and gather up all the loose revolvers and bowie knives in the possession of the foreign element. An ounce of prevention is better sometimes than a pound of cure."

Kings County Record - Sep. 10, 1915 A foreigner employed at the Minto Coal Company's mines at Minto was killed on Tuesday afternoon as a result of a cave-in at one of the mines. As far as cane be learned he was standing on some timbers when they gave way and he was buried under an avalanche of mud. After two hours the body of the unfortunate man was finally rescued, but life was extinct."

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County Record - Jan. 21, 1916 Belgian Miner At Minto Murders His Wife and Then Shot Himself. - A terrible tragedy was enacted at Minto on Thursday last when a Belgian miner named Arture M. Barthalos killed his wife and then shot himself. The Barthalos family consisted of five members - the father and mother, two daughters and a son - and they all lived together in one of the Minto Coal Company's houses, having moved there some time ago from Northfield, where they had lived since Barthalos came out to Canada about six years ago to work as a miner originally for the Northfield Coal Company. It was about 11 o'clock when Barthalos arrived at the house on Thursday night. He made ready to go to bed, but refused to take off his clothes, and it was evident to the other members of the household that there was something wrong. Some time after all had retired, however, Barthalos got up out of bed, seized the coal pick which he used when at work in the mines, and attacked his wife. The coal picks are sharp instruments - much sharper and considerably lighter than an ordinary pick axe - and he sunk it into the upper portions of her body at least three and perhaps four times. The other members of the family were horrified, and, at the same time, frightened that their crazed father would attack them next. Finally he discarded the coal pick and then attacked the prostrate body of his wife with a big knife with which he inflicted several more ghastly incisions. While he was using the knife the two girls seized the pick axe and forced open the door, which their father had locked, and thus made their escape from the house. They were outside only a few minutes as they hurried to the homes of the neighbours to give the alarm when they heard a shot fired from a rifle in their house. That was the shot which Barthalos, perhaps with the thought of ending her agony, fired into the body of his wife, the bullet passing through her breast and killing her almost instantly. A few moments after the girls heard a second shot, which was that with which Barthalos tried to blow his own head off and succeeded in suiciding. He evidently deliberately placed the butt of the rifle on the floor with the end of the barrel under his jaw, and pulled the trigger. Had he had the gun pointed further back he would probably have succeeded in blowing his head off there and then, but the bullet, as it was, practically tore the front of his face away. The whole front of his jaws and his nose were carried away, a portion of the jawbone with several teeth in it, being picked up near the scene of the tragedy on Friday. The shooting over, Barthalos staggerred out of the house and into a neighbour's cabin, where he was found by Constable Miller when he arrived lying over a stove, unconscious. The crime was not one committed in a moment of rage nor can it be charged to a drunken craze, for there is every evidence on the other hand that Barthalos planned his ghastly design in all its horrible aspect and carried out his

plans with insane deliberation. He had apparently been driven into despondency by the infidelity of his wife and while morose determined to kill her and end his own life too, thus putting an end to all the turmoil which resulted form her having allowed her affections to be alienated by another Belgian miner known as Arthur Moreng, a widower with at least one child, living in the Minto district. The second act in the tragedy occurred at Fredericton on Friday evening when Barthalos, the murderer of his wife, succumbed at the Victoria Hospital to his self inflicted wounds. The body was taken to Minto and on Sunday afternoon a double funeral was held for the victims of the horrible tragedy."

Kings County Record - Jan. 26, 1917 Over 250 miners are now employed at the Minto Coal Company's mines and the output is over 400 tons per day. The recent order prohibiting any further recruiting in the Minto district was absolutely necessary as the labor situation was a serious problem owing to the scarcity of miners. Over 100 men have enlisted at Minto, a large number having gone overseas with the tunnelling corps."

Kings County Record - Jul. 5, 1918 The Minto Coal Proposition. - G.A.O. Gabany,geologist for the Peabody coal interests, which has been prospecting at Minto and Sydney, left recently for Montreal. Mr. Gabany said he was well satisfied with the prospects for mining coal at Minto and hoped in a short time to be able to announce that the Peabody interests would be in the game at that place. He said he had found the provincial government favorably disposed toward the proposition and anxious to help in every way possible. No definite proposition had yet been made to the government nor would be until the company had taken up some options and prospected the ground more thoroughly. He will return to the province in about

S.J. Globe - Jan. 20, 1919 Mining Machinery On A Large Scale. - May Be Introduced At The Minto Coal Mines Shortly.- Fredericton, Jan. 20. - Mining machinery may be introduced at the Minto Coal Mines in Sunbury and Queens counties on a large scale by the Minto Coal Company, in which C.P.R. magnates are interested, and the output of the mines thereby trebled with the same number of miners employed. John Henderson, manager of the Minto Coal Company, left Saturday for Montreal to confer with Sir Thomas Tait, the president of the company, before proceeding on an inspection trip to the coal fields of West Virginia, Ohio and Pennsylvania to look into the advisability of introducing mining machinery at Minto. The proposal comes from experts of the staff of Dr. Garfield, Fuel Controller of the United States, who visited the Minto mines and looked into the methods of operation for the purpose of reporting upon the best way to speed up production. It is claimed that the output of the mines could be trebled by the introduction of mining machinery in West Virginia. It has, also, been proposed that mammoth steam shovels be used for stripping seams of coal as deep as 10 feet or more at Minto. Immense shovels, some of them operated by electricity and costing as much as $125,000 a piece, are said to be in use in West Virginia coal fields, where conditions are similar to those at Minto."

Kings County Record - Sep. 17, 1920 The Coakley mine, one of the best known mines inthe Grand Lake area, has been sold, the transfer being completed last week. The purchasers are John Henderson, formerly manager of the Minto Coal Company, who has lately been operating a mine of his own at Minto, and Harvey Welton, of Minto, who has been engaged in mining operations in the Grand Lake district for some years. The purchase price is said to have been about $35,000, the previous owner being Jeremiah Coakley, one of the pioneers of the Minto district. The mine adjoins the property of the Minto Coal Company in the centre of the Minto district."

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County Record - Jan. 14, 1921 Fifty miners at Minto, Queens County, have beenthrown out of work by the closing of the Evans coal mine, according to J.M. McLachlan, union secretary, who has just made a tour of the Minto coal fields. The Minto operators, he said, are finding difficulty in getting a market for their product, but Mr. McLachlan says the prospects now are that the mines will work four or five days a week for the remainder of the winter."

Kings County Record - Aug. 25, 1922 There is no strike in the coal mines of New Brunswick. The mines at Minto, since the strike in the United States became protracted, have been operating with increased capacity and everything has been done, including the installation of new equipment, to speed up production. The principal mines at Minto are owned by interests connected with the Canadian Pacific Railway and the International Paper Co., and in case of a general shortage of coal, their output would doubtless go exclusively to those companies. Other companies at Minto have lately been carrying on extensive stripping operations."

Kings County Record - Mar. 28, 1924 A map of the Minto coal area, New Brunswick, has just been published. It covers an area extending 12 miles east and west and 17 miles north and south. It is published on a scale of one mile to one inch and shows the topography by contours. Copies may be had by applying to the Director, Geological Survey, Ottawa."

Evening Times Globe - Apr. 23, 1928 20,907 Tons of Coal Mined in N.B. Last Month. - March Production for Dominion Shows Slight decrease. - Ottawa, April 23 - Coal production in Canada during March was slightly less than in February. The output for the month was 1,405,423 short tons, including 1,005,774 tons of bituminous coal, 269,607 tons of lignite coal and 40,042 tons of sub-bituminous coal. Nova Scotia produced 478,352 tons, New Brunswick mined 20,907 tons, Saskatchewan output amounted to 38,269 tons, Alberta produced 616,063 tons, including 344,683 tons of bituminous coal, 231,338 tons of lignite coal and 40,042 tons of sub-bituminous coal, and British Columbia's output was 251,832 tons. Nova

Scotia's output showed a gain of 6.1 per cent and New Brunswick 11.5 per cent over the February figures. The other provinces show decreases; Saskatchewan, 11.5 per cent; Alberta, 3.5 per cent, and British Columbia 1.5 per cent. Imports of coal into Canada during March amounted to 1,188,018 tons, including 1,181,698 tons from the United States and 6,320

Evening Times Globe - Mar. 13, 1928 Alfred Ford, 60, engineer at the mine at Grand Lake ... (trial)..."

Evening Times Globe - Mar. 16, 1928 Urges N.B. Mining of Coal Be Revived. - Fredericton, N.B., March 15 - The House of Assembly of New Brunswick this afternoon did not finish consideration of supply as had been anticipated. Instead the committee on supply became involved in a long discussion on an item of $15,000 for mining development. A.B. Taylor, representing Sunbury County, himself personally engaged in the management of coal mining properties at Minto, strongly urged that some action be taken to revive the coal mining industry of New Brunswick which he characterized as the only mining the province had, although much had been published concerning mineral activities."

Evening Times Globe - Mar. 16, 1928 Suggests Ways of Stimulating Trade. - A.D. Taylor, in Legislature, Urges Levy On All Imported Fuel. - By J.G. Bruce, Staff Correspondent. - Fredericton, March 15. - Drilling in the Minto coal fields and collection of a royalty of 15 cents per ton on imported coal used by railways in New Brunswick as a method of stimulating the marketing of New Brunswick coal, was urged in the Legislature this afternoon by A.D. Taylor, government member for Sunbury, during consideration of the supply item of $15,000 for mining developments. Mr. Taylor claimed that charts of drilling operations carried on several years ago were inaccurate in some respects and urged the advisability of boring to a depth of 2,000 feet in the Minto area in order to determine the exact nature of the sub strata below the level of the present coal beds which are being worked. Use of Coal. - He also said that the Canadian National Railways, with 250 miles of lines in the province, last year utilized 100,000 tons of Minto coal while the Canadian Pacific Railway with 651 miles had imported 40,000 tons at McAdam from beyond the province. The latter railway was not utilizing New Brunswick coal and he thought the province might well place in operation the royalty which it was empowered by legislation to collect in an effort to stimulate the sale of the province's own product. Richards' Proposal. - Hon. C.D. Richards, Minister of Lands and Mines, in reply said that geologists had reported no indication of coal seams below the present working levels. However, he suggested that in order to determine this by drilling, the operators in the area might submit to a proportionate assessment which would aid the department in carrying on the necessary investigational work. This work was expensive, drilling costing at the rate of $10 per foot. Investigation Promised. - In connection with the C.P.R. and ..?.. railway's attitude to New Brunswick coal he said that the president of the company had recently promised a new investigation to determine the adaptability of Minto coal for use by its locomotives. Previous investigations had resulted in the report that it was unsatisfactory, but coal operators were dissatisfied with the study which had been made. Some steps were also being taken with a view of looking into the situation affecting the collection of royalty on imported coal. Mr. Taylor, pointing out that the province obtained an annual revenue of some $40,000, from coal royalties, said that so far the province had not reinvested a cent in the industry. He thought, therefore, that it was a bit unfair to ask the operators to submit to the suggested assessment. Dysart ... said ... It seemed strange that the C.P.R., of which his honorable friends opposite appeared to entertain such a high opinion, preferred to purchase coal in the United States, rather than use the New Brunswick product, while the C.N.R. which had been held up to the public gaze as a vagabond was a larger user of the coal mined at Minto. He would like to know what the Hon. Premier who had recently indulged in sharp criticism of the C.N.R., thought of such a condition of affairs. He (Dysart) thought the fact that the C.N.R. was patronizing an industry of the province, while its competitor was importing coal from abroad, should have serious consideration from the government. In his opinion the C.P.R. should not be allowed to get away with that sort of thing, but should be brought to task. ..."

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County Record - May 8, 1931 Good Body of Coal Is Shown. - The coal vein recently discovered in the Minto district, and heralded at the time of its finding as one of the most valuable in the province, seems to be living up to expectations. John Henderson, Minto coal operator, whose company staked the original claim after an employee found the outcrop at Wildcat Brook, two miles east of Albright, Sunbury county, stated that the vein had been traced 1,200 feet by drilling operations carried on up to the present. It had, he said, maintained throughput this length the same thickness it had at the outcrop, about three and a half feet, or about twice the thickness of the average vein which is being worked in the Grand Lake coal fields. This, coupled with the fact that it runs so close to the surface - some of it is only eight feet under the ground - and that it is near a railway siding, tends to make the mining of it profitable. Mining of some of it from the surface, by 'stripping' the covering, will probably be possible. This form of mining has the lowest production costs of any. No plans to work the vein would be made until it had been fully prospected and 'set down on paper', Mr. Henderson said. Drilling operations are going ahead with the view of more fully determining its extent."

Kings County Record - Oct. 19, 1933 Record Amount Of Coal Shipped From Minto. - This Year's Output Will Exceed 300,000 Tons As Against 185,000 Last Year. - ... in Minto, is a little slack at present, with the mines only working from three to four days a week, it is anticipated that the present fiscal year, which will end on October 31st, will show an all time record for the Minto district, when it is expected that over 300,000 tons of coal will be mined and shipped as against 185,000 tons in the year ended October 31st, 1932, and an average annual shipment from this district of about 240,000 tons, and, while it is true that the wages are not as high as in the boom years, it would appear that they are proportionally equal to the decreased cost of living. The same lack of any distress seems evident in Chipman where the King Lumber Company, who own the coal mine at Coal Creek, have operated it throughout the year to about 80 per cent capacity. Very little coal has been taken out of this mine during the past five years and the increased operation has been a great benefit to the community. ... Mining History. - Minto, would seem to spread over a period of three hundred years, according to a tablet on a cairn erected in 1930 about the centre of Minto village, which reads as follows: 'First Export of Coal' 'Soon after the occupation of Acadie by the French, coal was discovered in this region. Before the middle of the 17th century it was being shipped from Grand Lake to Boston by water. This export trade in coal was the first to be developed on the entire Eastern Coast of North America.' Mining continued in a more or less individual and crude way, the coal being hauled and shipment n\being made by schooner from Grand Bay till the year 1889 when the railroad from Norton to Chipman was completed with assistance of subsidies from the Dominion and New Brunswick governments. A short time later this railroad was extended to Minto and coal mining was begun in a practical way. Some time later the Canadian Pacific Railway linked up Fredericton with Minto and eventually were given a ninety nine year lease of the entire line from Norton to Fredericton. Minto is at present served by the Canadian Pacific Railway and Chipman by the Canadian Pacific and Canadian National Railways. Six different coal mining concerns are operating at Minto and North Minto, Minto Coal Company, Limited' Miramichi Lumber Company, Limited; Harvey Welton and Company; Avalon Coal Company Limited; Black Diamond Coal Company, and Rothwell Coal Company. The coal in the Minto district is found in seams of from 18 to 32 inches, some sixty to one hundred and twenty feet under ground, and the country would seem to be pretty well covered with 18 inch seams. Only one mine, that owned by the Minto Coal Company, is approached by a slope, the entrance to all the other mines is by way of a shaft and when the coal, within reasonable distance of the shaft, has been mined it is apparently cheaper to sink another shaft rather than haul the coal any distance under ground, and for this reason the country is dotted with abandoned mines, which are carefully protected by planks and barbed wire since three boys and two miners were fatally gassed in a disused shaft a year or two ago, and it speaks well for the safety of the mines of this district that this is the only known occasion on which poisonous gas has been met with in this field and no explosions have ever occurred. Some stripping, but comparatively little, is now being done in the Coal Creek and Minto vicinity. The great majority of the miners live in four- roomed bungalows, a large number of which have been erected during the past year, or in one and one-half story frame houses. The miners are paid in cash each week and trade where they wish. The population of Minto, which up to the past year or two, was to quite an extent a floating one, is mostly British with a sprinkling of French-Canadians, Belgians, Italians, Poles, Hungarians, Germans and Czechoslovakians. The Canadian National and Canadian Pacific Railways are the best customers of the mines in the Minto district, but a fair amount of coal is shipped to Montreal and a

Codes: X1 / IDX_Names: Grand Lake Coal;
Kings County Record - Apr. 26, 1934 Trouble Develops at Minto Mines. - Strikers and Non-strikers Clash - Detail of R.C.M.P. Proceed to Scene of Outbreak. - The first trouble between strikers and non-strikers in the three week walkout of miners in the Grand Lake coal field flared at North Minto Wednesday morning. As a result of an attack by 100 men, some of them armed with clubs, on a party of about 15 workers of the Minto Coal Company, three men are nursing facial injuries and six members of the assaulting force are sought by Royal Canadian Mounted Police. The men who were assaulted were walking along the railway track toward the mines of the Minto Coal Company about 7 o'clock in the morning when they were interrupted by attackers. Strikers quickly surrounded the workers, wielding clubs and taking their axes and other equipment from them. The victims were said to have been threatened with the axes. Two members of the Mounted Police, Corporal Love and Constable Thivierge, soon reached the scene. The attackers fled to the nearby woods, but not before the officers thought they had identified the ring leaders of the attack. William Pitt suffered painful injuries of the face and head at the hands of the strikers. Two other members of the group of 15 workers, Edmund Casey and Fred Blacker, were also beaten with clubs but were less seriously hurt. The injured men were given medical treatment. The victims of the attack were on the way to the Minto Coal Company's workings where for several days the dismantling of coal-cutting machinery has been in progress. Some half dozen of the company's machines at North Minto have not been in use for 22 days, since the commencement of the strike. The company has been gradually removing conveyor pans to prevent these parts of the machines being damaged by earth or rock slides. Police Reinforced. - Provincial headquarters of the Mounted Police in Fredericton were notified of the gravity of the situation and 11 additional officers, under command of Inspector John Bird, left by train Wednesday morning, the reinforcements arriving at the scene of the strike at noon on the same day. The situation quieted considerably after the attack was dispersed, but the augmented police force was guarding against a renewal of trouble. Only two companies, the Minto Coal Company and Welton & Henderson, are as yet affected by the strike. The men of the other four large operating concerns are still at their jobs. Major E.C.P. Salt, superintendent of J Division, R.C.M.P., said he believed the police reinforcements would be 'ample' to handle the situation, adding a belief that further serious trouble was improbable."

Daily Citizen - Feb. 9, 1937 To Speak Tonight on Minto Coal. - Dr. William J.Wright, provincial geologist, will address at meeting at the Museum tonight on the Minto coal fields. The meeting will begin at 8 o'clock."

Daily Citizen - Feb. 10, 1937 Grand Lake Coal Was Once Shipped to South Colonies. - The first shipment of coal in North America was made from New Brunswick, it was revealed last night by Dr. W.J. Wright, of Fredericton, provincial geologist, who spoke on 'Minto Coal' before the members of the Saint John branch of the provincial association of the New Brunswick Museum, at its monthly meeting last night. The session was held in the Museum building."

Evening Times-Globe - Mar. 23, 1961 Fuel Tax Boost Shouldn't Hit Miners. - Fredericton (Staff Special) - Wilfred G. Bishop (PC- Queens) urged Wednesday that the coal industry be exempted from the increase in gasoline and diesel fuel taxes going into effect April 1. 'Coal is a vital industry locked in a serious battle for existence,' he said in the budget debate in the Legislature. 'It cannot withstand any more economic hurdles.' 'this government must reconsider and exercise some wisdom in the application of these tax increases. I urge them to exempt vehicles carrying coal from the mines to the points of delivery within New Brunswick.' Kept Them Going. - Mr. Bishop said it was the 'policy of the former Conservative government to keep in operation every single coal burning unit that existed when the government took office. He said the former government also undertook a mechanized coal mining experiment at Minto designed to lower the cost of coal production and restore coal as a competitive energy fuel. However, he said, the coal operators have been given 'little or no opportunity to study or implement the mechanization experiment before the New Brunswick Electric Power Commission started reducing their market potential. The speaker said he is opposed to reducing the number of coal burning units and replacing them with imported fuel such as the conversion of the NBEPC's Dock Street generating plant in Saint John to oil from coal."

Kings County Record - Nov. 10, 1966 Restoring Coal Mine Waste Areas Planned. - Natural Resources Minister W.R. Duffie has announced an intensive study is under way on the best methods to restore mining waste areas in the Minto-Chipman coal fields. Mr. Duffie told a meeting of the Queens County development committee in Chipman on Saturday that his department, along with other federal and provincial agencies, is working to find the most practical means to rehabilitate land disturbed by mining operations in the Minto and Chipman areas. Work will begin next summer in the Minto area to deal with slag piles which have built up over the years. A number of other pilot projects will also be undertaken. Mr. Duffie said the waste areas of the Minto- Chipman region were mapped by aerial photography this fall for the specific purpose of the rehabilitative work, and that preliminary classifications have been made. Mr. Duffie said 'we want to ensure that multiple maximum use is made of the lands now in a waste condition as a result of mining operations. We are hopeful that our current investigations will result in recommendations that will permit us to rehabilitate the waste land for use for agricultural, forestry, wildlife habitat and recreational purposes. 'This, of course, would require filling in ridges and valleys of rock and other materials that have been piled up from years of strip mining operations. The ridges could be levelled in varying degrees, depending on the rehabilitative use to which the land might be put.' Some 9,200 acres of waste land in the Minto and Chipman area are involved in the current investigations. In some instances, particularly in the older cuts, a certain amount of vegetation has begun to return. The maximum distance between the cuts, made by giant dragline machines, is approximately 80 feet. The depth of the valleys between the ridges is about 25 feet. Just over 2,300 acres of land involved is owned by the Crown. The remainder is privately owned. The department of natural resources is hopeful that the value of the lands rehabilitated would increase to make levelling and other operations practical from the economic point of view."

Kings County Record - Jun. 29, 1967 Minto Honors Dr. Evans. - Tribute to the contributions made by Dr. W. Benton North Evans to the community was paid at a special meeting of the board of trustees Minto Regional School. …by Mr. Justice W.J. West … Dr. Evans operated a coal mine in the Minto district for several years and was one of the promoters in the building of the New Brunswick Electric Power Commission's plant at Newcastle Creek. ..."

Kings County Record - Mar. 2, 1967 Shipped Coal From Grand Lake 300 Years Ago. - Members of the Kings County Historical Society enjoyed an address by A.P. Hetherington of Codys and Sussex.... As early as 1643 coal was being shipped by way of Grand Lake to Boston..."

Kings County Record - Apr. 24, 1969 For Development of The Grand Lake Area. - Proclamation of an act to incorporate the Grand Lake Development Corporation and appointment of a board of directors for the corporation have been announced by Natural Resources Minister William R. Duffie. The minister names John C. Smith, assistant deputy minister, mines, as president of the corporation. Minto Mayor Marion Upton; Garnet Daye, president of Local 7046, United Mine Workers of America, Chipman, and Fredericton lawyer Raymond W. Dixon were named directors. 'The new corporation was incorporated at the recent session of the Legislative Assembly to acquire and operate the coal mines and to advance the development, prosperity and economic welfare of those resident in the Grand Lake area,' Mr. Duffie said. The minister noted that the corporation will be required to submit a management plan setting forth an overall program for the conduct of coal mining, and the methods to be used to provide employment, increase industrial activity and broaden the economic base. Negotiations have been successfully completed with the four operating companies in the area, the details of which were released by the minister in the House in March."

Kings County Record - Jan. 17, 1974 Search For More Coal Deposits. - Natural Resources Minister A. Edison Stairs has announced the awarding of a contract to Canadian Longyear, Ltd. for a minimum of 3,000 feet of exploratory drilling for coal deposits in the Grand Lake basin. Mr. Stairs said these exploratory drillings were part of the coal exploration program of his department in light of the renewed interest in the New Brunswick coal fields created by growing shortages of other fuels. Canadian Longyear, of North Bay, Ont., and Moncton, presented the lowest of four bids. Drilling is expected to be completed by Feb. 28. Two diamond drills will be used. It is expected that they will prove the existence of eight to 10 million tons of coal at depths ranging from 60 to 110 feet."

Codes: X1 / GEOL / IDX_Names: Grand Lake Coal; Geology - General;
N.B. Courier - Nov. 4, 1837 LETTER VI. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor andCommander in Chief of the Province of New Brunswick, &c. &c. &c. May It Please Your Excellency: In my last letter I endeavored to give a general review of the different formations of New Brunswick, with their probable extent, and boundaries, so far as the information received from different sources, and my own investigations would permit. An attempt has also been made to describe the limits of the great coal districts of the Province, and to shew the relation it bears to the carboniferous deposit of Nova Scotia. But so little is known of the geology of the country that it would be impossible at present to give an accurate delineation even of its most prominent features. It therefore remains for me to lay before Your Excellency such remarks as were made, during the survey of the Coal Mines, and also the observations recorded on an excursion from St. John to Richibucto, by way of the Grand Lake, and Salmon River. About three miles from Gagetown, the channel of the St. John is divided by a large tract of alluvium called Gidney's Island. From this place a narrow and deep opening, three and a half miles long, called the Jemseg, communicates with the Grand Lake, giving vent to its surplus waters. Passing along this singular channel (at many places not more than ten rods wide) in a steam boat seems like paddling through a grove of elms, and the smoke from the chimney forms a sable curtain among the tops of the trees bending over the watery path. Even cows and horses here are fond of aquatic excursions, and are often seen swimming from bank to bank of the stream; I could not however, discover that they were more web footed than those living in more terrestrial situations. It was the opinion of Lamark that species of animals as they change their situation, and manner of living, so they change ""little by little the consistence and proportion of their parts."" Were this doctrine correct, it might be supposed that all the quadrupeds on the shores of the St. John and Jemseg, would have feet like ducks, which are well adapted for swimming and walking over soft mud. The Grand Lake is about twenty five miles long and will average four miles in breadth. It is navigable throughout, and communicates with French and Maquapit Lakes, by small channels running parallel to the St. John. A considerable ""bar"" is formed where the Jemseg enters, and a schooner was observed stranded near its extremity. This is the only obstacle between the sea and Salmon River, and a moderate sum could scarcely be applied more advantageously for the inhabitants of this flourishing part of the country, than by opening a deeper passage to the Lake. About three miles from the entrance of the Jemseg, and not far from a church on its east side, there is a considerable cliff of new red sandstone, and conglomerate; rocks which extend a number of miles along the shore. These formations were also observed at Long Point, and the borders of the lake on its western side, where they sometimes form perpendicular cliffs fifty feet high. The new red sandstone rests directly on the coal measures, and evidently belongs to the formation seen at Pleasant Valley, and other places on a line running east and west through the Province. Occupying a broad belt on the surface, its constant disintegration and marly composition, afford a large and most fertile tract of country. I was rather surprised to find a species of wild grape growing on Goat Island, a small isolated collection of sand about four miles northward of Long Point. They are reported to be more common on the islands in the Oromocto, and main river. These grapes would be much improved by cultivation, and being indigenous are fitted to endure the long winters of the climate. Three species of mussels were procured on the adjacent shore, one of them is peculiar on account of the large size of the hinge, and its pearly lustre when polished. I will now refer to that portion of the Province where coal has not only been discovered, but also worked on a limited scale for several years, and quote some general remarks contained in my report to the Salmon River Coal Company, after I had examined the situation and probable extent of the deposit where they are now expending their capital. At the northern extremity of the Grand lake, andwhere the Salmon River and Long Creek, discharge into that beautiful sheet of water, an outcropping of coal was discovered a few years ago, and in a situation favorable for its mining and transportation; for the river and creek here are sufficiently deep to admit vessels of two hundred tons burthen. This vein of coal is only twenty two inches thick, and the accompanying strata are nearly horizontal. The small inclination they seem to have in a northerly direction may be only a gentle waving in the layers, and not a permanent dip in that direction, as the stratum of coal was observed at almost an equal distance above the level of the lake, wherever it was seen, and several miles from the site of the company's operations. A number of small shafts and levels have been opened into this layer at the mouth of the Salmon River, but notwithstanding the favorable situation thus offered, the work appears to have been injudiciously conducted heretofore, and it has yielded no profit to those who had promised themselves every success. It is now however going forward in a proper manner, under the direction of M.H. Perley, Esq., the Agent, and Captain Cunningham, who superintends the business constantly. The operations now consist in raising coal from the thin seam, and3 boring for a deeper and richer deposit; and although the latter speculation must necessarily be attended with considerable expense, there can be little doubt of ultimate compensation if those engaged in it do not become discouraged too early in the enterprise. At the distance of a mile and a half northward of the shaft at a place called ""Crawford's farm,"" several small openings have also been made, and coal was raised from the stratum just mentioned. This situation is equally advantageous for mining operations, and lying on the bank of the river, vessels might receive their cargoes at the mouths of the pits. Besides the advantages these places possess in regard to their position in the coal field, which is here uncovered by the more recent formations of sandstone and conglomerate - the surface is overlaid with beds of plastic clay that will effectually prevent the water from descending into the mines beneath, an object of much importance to the miner. In the neighborhood of these mines I discovered a quantity of the argillaceous oxide of iron. From this kind of ore almost all the iron in Great Britain is manufactured, and it is highly probable that a sufficient quantity may be procured near the Salmon River, to supply a smelting furnace on the

very spot where the coal for fuel is taken from the earth. The stratum of coal already referred to, appears at Barton's Point, Newcastle Creek, and Coal Creek. In the distance of six miles on the latter stream, twenty levels have been run into the south bank, and a considerable quantity of coal has been removed. Three mines are now in a dilapidated state, and probably never exhibited any great degree of skill in the subterranean art. At Brown's Mill, six miles from the mouth of Coal Creek, it was curious to observe a number of chaldrons of coal on the mill dam, while the stratum may be seen running along its north side. Coal has also been raised at other places bordering on the creek and northern extremity of the lake, but during an excursion over a large area in this part of the Province, it was found of uniform thickness, and under such circumstances as shew that only one stratum in the basin has ever been opened. Some of the sandstones contain large quantities of the decomposing sulphuret of iron, (Fer sulfure epigene of the French) and are admirably adapted for the manufacture of copperas. The sulphur by absorbing oxygen from the air forms sulphuric acid, which by combination with the iron produces sulphate of iron. Several large specimens brought away became covered in a few days with the effloresence of the sulphate nearly pure, and I was obliged to immerse them in a solution of gum arabic to prevent their decomposition. When the uniform thickness of the coal, the regularity in the distance at which it appears above the waters of the lake and rivers, with the apparent absence of faults, are considered, and various other 4 circumstances connected with its quality, and the rocks embracing it, there can be no doubt that one and only the most superficial stratum has been penetrated. Nor can any who are acquainted with coal fields hesitate to believe that there are other and richer layers placed beneath it, but at a distance impossible to calculate, in consequence of the horizontal position of each stratum in the basin, and the difficulty in discovering the outcroppings of the underlying rocks. In examining three measures of the great coal district of Nova Scotia, and New Brunswick, it will be found that they each contain a number of coal strata. At Sydney they are numerous. In the eastern coal field of Cape Breton, there are no fewer than fourteen veins of good coal, and none of them is under three feet in thickness. At Pictou, the main coal band is no less than thirty six feet thick, with many other layers from a foot to two yards in depth. At Tatamagouche, the [??] veins have been opened. At Maccan three, at the Joggins on Chignecto Bay, nineteen appear of different dimensions; therefore reasoning by analogy and a comparison of the basins belonging to the same vast district, it can hardly be supposed, that there is only a solitary stratum at the Grand Lake, but on the other hand it must be believed that there are a number of deposits of the bituminous mineral, some of which are probably of great thickness. At Salmon River, the coal already discovered is only eighteen feet below the surface, and it is impossible that it can be the lowest in the series, or the carboniferous limestone, and mill stone grit would be at hand, and there are no valleys of denudation or marks of other geological catastrophes, which indicate that the upper strata of coal have ever been removed. It is to discover a deeper and better deposit of coal that the Salmon River Company are now engaged, and they have chosen a favorable situation to commence boring. The result of this enterprise will be of the highest importance to the Province. Should they be successful, a new source of wealth, and the greatest public benefit will be the result. There a number of steamboats employed on the river and running along the coast, almost all the fuel consumed by them is imported from England, and as steam navigation and manufactories increase, so will the demands for coal be multiplied; and therefore it is obvious that the opening of a bed of that valuable substance or any other mineral would at once elevate the condition of the country, and give the Province a rank even higher than that of other British Colonies. The bituminous shale overlying the coal at Salmon River, abounds in the remains of plants that flourished upon the earth at a former period, and when its condition was widely different from any that has followed since. These fossil vegetables have not all been converted into coal; many of them are but partially carbonized, and 5 others have their original cortical covering completely filled up with the slate clay, in which they have been imbedded. But all clearly point out the character of the vegetation and the climate, which preceded that era when other races of plants and animals were to be supported on the earth. Equesetums are much less numerous here than in the coal mines of Nova Scotia, while ferns and other criff togamous plants seem to be more numerous. One kind was observed resembling the Club Moss of South America. There are several others difficult to class with living genera, and two varieties of leaves with their stalks resembling some of the grasses were taken from the floor of the mine. Many of these fossil vegetables are admirably preserved and the impression of almost every fibre can be distinctly traced on the shale where they have stamped. It is difficult to prevent these specimens from falling to pieces as the soft rock containing them crumbles down into a tenacious clay when exposed to the air, and therefore require a thick coat of gum. It is evident from an examination of the fossil flora of the coal period, that the plants then laid up to supply mankind with fuel, were scattered to distinct groups over the country where they lived, each enjoying a situation most favorable to its growth, as the plants now thrive, each in its own favorite soil. In one coal basin one species of petrification is abundant, in another a different class exists, and sometimes the coal has been derived from a single kind only. I am now endeavoring to ascertain, if possible, what classes and species have produced the best coal, and whether the quality of the fuel does not depend on other circumstances than those of the situation where it is placed, and the pressure it has sustained. I have the honor to be Your

New Brunswicker - Feb. 22, 1842 Fourth Report on the Geological Survey of the Province of New Brunswick. - In the second part of the Report, Doctor Gesner enters into a description of the great Coal Field of New Brunswick. This Coal Field, says the Dr. occupies the whole of the counties of Kent and Sunbury, the chief part of Queen's, York and Northumberland, and a portion of Westmorland, and embraces an area of seven thousand five hundred square miles! If the Westmorland Coal Field also belongs to this carboniferous deposit, the whole area may be computed at eight thousand seven hundred square miles !!! Should thisopinion hereafter prove correct, New Brunswick will possess the most extensive coal mines in the world. We extract the following remarks on the geographical position of the coal field:- (For extract see original report ...) We take leave of this Report on the natural resources of our Province with feelings of satisfaction, and recommend it to the notice of all our readers, as containing much useful information."

Codes: X1 / GEOL / IDX_Names: Grand Lake Coal; Geology - General;
S.J. Globe - Jan. 14, 1867 Natural History Society. - Mr. R. Matthew read ... On the northwestern side, a long strip of land, called Grand Point, stretches out a mile into the lake, and the extreme part of the bar beyond this point, which is nearly another mile out, terminates in quicksands. Numerous large fossil trees are found in the conglomerate rock on the southern side of this point; and from their position and character it is evident that they were drifted together before they fossilized. All the woody fibre in them is carbonized, and iron pyrites is present in large proportion. Their vegetable character is very apparent and distinct in these fossils, and sections of them, when polished are very beautiful and interesting objects for study. In this neighborhood, too, is found agranular oxide of iron, known as Hematite; but whether its quality would render it valuable for smelting is a point which has never yet been determined. On this side of Grand Lake the Newcastle River empties into it, and most of the Coal called Grand Lake Coal comes from the mines adjacent. The mines are two or three miles from the shore; and produce annually about 4000 chaldrons. If properly worked, they might be made to yield 40,000 chaldrons. The principal seam worked here is about 20 inches in thickness. A great saving in the expense of shipping these coals (which is now heavy) might be effected by the construction of a horse railroad to convey them to the vessels. The cost of mining is $1.50 per chaldron; that of transportation might be brought down to $1.25, - so that the coals could be sold in St. John at $3.00 per chaldron. The blue clay which here lies above the coal contains many fossil plants, conspicuous among them being the ferns, of which there are more than 20 species. Probably no other place on the continent affords more abundant or better specimens of the carboniferous ferns. The land at the head of the lake is divided into what are called the North and the Northeast Arms. The Salmon River which flows down through the North Arm runs from far back in the County of Kent, its headquarters being divided from those of the Richibucto by a very few miles. The mines on the Salmon River have a seam of coal 19 inches thick, and of good quality. They are well situated for working. The cost of bringing down the coals for shipment is 75 cents per chaldron. Although the natural beauty of the place is destroyed by these mining operations, that is a result which the necessities of man and the steam engine everywhere produce. The mines of the Coal Creek Company are situated on the banks of the large creek or stream which runs down the side of the Northeast Arm, having nearly the same direction as the course of Salmon River. The seam at present worked by this Company is 17 inches thick and the mines are most favorably situated. A bridge built by the Government to carry a public highway 3 across the stream alone prevents the ready and cheap shipment of the coals. If this bridge were converted into a draw bridge, schooners could easily go up and load directly at the mines thus saving much expense and the deterioration which frequent handling of the coals inevitably causes. When the alteration in the bridge is made, as it probably soon will be, the Coal Creek Company will be enabled to avail itself of its very advantageous position. The Coal got at the Grand Lake is highly bituminous; and it possesses other excellent qualities. Its value for the purposes of the blacksmiths has been long known and appreciated; and it is now beginning to find its way as one of the best kinds we have, when properly screened, in domestic use. It has also been found to be extremely valuable for consumption in the furnaces of steam boilers; its tendency to coke upon the bars being the only drawback. This difficulty, however, will, it is thought, be entirely obviated by the construction of a newly devised furnace. Whether there are other good workable seams below those now mined at Grand Lake is an unsettled question. Dr. Gesner, who first made a geological study of this district, and examined the results of borings made by the Salmon River Company, in the course of which eight feet of shale and coal were said to have been passed through at a depth of 210 feet, was quite confident of the existence of good lower seams. But Dr. Robb, who was a more accurate and cautious observer, had great doubt upon this point and inclined to the opposite opinion. No thorough survey of the district, however, has been yet made. Professor Hind only traversed the outer rim of the Coal Basin. Prof. Bailey has not hitherto had an opportunity to examine this portion of the Province at all. Mr. Matthews then gave a brief statement of the reasons why thicker seams might be expected to occur below those now reached. These reasons are principally derived from a reference to the coal seams in Nova Scotia. Dr. Dawson's opinion in favor of the probability of the existence of other productive seams is based upon a careful examination and comparison of the fossil plants here found; and his deductions show the immense importance of scientific observations, and the practical value of these delicate fossil ferns. Last year the Coal Creek Company commenced borings upon their property to ascertain the position of lower seams; but the breaking of the apparatus before they had gained any great depth put a stop to their proceedings. They intend to prosecute the work afresh next summer. Mr. Matthew closed his paper by a brief description of the extent and situation of our coal field. The coal measures occupy a basin in the middle of the Province, and extend over about one fourth of its surface. These coal fields have been as yet very imperfectly surveyed, and our knowledge of them is consequently very incomplete. In his opinion, it is quite probable that good productive seams may be discovered in the country at the upper parts of the Salmon and the Richibucto rivers. Mr. Matthew illustrated his observations by frequent references to a geological map; and at the close of his remarks formally received the thanks of the Society for his valuable contributions to their papers."

Kings County Record - Mar. 11, 1927 A geological map of the Minto coal field of New Brunswick has been published by the Geological Survey. Itconsists of two sheets on a scale of one mile to one inch. The coal bearing formation, earlier sedimentary formations, and a basaltic extrusive rock are indicated in colors. The topography or the elevation of the land surface above sea-level is shown by contour lines with an interval of fifty feet. Outcrops of coal and rock, mine shafts, and adits are marked, and the structure of the coal seam is indicated by contour lines showing the elevation above sea level. Copies of these sheets may be had on application to the Director, Geological Survey, Ottawa."

Codes: X1 / J8 / LEGI / IDX_Names: Grand Lake Coal; Albert Mines; Legislation, etc.;

Headquarters - Apr. 5, 1854 (From Mr. Hill's Reports.) House of Assembly, Wednesday, March 29th. ....Mining Leases. - The House next went in committee on Supply, and resumed the debate on there solution for œ2000 to the Government, to buy up the claims of the Lessees of minerals. Hon. Surveyor General read a petition from the ship builders, smiths, and proprietors of foundries in the City of St. John, setting forth that they could not procure the proper kind of coals in sufficient quantities to carry on their works, praying that such steps might be taken as would lead to the working of the coal mines in the county of Queen's, and setting forth their willingness to pay any royalty the Government might think proper to impose, in order that a fund might be raised to pay the lessees for their rights. The hon. member then said a bill had recently passed the House which, if it became law, would vest the right to all the minerals in the owners of the soil, so far as new cases were concerned, but it made no provision to settle the difficulties that now existed, and unless some power was given the Government to settle the claims of the present licencees the mines would be locked up another year. The question then before the Committee was this: would they grant the sum of œ2000, to enable the Government to enter into equitable arrangements if possible, or would they allow the mines to be locked up? Before he sat down he would inform the committee that they must not take the list of applicants for a guide, as in several instances the licences were applied for, but were not issued. Mr. Cutler said he doubted if there was anything in the petition read by the Hon. Surveyor General, whatever stress might be laid on it, that should guide the action of the committee to vote on this grant. The chief claim it was now sought to settle was Mr. Berton's; but however desirable it might be to settle that claim, they must still recollect that other claims would come in, and they would have to deal with them also. He would give much if they could settle the whole affair for ever, but this grant would not do it. He gave the hon. Secretary credit for sincerity in moving it, but it did not go far enough. The Bill that passed the House the other day in reference to the minerals had been greatly magnified; it did not meet the difficulties that had arisen, nor did it attempt to; it merely provided for the 6 future, and legalized what was already in practice, as the Government had issued no mining licence since 1851 except to owners of the soil. - It did not apply to theinjured parties, and was altogether prospective in its character. He considered it all a flourish of trumpets, - a political sham fight. In 1851 he had voted for the grant to Mr. Berton to pay the costs of a suit, because he considered him an injured man. It had been stated by some hon. members that the Government in issuing the licences did not guarantee the parties the statement he would put the opinion of the Attorney General and leader of the late Government, the present Judge Wilmot, who, at the time of issuing some of those licences expressed his opinion that they had a right to enter. And there could be no doubt about the correctness of that opinion, for every man of common sense must see that it was utterly useless to reserve the minerals, and then grant licenses to mine, if the Government did not reserve the right of entry. He was glad to hear the Attorney General state his opinion so unequivocally on this point, and assert that had it been his own case he would have appealed to England, and carried it before the judicial Committee. It was impossible for common sense to take any other view of the case. As for Mr. Berton's particular claim, hon. members must make up their conclusions that he had lost little by the decision of the Court, because his works were not of an extensive character.When a man attempts to open up a new trade with a foreign country he generally expects to lose at first, but with the prospect of making up for his losses when he has fully established the trade. Now Mr. Berton had sent several cargoes of coals to the United States, in the endeavour to open up a trade with that country, and being deprived of the right of entry by the decision of the Court, he was obliged to abandon his design. The bill that passed the House the other day was all very well so far as it went, but it did not go far enough; it should have provided for the appointment of a commission to inquire into, and examine all existing claims, and report upon them, so that they might all be settled at once. Hon. members were inconsistent at one point; if the affair stood as they represented it, - if the minerals belonged to the landowners from the first - by what authority did they intend to pass a royalty? The bill that passed the House a few days ago merely confirmed, it was said, what the owners of the soil had a right to before; but if they had that right, the Government had no right now to impose additional taxes on them, and if it was necessary topurchase the claims of the lessees, let it come out of the general revenues of the Province. They should adopt some scheme by which all the claims would be investigated. So far as the principle was concerned it mattered not whether it took œ2,000 or œ20,000, but the whole difficulty should be settled by one general scheme. 7 The Asphaltum mines in Albert had no claims, as they were being worked under a special Act of Incorporation. They should carry out the principle on some general scheme, without any reference to the cost, and as this grant did not come up to his views on the subject, as he had now expressed them, he should oppose it. Mr. Johnson said he would not enter into the merits of the bill that passed the House a few days ago; but in reference to the mining leases, there could not be a doubt but the Government at the time of issuing the licences supposed they had a right to enter; the face of the licences showed it, for it was expressly stated that they had a right to erect buildings for carrying on their works, and that had been made use of as an argument in some of the suits. That, he thought, was stronger proof of the view the Government took of it than an expression of opinion in conversation by the late Attorney General. The Government thought they had the power to enter by the reservation, and so did the lessee. He objected to the present grant because it was dealing with an isolated case. The hon. members who had supported it had differed as to their reasons for doing so; one said he wished to settle the claims of the lessees, another wished to settle the difficulties among the people of Queen's County, and a third supported the grant solely upon the ground that he wished to relieve the operatives who were suffering for want of coal, as the opening of the mines would enable them to get that article cheaper than it could be imported. Let them put it on the footing that the lessees had claims which the Government were bound in equity to purchase, and see where they were going to stop. Let them in the first instance take Mr. Berton's claim for damages on account of having been stopped from working under his licence. He had sent several cargoes of coals to the United States in the hope of establishing a market there, and had probably lost money by it at first, and had no doubt, been injured by being obliged to shut up his mine. There was one case clear, if they came to the conclusion that it was necessary to buy up those claims. But he contended that Mr. Berton and the owners of the soil would have effected a compromise before this time, if the Legislature had never held out any hopes of assistance by their interference. Mr. McMahon, the owner of the soil where Mr. Berton's chief mining operations were carried on, knew that he durst not touch the coals himself, and would rather sell Mr. Berton the right of entry than the coals remain untouched and unproductive. If the House had not interfered during the last four or five years, the whole difficulties would have been settled long ago. - Mr. Berton had carried on works under a licence which not only gave him a right to the coals, but the right of entry. That could not be denied. He had been prosecuted by the landowner, and the costs had been paid by the Legislature, and how was it now? He was not 8 before the House by petition endeavoring to get them to take the licences and pay him the damages he had sustained, and they must take care or they would be jumping before they came to the stile. If they purchased Mr. Berton's claim they would have to purchase others; this was but the entering wedge. Then, he would ask where was the great boon they were about to confer on the owners of the soil, by the bill that passed the House a few days ago, giving to them, and their heirs and assigns forever, all the minerals. It was a mighty boon, if they were to be taxed an additional royalty of one shilling and six pence a chaldron until all the claims of the lessees were bought and paid up! The price of coals would not be increased by that additional royalty, as they would find their level in the market, and the money must come from the pockets of the parties who carried on the mines. The argument that the operatives at St. John were suffering would not bear sifting. If ships could not be procured in sufficient numbers to import the necessary quantity of coals from England, it merely showed that they did not offer them what they required for freight. Give them as much as they could make in any other trade, and they would soon get ships enough. But how were they to afford this? it would be asked. Why, the matter regulated itself. If freight was high it showed there was a good demand for ships, and good prices paid, and therefore the shipbuilder could afford to pay high for coals. In fact, the shipbuilder stood in a much better position than he did when the coals were low, for when vessels brought out coals from England as ballast, it showed that there was no demand for ships, and the shipbuilder might as well close up his yard. - it was a boon instead of a loss, as everything went around the circle. Mr. Berton was not before the House by petition, and they did not know that he wished to dispose of the claim, or that he would take the money after it was granted. It was the same with respect to the owners of the soil; the House had nothing before them to show that they would be willing to pay an additional royalty in order that the leases might be bought up. The grant was no bonus either to the lessee or the land owner, but it was a bonus to the operatives in St. John, and to them only. They saw it, and knew it, and therefore they, and they only, had petitioned for it. They had no more right to receive a benefit by coals being thrown in their way by a grant of the House, than the operatives of Miramichi had to come there and ask for a grant toward paying the freight on the coals. It had been said that if the House passed this grant everything connected with the mining difficulties would be settled; but hon. members who imagined anything of the kind were mistaken; if this passed, more claims would be presented than they anticipated; Albert would come in, with her claims for œ30,000 or œ40,000. There they were mining in earnest; 9 they had two expensive steam engines working, to keep out the water, besides other machinery. He had looked into the subject a little deeper than the Hon. member for Queens had done, - in fact he had been down in the Albert mines, and saw how they were being worked. If they purchased back Mr. Berton's lease for Mr. McMahon's benefit, and gave him what he never purchased and never owned, the parties who had originally owned the Albert mines would apply, although they had leased them for one hundred years. He prophesied that the application would come, and the House could not refuse them because their claim was for thousands instead of hundreds, for that was an argument in its favour. If the House refused to interfere the whole difficulty would be settled before another year elapsed; (No, no!"" from Mr. Earle). He would oppose the resolution because it would benefit the operatives of St. John, and be unfair towards others. If they were willing to pay as much freight for coals as was paid for other things, they would find no difficulty in getting a supply; (Hon. Provincial Secretary, - ""They can't. They want 5000 chauldrons, and can only get 1000."") It was unjust toward the people of the north, and if the operatives of St. John wanted coals, let them pay the market price. Mr. Gilbert had supposed the grant was intended to apply to all disputed claims. - With respect to the rights of the lessees, he contended that the licence did not give them the right to enter. The lands in the county of Queen's which contained coal had been in the possession of the families who now owned them for the last sixty-five years, and it was always considered that they not only owned the land, but all that it contained. Subsequently it was discovered that the lands contained coals, and then strangers came in and procured licences to mine, in preference to the owners of the soil, who tried to procure them and could not, the others, he presumed having more influence. - The licencees had then made entries by force, and the farmers had done their best to prevent them, and this had led to strife and law-suits, which had continued down to the present time, and would still be continued until the Legislature had something to settle them. They saw before them a petition signed by all the ship-builders and foundry-men, and blacksmiths in St. John, in Fredericton, and up and down the river, in favor of a grant to settle all disputes, and saying they were willing to pay an additional royalty for years to come if this were done. It was not one land-owner only whose land contained coal covered by Mr. Berton's license, but eighteen farmers. The hon. Secretary had, a few days ago, endeavored to get the tax taken off coals; that was because the mines were locked up. Let them pass this grant, and they would soon find plenty of coals in the market. Mr. Ryan agreed with the view of the case taken 10 by the hon. member for Kent (Mr. Cutler,) that this grant did not go far enough, but as they could not get all they wished, he would do the next best thing in his power, and should therefore support the grant. The question for their consideration was whether the grant was just or not; as to what the hon. and learned member for Northumberland had stated about other claimants coming in, it ought not influence the Committee, for if it was just to purchase up the licences in the county of

Queen's, they should do it. The hon. member had also stated that plenty of coals could be got if people would pay the price for them, but that was not the case; it was not the price the people cared about, but the scarcity, - they were not in the market and could not be bought. An hon. member had stated the other day that coals could be imported from Nova Scotia, but even if that were correct, he would ask if it was not much better to take them from out own mines, and employ our own people? If the grant passed, the Government would not be obliged to pay Mr. Berton all he asked, but they would, no doubt, enter into some arrangement with him, and offer him what they considered him fairly entitled to after having

Codes: X1 / LEGI / IDX_Names: Grand Lake Coal; Legislation, etc.;

N.B. Courier - Nov. 19, 1836 Notice is hereby given, that the Subscriber, Proprietor and Crown Lessee of Coal Mines on the Salmon River in Queen's County, will apply to the Honorable the Legislature, at its next Session, for the Incorporation of ""The Salmon River Coal Company,"" and that a copy of the Bill to be introduced for that purpose is hereunto 5 subjoined. M.H. Perley. Saint John, 18th November, 1836. A Bill To Incorporate the Salmon River Coal Company. Whereas Mines of Coals and other Minerals are known to exist within this Province - the working of which in an efficient manner would be conducive of great public benefit; and whereas it is thought expedient to engage inthe same by granting them an Act of Incorporation; Therefore I. Be it enacted by the Lieutenant Governor, Legislative Council and Assembly, That --, their Associates, Successors and Assigns, shall be and they are hereby erected into a body politic and corporate, by the name of ""The Salmon River Coal Company"", and shall have all the General powers and privileges made incident to a Corporation by Act of Assembly in this Province. II. And be it enacted, That the Capital Stock of the said Corporation shall be -- pounds of current money of New Brunswick, and shall be divided into One Thousand Shares of --- Pounds each, to be paid in at such times and in such installments as the business of the said Company shall require; Provided that Fifteen per Cent. of the said Capital Stock amounting to -- shall be actually paid in and invested in the business of the said Corporation on within three years of the passing of this Act. And provided also that the said Corporation shall when necessary have leave to extend the said Capital Stock to the sum of -- pounds of like current money, and shall have power to increase the number of Shares accordingly, or to assess such increase upon the original number of Shares. And provided also that the said Corporation shall not be entitled to purchase any property, real or personal, or incur any debts, until the said Fifteen per cent. of the Capital Stock as aforesaid shall be paid in. III. And be it enacted, That the first meeting of the said Corporation shall be held at the City of Saint John, and shall be called by Moses H. Perley, Esquire, or in the case of his death, neglect or refusal, by any two of the said Company, by giving notice in one or more of the public newspapers printed in the said city, at least twenty days previous to such meeting, for the purpose of establishing Bye Laws, choosing five Directors and such other officers as may be necessary for the management of the affairs of the said Company, which Directors and Officers so chosen shall serve until the first annual meeting, or until others are chosen in their stead, and shall have full power and authority to manage the concerns of the said Corporation, subject to the rules and regulations hereinafter made and provided. IV. And be it enacted, That a general meeting of the Shareholders of the said Corporation shall be held at 6 the City of Saint John on -- in each and every year for the purpose of choosing five Directors and such other Officers as may be necessary for the management of the affairs of the said Corporation, which Directors so chosen shall remain in office for one year, or until others are chosen in their place, and shall at the first meeting after the election choose one of their number President of the said Company. Provided always, that not less than three Directors to form a quorum for the transaction of business, and in case of the absence of the President, the Directors shall have power to appoint one of their number Chairman for the occasion. V. And be it enacted, That no person shall be eligible as a Director unless such person is a Stockholder, and holds not less than -- Shares of the Capital Stock of the said Corporation, and is of the full age of twenty one years. VI. And be it enacted, That the number of votes to which each Stockholder shall be entitled on every occasion, when in conformity to the provisions of this Act the votes of the Stockholders are to be given, shall be in proportion of one vote to each Share of Stock; and that absent Stockholders may vote by proxy, provided such proxy be a Stockholder, and produce sufficient authority in writing. VII. And be it enacted, That the Shares in the said Corporation shall be assignable and transferable according to such rules and regulations as may established in that behalf, but the assignment or transfer shall be valid and effectual unless the same shall be entered and registered in a book to be kept by the Directors for that purpose; that in no case shall a fractional part of a share, or other than a complete share of shares, be assignable or transferable; that whenever any Stockholder shall transfer in manner aforesaid all his Stock or Shares in the said Company, he shall cease to be a member of the said Corporation. VIII. And be it enacted, That if it should so happen that the said Directors or other Officers should not be chosen on the said -- in any year as aforesaid, it shall and may be lawful to choose them on any other day between the hours of twelve at noon and three in the afternoon of such day, on giving fourteen days notice of the time and place of such meeting in one or more of the newspapers published in the City of Saint John; and in case any Director shall be removed by the Stockholders for misconduct or mal-administration, his place shall be filled up by the Stockholders, fourteen days notice of the time and place of the meeting for such purpose being first given; and in case of any vacancy among the Directors by death, resignation, or disqualification by sale and transfer of stock, then and in either of such cases, the said Directors shall and may fill up such vacancy by choosing one of the Stockholders, and the 7 person so chosen by the Stockholders or Directors shall serve until another is chosen in his room. IX. And be it enacted, That the Joint Stock and property of the said Company shall alone be responsible for the debts and engagements of the same. X. And be it enacted, That the said Company shall have the power to levy and collect assessments on the Shares from time to time, of such money, as may be deemed necessary for carrying on the business of the said Company, and whenever any assessments shall be made by the Stockholders of the Company, it shall be the duty of the Treasurer to give notice thereof in a newspaper printed in the City of Saint John, requiring payment of the same within thirty days, and if any Stockholder shall neglect or refuse to pay to the Treasurer the amount of such assessment upon his shares at the time prescribed, it shall be the duty of the Treasurer to advertise all such delinquent shares for sale, at public auction; giving at least twenty days notice of the time and place of such sale, and all shares upon which assessment is not then paid with interest from the time such assessment became due, shall be sold to the highest bidder, and after retaining the amount of the assessment and interest due on each share, and the expense of advertising and selling, the residue, if any, shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser. Provided always, that no assessment shall be made, except by a vote of the Stockholders, and a majority of all the shares. XI. And be it enacted, That all meetings of the said Company shall be called by public notice being given of the time and place in a newspaper printed in the City of Saint John, seven days at least before the time of such meeting; and that special meetings may be called by the Secretary under the authority of the Directors, or by the Shareholders representing not less than two hundred and fifty shares of stock , upon giving the like notice. XII. Provide always, and be it enacted, That unless – pounds of the said Capital Stock, shall be actually paid in for the purposes of the said Corporation, and a certificate of such payment signed and verified on oath by the Directors of the said Company, or a majority of them, (which oath any Justice of the Peace is hereby authorised to administer) shall be filed in the office of the Secretary of the Province, before the expiration of three years after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the expiration of the said three years."

Codes: X1 / LEGI / IDX_Names: Grand Lake Coal; Legislation, etc.;
Headquarters - Apr. 12, 1854 (From Mr. Hill's Reports.) House of Assembly, Wednesday, March 29th. Mining Leases. - (Concluded) Mr. Williston said he regretted that the Government had not agreed on a bill giving the licencees the right to enter. In moving for this grant they should have specified to whom the money was to be paid, and in what manner it was to be divided. He contended that Mr. Berton had sustained no damage, as he had only to sink afew feet, and then take out the coal, and the costs of the suit against him had been paid by the Legislature. Why did he not stop then? That was what he ought to have done, and not go on until there was another amount to be pay. This was the most extraordinary application he had ever known, as Mr. Berton was not there by petition, and they did not know that he wished to sell out his claim; he had never before known the Committee of Supply to give away money that was not asked for. But there was another consideration; Mr. Berton had a right of entry on another farm in the immediate vicinity of his former works, and why did he not carry on operations there? Let the people of St. John who wanted coal set him on to work on that part of his lease. But did he intend, or wish, to carry on the mining business any longer? It appeared to him 11 very doubtful, as he had forfeited two leases by not working under them within the stipulated time, and very probably he would have given up the whole only that he was holding on in hopes to get money out of the Legislature. Since this grant was discussed on Monday, he had made enquiries, and found that if it was carried other applications would come in, and the Province would probably have to pay not less than œ20,000. Mr. McPherson said one would suppose the hon.members for Northumberland owned the whole Province by the way in which they talked, and they seemed to think no coals were required for any place but St. John; but they were wanted all over the country, and they must get them from the mines in the county of Queen's or stay without them. If the hon. member who spoke last had any confidence in the Government he would support it upon the ground that the people must have coals, and could not get them unless those mines were worked. Mr. McPhelim said the more he heard the matter discussed the more firmly was he opposed to the grant. Applications were made to the Legislature year after year, by parties engaged in these coal mines, which showed that they would not support themselves, and whenever it was found that any branch of industry would not support itself, it was better to let it die a natural death than to support it by taxing others. It had been said that the parties would submit to the imposition of a royalty of two shillings and sixpence a chaldron, but if the coals would bear that duty it ought to be collected and paid into the Treasury, and not be devoted to a particular purpose, as the royalty belonged to the people. If they looked to England they would see the price of coals there were up to an unprecedented height, occasioned by money being plenty and labour high; and when they added the high rate of freight from England to this Province the high prices here were sufficiently accounted for, and he did not believe the prices were at all affected by the mines at Grand Lake being closed. The petition from St. John was respectfully signed, but he must oppose the grant, - if for no other reason - because whatever royalty the coals would bear belonged to the people at large. Mr. Jordan had been listening to the debate, and as soon St. John was mentioned he found a local feeling spring up. He considered that these disputes about the minerals ought to be settled, and as there was no other way let them pass this grant, which would be the first step towards it. Even if it should cost a little more than the œ2,000 it was well to settle it. The licencees thought they had a right to enter, and went on working and got themselves into trouble by it; the grant to Mr. Berton in 1851 had arisen out of it, and would not have passed were it not that the licence was supposed to give the right of entry. He had that confidence in the 12 Government that he believed they would make proper enquiries, and make the best arrangements it was possible to make; it was merely lending the money, to be paid back again by the royalty dues. Hon. Attorney General took a review of the debate, and replied to the remarks of several hon. members. He said it had been raised as an objection that Mr. Berton was not before the House by petition, but the hon. member for Queen's was most anxious that Mr. Berton's claims should be brought up, as his licences covered twenty seven square miles, and all the best mining ground was thereby locked up. - He should not vote on the question, as Mr. Berton was his nephew. Hon. Mr. Montgomery said it was a fallacy to suppose that the price of coals was affected by the closing of the mines in the county of Queen's. The price of freight to Europe ranged from forty to fifty shillings a ton, and from England to this country it was twenty or twenty five shillings per ton, while a few years ago vessels brought out coals

as ballast. If any grant of this nature were passed it should be after an investigation into all the claims that could be preferred, and should have been general in its application. He believed that if this grant passed, instead of costing the Province œ2000 it would cost œ40,000 before all the claims were paid. Dr. Gordon said a difficulty had arisen out of the Government of former days selling the land to one person, and the minerals to another, without sufficiently defining their respective rights, and now the question arose what should be done? The Committee had nothing before them to show that the œ2000 would enable the Government to settle with all the claimants, and as the additional royalty by which it was proposed to repay this sum into the Treasury would come out of the pockets of all those who obtained leases in the future, it would not be fair, and he could not support the grant. Mr. Earle said the hon. member from Restigouche was altogether mistaken; the coals raised in Queen's were not at all like the coals imported from England; they were better for blacksmiths and manufacturing purposes, and since the mines were locked up they could not be got in sufficient quantities at any price. Mr. Berton was not there by petition, because he was still mining on the lot where he had purchased the right of entry, and doing well by it, and the grant was not intended for his benefit, but to purchase out his claims and allow the parties to mine where they were prevented at present by Mr. Berton's licence. If the grant passed, the Government would investigate the affair, and as they must account for their conduct to the new House he had no fear of the money being misapplied. He was astonished at the conduct of some hon. members who called themselves Liberals; they were anything but liberal on this occasion. The hon. and 13 learned member for Northumberland (Mr. Johnson) spoke well, but his name would appear to greater advantage in the Reports than it would in the Journals. Hon. members talked of bringing in a bill giving the licencees the right to enter? He would like to see them about it! To pass such a measure would be to trample on the rights of the people, and strike at the very foundation of society. He would warn hon. members how they entertained any such idea, for what was the case of the landowners in Queen's today might be their own tomorrow. He trusted that a bill of that nature would never be sustained in the House. Although the hon. and learned member for Northumberland expressed extreme liberalism, he was eloquent, and he (Mr. Earle) oftened listened to him with pleasure; but he did not like to hear him blow hot one day and cold the next. He would say no more, but hoped the grant would pass, as the country was suffering for the want of coals, while they possesses the article in abundance almost at their very doors. Mr. Barbarie said if the statement just made by the hon. member for Queen's was correct, that Mr. Berton was now mining on the shores of the Grand Lake, and doing well, the grant was quite unnecessary, and it was the duty of the House not to interfere with him, but let him go on with his mining operations. He agreed with the hon. Attorney General; he did not believe the decision of the Courts, in this Province was correct. They should have carried their respective cases further. At all events, let Mr. Berton proceed with his work, and then if other applications came they could tell them to go and act in like manner. Mr. Lewis said they ought to do something to settle the matter in Queen's county. He was afraid that other applicants would come forward but the fact was it was impossible just then to get coals fit for manufacturing purposes. He wanted some coals the other day to send up the Bay, and had tried to purchase them in St. John, but there was none to be got. Under these circumstances he would support the grant. Mr. English said the hon. member from Restigouche (Mr. Montgomery) had put the matter in the proper light, in accounting for the high prices; it was the high wages in England, and the high freights. He did not believe the stopping of the coal mines on Grand Lake had raised the price a single farthing. If this grant would settle all the claims, and set the matter for ever at rest, - if any hon. member could certify to the committee that such would be the case - he would go for it. But it would not. If they gave this amount to the persons holding licences in Queen's all others holding licences would come in, and instead of two thousand pounds it would cost œ20,000. The hon. member from Queen's said Mr. Berton was still mining, and getting along well, and if that was the case they should let them alone. - they had got the coals 14 among them, and let them make their own bargains. They (hon. members) were not sent to the House to dispose of disputes of this nature between parties. The people of St. John and Fredericton had petitioned the House, their object being to lower the price of coals, but if they wanted cheap coals he very much feared they would have to wait until the war was over. He would support the grant if he could, but could not do so conscientiously. Mr. Johnson would like the hon. member for Queen's (Mr. Earle) to point out any instance wherein his vote differed from his speech. He challenged him to do so; and if such had ever been the case it could be easily ascertained, for he was generally particular in having the names taken on important questions. The hon. member had defied the House to pass a bill, giving the licencees the right to enter, but such a bill had once passed the House, and it was lost in the Council. Mr. Earle was aware of that, but it was some years ago, and public opinion had been growing stronger upon this question year after year. In 1848, when he first moved in this matter, he had but one hon. member to stand by him, and now he had a majority. The question was then taken on the resolution, when the committee divided as follows: Ayes. - Hon. Messrs. Partelow, Wilmot, Gray, and Hayward, and Messrs. Earle, Gilbert, Robinson, Godard, Jordan, Thomson, Porter, Ryan, Purdy, McLeod, MacPherson, Taylor, and Lewis, - 17. Nays. - Hon. Messrs. Speaker, and Montgomery, and Messrs. Connell, Cutler, McPhelim, Botsford, Johnson, Barberie, Smith, Read, Landry, Williston, Gordon, Rice, English, and Stiles, - 16. Hon. Mr. Montgomery moved the blank be filled up with œ1,000. His. Honour the Speaker then said the resolution had been sustained, but he suggested that the blank be filled up with œ500, - that would be as much as would be required for one year at all events, and it would relieve the Government, for he believed they would be able to do as much with that sum as they would with a larger one. If they granted so large a sum as œ2,000 it would raise the expectations of the people, and they would increase their demands. Hon. Provincial Secretary said the conduct of the Speaker was most extraordinary. - Finding himself beaten after a long debate, he attempted to get rid of the motion by a side-wind, for he knew well - no one knew better - that œ500 would be utterly useless. He had entered the the House from his room and thrown a fire-brand in their midst. The resolution had been sustained by a majority, and several hon. members were absent who were known to be favorable to it, and, that being the case, he would inform the hon. Speaker that the grant should pass this Session; if not in Supply it should by 15 bill. His Honour the Speaker said the hon. Secretary had displayed a degree of warmth that was unnecessary. He had not intended to upset the grant by a side-wind, as he knew a majority of the House was in favour of it; he had merely suggested a smaller sum, as the larger one would raise the people's expectations. There was no need of threats. He had no doubt but in the hands of the Government they would do the best they could do with it. Hon. Mr. Montgomery had moved the sum of œ1,000, but he was opposed to the grant in toto. - he did not think the licencees were entitled to receive a single shilling, and therefore he would not press his motion. But threats were useless, - no threats from the hon. Secretary would alter his vote. Hon. Provincial Secretary, - ""I did not expect they would."" Mr. Connell then repeated the objections he had already urged against the grant. Mr. Smith said the hon. Secretary had threatened the House by saying ""the grant shall pass this Session,"" and he might know the opinion of absent members. He had no doubt the Government could carry the grant if they chose to put forth their strength; but he would ask the honorable Secretary if he considered it fair to apply the strength of the Government in this case? The grant was evidently intended to be applied in a personal and peculiar manner to a case in the County of Queen's. But if it passed, hon. members might depend upon it there would be applications from Albert. A few days ago the hon. member from Queen's (Mr. Earle) had moved an Address to His Excellency, upon this subject, but had withdrawn it at the suggestion of the hon. Secretary, who had subsequently placed this grant on the Supply Book, thus interposing the strength of the Government betwixt two individuals. Hon. Provincial Secretary said the hon. member had not put the case fairly. When he (hon. Secretary) saw the hon. member for Queen's resolution, and saw that there were only four or five members opposed to it, and when he saw that the resolution said nothing about money, but called on the Government to settle all claims in the County of Queen's without limiting the amount to be expended, then he thought it time for the Government to interfere, and take care of themselves, as it was impossible for them to settle those claims without money. That was the fair statement of the case. It was forced on the Government by the House, and now, as a majority of the House had sustained the resolution, he would take care that no unfair advantage should be taken by the opponents of the grant. Mr. Stiles said if this grant passed there would be claims sent in from Albert to the amount of œ50,000, and if he was in the House he would support them all. 16 Hon. Mr. Gray said the matter had been forced on the Government, as the House was desirous of putting a stop to the strife and ill-feeling existing in the county of Queen's, and to open the coal mines. As to other claims coming in, they could not, for nearly all the licencees would be escheated. He was very glad the House had sustained the principle of the grant, and he would advise hon. members who were really anxious to have this vexatious question settled, not to cripple the hands of the Government by filling up the blank with a smaller amount than had been at first proposed. Mr. Johnson would ask what was this grant based on? It was based on the mere assertion of the hon. member for Queen's (Mr. Earle) that Mr. Berton would take œ1500 for his claim. Now he (Mr. J.) and his hon. and learned friend from the county of Westmorland (Mr. Smith) had both asserted that if this grant passed, claims would come in from the county of Albert, and that was information as good as the information this grant was based on. The hon. Secretary had threatened that if this grant was lost in Supply it should be carried by bill. Well, let the Government bring in their bill, for that mode would be less objectionable than a resolution in Supply, as a bill would define how the Government should act, and what should be done with the money. The law inference to escheating the licences, merely gave the Government power to escheat when the licence was forfeited, which was very different from purchasing out the claims of a licencee. He would move that the blank be filled up with œ500. After a short consultation as to how the question should be asked, Mr. Johnson withdrew his motion, and the question was put on the blank being filled up with œ2,000, when the Committe divided as follows: - Ayes, - Hon. Messrs. Partelow, Wilmot, Gray, and Hayward, and Messrs. Earle, Gilbert, Robinson, Godard, Jordan, Ryan, Purdy, McLeod, MacPherson, Taylor and Lewis. - 15. Nays. - Hon. Messrs. Speaker and Montgomery, and Messrs. Connell, Cutler, McPhelim, Botsford, Johnson, Barberie, Smith, Read, Landry, Williston, Gordon, Rice, English, and Stiles, - 16. The motion was therefore lost by a majority of one, Messrs. Porter and Thomson, who voted for the resolution, having left the House. Some of the opponents of the grants attempted to take advantage of this,

Royal Gazette - Apr. 20, 1870 CAP XVIII An Act Relating to Coal Mines. Passed 7th April 1870. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-That from and after the passing of this Act all veins or deposits of Coal on granted Lands, known assurface veins, and not exceeding two feet in thickness, may be mined and worked, and the said Coal removed,shipped and disposed of, without the payment of any Royalty whatever, any Law to the contrary thereof no twithstanding."

Carleton Sentinel - Apr. 20, 1872 Legislature - (passed this session):An act to incorporate the Knickerbocker Mining and Manufacturing Company. An act to incorporate the Queen's and Sunbury Coal and Iron Mining Company."

Royal Gazette - Apr. 24, 1872 Passed April 12: An Act to incorporate the Queen's and Sunbury Coal and Iron Mining Company. His Excellency withheld his assent to: The Bill to incorporate the Knickerbocker Mining and Manufacturing

Royal Gazette - Jun. 5, 1872 CAP. LXXIII. An Act to incorporate the Queen's and Sunbury Coal and Iron Mining Company.Sec. Sec. 1. Company incorporated. 4. Liability of 2. First meeting, when and shareholders. where held. 5. Joint stock alone 3. Capital stock. liable. 6. Ten per cent of capital, when to be paid. Passed 11th April, 1872 Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Gideon D. Bailey, Esquire, M.P.P., Richard P. Yeamans, John S. Covert, Esquire, M.P.P., Archibald Harrison, Esquire, M.P.P., Caleb E. Wetmore, John Cokely, James Kennedy, Ebenezer Williams, Esquire, M.P.P., John Yeomans, George A. Bailey, John E. Flowers, Charles

Burpee, Esquire, M.P., the Honorable George E. King, their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Queens and Sunbury Coal and Iron Mining Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of this province, for the purpose of Mining Coal and Iron Ore, and manufacturing Iron, and for purchasing, owning, leasing, taking leases of, or selling mines or real estate required or necessary for these purposes, or either of them, and establishing all necessary works therewith connected, and for the convenient carrying on and managing the same. 5 2. The first meeting of the said Corporation shall be held at such time and place as any three of the above named persons may appoint, by written or printed notices posted in two or more public places in the Parish of Canning, in the County of Queens County, and in the Parish of Northfield, in the County of Sunbury, respectively. 3. The capital stock of the said Corporation shall be twenty five thousand dollars, divided into one thousand shares of twenty five dollars each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts of or to carry on the operations for which the said Company is incorporated, which call or assessment may be sued for by the said Corporation and recovered in any Court of Record within the Province. 5. That the joint stock and property alone of the said Corporation shall be liable for the debts and engagements of the same. 6. That unless ten per cent of the said capital; stock shall be subscribed within two years from the passing of this Act, the operations of this Act shall cease, and the existence of the said Corporation shall be terminated."

Royal Gazette - May 7, 1873 4 CAP. XXIV. An Act relating to Mines within the Province of New Brunswick.Sec. Sec. 1. Companies to keep plans of plans to be filed of Mines. in Provincial 2. Correct drawings of all Secretary's Office. seams, &c. of coal and other 5. What persons shall minerals to be kept. have the right to 3. Surveys from time to time examine books, plans, to be made of all Mines. &c., of Company. 4. Accuracy of surveys, plans, 6. What persons shall &c. to be made on oath; copy have the right to descend into and examine Mines. Passed 14th April 1873. Whereas the Mining business of this Province is increasing, it is thought just and proper that all Mining Companies and parties in this Province shall make accurate surveys of their Mines from time to time, and keep true maps and plans of the same for the information of the Government, and for the land owners or Companies adjoining such mining operations; Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That all Mining Companies, party or parties, in this Province, shall keep accurate maps and plans of their Mine, comprising all their workings thereof, showing all their shafts, drifts, adits, levels, and all other workings and excavations whatsoever belonging thereto. 2. There shall be kept in the office of all Mining Companies in this Province maps and plans, on which shall be delineated accurate drawings of all the veins, seams or beds of coal, and all other minerals, showing their true magnetic course and angle of dip of the same. 3. An accurate survey shall be made by the agents of all Mining Companies, or some competent surveyor, from time to time, and the same to be added to said maps and plans as the works proceed; and also a book of registry shall be kept, in which shall be registered accurate magnetic courses of all veins, seams or beds of coal, and other minerals, and also the true course and length of all their drifts, adits, levels, and all other workings and excavations whatsoever belonging thereto. 4. The truth of such surveys, maps and plans, to be sworn to by two or more credible persons principally employed in or about the works and management of such Mine or Mines before a Justice of the Peace, and a true copy of the said maps and plans shall be safely transmitted to the Provincial Secretary's Office at Fredericton as often as once in each and every year, in the month of January. 55. The Surveyor General of this Province, Deputy Land Surveyor, or such person or persons as may be appointed by the Government of this Province, or any land owners or Mining Companies or their agents that have lands or property adjoining such Mine or Mines, shall have a right to see all maps and plans, also the books in which all registered surveys have been kept, and may have full liberty from time to time, or at any time, to make copies or extracts from all or any of the maps and plans of said adjoining Mines, comprising all the shafts, drifts, adits, levels, courses and dip of veins, seams and beds of coal, and all other minerals belonging thereto. 6. And it shall be lawful for the Surveyor General of this Province, Deputy Land Surveyor, land owners and Mining Companies or their agents that have lands or property adjoining such Mine or Mines to enter and go down at any time or times in the said adjoining Mines, to descend by the ropes, guys, engines, or any other machinery or utensils used at any of the shafts belonging to the said Mines, with full liberty to make surveys, views, plumb line and measure all the said drifts, levels and workings, excavations and extensions whatsoever belonging thereto, and by the same ways and means to ascend and come up out of the said Mine or Mines, shafts, pits, or any of them."

Royal Gazette - Sep. 26, 1888 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the twenty second day of September, A.D. 1888, incorporating Louis G. DeBertram, of the City of New York, in the State of New York, in the United States of America, Doctor of Medicine; C. Red Stevens, Banker; E.W. Clark, Junior, E.E. Denniston, Bankers; John P. Ilsley, Engineer, of the City of Philadelphia, in the State of Pennsylvania, in the United States of America; and Thomas M. Williamson, of Bustouche, in the County of Kent, and Province of New Brunswick, Civil Engineer; for the purpose of the sale and purchase of Real Estate, and the right to acquire by purchase, lease or otherwise the right to mine and deal in Coal and other minerals; the right to buy and sell merchandise, and to carry on a general mining business, by the name The Grand Lake Coal Company, with a total capital of Two hundred thousand dollars, to be divided into two thousand shares of one hundred dollars each. Dated at the office of the Provincial Secretary, at Fredericton, this twenty second day of September, A.D. 1888 R.W.L. Tibbits, Deputy Provincial Secretary."

Royal Gazette - Sep. 11, 1889 Notice. Notice is hereby given, that application will be made for Letters Patent by the undersigned, under The NewBrunswick Joint Stock Companies' Letters Patent Act, for the incorporation as a Company under said Act, of theshareholders of The Grand Lake Mining Company being a Company heretofore incorporated under 25th Victoria, Chapter 28. 1. The proposed corporate name of the Company is The Grand Lake Mining Company. 2. The objects for which incorporation is sought are as follows:- The right of prospecting for, developing mining, preparing, manufacturing, shipment, and dealing in Coal, Oil, Salt, Iron Ore, Stones of all kinds, and all kinds of Ores, Minerals and metals, with the right of acquiring, raising, getting, and working the same, and the right to buy and sell merchandise, and to carry on a general business in such ores, minerals and metals, with such other things as are incidental thereto, 3. The office or chief place of business is to be in the City of Saint John, in the City and County of Saint John. 4. The amount of Capital Stock is $50,000. 5. The number of shares is 2,500, of $20 each. 6. The names, additions and calling of the applicants who are to be Provisional Directors are as follows:- Joshua Turner, of the City of Saint John, in the City and County of Saint John, merchant; Alfred Stockton, of said City of Saint John, Barrister-at-Law; Caleb. W. Wetmore, of said City of Saint John, broker; William B. Wallace, of said City of Saint John, Barrister-at-Law; G. Frederick Fisher, of the City of Fredericton, Barrister-at-Law."

Royal Gazette - Sep. 18, 1889 Notice. We, the undersigned, hereby give notice of our intention to apply for Letters Patent under the provisions of Chapter 9, 48th Victoria, of the Acts of Assembly of the Province of New Brunswick, intituled, An Act respecting the Incorporation of Joint Stock Companies By Letters Patent. 1. The proposed corporate name of the said Company is -The Newcastle Mining Company. 2. The objects of the Company are the right of prospecting for, developing, mining, preparing,manufacturing, shipment and dealing in Coal, Oil, Fire Clay, Iron Ore, Stones of all kinds, and all kinds of Ores, Minerals and Metals, and the manufacture of Fire Clay and Bricks, with the right of acquiring, raising, getting and working the same, and of acquiring or building vessels and navigating the same, and the right to buy and sell merchandise, and to carry on a general business in such ores, minerals and metals, with such other things as are incident thereto. 3. The office or chief place of business of the proposed Company is to be established and situate in the City of Saint John. 4. The amount of the Capital Stock of the said Company shall be Fifty thousand dollars, to be divided into two thousand shares, and the par value of each share shall be Twenty five dollars. 5. The amount of capital stock actually subscribed at the present time is five hundred and sixty shares, amounting to Fourteen thousand dollars. 6. The names of those chosen as the first or Provisional Directors of the said Company are. - David K. Tapley, George H. Waring and Samuel D. Green. The names of the applicants are - David K. Tapley, City of Saint John, merchant; George H. Waring, City of Saint John, founder; Samuel D. Green, Newcastle, Queen's County, New Brunswick, miner; James Straton, City of Saint John, Barrister; and J. Douglas Hazen, City of Saint John, Barrister. Straton & Hazen, Solicitors for Applicants."

Daily Telegraph - Dec. 4, 1890 New Brunswick Minerals. - The Mining Laws and Regulations Said to be Faulty - Difficulty of Obtaining Accurate Information About Our Mineral Wealth. - Edward Jack - If any one will take a glance at the mining laws and mining regulations of New Brunswick, he will find them to be of the most absurd character, and about as well adapted to prevent progress in the way of the exploration of metalliferous veins as can well be imagined. Besides this, we have no inspector of mines and no record of their output is kept, so far as I can learn on inquiry at the public offices here. We have in New Brunswick large quantities of a metal which, owing to the extensive manufacture of Bessemer iron, is yearly becoming of more importance. I refer to manganese. Various parties interested in the manufacture of iron in the United States, even from such a distance as Pittsburg, are visiting the province in search of manganese properties, and these deposits have attracted so much attention abroad that I received not long since from the geologist in charge of iron and manganese on the geological survey of Arkansas a note, in which he says:- I am engaged in writing a report on the manganese ores of the state of Arkansas, and in this connection am trying to give also a few facts concerning similar ores elsewhere. Mr. E. Gilpin, of Halifax, has kindly given me the records of the output of manganese for different years in Nova Scotia, and has referred me to you for the records of output for New Brunswick. No record being kept, I was unable to give the geologist the information which he desired, and the province thus lost a chance of advertising its very valuable manganese deposits. Grand Lake coal is also an article, to whose cheap production as well as to the selection of its bestvarieties, much more attention should be paid than is now being done. It is the intention of the writer to visit again the coal regions of Grand Lake this winter, and to endeavor to get a meeting of the people residing there who are interested in coal mining, for the purpose of ascertaining their views as to the best way of arriving at the objects above mentioned; and it may be that the provincial legislature may be asked to aid in this development of the coal area of which the province holds so much. Should I do so I will send to the Telegraph a full description of the situation and of the plans which may be proposed to cheapen the production of Grand Lake coal, so that the city of Saint John and the river counties may be supplied with this fuel at the cheapest rate, as also such suggestions as can be got as to the best means to be taken in order to guarantee to purchasers the quality of the Grand Lake coal which may be offered to them. Should such work be undertaken, and a suitable scheme arrived at by those interested in coal at the Grand Lake, for its developments, I trust that the Telegraph will give its valuable assistance in bringing before the legislature a well devised project to advance the coal interests of Queens and Sunbury counties."

Daily Sun - Mar. 1, 1901 Legislature. - ... He was glad to see thatthe mineral resources of the province were again attracting the attention of the government and that an effort is to be made to develop the valuable coal areaslying in the county of Queens and Sunbury. The great scarcity of coal in the past year indicates that there will be a profitable market for all the coal mined in New Brunswick. We are told that the quality of this coal is splendid and that it can be supplied at a much less cost than the coal which is imported from Nova Scotia. If so, every effort ought to be made to develop those

S.J. Star - Mar. 23, 1901 Fredericton, N.B., March 22. - A bill has been introduced in the legislative assembly to incorporate the New Brunswick Central Coal, Iron and Railway Co. The purpose of the company is to construct and operate a railway from Moncton to Fredericton, passing through the coal fields of the Grand Lake district in Queens county. The company asks for power to acquire the Central railwayand to secure running powers over the railway bridge at Fredericton. The capital stock of the company is $190,000, divided into shares of $100 each. The names of the provisional directors of the company are Right Hon. the Earl of Russell, William Leatham Bright, Bernard Charles Malloy, M.P., James Ward Burchill and Sir John H, Puleston, all of England. The head office of the company is at Chipman, Queens county."

Evening Times & Star - Jun. 2, 1910 Mineral Work in New Brunswick. - Licenses to search for minerals have been granted to L.L. Caillaux in Gloucester county; M.C. Holmes and J.F. Eskildson, Kings county; George Gilbert, R. Carr Harris, M.M. Dugas, HenryScott, Geo. Robertson and John Robertson, Gloucester county; F.H. Pete, York county; M. McLaughlin, Queens county; E.M. Sypher and heirs of S. Clarke, Queens county, and Northfield Coal Co., Sunbury county. A license to work has been granted to the Canada Paint Co., in Westmorland county. M. O'Leary, G.N. O'Leary and J.A. O'Leary have been granted a twenty years lease of Lot 92, on the line between Sunbury and Queens county, containing 213 acres."

Codes: X1 / LEGI / SPRI / IDX_Names: Grand Lake Coal; Legislation, etc.; Mineral Springs;
Morning Freeman - Apr. 16, 1874 Looking For Mines. - Something was said in the Assembly about the money expended in exploring for mines. We are not disposed to find much fault with the Government for an expenditure of this sort, even though it may not be as judicious as it should be, and there does not seem to be any good reason why individuals or companies looking for mines that they may make a profit out of them should not themselves pay the cost of the explorations from which, if successful, they would derive all the immediate benefit. On page 78 of the Auditor's Report appear the following entries:- MINING Receiver General, expenses connected with Diamond Drill, $1,400.00 Samuel T. Gove, on account Grant, 150.00 Francis Hibbard, do. 1,200.00 Wm. Porter, do. 1,000.00 Receiver General, on account Diamond drill 708.22 -- $4,458.22A Grand Lake correspondent, in a letter which we have been obliged to overhold for some time, tells something of the work of the drill:- To The Editor of the Freeman. Newcastle Bridge, Canning, Q.C., March, 1874. Sir,- The diamond boring machine purchased by the Local Government to test the existence of the much talked of seam of coal is now considered useless, so far as this, the parties operating with it can only bore 400 feet. They have bored three holes, one 400 feet, one 362 feet, and one 170 feet. This machine arrived at Grand Lake in October, 1872, and they have done in one year and three months what ought to have been done in three months. It appears now that the principle object of Mr. Bailley in recommending this machine to the Government was to develop a seam of coal supposed to be lying on the bottom of the Grand Lake, as coal had been brought up at different times on the anchors of wood boats, and this has led parties ignorant of coal mining to think that by this enterprise they would become rich at once and that the Grand Lake was one solid bed of coal. Had it turned out so, the enterprise would have been a deep laid scheme to develop it with the public money and a company to enjoy it. Dr. Robb set this question at rest as far back as 1857 by requesting a private party interested in mining at that time to make proper investigation. The parties bored thirty-five feet, which Dr. Robb considered was sufficient to prove there was no seam of coal at the bottom of the Lake, only the coal that had floated down the small streams on the ice in the Spring of the year, and some might have been washed off the decks of wood boats and come there by other means unknown to this day. The Local Government has been as liberal as any Government could be in a matter of this kind. Mr. Bailley recommended the machine to the Government through a pamphlet which he received from the Boring Machine Company of New York, and Mr. Bailley was deceived himself. He stated in public that the machine would bore 1000 feet. He is now convinced that it will bore only 400 feet. Mr. Bailley has had the management of the machine. He recommended it to the Government. Mr. Covert recommended the machine to the Queen's and Sunbury Coal and Iron Company, and they accepted it at his request, expecting it would help them to get satisfaction as the company was about sinking a shaft at the time. This company has expended between one and two thousand dollars and the machine was taken away from them after the company voting to bore another hole up in the high land. It is the opinion of miners that a boiling spring wasstruck at Newcastle Bridge at a depth of 190 feet; the water tasted sulphurous and is supposed to come from coal or in close proximity to coal. This company ought to have the machine to develop this locality, or a portion of the money granted for mining operations. This is the encouragement held out to the company by certain gentlemen. We hope they will come to the front now, as it might be too late after the local general election. There is talk going around that a certain gentleman was heard say that the Government sent Messrs. Williams and White to New York to purchase a sheep and when it got to New Brunswick it turned out to be a goat. Now, if this is done to injure Mr. Williams in his election it will have no effect. It ought to be rightly understood that if this machine has turned out a goat, Mr. Bailley went to New York and saw this goat and then Messrs. Williams and White went to purchase it, and shortly after Mr. Covert went to New York and purchased a solid bit, so called. This machine has been very expensive affair and we can see no one party particularly to blame. If Mr. Bailley and Mr. Covert and Mr. Williams will meet face to

face they can soon convince themselves of the conversation that took place on the railway last Fall leaving St. John, and the sheep and the goat story can be very nicely settled. The people have entire confidence in the experience they have had of Mr. Williams, and that he is guided by no selfish motives in politics only to give justice to all parties. Yours, &c.,

S.J. Daily Sun - Mar. 26, 1890 Mining Licences. - The receipts from mining licences for the year were but $460.25, as follows:From Grand Lake Coal Co. on granted lands in Queens Co. …$10.00Albert T. Dunn, on crown lands in St. John Co. …$20.00 J. Fenwick Fraser, on crown lands in Albert Co. …$20.00Musquash Anthracite Coal Mining Co., on crown lands in St. John Co. …$200.00 R.C. Call, on crown lands in Gloucester Co. … $20.25 W.R. Payne, on crown lands in Gloucester Co. … $40.00"

Codes: X1 / S6 / IDX_Names: Grand Lake Coal; Kent County Coal;
N.B. Courier - Oct. 10, 1835 Grand Lake and Richibucto Railroad. - … Ahighly respected gentleman of Richibucto … says … Coal may be found in abundance five miles from where the projected road would start from on this River (Richibucto river?) … . William John Layton, Esq., Deputy Commissioner of Crown Lands at Richibucto … replied… Richibucto and Salmon Rivers … rivers and brooks doubtless flow through ravines, but those ravines are only natural beds formed by the incessant action of the waters upon the enerally soft and penetrable soil. … The country across from the head of the tide to where the Salmon River is navigable, consists neither of what may be called decidedly rock nor sand. The surface soil is a light loam, inclining to redness in colour and sandiness in consistency. Wherever rock shows itself, which is only on the banks and bottoms of the rivers and streams, it is composed of a hardish sandstone, I believe of secondary formation, and often exhibiting specimens of pudding-stone. I have never seen on Salmon River or on the Richibucto, a single specimen of granite or any other hard stone, excepting a few specimens of quartz in the beds of the rivulets. ...One great and important advantage on this route would be, the great facility for procuring an abundant supply of coals, at the lowest possible rate, for the supply of steamers and locomotives; as it is well known that they can be had of good quality at the Mines now working on the Salmon River, and that Coals are to be und cropping out on the banks of the Richibucto. These Coals would enable Steamers to run at a cheaper rate than in almost any other part of America, and would give the route a decided preference over all others, and defy competition. ..."

Weekly Record - Fri., May 22, 1903 Developing the Province. - … The KentNorthern Extension will be forty-two miles long and will run from Kent Junction to Chipman, there connecting with the New Brunswick Coal & Railway Company's line to Fredericton… The other road, the Beersville will run from Adamsville on the I.C.R. six or seven miles to the Beersville coal mine, the property of the Imperial Coal Company. Charter and subsidy have both been granted and Mr. Brown expects that coal will be carried over the road four months from now. The coal is of excellent quality and conditions are such that mining operations are not difficult. He thinks that when under way 200 tons a day can be taken out and it is estimated there are 6,000,000 tons in the field."

Richibucto Review - Feb. 4, 1904 Forty five miners, 36 from Belgium and from England, have been brought out by the provincial government to work in the coal mines in Queen's and Kent Counties. They are the last of a party of one hundred brought out for that purpose. Their families will come out after they have become established at the mines. Practical coal mining is being done with good success both in Queen's county and at Beersville in Kent county. Surveyor General Dunn states that the outlook for mineral development in this province is bright, and he expects to see it become an important source of wealth. - Maritime Merchant."

Richibucto Review - Feb. 18, 1904 In the last issue of the Royal Gazette, Dr. HugoVon Hagen of New York has applied for mining license to search for minerals on twenty two lots of five square miles each, making a total of one hundred and ten square miles chiefly along Lake Stream and Coal Creek in Kent and Queens counties."

Codes: X1 / S6 / IDX_Names: Grand Lake Coal; Kent County Coal;
S.J. Globe - Mar. 29, 1910 Injunction Against A Mining Company. - New Brunswick Has Some Interests. - Augusta, March 28. - A temporary injunction to prevent the Canadian Consolidated Mines Co. Ltd., from holding any stockholders' meetings, issuing or selling any bonds or proceeding further with its business was issued on Monday by Judge Whitehouse, of the Supreme Court. The restraining order was petitioned by Alvin Woodbury, of Portland, a stockholder, who in a bill in equity claims that the corporation, which was organized March 29, 1909, under the general laws of Maine and with an authorized capital of $5,000,000, is insolvent through negligence or gross mismanagement of its affairs. The petitioner further asked that the injunction be made permanent and a receiver be appointed to take possession of the property and assets of the corporation. A hearing will be held Wednesday on the latter phase of the petition. The liabilities are $50,000; assets unknown. The Canadian Consolidated Mines Company is an organization incorporated under the laws of Maine, with a capital of $5,000,000, of which $2,000,000 is preferred and $3,000,000 common stock, and the officers are: Dr. Hugo Von Hagen, president; Mr. James M. Seeley, vice president, and Mr. J.F. Donnelly, treasurer. These with Mr. G.W. Breffit are the directors. The company took over the business of the Great Northern Coal Company, Ltd., The Chignecto and Kent Coal Company, and the Crown Coal Company, of New Brunswick, and, it is said, hold large interests in the Grand Lake coal region. Dr. Von Hagen is well known in New Brunswick, having been the head of a company opened up the now closed

Beersville coal mine and built a line of railway from the I.C.R. to the mine in Kent county. A sketch of Dr. Von Hagen describes him as a middle aged man whose early life was devoted to literarywork and who was for some twelve years engaged in Y.M.C.A. work in New York and is said to have made considerable money in promotion work. This sketch describes him as 'owning 90 per cent of the North Shore Railway in New Brunswick, ten miles long, and connecting numerous coal properties with the Colonial railroad.' It is presumed this means the Intercolonial for the North Shore Railroad is now the name of the Beersville line. The road is said to be capitalized at $190,000 and to have cost $175,000. In addition to this Mr. Von Hagen is said to own 60 per cent of the Northern Coal Company at Mount Carlyle, N.B., incorporated for $1,000,000; 75 per cent of the Great Northern Coal Co., of Nova Scotia, capital $300,000, which owns three square miles of coal lands with fully equipped plant; large interests in the Maritime Coal Co. in Nova Scotia and New Brunswick, capital $2,500,000, of which $1,000,000 is subscribed, and 80 per cent of the Bay of Fundy Mining Co., with valuable copper holdings, etc., capitalized at $300,000."

Daily Times - Jul. 15, 1901 New Brunswick Coal Areas. - Being Examined By A Nova Scotia Expert. - At the request of the New Brunswick local government, Mr. H.S. Poole, the late manager of the Acadia Coal Co., of Stellarton, N.S., has spent the past two weeks examining the coal formations in Westmorland and Kent counties. Mr. Poole was formerly inspector of mines in Nova Scotia and is said to be the best geological authority on coal, in Nova Scotia. Mr. Poole spent Saturday in Moncton in company with Dr. Bailey, of Fredericton. Next week he is to makean examination of the Grand Lake seams and later on is to make further examination in this and adjoining counties with a view it is said to advising the local government as to the most desirable locations for carrying on boring operations."

Codes: X1 / STAT / IDX_Names: Grand Lake Coal; Statistics;
Royal Gazette - May 1, 1833 Statistics of the Trade, Industry and Resources of Canada, and the other plantations in British America. By Henry Bliss, Esquire... Produce of the Mines. - Gypsum and grindstones, lime, coal and iron, have long been among the staple productions of the British Northern Colonies. Mines of copper and lead have been discovered within a more recent period; other and richer minerals are still insupposition; but the first mentioned are so extensive, and raised in such abundance as to form a very considerable article of export trade. Freestone, granite, marble, clay, and slate of excellent qualities exist in various parts, and are there used for the purpose of building. Manganese and antimony are also found, and a 6 small quantity of the former is exported. The mineral resources of the Northern Colonies have by no means been yet explored. Whatever indeed is known has been less the result of inquiry, than of the voluntary, and almost obtrusive, disclosures of nature herself, who has scattered indications of these her gilts on the very surface of the land, and even on the shores of the sea, so that if the eye did not heed them, man's foot would stumble where they lie. Enough, however, has been ascertained to make it unquestionable that the mines of these provinces are destined to become an immense and inexhaustible source of wealth and power. The island of Cape Breton, the eastern parts of Nova Scotia, the country between the Gulf of St. Lawrence and the river St. John, in New Brunswick, the peninsula of Gaspe, in Lower Canada, contain beds of coal of vast extent; and in Newfoundland also, the same mineral is known to exist. These veins which lie near to the surface have for some time been partially opened in various places, and in one or two the pits have been worked to some extent. But within a few years the General Mining Association of London have invested a large capital, about œ180,000, in the mines of Nova Scotia. Piers have been constructed, railroads laid down. Steam boats, mills, shops, and houses built, and every preparation made for prospecting the enterprise on a large scale. About 500 men are already employed in these mines. Coal, coke, tar, and iron, are the objects and produce of their labour. In the last year, 1832, they shipped above 33,000 chaldron of coal, and made about 2,500 of coke. Fifty vessels at a time have been seen waiting at the mines for freights; and from the extension and improvement of their operations, the company expects, apparently with reason, to ship 100,000 chaldrons in the ensuing year. N.B. Courier - May 4, 1833 The stockholders of the New-Brunswick Mining Company, met at the Masonic Hall in this City on Tuesday the 30th ult. pursuant to notice given in the Royal Gazette and other papers, for the purpose of electing Directors for the ensuing year, when the following Gentlemen were chosen: Robert Parker Robert F. Hazen Henry Johnston John Ward, Jun. N. Merritt William Leavitt R.W. Crookshank Geo. D. Robinson John M. Wilmot James Kirk Henry Gilbert E.D.W. Ratchford Stephen Wiggins The Directors of the Company met at the Masonic Hall on Wednesday, for the purpose of electing a President, when Nehemiah Merritt, Esq. was unanimously chosen, and T.L. Nicholson, Esq., appointed Secretary to the Company."

S. J. Daily Globe - Jul. 11, 1862 ...Not less interesting, as evidence of the natural wealth of the province, is the very complete collection of the minerals made by Mr. Payne, of Portland, St. John, by the direction of the Colonial Government. It contains 523 specimens, arranged in five glass cases, the frames of which are made of the woods of the province. Among the specimens of coal are some from which the famous Albertine oil is distilled.- The Albert Mining Company have two shafts; one of these is 750 feet, the second has already been sunk to 350 feet, and it is proposed to be continued to the enormous depth of 1,500, or nearly one-third of a mile. The veins of this extraordinary coal run nearly perpendicular. The coal is used in the production of gas and paraffine, and it is for these purposes superior to the petroleum or American rock oil. One ton of the coal contains from 16,000 to 18,000 cubic feet of gas, or 80 gallons of refined Albert oil. Last year the Albert Company produced from their works not less than 70,000 gallons of refined oil. There are also some specimens of shale found about seven milesdistant from the Albert works, which is not quite so rich in oil, but which, nevertheless, produces nearly 60 gallons of crude oil per ton. Building and limestones, and various descriptions of earths and pigments, and clays, and gypsum are included in the collection. The report presented to the Local Government by Mr. Payne shows that the produce of the colony during the last yearwas 1,500 tons of Albert coal, 21,190 grindstones - and New Brunswick enjoys a high reputation for quality of this description of stone, - 12,430 tons of building stones, 2,300 tons of gypsum, 406 tons of manganese, 20,650 casks of lime, 4,000 tons of coal, and 606 tons of granite. We have felt considerable interest in the examination of the contents of this New Brunswick court, and an hour or two may be most profitably and agreeably passed by the visitor in inspecting the natural products and the many evidences of the arts and industry of the New Brunswickers."

Daily Telegraph - Sep. 16, 1891 Sackville, Sept. 15. - The N.Y. Freestone Quarrying Co., of Wood Point, are shipping largely by rail to Toronto, for the new City Hall and Court House, which will it is said, when completed, be one of the finest structures of the kind in the world. They pay the I.C.R. this season $15,000 for freight. A train load of this stone was examined a few days ago by the Telegraph correspondent, at Sackville Station. The specimens of stone were really splendid, not only for the rich brownish red shade, but for the evenness of color and a texture of unvarying perfection shown. Two stones designed for lintels of immense windows were no less than 16 feet long and two in width. The quarry where these came from is now considered one of the most valuable in these provinces. It is well fitted with the latest appliances for quarrying and hoisting stone, and gives employment and cash pay to a large gang of men.The existence of a coal seam at Shediac has long been known there, but no one has had the enterprise to test it. Although it is said to exist in the lower coal measures, where productive seams are not usually found, Mr. J.W.Y. Smith, who promises to become one of our most active and useful business men, intends to settle the question of its value by actual work."

Codes: Z2 / E2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Oil and Gas - Kings Co.;

Daily Morning Telegraph - Apr. 27, 1865 In another column we give an extract which we find in the Quebec Daily News respecting the discovery of petroleum in California. The Engineer, who has examined the locality carefully, and superintended the boring of test wells at much expense, reports the presence, in abundance, not only of petroleum but of ""Albertine coal"". Now ""Albertine coal"", as he calls it, has heretofore been supposed to exist only in Albert County, in this Province, and hence the characteristic name applied to it, Albertite. We had scarcely laid down the Quebec News yesterday when the Christian Visitor, damp from the press, was laid on our table; and the first portion of the contents that caught our eye was a letter from the Editor, the Revd. Mr. Bill, who is travelling in Westmorland and Albert Counties, and whose observations on local topics are always practical and frequently given in detail. In reading his letter from Moncton in yesterday's issue, we were struck with the fact, that, while an engineer was announcing the discovery of Petroleum and Albertite in the same locality on the Pacific Coast, the Press of New Brunswick proclaims a similar discovery on these Atlantic shores! We referred a week or two ago to the fact that Americans were boring for oil at Dover in Westmorland, near the Petitcodiac river; the Visitor gives fuller details of their movements and success than we were able to obtain at the time. It says:- ""Very near the River are valuable stone quarries, of different kinds, which have only to be worked thoroughly to produce immense profits. And not far distant, in all probability, Oil Works will be erected, upon a large and productive scale. Recent investigations are making the impression upon scientific minds that this whole region, extending to Hillsboro, Dover, and Memramcook, is destined to become, at no distant day, a vast oil-bearing country. An American company have already erected six derricks in Westmorland, and two in Albert; they have four steam engines on hand, but only two are yet in use. Two of the wells were bored by hand. A reliable gentleman connected with the company informs us that they intend operating extensively all summer. The oil has been forwarded to Pittsburg, Pennsylvania, where it has been thoroughly tested and pronounced very fine. Oils both light and heavy have been obtained. What is designated The Goodie well is pronounced by competent judges in Pittsburg to be decidedly and distinctly an oil-bearing rock. A friend has handed us a phial of oil from the Goodie well and it seems almost fit for use in its crude state. When we return, it can be seen in the Visitor office. ""As long ago as 1830, oil was discovered here by Dr. Jackson; subsequently Dr. Hay, Prof. Taylor, and several other eminent scientific gentlemen, have examined this district, and all agree as to the existence of oil, and say that it is not confined to any one locality, but exists in different sections. Practical men who have examined these oil formations say that the surface and other indications ""surpass"" anything they have seen in the ""Kanawha"" oil region of Western Virginia, and in West County, Virginia, where oil is being obtained in such abundance. ""If these valuable resources be opened up and rendered productive, it will have to be done largely by foreign capital. Men from the oil regions of the States have already expended here some $12,000 in gold, and are expecting to expend a much larger amount in testing the various points of interest as to their oil-bearing capabilities. We sincerely hope they will go on and prosper. ""With all these natural elements of wealth and progress, surely this ought to be one of the most progressive places in the Maritime Provinces, and it will be as soon as the necessary skill and capital are employed. Education, economy, and industry are essential to the onward march of any country. Let these be applied in sufficient measure to the mines, minerals, and other resources of Westmorland and Albert, and they will soon become the most prosperous sections of British America."" Since the above was in type we have received some additional information on this subject which we shall lay before our readers at as early a date as possible. We need only say at present that the oil prospect at Dover is

Slate; Albert Mines;

N.B. Courier - Jul. 31, 1852 and St. Andrews Standard - Aug. 11, 1852 Albert County. - We alluded last week to the Albert Coal Company, in which Messrs. Allison, Cairns and others are concerned, and the benefit to be derived by the Province from the exportation of such large quantities of its mineral treasures. The parties in whose possession the mines are at present, are carrying on the work with great energy, having already expended a heavy amount of capital on the undertaking, and the result of this new trade springing up will not be long in producing a great alteration on the appearance of Hillsborough and the surrounding country. We have also to notice another undertaking of great importance to the Province, situatedin the same county, viz., the Albert Building Stone Company, near Harvey. This concern is now carried on under the superintendance of Messrs. Lang and Stirling, two Scotch gentlemen who have an interest in it, with C.D. Archibald, Esq. There are now seventy-five men busily employed raising stone from this quarry, for which a ready market is found in New York and Philadelphia, the quality being very superior. During the present year it is expected 4000 tons will be exported, and next year probably 30,000 tons. Within a few miles from the stone quarry, avaluable slate quarry has been discovered, and there are now eight men employed in clearing away the surface, with a view to commence extensive operations. We have received a specimen of the slate, which we have placed in the reading room for inspection. The Gypsum mines, owned and worked by Mr. Fowler, at Hillsborough, will also prove a valuable source of export when the arrangements are completed for working them on an extensive scale. On the whole, Albert County has at present the appearance of rapidly rising into importance, possessing as it does such varied and extensive mineral resources, besides being one of the finest agricultural districts in the Province of New Brunswick."

Gypsum; Albert / Kings County Oil Shales; Albert Mines;

Morning Journal - Jul. 12, 1867 The Resources of Albert County. - … The soil, being that of, the lower carboniferous rocks, is, of course, of the richest and most productive kind. How could it be otherwise with its marls, gypsum, limestone, and oil-bearing shales? On this point Professor Bailey, a most careful and accurate observer, says:- No other district in the Province, except where alluvial deposits prevail, will compare with that of the subcarboniferous rocks in fertility, and none, therefore offers so many facilities for settlement. … Mining operations will lead to a large consumption of wood. The manufacture of plaster now, and of oil, sure ere long be undertaken, will consume very large quantities of wood in barrels. .Ship building … The vessels once built may at once be laden with plaster, albertite, lumber, building or other stones and sent on their voyage. … Of the mining and manufacturing of Albertite andplaster we have already spoken. As to the latter we needonly add that the supply of gypsum, the white cliffs of which are a marvel to behold, is practically inexhaustible. Part of them may be anhydrous, and therefore of less value than the hydrous gypsum, used for making plaster for building, but it will require ages to exhaust the supplies of the most valuable kind which invite the operations of the manufacturer. The same may be said of the freestone for building purposes. It is now being quarried in several places, and despite an adverse tariff, shipped at a profit to the United States. It is strange if it cannot also be advantageously shipped to the Provinces of Quebec and Ontario as well as the freestone of Ohio. The members of the House of

Commons will have to see to these and other kindred matters by and bye, so far, at least, as fiscal arrangements are concerned. Slate, flagging fire-clay, clay and sand forbrick making, may be had in abundance. Manganese and copper have been found, but the search for them and other minerals in quantities sufficient to warrant mining operations which has been carried on at an immense expenditure, has not as yet yielded any proper return. Wemay say the same of the oil bearing shales. The Caledonia works, their grinding apparatus, rotary retorts, distilling, condensing and purifying apparatus and machinery, their steam engine, even their anvils, hammers and other tools and implements, provided at a cost of hundreds of thousands of dollars, are lying idle and wasting away by corrosion. The shales yielding from 25 to 60 gallons of oil per ton, found on the Caledonia property (partly owned by Mr. Archibald,) and at Turtle Creek, in which he has an exclusive interest, are found from a foot to ten or twelve feet thick, increasing in richness and in thickness as they descend. The quantity of shales to be found far above the level of the sea is practically inexhaustible. At Baltimore nine different beds, lying parallel to each other may be most distinctly traced. At Turtle Creek there are five or six smaller ones, the one rising above the other, and even ascending the hillsides during a portion of their course. Quantities of the shale are now being shipped to the United States from Westmorland, where the same deposits are found, and it is probable that the day is not far distant when the price of oil, owing to the failure of the springs of petroleum, and the adoption of fiscal arrangements fitted to stimulate those branches of our industry which have been prejudiced by the refusal of Reciprocity on the part of the United States, may ensure the manufacture of oil from these shales, to such an extent, as will turn Albert into one vast manufacturing hive, and require her shipping in order to meet our export requirements, which will involve corresponding imports, and give the Albert Branch Railroad - we must yet say something more special in regard to this desirable work - and also the Intercolonial railroad a handsome contribution in traffic. When this comes about we suppose Mr. Archibald, who has already several miles of excellent road in Albert, and had several houses erected, preparatory to operations in which he hopes to engage, and about which Mr. McHenry ever thinks and talks by day and dreams by night (if not by day!) the owners of Caledonia stock, and sundry other persons, will have become immensely rich; while the farmers of Albert will have such a demand for their products, and mechanics and labourers such a demand for their work, as has been hither to unknown in New Brunswick. So may it be. We think, indeed, that it is quite likely that such will be the case, and as a means to this end, we hope the press in different parts of our Dominion will not grudge to say a word about the great general resources and the boundless mineral wealth of Albert County. Provincial apathy forced the Albert Mines into the hands of non-resident proprietors, with a single exception. Is this also to be the fate of the rich cannelite of Albert, representing millions upon millions of gallons of oil, or still worse is it to be neglected altogether, merely to nourish the ""forest primeval"" or to promote the luxuriance of the crops grown by the farmers of Albert?"

S. J. Daily Globe - Oct. 6, 1862 Albert County. - The ""Review"" referring to the prospects of Albert County says:- The Albert Coal is to a great extent dependent upon the American market, and also our Plaster and Gypsum; consequently, these branches of industry have not been carried on to the same extent that they would have been had our neighbors been fortunate enough to escape their present trouble. Our Stone quarries have also met a severe check to their progress. Not withstanding all this, these branches of industry have been kept in operation, and although there was some fears a short time since of the Albert Mines suspending operations for a time, yet these doubts and fears have been removed by an increasing demand for coal. Similar fears were entertained in reference to the Plaster Works, but they are still going on with their accustomedactivity. On the whole we are better off than we expected to be under the circumstance, for quite a change has taken place in this country during the past few weeks, and many of those doubts and fears that arise in the human mind at the thought of ""hard times"", have been removed, at least for a time."

Morning Freeman - Nov. 28, 1863 The Eastern Advocate describing the state of affairs in Albert county, says:- ""But the 'lords of creation' may be mining. Letus see. We go to the Albert mines - it is a Yankee company; the Albert County people have no interest there, except to pick up the crumbs that fall from the rich concern's table - the natives supply some of the produce that is consumed there - that is all! We go to the Plaster Quarries - it, too, is Yankee; and we have the same story to tell. The Stone quarries - the new discoveries - everything - is dependent upon Yankee enterprise and capital for development, and ""own fools"" are quite content if they can but sell these 'Yankees' a few goods, and supply them a small amount of produce, and so gather from their expenditure a few shillings! ""As to Mills and Manufactories we have next to none; of those which do exist we will take note, and give due credit at another time. Of Shipbuilding we have spoken in a previous number. ""The sum of the matter is this: that next to the attractive facilities lying idle on all hands which strike the stranger's attention is the easy, independent, want-of-enterprise air, which the people to a great extent exhibit in all the more settled districts of the county. They are comfortable, frugal, moderately industrious, and they are content."""

Codes: Z2 / J8 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Albert Mines;
Weekly Observer - Aug. 3, 1852 and Miramichi Gleaner - Aug. 9, 1852 Albert County. - We alluded last week to the Albert Coal Company, in which Messrs. Allison, Cairns and others are concerned, and the benefit to be derived by the Province from the exportation of such large quantities of its mineral treasures. The parties in whose possession the mines are at present, are carrying on the work with great energy, having already expended a heavy amount of capital on the undertaking, and the result of this new trade springing up will not be long in producing a great alteration on the appearance of Hillsborough and the surrounding country. We have also to notice another undertaking of great importance to the Province, situatedin the same county, viz., the Albert Building Stone Company, near Harvey. This concern is now carried on under the superintendance of Messrs. Lang and Stirling, two Scotch gentlemen who have an interest in it, with C.D. Archibald, Esq. There are now seventy-five men busily employed raising stone from this quarry, for which a ready market is found in New York and Philadelphia, the quality being very superior. During the present year it is expected 4000 tons will be exported, and next year probably 30,000 tons. - Courier. In addition to the above, Slate and Gypsum quarries are being opened in Albert County; and its maritime advantages and agricultural resources are also becoming appreciated. This fine county soon will form one of the most important sections of the province."

Morning News - Jul. 2, 1862 New Brunswick at the London Exhibition. - … Among the natural products of the Province, the Albert and common coal are prominent articles, the great value and extent of which are hardly yet developed. There are specimens too, of the fine building stones properly called ""Albert Freestone"", but more generally known in the United States, whither it has been largely exported, as ""Nova Scotia stone"". The building in which is the office of the Scottish American Journal, is faced with this fine stone, and some of the finest edifices of New York are built with it. ... Mr. Spurr, of St. John, sends a fine specimen of albertite, a coal or asphalt, from which the paraffine or kerosene oil is extracted. The specimen is remarkably beautiful, and superior in brilliancy of color to fine specimens of jet. The same gentleman contributes specimens of the oil in the crude and refined state. It is stated to be worth two shillings and sixpence a gallon; but I fear it would scarcely command that price in the London market, which is already overstocked with Canadian and

Albert / Kings County Oil Shales;
S.J. Daily Sun - Apr. 21, 1888 and Daily Times - Apr. 26, 1888 The Albert Railway. - And How It Grew Out of The Discovery of Albertite. - Some Interesting Facts in Provincial History. - The inhabitants of more sunny climes often complain of the fog and gloom of England. The water of the Gulf stream though imparting warmth and humidity to its atmosphere does so at the expense of much of the glorious sunshine with which we are blessed. But nowhere has the hearth glowed more brightly and the gas jet more brilliantly than in the homes of Merrie England. Not many years ago the cannel coal, on which the gas companies relied for their supply, was thought to be nearly exhausted, and the gas men substituted for it an inferior article, whereupon the English people called for more and better light. A parliamentary commission instituted to enquire into the matter, unearthed the fact that all the cannel coal then known to exist would at thethen rate of consumption be exhausted in a few years. The electric light was then but a plaything of scientists. Pennsylvania had not yet tapped the oily ocean that lay far down beneath the coal measures. The Scotch cannelite shales attracted the most attention as a possible source of gas supply, but they were limited in extent, poor in illuminating power and altogether inadequate to meet the demand. The world was searching for light. About this time a curious substance was discovered in Albert County, N.B. Professor Dawson in his Acadian Geology speaks of it as follows: A deposit of a curious substance resembling bitumen was found at Weldon Brook, near Hillsboro. It is evidently coal, and is seen in masses presenting a beautiful and singular appearance. It has a splendid resinous lustre and perfect conchoidal fracture. It is perfectly free from mineral charcoal, or impure coal. Associated with it are shales containing numerous fossils and entombed fishes. Israel D. Andrews, American consul at St. John, in his report to the United States government, speaks of it as follows: In the province of New Brunswick recent explorations have brought to light a most beautiful and before unknown variety of coal, containing 60 per cent. gas-making material. This coal is the most remarkable in America, not only from its beautiful, clear, glossy, and highly bituminous character, but also on account of the abundance, beauty and perfection of its fossils. It furnishes a very rich gas, highly charged with carbon, consisting mostly of olefiant gas, etc., etc. Small pieces of it had been found in Weldon Brook, and Peter and John Duffey of Hillsboro determined to search for it. It is reported that as they were walking up the brook they came to a smooth surface, under a few inches of water, covered by a vegetable growth. As the leader stepped on it his feet slipped from under him and he sat down suddenly. On arising he found the vegetable matter clinging to his clothes, leaving a black and glossy coal revealed to his gaze. Messrs. Duffy forthwith secured the mining right. They tried the coal for forging, but it would not work. Used in a grate it would melt and the oil would run out of it. The firm of Allison & Spurr were at that time speculating in mining properties, and some samples of this Albert coal were sent to J. DeWolfe Spurr who was then in England. Mr. Spurr had the novel substance analyzed there, when to the surprise of everybody concerned it was found to yield per ton 120 gallons of oil of a high illuminating power. Messrs. Allison and Spurr immediately purchased the property and the Albert Manufacturing Co. was formed to operate it. As soon as its great value was known, of course other parties wanted a share in it. The land on which

the coal was found was owned by H. Steeves. Dr. Gesner, author of A History of New Brunswick, and who was a man of extensive scientific attainments, visited Hillsboro to examine the find, and, of course, recognized the difference between it and any known variety of coal. Having secured the title to the land, he procured an injunction restraining the Albert Mining Co. from raising any more of the substance, on the alleged ground that as it was not coal, but asphaltum, the company had no right whatever in it. Litigation followed, and the most extensive and expensive lawsuit ever witnessed in Albert Co. was the result. Experts were brought in from England, Germany and the United States, but as is the case with experts of all kinds, their sworn testimony was as contradictory as that of ordinary mortals. Some of the scientists contended that it was coal; others equally learned contended it was not. Judge, jury and claimants were alike puzzled. At last an anything but learned blacksmith testified that he had forged an axle with the stuff. That settled it. The court confirmed the title of the Albert Mining Company and gave to the substance the name Albertite. It was extensively mined and much of it shipped to St. John, where Mr. Spurr had large works erected for the distillation of the oil. Another Albert Mystery. - Extensive search was made for other deposits, and some were found but none large enough to warrant working. At a place called Baltimore and Caledonia in Albert Co., a substance was found that nearly resembled albertite; but it was not lustrous, like albertite, nor was it so flammable. Albertite was readily ignited with a match, and would burn till entirely consumed, leaving but little ash. The newly discovered product would also burn with intense heat, but required to be heated to a high temperature before igniting, and by burning its bulk would not be sensibly diminished. It was as great a mystery as the albertite had been. Boulders of it were found all over the section, and had sometimes been used by the maple sugar makers in combination with wood to evaporate their sap, but its forces were too intense for ordinary fires, as it would melt the fire dogs and burn out the pots. The attention of Alexander Wright was called to this stuff, and he recognized it as cannellite, similar to but much riches in illuminating properties than the Scotch shales. A quantity was sent to the oil works in St. John and retorted, when it was found to yield 60 gallons of oil and over 7000 cubic feet of illuminating gas to the ton. Just about this time there appeared on the scene a man whose name is inseparably connected with the inception, construction and progress of the Albert Railway. That man is Thos. McHenry. He had achieved no slight reputation as a writer. He had filled the editorial chairs of the Christian Visitor, Colonial Empire and Eastern Advocate. At the date spoken of he was employed in the oil works at St. John. Mr. McHenry went to Albert County to examine the shales. He found the deposits to be very extensive. The Albert Mining Co. neglected, possibly scorned, to secure them. Albertite yielded 120 gallons to the ton, and had nothing to fear from competition with shales. A new company promoted by J.H. Harding of St. John, was organized for the purpose of working the shales. Extensive and costly works were erected in Baltimore, and over 100,000 gallons of oil were distilled and exported to the United States. But this alarmed the whaling interests there and the whale oil men induced congress to impose a duty of ten cents a gallon on the New Brunswick product. This was severe blow to the new industry, but the works were continued, though with diminished profits. About this time Charles Dickson Archibald came to Albert Co. He had lived a checkerboard life; at one time in the possession of vast wealth, at another in straightened circumstances. He was agent in St. John for an English banking house. Israel D. Andrews, American consul at the port of St. John, who had purchased Mary's Point stone quarries, had secured some accommodation from the bank that Mr. Archibald represented. Unable to meet his obligation, he transferred his property at Mary's Point to Archibald, who went to Albert Co. to look after it. There he met Mr. McHenry, who represented to him the vast mineral wealth of the county awaiting development. Mr. Archibald had already been favorably impressed with its resources and had leased several properties that gave indications of being oil-bearing. His attention was particularly called to the shales by Mr. McHenry, and together they examined the deposits. Imbued with the prevalent English idea that cannel coal would be speedily exhausted, and knowing that the Scotch shales, though only four inches thick, were worked at a profit, while the Albert shales aggregated thirty feet in thickness, Mr. Archibald, after closely scrutinizing the excavation made by Mr. McHenry, rose to his feet and exclaimed: I will sell all I possess and purchase the pearl of exceeding great price. He immediately abandoned all his other business and sailed for England, taking with him samples of the shale. He had them analysed in London, Paris and Edinburgh. The results were uniform. The light produced was pronounced the most brilliant artificial illuminator of the day, excelling that from cannel coal, albertite, or any other source. Armed with the results of these analyses, Mr. Archibald appeared before the British parliamentary committee above referred to. His statements produced a profound sensation. But two drawbacks were discovered: 1st. the shale yielded no coke, while that from cannel coal more than paid the expenses of manufacturing gas; 2nd. the shale was located at a distant, nay in an almost unknown land, remote from shipping or railroad facilities. To compensate for the first drawback, it was argued that though from having a mineral instead of a carboniferous base, this shale yielded no coke, yet it contained in that base the materials, lime, etc., required to purify the gas. Further, the supply was inexhaustible. Instead of having to raise it from the bowels of the earth at great cost, it could be cheaply tumbled down the side of a mountain. Although yielding only half as much oil as albertite, it only cost half as much to retort it. It could be mined for one dollar per ton. These and other points in its favor were urgently

S.J. Daily Sun - Mar. 1, 1889 Hopewell. - ... (The Rocks) - The cape is best known to sailors as a conspicuous point on the coast during several hour's sail, and ashore for its interesting scenery. Though not as grand as the Giant's Causeway, Fingal's Cave, or the Palisades, yet it is easy of access, well worth seeing, and adds materially to the pleasures of a summer holiday. It is on the west side of the bay mentioned, has a water front near to low water mark of about one quarter of a mile, with a height of 100 or 150 feet. The south end is bold, the north end forming a gentle slope to low ground. This point is reached by a carriage road, and here an array of water worn columns of rock 20 to 30 feet high above a smooth, sloping beach, met the eye while the shore wall is seen to be honeycombed with caverns. Farther down shore past projecting reefs and recurring recesses, as the headland rises, the outstanding masses grow more lofty andimposing, occasionally approaching the height of themainland, with a diameter of 30 to 50 feet. Some areapparently solid and several rods away from the bluff,others parted off by a fissure a few feet wide and rifted from top to bottom, with their bases riddled by long oval shaped passages which here and there almost undermine a towering and ponderous slab. The tunnels, galleries and caves differ in size, shape and form. Here is one roomy as Dan O'Connell's acts of parliament; the next with scarcely standing room, while another has 20 feet of space between its floor of sand and pointed arch overhead. They run parallel to each other at times, or cross at right angles. Some go straight through from daylight to daylight, others by turns and surprises, or now and then end in the cliffs too far and too dark to be explored without a light. The rock at these peculiar places is chiefly a fine grained, tough, dull red, conglomerate, alternating with other layers of red sandstone, and coarser conglomerate, all containing a proportion of lime, which appears to be the cementing ingredient between the layers as well. It pounds up more readily than it splits or breaks and is an unwilling stone to give up specimens. Probably it was formed without flaws, but irregular lines of cleavage now run up and down through it at varying distances apart. These cracks have evidently marked out the isolated portions and located the caverns. Atmospheric agencies, the surf, and the beach pebbles, burrowing in the crevices have done the rest. No caves a mile long and necessarily earlier formed, of which written descriptions and traditions tell, could be found. Fractures similar to these would reasonably account for the remarked absence of living springs over a considerable area of neighboring country. Down shore at the southeast corner two regular wall like ledges of blue limestone reach under the tide and in shore rise in a precipice. Here a pile of large square blocks have ground upon each other showing the marks of the waves' tremendous force. This is the most enduring stone of the group and contains curiously worn arabesque pieces, with veins resembling bunches of grapes. The Cape rocks seem to be older than the fossil marked sandstones at St. Mary's Point and Hopewell Cape, on either hand, on the same shore, but widely separated. ... Close by Cape Demoiselle Creek empties into the bay. This stream gives its name to the country through which it flows. One branch takes its rise near the once famous Albert mine. Large deposits of gypsum, freestone and limestone, with indications of salt are found along its course; freestone and lime stone have been extensively quarried. These facts, with the name as a connecting link, seem to call reference to them. .... Though prospecting to any extent for albertite has ceased, and in view of an estimated expenditure of $100,000 by several American companies in trial pits and borings outside Albert mines limits, yet there is a lingering and quite general hope that the lustrous mineral will crop out at some unexpected place and time."

S.J. Daily News - Dec. 31, 1870 Matters in Albert County. - ... There are in that part of the Province beds of Cannelite, coal, extraordinarily large; literal mountains of freestone and plaster abound along the line of the projected Railway, ... Below this lies Mary's Point and GrindstoneIsland, forming a splendid outer harbor with deep water, where the ""Great Eastern"" could come up and load with ease and entire security. The late Mr. Archibald intended to erect extensive oil manufactories here, and the site appears to be exceedingly well adapted for such a purpose. ... Shepody means Chapeau

Moncton Daily Times - Nov. 16, 1880 and Daily Telegraph - Nov. 17, 1880 Reported Discovery of Coal. - It is reported here that coal has been discovered on Cape Demoiselle Creek, on the property belonging to Robert Milburn, and near the Hayden stone quarries. The coal is said to be similar to the Albert coal found at Hillsboro. The discovery was made by Mr. Abner Marks, who with Henry Bennet and some others, including E.B. Chandler, Esq., have secured a lease, and intend commencing preparations to test the value of the discovery."

Moncton Daily Transcript - Jul. 26, 1888 Mr. E.B. Chandler is seeking for coal on Judson Peck's property, near the Memel freestone quarries, Albert Co."

Codes: Z2 / S6 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Kent County Coal;

S.J. Globe - May 10, 1887 The Weldford Coal Mining Company, composed of James Brown, of Weldford Station, Kent Co., merchant; Matthew T. Glenn, of Weldford, hotel-keeper; Andrew Dunn, of Weldford, merchant; William W. McLellan, of Newcastle, Northumberland, track master I.C.R.; Michael Adams, of Newcastle, barrister-at-law, and David W. Clark, of Weldford, stonecutter, have applied for incorporation.The objects of the company are the exploring, digging, raising and mining of gold, silver, coal and other ores and minerals, together with the crushing and smelting of the same, with such other things as are incident to the obtaining thereof. The office will be at Weldford. The capital stock of the concern is to be

Codes: Z2 / T8 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Gloucester County Coal;

Daily Telegraph - Sep. 10, 1885 Over the Caraquet Railway. - ... The chief items of export will be fish, lumber, grindstones, building stones and farm produce of every kind. In a few months the grindstone shipper will be able to send his goods to the United States without the expensive operation of transshipment at either Bathurst or St. John. Already 64 carloads of stones have been shipped over the section of road now constructed. ... At Clifton are the extensive grindstone quarries of the prosperous firms of J.B. Read & Co., Lombard & Co., Francis Scott and others ... Next comes New Bandon with three lobster factories and as many grindstone quarries. It might be mentioned here that at Clifton there are decided indications of coal underlying thegrindstone formation. Mr. Read states that the seam in places has a thickness of eighteen inches, but the greater portion is black carbonaceous slates, and the coaly portion does not exceed from six to eight inches in thickness. Coal of considerable thickness is reported at Caraquet and at Shippegan, and the outcrop yields promising specimens. Should a workable bed be found it is needless to say a market is ready for all that could be produced. The building stone referred to above is used entirely for local purposes. Many of the beds, however, are quite free from pyrites, and equal in quality to the fine stone obtained in the southeastern portion of the Province..."

S.J. Daily Sun - Sep. 15, 1886 From Bathurst to Shippegan. - Caraquet Railway ... At Clifton are the extensive freestone quarries of Messrs. Joseph Read & Co., Lombard & Co. and others, capable of producing unitedly, as now operated, between 5,000 and 6,000 tons per annum of the finest grindstone in the world. The deposit appears to be inexhaustible. Within the last two years Messrs. Read & Co. have been finding an outlet for their products in Canada, though as yet the United States supply the chief market. Eventually the entire output will be shipped by rail direct. From 300 to 500 men are employed at the quarries. Read & Co. have some very large quarries in the state of Ohio, and others on the Miramichi and Bay of Fundy. At Pokeshaw the writer was shown a solid cliff of magnificent building stone 200 feet in height. Recently both Lombard and Read have added a great deal of expensive modern machinery to their works. We noticed as we passed a new Methodist church in course of erection at Clifton. Operations, by the way, have been commenced on a handsome new R.C. church at Bathurst to replace the one destroyed by fire a few weeks ago... Strong hopes are entertained that theoutcroppings of coal at Clifton may lead to the discovery of a workable vein. Several small seams of coal have also been exposed by the workmen in the cuttings near Caraquet. The coal is of very good quality and if found in paying quantities, as expected, must be of immense value to the whole county, and of especial importance to the railway, inasmuch as it will have an advantage of 200 miles in distance from the Canadian markets over any beds now worked in these provinces..."

NB. Courier - Sep. 16, 1837 LETTER 1. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor and Commander in Chief of the Province of New Brunswick, &c. &c. &c. May it please your excellency;The important measures which have been adopted for thewelfare and prosperity of New Brunswick, by the Executive and Legislative Branches of the Government, since your Excellency's arrival in the Province, have produced the highest satisfaction among the inhabitants of that flourishing and loyal Colony. And although but a few months have passed away, since the country has enjoyed the benefit of your Excellency's talent and experience,it is already known that the veteran soldier is also the wise statesman under whose care science, industry, and lawful enterprise are protected, and have even now received a new impetus in their numerous departments. With a knowledge of these facts, I beg permission to address the following letters to your Excellency, knowing that whatever they may contain of an useful character, will be received with the patronage their author would endeavour to merit. The importance of examining the structure of the earth, with a view to unfold its valuable resources, must be evident to all who consider that mineral substances are indispensibly necessary in all the arts and sciences, and every work which man is called upon to perform. They form the powerful instruments of war, they supply the blessings of peace, and diminishing animal labor, they afford abundant means of happiness and health. By them agriculture, manufactures, and commerce are sustained, and the prosperity of every country depends upon their discovery and employment. None of the sources of national independence and wealth, have contributed so largely to the civilization of mankind, as those of the mineral kingdom, whose treasures also admirably display the intelligence and power of their All-wise creator. It is true that by viewing them the mind feels its own weakness, although it can hardly fail to behold the beauty and order of their arrangement. If such remarks will in any way apply to countries where vast mineral deposits are giving out their valuable contents to the benefit of their inhabitants, how much more must they be acknowledged to be correct in a Province, into which even granite and limestone were imported a few years ago. But instead of pursuing farther a prefatory part of the subject, I proceed to lay before your Excellency such observations as have been made by personal examination. And without confining them entirely to Geological and Mineralogical detail, will endeavor to give the result of my enquiries in other branches of natural science, with some topographical matter collected on a tour through the country. Having been requested by M.H. Perley, Esquire, the active agent of the Salmon River Coal Company, to examine the Coal formation on the Grand Lake, in New Brunswick, it was deemed necessary to ascertain, if possible, how far the strata of that place were connected with those of Nova Scotia, and how far the Coal districts of the two Provinces were united. On the boundary line between the two Provinces, there is an extensive Coal Field, having a large part of the county of Cumberland on one side, and a part of the county of Westmorland, belonging to New Brunswick, on the other. The coal district has been denuded by the action of the sea, and its rapid tides on the coast of the Bay of Fundy, and by the steady action of the waters flowing along numerous rivers taking their rise from the higher lands of the interior; and long since the coal with its accompanying strata of sandstone, shale and limestone were deposited, vast portions of each have been worn down, and carried away by tidal currents, and torrents ever rushing onward toward the sea – That the strata of sandstone and other rocks, were once perfect and continuous from one side of Chignecto Bay and Cumberland Basin to the other, there can be no doubt. The strata of Cape Enrage, Cape Maranguin, and Grindstone Island, and those of the opposite coast on Nova Scotia side, are identical in structure, mineral composition, and inclination, and may be seen at low-water, reaching out beneath the sea, pursuing a direct and uniform course. Chignecto, and Shepody Bay, Cumberland Basin, and the numerous rivers and creeks emptying into them, almost intersect this coal field; and have by their unremitting currents, exposed beautiful sections of the rocks now forming their shores. The detritus produced by these causes, frost, rain and atmospheric influence, has been deposited in lakes, estuaries, and on the sides of creeks, forming those extensive marshes, now skirting the rivers of this fertile country. The same causes that reduced the hard rock to an almost impalpable powder, have transported the sedimentary matter to those situations where it is now found, until it rose to the highest level of the sea, and formed a soil only inundated at the highest tides. The coal field extends northward and eastward to Northumberland Straits, where the same freestones are quarried that appear on the shores of Chignecto Bay. - The sandstones of Grindstone Island, Cape Meranguin, North Joggins, and Coast of Shepody, are very valuable, as they apply the most durable and elegant slabs for buildings, and also afford the best materials ever discovered for grindstones. Of the latter great numbers are made yearly, and shipped to the United States, and from thence to other parts of the world. They are equal in quality to those found at the South Joggins, and already afford a profitable and extensive trade. These 3 sandstones are generally of a grey color, and composed of fine grains of quartz, with a little feldspar and mica united by an argillaceous cement. The lines separating the strata, (which differ much in thickness), are perfectly parallel, a circumstance which enables the workmen to select such strata, as have a proper depth for the diameter of the stone to be cut; and it is surprising with what facility the compact rock is converted into circular grindstones, which appear like piles of large cheese at the quarries from whence they are taken. The measure of a single stone is 24 inches in diameter, and 4 inches in thickness, but they are often made of much larger dimensions, the price of each of the above size, is from 2s. 6d. to 3s. 6d. These grindstones already form an important export of New Brunswick, and the time is not far distant when they will not only enrich individuals, but also become a source of public revenue and provincial wealth. From the rocks of the Coal Basin of Chignecto Bay, and the adjacent country, most of the manufactories of the United States receive the best materials for grinding iron and steel; these northern colonies and most of the Western States are supplied with the best grindstones for sharpening all kinds of cutting instruments; therefore it is obvious that as population and manufactories increase, so must the demand for the sandstone of this portion of the country supply a permanent source of commerce. Many years have elapsed since coal was first discovered at the South Joggins, on the east side of the Chignecto Channel, and while making a geological examination of the strata at that place for the General Mining Association, it appeared to me that by the direction of the different layers of rocks, that it could also be found on the opposite coast of New Brunswick. During that examination, I discovered and measured several strata of coal which had not been previously reported, and found the whole number to amount to nineteen, several of which are workable. Having ascertained the true course of these strata, a landmark on the opposite coast was noted down; but the exact point where the coal might be expected is covered with a superficial bed of gravel so far as it could be distinguished by a telescope; and, perhaps that circumstance has prevented its discovery on the N. Brunswick side, which is several miles distant, and I regret that my time has been too much occupied to pursue this enquiry further. The rocks of Cape Meranguin, Grindstone Island, and their neighboring shores, like those of the county of Cumberland, abound in fossil relics of the vegetable kingdom, belonging to that period in the earth's history when the plants from which the coal was formed were in a living state. There is scarcely a stratum along this interesting part of the Province that does not exhibit remains of some lofty arborescent plant, or humbler 4 species of the carboniferous tribes; all of these are now converted into sandstone or shale, according to the circumstances in which they were placed, and they cannot fail to produce reverence in the minds of all who behold them. Their vast dimensions show how frightful the period was when they lived, and their present petrified condition bears record of the changes and convulsions the crust of this earth has suffered. These once living vegetables now stand like sculptured monuments bearing testimony not only to their own former life, and place of abode, but their inscriptions which seem to defy even time itself, declare that this earth has been the theatre of catastrophes unknown in these later days. They now stand like beacons to guide the astonished geologist to the haven of truth, and the indelible characters they display are interpreted without the risk of error or danger of delay. Ferns form a considerable part of the fossil flora of this Coal field. They all seem to belong to arborescent species that previous to their destruction had obtained a growth truly astonishing. Equizetums, plants having some analogy to the common horsetail of our swamps, are common. The species found here are however extinct even in the tropical latitudes, and none of their kind has ever been seen in a living state. There are several species of Lepidodendron, plants resembling the fir tribes. Some of these are of enormous size. I discovered one 48 feet in length, and 3 feet in diameter at the largest end. It lay in a horizontal position, passing through several strata, and a large portion of its top had been carried away by the violence of the waves. There are many other varieties of fossil plants along these shores; but a full description of them cannot be given in these letters, as it would occupy the space intended for other matter. It may, however, be remarked, that all these plants were produced in a climate, at least, as warm as that between the present tropics, and the vegetation to which they bear any resemblance can only be found in warm regions. Many of them have no living successors, and it is far from being improbable, that even the warmest climate in the torrid zone would not supply sufficient heat to produce those families of the vegetable kingdom, that have long since ceased to exist upon this planet. It is certain, therefore, that the climate of this country was at one time extremely warm, that a remarkable reduction of temperature has taken place; and the earth has been clothed with plants adapted to the degrees of heat and light now shed upon it. By taking the most limited view of the great size of the fossil plants to which I have referred, and the luxuriant growth they must have enjoyed, we cannot fail to discover the vast quantity of materials produced by 5 the earth for laying up the stores of coal, which now add so much to the comfort and happiness of mankind. And we must also believe, that when those numerous tribes of the vegetable kingdom flourished, the earth was surrounded by an appropriate atmosphere, an abundant light, and it was as far as we can judge by comparison, every way fitted for sustaining extensive tribes of mammalia, and numerous races of aerial and terrestrial beings. It would be selfish in man, to suppose that this mighty herbage, of a former condition of our planet, was created solely to supply the fuel now found in the earth. It is far more in accordance with the all-wise Creator's works in general, that they were also given to nourish and bestow happiness to other creatures, which were co-evil with the forests now found changed into coal, or converted into solid rock upon our shores. But are the remains of those animals found? It is true there are many tribes of graminovorous animals inhumed in the earth, but some of them are discovered in situations which render it at all probable they fed on the tropical herbage of the coal period. They are, according to the most received geological opinions, separated from that herbage by extensive and deep deposits of other rocks, and by a period of time almost immeasurable. The celebrated Doctor Buckland, in his Bridgewater treatise, Vol. 1, page 62, says, ""no higher condition of vertebrata has yet been discovered in the transition formation, than that of fishes,"" an opinion confirmed by the labors of many other geologists, whose discoveries have been confined to moluscous radiated, and other animals occupying marine and lacustrine situations. But we should be careful how we infer from these facts, that there was not a corresponding exalted state of animal life to that of the vegetable kingdom, at the period referred to. And perhaps the time has not yet arrived, when a perfect theory can be formed which will explain the phenomena exhibited in the earth. It has been said by some that there has been a gradual increase in the number and perfection of plants and animals, since that remote period, when this earth first became habitable. The circumstances, however probable, as far from being proved; and there are many links unsupplied in the chain uniting the animated creation of past ages, with that now in existence. In my next letter, the

St. Andrews Beacon - Nov. 28, 1889 CHARLOTTE COUNTY'S RESOURCES.- We doubt if there is another County in the whole Dominion which offers such tempting opportunities for capitalists as does Charlotte County. Where is there another County so rich in natural resources; in mineral wealth, as Charlotte. Coal depositsat Lepreaux, granite and slate quarries at St. George,silver and gypsum at Frye's Island, copper on anotherisland, salt wells at the Bayside, immense cliffs of red sandstone at St. Andrews. What more could we ask for?What more do we want? And yet we have not mentioned the St. Andrews turnip, or the St. Andrews sardine, or the Grand Manan herring and cod, all of which possess considerable importance. Nor have we dwelt on the scenery, or its beautiful, capacious harbours, the fame of which is world-wide. Surely, if there is a happy people on the face of the earth they should be the people of Charlotte. And so they would be, if the capital was at hand to develop the rich resources of their County."

Morning News - Sep. 8, 1862 Important Discovery. - A most valuable Coal discovery has been made upon lands owned by Alexander Light, Esq., Sussex, within half a mile of the railroad. On Friday three men were set to work with spades and picks, to ascertain the probable breadth and depth of the ""formation"" - the largest ""seam"" was found to be fifteen inches broad on the surface, and upwards of a cart load of the coal was thrown out. Mr. Light intends sinking a ""shaft"" immediately to a depth of one hundred feet. The belief is that the supply is inexhaustible. Should it prove to be abundant to this Province than the discovery of a field of gold. The quality of the coal is superior, equal to the best English Orrel - it resembles the Anthracite, of a polished jet black. We tested some of it, and found it burned like the Orrel coal, highly bituminous, running together like tar, emitting a light blue flame - indeed, we never used better. The discovery of a pure article, such as this Province has long stood in need of, being certain, the next thing is the quantity. If enough can be raised for home consumption alone, the saving of money on imported coals will be immense, to say nothing of the employment which would be given to a large number of hands, miners, and operatives of one kind and another. The coals imported into this Province last year amounted to 40,000 tons, at a cost in round numbers of $200,000. Coal being found in a pure state, the labour of putting it into the market, compared with that of getting gold is but small, consequently far more profitable. For example, a day's labour upon coal will yield more to the owner than a day's labour upon quartz of the usual gold bearing character. Here, then, we have coal and gold combined, because in having one we have that which will be sure to bring the other. But if the supply be adequate, and there is no doubt of it, we shall have not only enough for home consumption, but plenty to spare for exportation; and shall in time become a successful competitor with the Sydney and Pictou Miners, inasmuch as St. John lies nearer to the United States and the other markets of the world, and can afford to export cheaper. The business this discovery when worked will make for the railroad, will be considerable. Sussex will become a large flourishing town - for it is only the coal fields of Pictou that have built up New Glasgow, now a highly prosperous place. St. John, being the depot and port of shipment, will spring ahead in the coal line with rapid strides. In support of this belief we may state that last month (August) not less than 250 vessels loaded with coals at Pictou, for distant parts, conveyed 44,287 tons. During the summer the number of tons sent away altogether was 101,403, in about 500 vessels. A fleet like this added to our timber fleet in St. John harbour would pretty well crowd us up. We feel sanguine in this matter, because we believe that the same causes here must produce the same results as in other places. Coal is an article that will always sell, and command remunerative prices. In scarcity and great demand, even for steamboat purposes, cannot fail to insure for it a steady market. We shall have information in a short time, as to the principal part of the business, and that is the supposed quantity - for all the bright prospects we have been painting up will depend upon the settlement of this vital question. As soon as we can get the necessary information, we shall at once make it known to our readers. The belief at present is that the whole country in the neighborhood of Sussex rests upon a bed of coal."

Morning Freeman - Sep. 9, 1862 Important Discovery. - A most valuable Coal discovery has been made upon lands owned by Alexander Light, Esq., Sussex, within half a mile of the railroad. On Friday three men were set to work with spades and picks, to ascertain the probable breadth and depth of the ""formation"" - the largest ""seam"" was found to be fifteen inches broad on the surface, and upwards of a cart load of the coal was thrown out. Mr. Light intends sinking a ""shaft"" immediately to a depth of one hundred feet. The belief is that the supply is inexhaustible. Should it prove to be abundant to this Province than the discovery of a field of gold. The quality of the coal is superior, equal to the best English Orrel - it resembles the Anthracite, of a polished jet black. We tested some of it, and found it burned like the Orrel coal, highly bituminous, running together like tar, emitting a light blue flame - indeed, we never used better. We hope this is not like the last coal mine discovery announced by the News."

Royal Gazette - May 9, 1860 Cap. XCII. An Act to incorporate the Saint Martin's Mining and Manufacturing Company. Section. Section. 1. Company incorporated. 10. What shall be 2. Capital, amount and division sufficient proof. Into shares - power to 11. Register of share- increase. Holders to be prima 3. First meeting, how to be facie evidence. 2 called. 12, 13. Shares of 4. Votes of stockholders delinquent stock regulated. Holders may be sold. 5. Power to make bye laws 14, 15. No transfer or and assess shares. Vote or dividend on 6. Interest payable on calls shares in arrear. In arrears. 16. Liability for 7. Advance payments on stock corporate debts. Receivable on interest. 17. Bye laws may be 8. Shareholders in arrear for made. Calls may be sued. 18. Annual and special 9. Declaration in such suit. Meetings; votes. 19. Act void if 25 per cent of capital be not subscribed within one year. Passed 9th April 1860. Whereas a Joint Stock Company has been formed for opening and working Mines in the Parish of Saint Martin's, in the County of Saint John, and for carrying on Mining and Manufacturing business and operations, who have expended a large sum of money in Mining operations, and in purchase of lands, and otherwise; And whereas it is deemed advisable that the said Company should be incorporated;- Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That William Henry Scovil, Otis Small, Frederick W. Hatheway, Albert Betts, and Michael Henry Furrell, their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Saint Martin's Mining and Manufacturing Company,"" and by that name shall have all the general powers and privileges incident to a Corporation by Act of Assembly of this Province, for the purpose of opening and working Mines in the Parish of Saint Martins aforesaid, and for establishing and carrying on Mining and Manufacturing business and operations, and for the convenient managing of the same. 2. The capital stock of the said Corporation shall be twenty five thousand pounds of current money of New Brunswick, divided into one thousand shares of twenty five pounds each, and the said Company shall have the power to increase its capital stock from time to time, in such sums as they may deem expedient, to a sum not exceeding one hundred thousand pounds, and they shall have power from time to time to increase the number of shares accordingly. 3. The first meeting of the Corporation for the organization therof, may be called by the said William Henry Scovil, or in case of his death, neglect, or refusal, by any one of the parties named, at such time and place as he may appoint, by publishing notice of the same in two of the Newspapers published in the city of 3 Saint John, at least one calendar month before such meeting is held. 4. Every person owning a share in the capital stock of the said Company, shall be a member thereof, and be entitled to vote at all meetings of the said Company; and absent members may vote by proxy, such proxy being a stockholder and authorized in writing. 5. It shall be lawful for the Company, or the Directors if empowered by the bye laws, from time to time make such calls of money upon the respective shareholders, in respect of the amount of capital respectively subscribed or owing by them, as they shall deem necessary; provided that the amount of any call shall not at any one period be more than twenty per cent on the amount of capital or stock belonging to any individual, and that three calendar months at the least shall be the interval between the successive calls, and that thirty days notice of payment being required for any call, shall be given in one or more Newspapers printed and published in the City of Saint John, in the said Province; and every shareholder shall be liable to pay the amount of the calls so made in respect of the shares held by him, not however, to exceed in the whole the amount of the stock subscribed by him, to the persons and at the time and places from time to time appointed by the said Company or the Directors thereof. 6. If before or on the day appointed for payment, any shareholder does not pay the amount of any call to which he is liable, then such shareholder shall be liable to pay interest for the same, at the rate allowed by Law, from the day appointed for the payment thereof to the time of the actual payment. 7. It shall be lawful for the said Company, if they think fit, to receive from any of the shareholders willing to advance the same, all or any part of the moneys due upon their respective shares beyond the same actually called for, and upon the principal moneys as paid in advance, or so much thereof as shall from time to time exceed the amount of the calls then made upon the shares in respect of which such advance shall be made, the Company may pay interest at such rate, not exceeding the legal rate of interest for the time being, as the shareholder paying such sum in advance and the said Company may agree upon. 8. If at the time appointed by the said Company or the Directors thereof for the payment of any call any shareholder fails to pay the amount of such call, it shall be lawful for the said Company to sue such shareholder for the amount thereof in any Court of Law or Equity having competent jurisdiction, and to recover the same, with lawful interest from the day on which such call was payable. 9. In any action or suit to be brought by the said Company against any shareholder to recover any money due for any call, it shall not be necessary to set forth the special matter, but it shall be sufficient for the said Company to declare that the defendant is the holder of one share or more in the said Company, (stating the number of shares,) and is indebted to the said Company in the sum of money to which the calls in arrear shall amount, in respect of one call or more upon one share or more, (stating the number and amount of each of such calls,) whereby an action hath accrued to the said Company by virtue of this Act. 10. On the trial or hearing of such action or suit, it shall be sufficient to prove that the defendant, at the time of making such call, was the holder of one share or more in the said undertaking, and that such call was in fact made, and such notice thereof given as is directed by this Act, and it shall not be necessary to prove the appointment of the Directors who made such call, and there upon the said Company shall be entitled to recover what shall be due upon such call and interest thereon, unless it shall appear either that any such call exceeds the prescribed amount aforesaid, or that due notice of such call was not given, or that the prescribed interval between two successive calls had not elapsed as aforesaid. 11. The production of the register of shareholders shall be prima facie evidence of such defendant being a shareholder, and of the number and amount of his shares. 12. If any shareholder fail to pay any call payable by him, together with the interest, if any, that shall have accrued thereon, the Directors of the Company, at any time after the expiration of two calendar months from the day appointed for the payment of such call, may sell the shares in respect of which such call was payable, by public auction, giving at least thirty days' notice in one or more of the Newspapers published in the City of Saint John in this Province, of the time and place of such sale, and shall sell the same to the highest bidder, and a new certificate or certificates of the shares sold shall be made and delivered to the purchaser, and thereupon he shall be deemed the holder of such share, discharged from all calls thereon due prior to such purchase, and he shall not be bound to see to the application of the purchase money, nor shall his title to such share be affected by any irregularity in the proceedings in reference to such sale. 13. The said Company shall not sell or transfer more of the shares of any such defaulter than will be sufficient, as nearly as can be ascertained at the time of such sale, to pay the arrears then due from such defaulter on account of any calls, together with interest and the expenses attending such sale, and if the money produced by the sale of any such forfeited shares be more than sufficient to pay all arrears of calls and interest thereon due at the time of such sale and the expenses attending the sale thereof, the surplus shall on demand, be paid to the defaulter; provided always, that such defaulter shall in all cases be liable to the said Company for any deficiency arising by means of such default, and recoverable in any Court in this Province having competent jurisdiction for that purpose. 14. No shareholder shall be entitled to transfer or vote upon any share after any call shall have been made in respect thereof, until he or she shall have paid all calls for the time being due on every share held by him or them. 15. No dividend shall be paid in respect of any share until all calls then due in respect of that and every other share held by the person to whom such dividend may be payable shall have been paid. 16.The joint property and stock of the said Company alone be responsible for the engagements and and debts of the said Company. 17. The time and place of holding annual and special meetings of the said Company, the manner of calling such meetings, and the mode of giving notice of same, the number of votes which the shareholders shall be entitled to give in respect of the shares held by them respectively in said Company, as also the number, eligibility, duties and powers of Directors, officers and servants, their continuance in office, removal or disqualification, and the manner of election or appointment, and any other matter connected with the objects and purposes for which the said Company is incorporated, may be established or regulated by bye laws of the said Company made at any meeting of the Company or an adjournment thereof. 18. Unless when otherwise provided or directed by the bye laws of the Company, an annual meeting of the stockholders of the said Company shall be held in Saint John on the second Tuesday in the month of June in each year, which may be adjourned from time to time; and special meetings of the stockholders may be called by any number of the stockholders representing at least one fourth of the issued stock of the said Company; and notices of the time and place of holding any meeting of the stockholders of the Company, may be given by publishing the same in any one or more of the

Headquarters - Oct. 15, 1862 and Philanthropist - Oct. 16, 1862 and N.B. Reporter - Oct. 10, 1862 and Morning Freeman - Oct. 14, 1862 and St. Andrews Standard - Oct. 22, 1862 University of New Brunswick, October 9th, 1862. - Sir, - Believing that you will agree with me in thinking that the accompanying remarks, drawn up by Professor Bailey, on the present state of our knowledge of the Mineral Resources of our Province, will prove generally interesting to the public, I take the liberty of asking you to give them a place in the columns of your widely circulated journal. I am, Sir, yours truly, J. Brydon Jack. The Editor of ""The Philanthropist"", -- As the subject is at the present time absorbing a large proportion of public attention, and as a very general interest seems to be manifested in almost all parts of the Province, in searching for and developing our metallic wealth, I have thought that a brief list of the ores already known and their localities, together with a few simple directions for the discrimination of future specimens, might possibly prove interesting to those engaged in such pursuits, and perhaps to the public generally. I have therefore prepared and given below a short list of the principal ores known to exist in this Province, with a few observations appended upon their quantity, quality and facility of working, so far as has been hitherto ascertained. My authority for the greater part of the facts mentioned below, are the labors of the late Dr. Robb, the metallurgical collection of the University, and statements, published or otherwise, of the late M.H. Perley, Esq., Dr. Gesner, and other gentlemen in various parts of the Province:-Name of Metal Name of Ore Locality Iron Red Hematite Woodstock "" "" King's County "" "" Queen's County "" "" Bathurst"" "" Richibucto Micaceous Ore Specular iron Morrison's Red Hematite West Beach Specular Iron Black River "" "" Campo Bello Iron Pyrites Cubic pyrites "" "" Micaceous iron Vicinity of Pyrites Saint John Red Hematite Restigouche "" "" Dorchester Iron Pyrites Botsford, Westmorland Bog Iron ore Rush Hill, Queens county "" "" "" Sunbury "" "" "" Campo Bello "" "" "" Charlotte Blue Phosphate Madawaska Manganese Manganite Tattagouche River "" Dalhousie Gray oxide Woodstock Wad. black oxide Quaco Wad. black oxide Dorchester Wad. black oxide Fredericton Wad. black oxide Westmorland Wad. black oxide Queensbury, York Wad. black oxide Shepody and Quaco Lead Galena Campo Bello Galena Norton, King's Galena Tobique Galena Restigouche Galena McLeod's, Magaguadavic Galena Long Island, Digdeguash Galena Emerson's Little Falls Galena Woodstock Galena L'Etang, Charlotte Anglesite Campo Bello Copper Native St. David's, Charlotte Copper pyrites St. Stephen "" "" } Green carbonate } Bathurst Green carbonate Tattagouche River Green carbonate Simpson's Island Charlotte Chalcopyrite Bull's

Creek Erubescite Magaguadavic, Salmon River, Albert, St. Stephen Copper Pyrites Campo Bello Zinc Blende Lubec 10 "" Nerepis "" Restigouche Antimony Stibnite Pr. Wm. York "" Vicinity of Fredericton Molybdenum Molybdenite Nepisiguit These are by no means all the localities in which the above named metals occur, especially as regards the Sulphurets of Iron and Copper. These are very generally diffused ores, and occur in almost all parts of the Province. Only the purer and more extensive deposits are above given. It is impossible, however, from small cabinet specimens to judge accurately in regard to the quantity or quality of an ore, average specimens being necessary to decide this point. The above list may therefore contain many which from their peculiar position or other causes may be in reality worthless, while some really valuable ores may be omitted. This source of error it was impossible to avoid. It will be seen from an inspection of the table that some two or three localities contain good ores of several of the metals. Among these Woodstock, Campo Bello Island and the vicinity of Bathurst on the Tattagouche River, are the most prominent. Campo Bello Island, especially, is rich in iron, lead and copper, while native (i.e. pure) copper occurs at St. David's, Charlotte, and zinc blende, at Lubec, Maine. Gold having also been discovered near Calais, by Mr. Goodale, this section of the Province may be regarded as one of the most promising for future exploration. Moreover no position could be more advantageous for transportation than these Southern Shores and Islands of the Bay of Fundy. It is to be hoped that the immense resources here stored away for use may soon be made a source of revenue and profit. In regard to the ores of iron, I may say generally, that the best ores for the purposes of smelting are the specular ores and red hematite (the first easily recognized by its steel-like, metallic lustre, and bright reflecting surfaces, resembling mirrors, the 2nd by its dull red earthy or rusty character) while the Sulphurets (generally called pyrites, from the fact that they strike fire like steel) are seldom used except when existing in large quantities and of great purity. Slate, however, impregnated with decomposing pyrites is valuable as the chief sources of the manufacture of Copperas or Green Vitriol. It may be of great value at some future day, but exists elsewhere in so great quantities as to be at present worthless. The same is partly true of Copper Pyrites, which closely resembles the above, but which is of a deeper yellow color, and unlike the former will yield to the point of a knife. These two ores, Iron and Copper 11 pyrites, together with an entirely valueless mineral, called Mica are those most frequently mistaken for metallic gold, and are hence frequently called fool's gold. The three may always be easily distinguished by the following means:- 1. Gold can always be cut in slices like lead with a common pen knife, is unchanged by the hottest fire, and is beaten out without breaking by the blow of a hammer. 2. Iron pyrites is of a much lighter color than Gold, cannot be cut, is very brittle, when heated gives off strong fumes of sulphur, and flies into atoms by the blow of a hammer. 3. Copper pyrites looks more like Brass than the preceding, yields to the point of a knife, but crumbles instead of cutting into slices like Gold, and also gives off strong fumes of Sulphur when heated. The two latter are frequently intimately combined, and the resulting mineral is then called chalcopyrite. Mica is wholly unlike any metal, that it has always been a matter of surprise that any one should mistake the two. As, however, the mistake is of frequent occurrence, I may say that Mica may be easily recognised by the fact of its splitting readily by the point of a knife into thin laminae or leaves. I may here state, in regard to Gold, that I am unaware of any authentic specimens having been as yet discovered in the Province, notwithstanding the numerous reports circulating to that effect. The report which was current in several of the papers last winter that specimens had been sent to the university, and found to contain the precious metal, was entirely without foundation, no such specimens having even been seen at the University during the past twelve months. It is highly probable, however, that such discoveries may yet be made. Manganese, of good quality, occurs in various parts of the Province, and resembles the ores of iron in many respects. The means of distinguishing the two, however, although simple, are not generally available to the public at large. This metal is used in the manufacture of glass, both for producing and removing colors. It is also extensively used for glazing and bleaching. The ore of lead (galena) is easily recognizable by its lead-grey color and sharp angles, easily breaking into cubical blocks. It melts readily when heated, and generally contains a small percentage of silver varying in amount in different localities. Antimony has been found in the two localitiesmentioned in the list. The statement now circulating in the papers to the effect that this is the only locality of Antimony known in North America is incorrect, it having been found (though sparingly) in Maine, New Hampshire and Maryland. Moreover, the discovery is not one of recent date, a specimen of the ore examined by Dr. Robb, and marked with his handwriting, having been in the museum of the University since before my arrival in the Province. Whether he was the discoverer or not, or whether the locality is the same as that recently announced, I do not know, he having apparently been in some doubt himself in regard to the same. This ore resembles the preceding but has a darker lustre. It may be recognized by boiling a little of the ore in strong ley (caustic potash) and after solution adding a little common Muriatic acid. If Antimony is present a dark red powder will appear, in the liquid. The metal is used in the manufacture of Type, Britannia Ware, Tartar Emetic and various medicines. Zinc blende occurs in the Province, but of no great purity. It is transparent and wax-like, with a brilliant surface. Molybdenum is a rare metal, of no importance in the arts. I have reason to think that the metal Bismuth also occurs in great purity in the Province, but as there is some doubt regarding the only specimen yet shown to me, I omit it from the list. It is used for the manufacture of type metal, plumber's solder, fusible metal, &c. In conclusion, I would say that it is highly desirable that authentic and representative specimens of the valuable ores and minerals of the province would be collected and preserved for future reference. Such a collection of minerals, ores, and fossils, representing their various localities, would be of inestimable value in the preparation of future agricultural and geological reports, or in the conducting of future geological surveys. As a numerous collection has already been made with this object, by my lamented predecessor, in the museum of the university, and as this collection is not only valuable for reference, but also directly for the purposes of instruction in the institution, it is to be hoped that those interested in the collection of such objects, will favor us with authentic and average samples of the different deposits, as they may from time to time be discovered. Such specimens, whether of ores, minerals, or fossils would be most thankfully received and duly acknowledged by the university. I would especially ask those visiting Campobello, Grand Manan, the North Shore of the Province, the coal mines of Albert and Grand Lake, and other interesting localities, to obtain and preserve any specimens they may meet, or forward them to the university. Any reasonable expense incurred in such transportation will be cheerfully repaid. The locality where the specimen is found should always be mentioned. To the farmers generally, throughout the Province, and indeed to all living in the country districts, I would say, that they may render service of great value, to the future interests of the province, by 13 he simple preservation of whatever objects of curiosity may chance to meet their notice, even though they may be unable of themselves to decide upon their value. Such collections cannot fail to be of interest to those who make them, while the assistance they may render to scientific investigators cannot be

Daily Telegraph - Oct. 7, 1880 Exhibition. - ... Minerals. - Our Ores Viewed in Their Geological and Economic Relations. - The mineralogical exhibits, though not large, are very complete. This is a branch of our industries which ought to rank next in importance to agriculture, but in our Province, at least, it has not been developed to the extent it has in the sister Province of Nova Scotia. The collection of ores and minerals products belonging to the Mechanics' Institute is the largest and is one of the first objects seen on entering the Exhibition Building bythe main entrance. Albert County is well represented inthis collection by several fine specimens of Albertite, brown shale, on which the Albertite occurs, and gypsum or plaster of Paris from Hillsboro. Various samples of this mineral are seen, as well as the calcined plaster in several stages as prepared by the Albert Manufacturing Co. The useful minerals are of great variety, namely ores of iron, lead, antimony, copper, manganese, zinc, etc., the specimens of copper and iron ores being in greatest quantity. On the upper shelves of this collection aresome fine specimens of antimony from the Hibbard mine at Prince William, and of anthracite from Lepreaux. This last, although not found in great quantity and belonging to an earlier geological age than that in which coal usually occurs, is nevertheless a valuable product. The shale in which it is found is also represented, showing that it bears resemblance to that in which albertiteoccurs. Specimens of argentiferous galena from St. Martins, received from Mr. Wanamake, are also exhibited. Behind the last named collection, to the left, stands that of the New Brunswick Natural History Society, exhibited in geological sequence. Commencing with the Laurentian and Huronian formations, which lie at the foot of the series, we find in the Huronian, barytes, or heavy spar from chance Harbour, N.S., chlorite and hornblende from Kings County and Grand Manan. Next in the scale is the Silurian, in which a large number of minerals are found. We have in this series mica from St Stephen, ironand copper pyrites from various places, galena from Campobello, native copper and zinc blende from the sameplace, and argentiferous galena from Le Tete, Charlotte County. In the lower carboniferous formation, which is likewise one of our most productive in useful minerals, we have calcite in various forms from Miramichi and the North Shore, alabaster from Hillsboro, barytes from Markhamville, agate chalcedony, cornelian, etc., from Washedemoak Lake, and pyrolusite (manganese) and manganite (a kindred mineral) from Kings County.The coal measures are represented by bituminous coal from Grand Lake, copper from Bathurst, etc. The Triassic series are shown by only a few zeolites (stilbite), and heulandite from Grand Manan. The recent formations are represented by selenite, or sulphate of lime in turreted crystals, from Sussex, iron sand from Petitcodiac, wad manganese from Woodstock and bog iron from Richibucto and St. Stephen. In the same case Mr. G.F. Matthew exhibits a collection of useful minerals, namely, granularanthracite from Lepreaux, bituminous coal from Newcastle,Queen County, polished shale (resembling cannel coal) from Caledonia, Albert Co., Albertite, or Albert coal, from Hillsboro, and peat (burnt) from Lawlor's Lake. Mr. W.F. Best, chemist, has likewise exhibited a neat little collection of useful minerals, such as bituminous coal, Albertite, lime, red granite, iron ores, antimony, pottery clay, copper, lead, manganese, graphite and marble. Mr. Alfred Markham exhibits fine specimens of manganese ores, braunite and manganite from his mine at Markhamville.The Revenue Silver Mining company have a case with specimens of zinc blende, which contains small quantities of gold, about 13-100 oz. Troy weight per ton, and also of silver and lead ores. These are from Letete, Charlotte county. Several specimens of silver-lead ore from Yarmouth, N.S. are also exhibited. A block of Iceland spar from Belledune, Gloucester County, a rather remarkable mineral, is also shown. The Spring Hill Mining Company exhibits splendid specimens of coal of

Headquarters - Sep. 17, 1862 and Philanthropist - Sep. 18, 1862 Valuable Discoveries. - Scarcely a week rolls round in which we do not hear of the discovery in one part of the Province or another of valuable ores. Until the recent gold discoveries in Nova Scotia, few persons could be induced to spend any considerable amount of time in search of the precious metals. Since that time, however, the aspect of affairs has changed. Numbers of the people, fully aware that the geological formations of New Brunswick were similar to those of the sister province, and that if rich deposits of precious metals were to be found in certain localities there, equally rich deposits were to be found in similar localities here, have been diligent and persevering in their researches. At one time we hear of the discovery of rich gold deposits, at another we learn that valuable copper ore in abundance has been found; at one time intelligence is received that valuable coal deposits have been discovered, at another we hear of the discovery of black lead mines. And so the work goes bravely on; and the discoveries increase as time progresses. The News of Monday contains an account of avaluable coal discovery on the property of Alex. Light,Esq., at Sussex. Men were set to work to ascertain the probable depth and breadth of the formation. The largest seam was found to be fifteen inches broad on the surface. Upwards of a cart load of the coal was thrown out, and, when tested, proved to be equal to the best English Orrel. It is of a polished jet black and resembles the Anthracite. The News says the belief at present is, that the supply is inexhaustible, but in order to ascertain with certainty the exact richness of the deposit, Mr. Light intends sinking a shaft to the depth of one hundred feet. Then follows another Copper Ore discovery, but this time in the Parish of Alma, in Albert county, and distant about one and a half miles from a safe harbour to which there is a good and regular descent from the works. The specimen forwarded to this office appears to be exceedingly rich. A mining lease and all the necessary privileges have been obtained from the owners of the soil by a Company incorporated under the name of the ""Williams Mining Company"". Explorations have been made of such character as to warrant the Company in believing the prospects to be very favorable. The vein has been uncovered to the length of one hundred yards on the course east and west, varying in width from six to eight feet; it is found to be stained throughout, and contains rich deposits of grey Copper Ore, some of which has been dressed and shipped to England, and some to the United States; the former producing 28 7/8 per cent., value £20 7s. 0d. sterling per ton; the latter producing 30 per cent., value $122.40 per ton. A large block of the ore from this mine, weighing 300 lbs. can be seen by the curious in such matters at the office of Wm. Davidson, Esq., Princess street. The capital of the Company is set down at $120,000, in 6000 shares of $20 each. We understand that a portion of the stock is yet open to purchasers. Next in the order of discoveries is that of avaluable mine of Antimony at Lake George, in Lower Prince William, York County, by Mr. John Hennebery of Indiantown. A Boston Chemist pronounces the specimen which he has examined a superior article. It appears that this is the only Antimony mine in America. - Courier."

S.J. Daily Sun - Jan. 19, 1888 New Brunswick as a Mining Country. - New Brunswick has never much parade of its mineral wealth, but notwithstanding, the province derives substantial advantage from these possessions. The economic minerals now mined or quarried in the province include coal, gypsum, granite, manganese, lime, grindstones and building stone, antimony, besides some less important substances. None of these minerals is yet worked to any extent compared with the possibilities. The province has no department of mines and no official with authority to collect returns as they have in Nova Scotia. The nearest approach to official statistics are to be found in a report for the year 1886, prepared by Eugene Coste, the mining engineer of the Canadian geological survey. This valuable work is published by Dawson Bros., by authority of parliament. Mr. Coste has been at pains to collect returns from all provinces of their mineral produce and export. The author is not able to tell us much about the coal product of this province owing to the desultory character of mining in New Brunswick. We, or course, know that a considerable quantity is mined at Grand Lake for local consumption in the river districts, and that this coal is used on the New Brunswick railway. It is also sold at St. John. Grand Lake district will next year be put in communication by rail with the outside world, and in a short time will be connected with Montreal, and the coal consuming regions of the west. Then we shall know whether New Brunswick coal fields are rich as has been supposed. The province once exported $100,000 worth of albertite in a year. The census of 1881 credits the Grand Lake district with producing 6,221 tons. We imported in 1886 from Nova Scotia 197,028 tons which at the value given to other Nova Scotia exports would be worth at the place of shipment $375,600. We also imported from other countries 34,845 tons of anthracite, valued at $111,260, and 8,992 tons of bituminous, at a cost of $17,535. It will be seen that New Brunswick has a fine home market. The antimony produced in Canada, comes mostlyfrom Nova Scotia. In 1886, the export of this province was 20 tons valued at $800. It was produced at Lake George, York County. The Rawdon mine in Hants county, Nova Scotia, turned out over $30,000 worth. Of graphite Canada exported $3,586 worth in 1886, all from New Brunswick. The quantity of gypsum produced in Canada has not been ascertained. The exports of crude plaster are givenas 442,833 tons for the Dominion, and 23,498 for this province. The value of the New Brunswick product, nearly all of which goes from Albert county, is $10,559. The quarries on the Tobique river have great possibilities, but are not yet strong competitors with those of Albert county. The total product of the manganese mines in Canada in 1886 is said to have been 4,789 tons, worth$11,499. Of this New Brunswick furnished 4,545 tons, valued at $22,054. The customs statement of export gives a larger value, the foregoing being the estimated worth at the mine. The geological survey people claim to have pretty full returns of granite production in Canada. This gives the total quantity in the rough at 6,062 tons, worth $63,309. New Brunswick is credited with 2,552 tons, valued at $34,509. It is perhaps not very easy to fix the value of the rough stone, but the value of the red granite, as turned out of the polishing works, was in 1886, four times the amount given. Mr. Coste admits his returns of other building stones to be incomplete. He has heard from producers of $??? Of value and it appears that this represents from three to four fifths of total output. Three returns from New Brunswick give 2,728 tons, worth $24,970. His return of the produce of lime quarries as also admittedly incomplete. The total amount heard fromat the statistical office was valued at $283,756. New Brunswick's share being $58,120. New Brunswick is the only province which produces lime for export. Mr. Coste returns includes brick, concerning which he has fourteen reports from New Brunswick disclosing a product worth $30,908. Four quarries in Gloucester County report an output of grindstones to the value of $22, 495. From above returns it would appear that New Brunswick stands well, both in respect to variety and quality of mineral resources. Our coal supply is only beginning to be available. The red granite industry hasbeen doubling its product every three or four years. Lime quarries have been for the past four years doubling their operations every year. The plaster export of 1886 was 50 per cent larger than in the preceding year, and fifteen per cent in excess of any previous year. The construction of the Tobique railway to Plaster Rock will bring a new field into operation. New investments were made last year in manganese properties, and it is probable that the work now in operation will be extended. The exports in 1886 were only exceeded in value by that of 1885 and that of 1880, while that year's sales were probably in excess of any previous year. The total value of mineral export from New Brunswick to foreign countries in 1886 calendar year is given by the customs returns at $101,349. The actual amount of sales outside the province were, as

Morning Journal - Oct. 21, 1867 Our Mineral Wealth. - A learned correspondent who has made valuable contributions to the Geology of New Brunswick writes: I have read with interest the article in the Morning Journal on the gold discoveries made by Mr. Shea. It has for some been believed, and the fact was pointed out in our Report, that the rocks of the central portion of the Province were very similar in character to those of the auriferous district in Nova Scotia, both being near or at the base of the Silurian series, and corresponding with the Chaudiere gold district of Canada, and probably with those which yield that metal in Virginia and North Carolina. I do not doubt that the drift gold found by so many observers in our central counties will be traced to the adjacent rocks (in which indeed it has been found at one or two places), but its discovery in the present wilderness condition of that part of the country will I suspect, be the result of accident, as careful and systematic search is almost out of the question. None but those who have tried it, can appreciate the difficulties of prospecting in unbroken forests.I am glad that the Prince William mines are showing signs of being actively and successfully worked. I visited them about three weeks ago expecting to find them at work with the actual smelting operations, but was disappointed, the furnace not having been completed, and the difficulty of procuring needed appliances having greatly delayed their efforts. This was at Hibbard's shaft, but both at this and at Hutchinson's every thing was active, men busily employed, some in building houses or furnaces, others in sorting ore, and others again in removing water from the pits. This is a very serious difficulty at Hibbard's mine, which is in low swampy ground, and they will need an engine before their works can be successfully prosecuted. This, I understand, they intend to procure. Of the silver-bearing capacity of the antimony at certain points I have no doubt, although I have not analyzed any samples myself. I have always believed that other metals than antimony would be found, and I still think that not silver only but perhaps cobalt, nickel and tin may yet present themselves."

Codes: 0007 / GEOL / IDX_Names: Lake George Antimony; Geology - General;
Daily Telegraph - Oct. 10, 1864 Exhibition. - ... Minerals. For the best collection of New Brunswick Minerals the first prize has been awarded to Professor Bailey whose cabinet is much admired by all, the specimens being so classified, arranged and labelled that even the unscientific observer may understand them. The Professor in his late tour through the counties of King's, Queen's and Albert, has added a large number of new specimens to his collection, and his Cabinet embraces specimens from almost every locality in the Province. I noticed Iron ores from Carleton, St. John, Charlotte, Victoria, Queen's and Gloucester; and lead ore from nine different localities. There are specimens of gold, too, but of course no discoveries have yet been made in sufficient 2 quantities to be of any service. Amongst the collection are some very fine Fossils; also curious Bone and shell beads. Indian relics - found with the skull of an infant wrapped in bark in an excavation on the Wapskehegan. To attempt a mere enumeration of the different Mineral specimens would be a hopeless task, and indeed it is a matter of surprise to persons less enthusiastic than the Professor, that during his comparatively short residence in the Province he has made so perfect a collection of its native minerals. Professor Bailey has taken the first prize also for useful minerals of New Brunswick. The second premium for New Brunswick Minerals has been awarded to Mr. G.F. Matthew, whose collection is highly creditable. Mr. Matthews has taken a prize also for Combustible minerals of N.B., the only collection exhibited. Professor Hind for his collection of the useful minerals of New Brunswick has been awarded a second prize. His collection is highly interesting, being arranged to exhibit the relation of each mineral to the mother rock, or rock in which it is found. This gentleman has lately made an exploration of the interesting Valley of the Tobique, and exhibits a map to illustrate the Minerals of the carboniferous area in that district, showing the relative position, extent and thickness of the Gypsum series, the Limestone series and the Sandstone or siliceous series. Among the minerals exhibited from this important basin are Ochres, Firestones, Moulding Sand, Sandstones for Grindstones, Mill-stone Grits, Limestones, Gypsum and Polishing Powder. Four sections are represented across the metalliferous belt of rocks extending from Bay Chaleurs to the Province line bordering on Maine. The rocks exhibited include the Red Slates of Woodstock with their associated Iron Ores and limestones,the Red Slates of the Nepisiguit and of the S.W. Miramichi, near Campbell, with Associated Iron Ores. The purple slates of the Nepisiguit and Tattigouche, with their Manganese deposits. The copper bearing diorites of the Tobique, Campbell River, and Nepisiguit. The copperbearing rocks of the St. John, the

Antimony of Prince William, with their talcose slates. Among the rock specimens from these sections are observed black slates, fine grained green copper bearing slates; Diorites, red and green porphyries; Siliceous porphyries, and green and red Siliceous conglomerates for decorative purposes, and suitable for the manufacture of chimney pieces, ornamental tables, vases, &c. Gold from drift clays and sands from several localities were also shown, from the Serpentine, the Little S.W. Miramichi, the Nepisiguit, from Campbell River, and from tributaries of the Tobique, together with auriferous black sand from two other localities. Some specimens of folded and contorted rocks were also shown, 3 illustrating the manner in which the rocks of the ""Quebec Group"" or metalliferous belt have been folded by pressure. The specimens illustrating the Useful Minerals of New Brunswick, included the Limestones, Gypsum, and Sandstones series; with materials for constructive and ornamental purposes."

Codes: 0007 / GEOL / IDX_Names: Lake George Antimony; Geology - General;
Colonial Farmer. - Mar. 13, 1865 Professor Hind delivered a very interesting lecture on Tuesday evening last, upon ""Ice, and its effects during past ages."" The lecturer stated that his subject was suggested by the season, surrounded as we now are by ice and snow, and invited his audience to accompany him to Greenland, while he directed attention to the ice-cap which covered a large portion of it. This ice-cap he represented as being in some places 200, and in others 1600 feet in thickness, filling up all the valleys and over-topping and covering the mountains. He referred to the vast amount of ice covering Melville Bay, and explained the cause; said some idea could be formed of the height of the ice-cliffs from the fact that the fishing lines used by the natives were at least 1500 feet long. That the ice rivers which flowed beneath the ice-caps were, in some instances 400 feet below the surface of the cap. The ice-bergs, he represented as being portions of these ice-caps, which while apparently at rest, were always moving forward, and breaking off they come in contact with open water, floated off and formed the fields of ice, generally denominated ice-bergs. The Lecturer said that the ice-cap which covered a portion of Greenland was its preservation; that at all seasons clear water could be found flowing there, abounding with life, while birds in countless numbers resorted to these places in search of the food brought down by the glacier rivers. Large glacier Lakes were also to be found in the interior of that country, from which the ice rivers had their origin, and the inland beaches and terraces which had so long puzzled the Geologists of Scotland and other countries, were now clearly understood and easily accounted for. The lecturer then proceeded to explain the promises upon which correct conclusions have been arrived at. The foreign rocks found in Greenland, termed boulders, he described, as being portions of rocks torn from mountain heights projecting through the glaciers, and carried forward by the ice-cap or rivers. That these rocks extended over a vast portion of this Continent, and abounded in New Brunswick. He denominated the table land of the Peninsula of Labrador, as the Land of Boulders. This country he represented as a scene of perfect wretchedness and sterility. The boulders there were the remains of vast glaciers, the rocks were rounded and polished, and in other respects clearly indicated ice action. He said that when on the Blue Mountain in the Tobique range, 1650 feet high, he had also discovered rocks which had undergone a similar operation. He illustrated his theory by referring to the rocks in the immediate vicinity of this city, to the formation at the Antimony mines in Prince William, and to the embrasure at the Oromocto Lakes, which also terminated the coal fields of this Province. He further stated that the gold which has been discovered in Canada, and New Brunswick, in the form of nuggets and in some cases as an almost impalpable powder, had been ground out of the rocks by the action of ice, and that the result of experience and observation, left not a doubt, but that at one time a large portion of North America was covered with similar ice-caps as those to be found now in Greenland. The lecturer in the course of his remarks also referred to the large extent of prairie land lying between the Saskatchewan and the Rocky Mountains. We cannot follow him further, those who were present enjoyed a rich treat, and our only regret is that, although there was a large attendance, the house was not better filled than it was. It is to be hoped that Professor Hind will favor this City with more information on this interesting subject."

Codes: 0007 / GEOL / IDX_Names: Lake George Antimony; Geology - General;
Daily Telegraph - Oct. 10, 1867 Exhibition. - The Mineral Department. - Now that our forest trees, hither to the staple article of export from our Province, are rapidly being laid low by the brawny arms of our sturdy lumbermen, it is assuring to know that the prospects of New Brunswick as a mining country are not to be surpassed by those of any other part of the new Dominion. The display in this department, though consisting entirely of private contributions, (none of the large and beautiful collections of minerals of the Mechanic's Institute and Natural History Society being on Exhibition) is very extensive, and reflects great credit upon those who must have labored assiduously to lay before the public such a varied and complete exemplification of the mineral products of New Brunswick. The two tables on the western side of the rink allotted to this department, seem to fairly groan under the glittering but heavy burdens laid upon them. The most complete and the finest collection of provincial minerals of every description and kind, consisting of six collections, embracing minerals useful, ornamental, combustible, pigments, clays and sands, and dressed ores, from the mines now or lately worked, that has ever appeared at any previous Exhibition is here displayed by Messrs. G. and R. Matthew, occupying one large table next the promenade platform. The minerals of New Brunswick are here represented by a large collection arranged in butternut cases. This collection is a complete one of its kind, showing nearly all the useful minerals of known 9 occurrence, consisting of ores of the different metals, marbles, limestones, gypsums, building-stones, mineral paints, and all kinds of rocky substance which find a use in the arts and manufactures, the whole numbering about 150 specimens, collected in all parts of the province. Among these is a specimen of silver-bearing antimony from York Co. A small collection of useful minerals, numbering 30 specimens, found in York and Carleton counties, isalso exhibited by Mr. Shea, who has lately spent a considerable portion of his time in prospecting on the tributaries of the Saint John. Among these are

some fine specimens of gold, washed from the sands of the Serpentine and Beckaguimic rivers. Combustible minerals find their place on Mr. Matthew's table, and until we saw his collection we were not aware that we were so well provided with fossil fuel. A magnificent specimen of albertite, in the centre, from the celebrated Albert mines, is supported on all sides by specimens of other coals including albertite from the East Albert Mines in Hillsborough, a lately discovered deposit of that valuable mineral, a dozen or more specimens of oil shale from various parts of Albert and Westmorland counties, samples of oil and paraffine extracted from the albertite by the Albertine Oil Company, and Petroleum or native rock oil, from an oil well on the Memramcook river, anthracite from St. John county, and bituminous coal from Grand Lake, Richibucto, Sussex Vale, &c. In this department Mr. Scoullar also exhibits a large box of very fine looking coal taken from new mines at the Grand Lake. Mineral paints, clays and sands. - A small collection of mineral pigments, of blue, green, red and yellow colors, and a large collection of clays and sands are exhibited by Mr. Matthew. Mr. Davidson also exhibits a neat little collection of clays and sands. Ores of metals. - Of these there are a greater number of exhibitors than in any other branch of the mineral kingdom. A very handsome specimen of copper glance taken from the Ellet River Mine containing about 60 per cent of copper, and handsomely mounted in a glass case, is exhibited by Mr. Fellows. Some very large and showy specimens of copper ore from the Letete mine in Charlotte county are shown by Mr. Janion, who is connected with the mine. These contain twenty per cent of copper, and the ore bearing part of the vein is from nine to fourteen inches wide. One of the cases of ores of metals is that displayed by Mr. Markham, the superintendent of the International Manganese mine. The specimens he exhibits are all taken from the mine in Hammond and contain numerous nests of very brilliant crystals of the ore, on which the sunlight reflected from every glittering point, produces a very fine effect. In this department is a splendid set of ores collected by Mr. Matthew. These include specimens of antimony ore from Cushing's and Hutchinson's lands in York Co., and from a newly discovered lode near Belleisle Bay. Manganese ore from Sussex, lead, zinc, and iron ores from various parts of King's Co., and copper ores from Bathurst and Point Wolf on the Bay of Fundy. Cards attached to these give the chief particulars in regard to the mine whence the specimen is taken. Building stone and plaster find but one exhibitor in the person of Mr. Stevens, who sends a block of brown freestone and a box of gypsum from Albert County. A small jar of Salt manufactured from the newly discovered Salt Springs in Cumberland County, N.S., owned by Mr. Allison, is on exhibition. Altogether the display in the Mineral Kingdom is a very good one; and from the collections of Mr. Matthew especially, which are scientifically arranged and labelled, may be

Colonial Farmer. - Jun. 5, 1871 Geological Report. - Continued.II. Slate Band South of the Main Granitic Area. 12 The second district into which, for convenience of description, I have divided the region explored by me, is that lying between the northern boundary of the Carboniferous area and the so-called central granitic band; extending in length from Magaguadavic Lake to the Southwest Miramichi, and in breadth varying from nine and a half miles on the St. John River to seventeen on the Miramichi; these measurements being taken in straight lines at right angles to the strike. The rocks of this district consist or argillaceous and micaceous clay slates, with interposed bands of hard fine-grained, crystalline quartzose, micaceous and feldspathic rocks resembling sandstone. These rocks, which doubtless consist of altered sediments, are generally of a light bluish-grey color, but sometimes greenish and brown from the presence of iron in various states of oxydation. They are frequently traversed by small lenticular veins and strings of quartz, generally interlaminated, but often cutting the rocks in all directions. Occasionally they are more or less calcareous, and chiefly so at and near their junction with the newer rocks. These schistose and compact rocks, which alternate in irregular bands of various but generally no great thickness, seem to be only varieties of the same or a similar mineral aggregate, but of different structure. At one point, as I shall presently explain, I have found fossils apparently belonging to these rocks; but, as the stratigraphical relations of these fossils are still very obscure, it is extremely difficult to discover the geological age, original conditions of stratification, thickness, or the succession of the component parts of the present series. I have observed in the same band of quartzite, (by which, for want of a better name, I shall in the meantime designate the compact bands) no less than four distinct planes of cleavage, or more strictly cleavage, lamination and jointing, along each of which the rock seems almost equally liable to split. Throughout the whole extent of these rocks they exhibit a series of sharp plications and occasional violent contortions, which greatly increase the difficulty of unravelling their structure. It is, however, probable that the planes of division between the compact and schistose bands are to be regarded as marking the original lines of identification. From numerous observations, many of which are recorded on the larger map, the prevailing dip, when not affected by local contortions, is NW 60 deg. - 80 deg.; this seems in accordance also with the general structure of the country viewed comprehensively, and with the direction of the fossiliferous band at the only locality where I have observed it. Where the plications of the strata are so numerous and so sharp, the dip so steep and almost uniformly in one direction (indicating overturns) the bands of different characters so numerous, as this, and so much alike, and the exposures so few and 13 interrupted, it would be impossible, in the present state of our knowledge, to construct an accurate section, or to give even an approximate estimate of the thickness of the formation. On the right side of the river St. John, the section of the country now under consideration is for the most part as elevated and uncleared marshy flat, with no natural exposures of rock except on the ridge running from the Magaguadavic settlement to the antimony mines, and on the banks and in the immediate vicinity of the main river, where numerous minor ridges and valleysoccur, running in the direction of the strike. Beyond what has been already stated in treating of the junction of the Carboniferous series, and the preceeding general remarks upon the metamorphic rocks, there is nothing specially worthy of note on this side of the main river, with the exception of the antimony mines in Prince William parish, and the carboniferous outlier in the same parish and in that of Dumfries. Of the former I propose to give some account under the head of the economic minerals of this part of the province; and shall only remark here that the rocks of the locality are of the same general character as I have already described, except that they are unusually full of quartz veins, some of which contain also calcareous spar, and that they are talcose in their aspect. The outlying patch of supposed Carboniferous rocks, about twenty four miles from Fredericton, on the river road to Woodstock, and near to the antimony mines, is of a rudely elliptical form, the major axis being parallel with the river; it is of considerable extent, covering about fourteen and a half square miles, being five and three quarter miles long by three and a quarter wide. It is chiefly situated on the right bank of the river, but a small portion extends to the opposite side. It seems to occupy a shallow trough or depression excavated in the older rocks, partly in the granitic and partly in the slate belt; the rocks of the outlier covering the junction of those underlyings. The newer rocks are nearly uniform in character and composition throughout, and consist of coarse grey grits and conglomerates combined in the same beds, and abounding in cast of calamites and carbonized impression of various obscure vegetable forms. These are apparently identical with those already described as occupying a very large area in the great Carboniferous field above the unfossiliferous red rocks; no traces of which are to be found in this outlier, which

Daily Tribune - Mar. 9, 1875 The Legislative Council bill, to enable Lake George Antimony Company to hold Stockholders' and Directors' meetings elsewhere than in Fredericton, was committed, Mr. Phillips in the chair. Agreed to. ...... Fredericton, March 9 After routine Hon. McQueen committed the Belleveau,Albertite and Oil Company Bill, Humphrey in the chair. The Bill is almost a transcript of the Bay of Fundy Red Granite Company Act, and the mover explained that should it pass a company will be formed for the purpose of boring for albertite and oil at Belleveau Village. He dwelt on the benefits which would flow from the establishment of the necessary works of the company, and asked for the passage of the bill. Hon. Mr. Crawford said that as there was a section in the bill exempting the property of the company from local taxation, except that for schools, he would move its postponement for three months unless it was struck out. Hon. Mr. Willis and Mr. Davidson argued against the principle of exemption from taxes for the same reasons as those advanced by them against Crawford's Manufacturer's Exemption Bill. Hon. Mr. McQueen said he felt with the gentlemen interested in the passage of the bill that the proposed Company would be the means of enriching the District and County in which it was established, and this claim for exemption was, therefore, a valid one. If, however, the House desired, he would consent to the striking out of the exempting section. Mr. Davidson thought progress should be reported in order that the measure might be closely scanned and its provisions more thoroughly understood. This was opposed vigorously by McQueen, seconded by Smith, and when the exempting section was reached McQueen argued in its favor, and was opposed by Dow, Smith, Smith, Pickard and others, all of whom, however, were in favor of the bill. The section was struck out and the bill agreed to."

S.J. Daily News - Jun. 19, 1867 Act passed to … Ratify and confirm the incorporation of the New Brunswick Antimony Co." Royal Gazette - Sep. 25, 1872 Government Notice. Under Act 25th Victoria, Chapter 28. These are to certify, that Jed Frye, of the City of NewYork, State of New York, U.S.A., Francis Hibbard, of Saint George, in the County of Charlotte, Province of New Brunswick, John J. May, of the City of Boston, State of Massachusetts, U.S.A., A.H. Gillmor, jr., Tobias Gillmor, Kinsman P. Gillmor, and Eldorado Gillmor, of SaintGeorge, in the County of Charlotte aforesaid, have this day filed in my office a Memorandum of Association, for the incorporation of a Company to be styled ""The Lake George Antimony Company"" for the purpose of mining for, and working of Antimony, and other Ores and Metals, with a capital of two hundred thousand dollars, ($200,000), to be divided into two thousand shares of one hundred dollars each; and stating that the office or principal place of business of the said Company will be established at Fredericton, in the County of York, and Province of New Brunswick. Dated at Fredericton this 19th day of Sept., A.D. 1872 Jno. Jab. Fraser, Prov. Sec'y." Daily Tribune - Mar. 18, 1874 Legislature. - ... In reply to Mr. Gough the Secretary said part of the mining appropriation of last year went to pay back claims, and only about $1000 were spent on the borer account. The present grant of $2000 is for the diamond borer alone. Mr. Hibbard referring to the mining policy of the Government, thought $2,000 too small a grant for this year. The Government was justified in purchasing a diamond drill, and it should pay half the whole mining expenses of the Province. Lumbermen can count on every tree on an acre, while minerals are an uncertainty. As the Government takes part of the profit of working mines, they should be partners in paying the expenses. The Lake George Antimony Co. paid twelve or fifteen thousand dollars before they could reduce their ore, and now any man can come and look at their works and do the same for twelve hundred. That Company is now making their ore an article of commerce, and, as a matter of justice, royalty should be withdrawn. Members may say what they like in reference to his following the Government because of the mining grants, but he was prepared to answer any questions on that head. The Lake George Company has spent $52,000, and is to spend $12,000 more this season, and yet operations of this class are alone of all our industries taxed by the government. He thought the Lake George Company should have a grant this year, the same as last. The borer will enable the Province to develope mining much better and cheaper than through any other means. ... and the mining grant were passed."

Royal Gazette - Jun. 16, 1875 CAP LXIV. An Act to Authorize the Lake George Antimony Company to hold Stockholders' and Directors' Meetings elsewhere than in Fredericton. Sec. Sec. 1. Meetings authorized 2. Not to change place of to be held at places business. Other than Fredericton. Passed 10th April, 1875 Whereas the Lake George Antimony Company has been duly incorporated under the Act of the General Assembly, twenty fifth Victoria, Chapter twenty eight, intituled An Act relating to Corporations, and by the Memorandum of Association filed in the Office of the Provincial Secretary, it is stated that the office or principal place of business is to be established at Fredericton, in"

Daily Telegraph - Sep. 26, 1910 The Copper Resources of N.B. - To the Editor of The Telegraph: Sir, - In The Telegraph of the 19th inst., appears some opinions of one Dr. Wilson who, it seems, isan employee of the geological survey department at Ottawa. It also further appears that Dr. Wilson has been engaged during the summers of 1909 and the present year investigating the copper properties of Quebec, Ontario, Nova Scotia and New Brunswick with a view of publishing a tabulated report on the copper resources of the Dominion. Pending the publication of this report Dr. Wilson has been giving opinions as to the copper possibilities of New Brunswick, giving as his opinion judging from what he had seen 'that copper does not occur in New Brunswick in such quantities or richness as would make the exploitation of it a commercial success.' The chances are that Dr. Wilson has either not seen much of the copper areas of New Brunswick or has enough knowledge of such matters as to make him what would be considered a sound authority, and is giving utterance to views which are both absolutely incorrect and absurd. It would have been in much better taste had he refrained giving publicity to a statement that any one at all versed in the copper resources of this province knows to be untrue, incorrect and misleading, until his report was fully tabulated and published. The curious part of it is that this opinion should have been so freely and publicly given when it is evident that Dr. Wilson has seen evidently but a very small portion of the copper outcrops of New Brunswick. That there are areas which he has seen that may not have been rich enough to be economically valuable may be correct, but I can tell Dr. Wilson, and others can do the same, that he is utterly mistaken in his views, and should have made himself conversant with the whole resources and facts in the copper line in New Brunswick before he so glibly made a statement that is absolutely untrue. Did Dr. Wilson visit, and does he know of theLumsden copper mine in Albert county on which considerable money has been spent, and which shows a vein matter of 20 to 24 feet in width of first class commercially valuable ore, carrying from 4 to 7 per cent copper and gold and silver in combination of good value?Did Dr. Wilson visit the Vernon mine in St. John county where there is a goodly quantity of most valuable copper ore of the bornite variety running as high as 20 to 30 per cent copper, and which is undoubtedly commercially valuable?Did Dr. Wilson visit the old 'Freeze mine,' so called, in the New Ireland district of Albert county where there is undoubtedly copper ore of high grade carrying gold and silver and beyond any question commercially valuable!Did Dr. Wilson visit the ore body or vein of chalcocite or sulphite of copper carrying silver at Jordan Mountain near Sussex, where a positively certain ore vein of eight feet exists giving right on surface upwards of $25 a ton in value and which will probably average 10 per cent copper all through, with abundance of ore, and once opened up will prove commercially valuable? Did Dr. Wilson examine the splendid bed of copperore near Annidale in Kings county which for some time past has been quietly exploited and has a large body of chalcopyrite ore and shows ore that is undeniably rich, and is commercially valuable? Did Dr. Wilson examine the copper ore veins inseveral parts of charlotte county which most positively contain copper ores carrying high percentages and carrying also gold and silver freely, and which are positively commercially valuable? And so I might proceed enumerating other instances in new Brunswick, but it strikes me these are enough to prove that Dr. Wilson has been talking through the top of his hat and before again indulging in such condemnatory remarks he better zealously apply his energies to ascertaining the true facts in the premises, and not reiterate the ideas and opinions of others, with which he has evidently been stuffed. The question also comes prominently into sight here as to whether the geological survey department of Canada requires its members to pass and give utterance to decided opinions on mining possibilities, as to their value or non-value, and rather to present a full and concise report on the facts as they exist, leaving to others the onus of investigating them for commercial values and exploiting of the same. It is within the memory of the writer where a prominent member of the geological survey expressed openly the most decided opinion that the oil and gas of Westmorland and Albert counties were simply delusions and no good, that there could not be any commercial value in the shales of New Brunswick and yet today both are proving very important factors in our mineral wealth. Might it not happen equally as well that Dr. Wilson has formed premature views and opinions on the copper wealth of New Brunswick which he may in the future have to retract? It is, of course, undeniably true that mining values are frequently overrated, but it does not follow that every mining location is unworthy of exploitation, and as one who believes, not only in its copper but in iron, manganese, antimony, gypsum, lead and silver, baryta, etc., which are slowly but surely coming into prominence, I most emphatically object to men such as Dr. Wilson making statements that are calculated to create timidity and distrust among our own people and prevent capital being induced to look carefully into and develop mineral wealth. Trusting you may find space for the foregoing, I am, Yours, etc., One Interested. Sussex,

Codes: 0019 / 0311 / 0691 / E2 / X1 / J8 / GEOL / IDX_Names: Wheal Louisiana Copper; Letete Mine; Markhamville Manganese; Oil and Gas - Kings Co.; Grand Lake Coal; Albert Mines; Geology - General;

Morning Freeman - Oct. 10, 1867 and N.B. Reporter - Oct. 11, 1867 Exhibition. - Minerals. -The show of minerals is not large. One of the most interesting articles exhibited is a box of coal taken from a vein 2 1/2 feet thick, lately opened on what is known as the Cokely farm, by the Grand Lake Mining Company, for which Mr. Scoullar is agent. This coal is remarkable for the intense heat it emits, and its great durability. For the house or the workshop it has no superior we believe. The specimen is clear and bright, entirely clear from all earthy matter or other extraneous substance, and the pieces are of a large size. We were glad to learn that the vein is improving in size as the work progresses. Of course, Albertite makes its appearance, and 8the oils distilled from that singular mineral. the company who have been boring for oil on the Memramcook send a small specimen of some Petroleum they have found, and some lumps apparently of the same substance consolidated. There are specimens of copper ore from various quarters, and of many other ores of sandstone, of sand, &c., &c., and in the Car Shed are specimens of gold bearing quarters, found in the Province, and some small particles of gold. Mr. Matthew's collection of minerals, which seems to be growing more extensive every day, is so large, and the specimens are so numerous, that it would occupy more than one column of our paper merely to give the names of them all. It proves conclusively that New Brunswick possess an immense variety of minerals, whatever may be the value of the deposits. Unfortunately few mines have yet been found to pay for working them. There is a copper ore by J.J. Fellows, manganeseby A. Markham, and a quantity of gold bearing quartz from Victoria county, by W. S. Shea, attracted considerable notice. There is also copper ore by E. Withers, while Mr. Janion shows some fine specimens of the same minerals from L'Etete mines."

Weekly Record - Fri. Jan. 11, 1889 For some months past our provincial papers have been filled with mining items concerning the new developments that are constantly going on in Nova Scotia and New Brunswick, and of the sales of mining properties in various quarters. Evidently there must be some foundation for these facts, and it goes to show that we in the Maritime Provinces, possess the hidden wealth that means in thefuture unbounded wealth if the same only be taken up and developed in a bona fide and legitimate manner. It is too true that amid all the bona fide and honest attempts at development that takes place in the opening up of our mineral deposits, that much is done, and has been done in the past, to bring reproach and discredit on our mineral resources, to cause a wide spread feeling of distrust to prevail. This is what is known as snide or wild-cat mining. Of all such ventures it is well to beware. Again another stumbling block is apparent at times, as many of the well meant efforts that are made to open up our mineral properties. Joint-stock companies are organized, and a glowing and over sanguine prospectus is issued. Stock is subscribed, and when matters are in good train for work, either the promoter or some relative of some stockholder or some particular friend who is in want of something to do is put in charge of the work of development and expenditure of funds, who probably knows as much about mining as a cat knows about running a sewing machine, and the result is, a failure and nothing to show for the funds expended, as a writer lately put it, but 'an eloquent hole in the ground'. To those who go into such matters honestly, carefully, and legitimately if they can have the patience and perseverance necessary the result will in the end be satisfactory. Another feature which serves to retard the progress of this branch of business is the extortionate value placed upon the deposits by the owners of the same. A few men perhaps will band together, take up a prospect, expend perhaps not over $500 to open up the same and make a good showing. Capitalists come along willing and prepared after a careful examination to purchase and work the same; provided reasonable figures are asked. They are promptly frightened off by an unreasonable demand for $20,000, $30,000 or $50,000, for what has in reality cost them perhaps not over $500 to $1,000. The sooner our people get rid of this idea the better for all concerned. Meantime, extraordinary activity is being displayed in mining matters in both Nova Scotia and New Brunswick. The gold mines of Nova Scotia attracting particular attention. Many bona fide sales of mining rights are being made; and others are now on the tapis. In Cumberland County reports are in circulation of two large and important coal discoveries that bid fair to be of importance in the near future. In Halifax County, near Musquadoboit, reports of a new find of silver ore of large and apparently valuable proportions, is reported.At Musquash, below St. John, a find of rich silver ore is reported on the property of Charles F. Clinch, Esq. InGloucester County, N.B., a large bed of magnetic iron ore and copper of valuable proportions is reported, and so on from day to day new finds are being discovered which only require the careful, honest, and judicious expenditure of capital to place them in the ranks of paying properties. The gold mines of Nova Scotia are, when in actual operation, making large and remunerative returns, and many new outfits of machinery are now being put up in various parts of that province on new discoveries, and even in districts that were formerly worked and to all intents and purposes abandoned. We therefore feel that with the vast mineral wealth of coal, iron, gold, silver, copper, manganese, antimony, plaster and limestone in Nova Scotia and New Brunswick that a bright and prosperous future is in store for the owners of these properties if they will but handle them in a careful, judicious and business like manner, avoiding the many professional 'snide and wildcat' speculators with which the provinces has been in the past infested."

Codes: 0038 / GEOL / IDX_Names: Red Head Harbor; Geology - General;
St. Andrews Beacon - Aug. 31, 1905 Geology of Charlotte County. - (By Dr. R.W.Ells). - The first part of the season of 1904 was spent in completing the study of the geology of certain parts of Charlotte county, New Brunswick, the survey of which owing to lack of time, was left unfinished last season. This work included the examination of the rocks of the shore of the Bay of Fundy, between Beaver Harbor and Point Lepreau, where, at different places, through the agency of intrusives, the ordinary sedimentary rocks of Silurian and Devonian age had become altered to the condition of schists of pre-Cambrian aspect. Surveys necessary to connect the work of last season with the shore roads were also completed, but there yet remains the survey of the railway between St. Stephen and St. John, of which no plans are available, in order that the map of the county may be properly compiled. On the island of Grand Manan, the western side, and in fact the greater portion of the island, is composed of trappean rocks or diabase, similar to those which form the North Mountain range of Nova Scotia. No trace of the Triassic red sandstone was observed. The rocks of the southeastern portion comprise large masses or eruptives, similar in character to those already described as occurring on Campobello and Deer Islands to the north west, which are intrusive through slates and conglomerates of Upper Silurian age, with small areas of limestone, the whole resembling what was found on Letang peninsula, south of the village of St. George on the mainland.

The slates are greenish and gray with purple beds, and the action of the intrusives on these is quite marked. In places they have become schistose. The actual contact of the traps or diabase was seen at only one point on the shore north of Seal Cove, on the south side of Red Head. Here, the extremity of the point is occupied by reddish and greenish grey slate, and at a distance of 300 paces west from the point, there is a sharp contact between the reddish slates which dip N 60 degrees, with a band, at the base, of about two feet, which is crushed and holds pebbles of altered slates and trap. The first part of the igneous rocks consists at the contact of about fifty feet of conglomerate composed of augite pebbles in a dirty green augitic paste, beyond which the trap is columnar for some distance along the shore in the direction of Seal Cove. The trap pebbles are of all sizes from that of a walnut to masses of a foot or more across. Seventy paces west of the contact with the slates, a band of similar conglomerate, about six feet wide, extends up the face of the columnar trap, filling an apparent line of fracture in the latter, after the manner of a later dike. As to the other eruptives of the island, associated with the Silurian rocks, possibly the best exposure of these is seen at the north east pint known as Fish Head, on the north side of Cameron Cove, which lies just to the north of Flaggs Cove. They form the whole shore between the light house and Whale Cove, and consist of greenish diabase, reddish feldspathic rocks and imperfect syenites. Their contact with the slates is well seen on the north side of Cameron Cove, and is here clearly intrusive. The slates are not only altered along the junction of the two series, but portions of the slates are caught up in the intrusive mass. Just where the outer light house point joins the main mass, there is an intrusive dike of the trap similar to that of the west shore, with a breadth of about fifty feet, cutting across the diabase of Fish Head in an almost east course. These rocks have been described in such detail in the Report by Prof. Bailey, 1870-71, that minute descriptions here are unnecessary. They are similar to the eruptives found on the Letite peninsula and on Campobello and Deer islands, and their action on the Silurian strata is similar. These strata have sometimes assumed a schistose structure near the contacts, with the formation of quartz veins and strings of dolomite, while certain of the associated limestones are nearly crystalline. Probably the best exposures of these exposures of these Silurian rocks on the island are to be seen around Flaggs and Cameron coves, and on the shore about half a mile south of the former place. At these places the slates are associated with intrusives, generally greenish diabase, distinct from the trap rocks of the islands, which cut the other intrusives and are of a later date. As displayed on the shore below Flagg's cove, the sedimentaries consist of large ledges of purple conglomerate and sandy shales, with black slates and green schists. The conglomerates contain pebbles of dark felsite, quartz and purple slates, are cut by quartz veins and sometimes assume a schistose structure. They resemble similar rocks seen at Back Bay on the main land where they contain Silurian fossils, and apparently overlie the greenish grey slates of Flaggs cove. The contact of the conglomerates with the slates is often irregular, the former showing local development and with tongues of purple shale extending into the conglomerate mass. The black slates in association are like similar slates seen in Cameron cove south of Fish Head, and, like them, are highly altered either by the agency of the green intrusives or in part by the trap rocks which touch the shore near this place. While from their peculiar character they were at one time supposed to possibly represent Pre-cambrian rocks their manifest resemblance to the altered Silurian slates of the mainland in Charlotte county and the islands to the north and west, in which Silurian fossils have been found, renders it very probable that those rocks of Grand Manan, like those of Letang and Letite may also be classed as altered Silurian. Along the shore, the green eruptives are seen at frequent intervals to the east limits of the outcrops of Red Head where the trap of the island extends to the southeast shore. Where these slates are seen in small outcrops they are invariably altered, but preserve a general similarity of aspect. On several of the islands off this part of the coast, notably Long Island, the Ducks and Nantucket the greater part is occupied by intrusives, frequently diabase. In certain places, however, as on Big Duck Island, a greenish, or sometimes purple ..?.. Porphyry is found. Banked by greenish and occasionally purple tinted schistose slates of the usual type. The bulk of the older rocks, therefore, of this part of the island, as contrasted with the traps, may be classed as eruptive, with small areas of altered Silurian sediments. In this respect Grand Manan corresponds closely with Deer Island and Campobello. On the mainland the rocks of Beaver Harbor and of the coast east to Lepreau were also examined. In this area several points of structure were noted concerning which some doubt existed last year. On the road from St. George to Beaver Harbor after passing over the series of slates which extend from Letite to the Pennfield ridge and which are of Silurian age, the reddish and purple weathering felsites are met with in a brook about two miles south of Beaver harbor. These extend to the village, forming hills. The felsites invade grayish, greenish and purple slates of the Mascarene series on the north side of the village with bands of conglomerate of a dark reddish tint. These rocks are schistose and overlie a thick series of generally black slates which form the headland south of the village, and which hold plant stems and are apparently of Devonian age. They are cut by masses of feldspathic granite and green diabase which have altered the beds along the contact. The eruptive rocks extend thence to the lighthouse point. Similar rocks are seen on the east side of the harbor. It is probable that the Devonian rocks of this place have a somewhat local development and rest upon the Silurian of the Letite series. Going east from Pennfield ridge to Crow Harbor, after passing the gravel deposits which form the large plain along the ridge road, masses of green diabase occur for a distance of a mile along the road to the shore. These are succeeded southward by gneissic diorite, and these again by felsites and gneissic granite with schists, often mixed with a basic granite. Along the shore of Crow Harbor the rocks are schists of an older type, as also at Red Head cove. They are gneissic, sometimes talcose, and are associated with diorite and basic granite which are intrusive. On the east side of Red Head Cove there is a copper mine which was opened in 1878-79, and reopened about five years ago, a considerable amount of development work being done. The ore occurs in the schists at the contact with the intrusives and consists for the most part of iron pyrites in irregular gashy deposits. Only a small quantity of copper is visible. These rocks, from Crow's Harbor east to Barnaby Head, appear to

St. Croix Courier - Apr. 5, 1956 Buchanan in Legislature: - Reviews Mining, Forest Conditions in Province. - Fredericton. - Lands and Mines Minister Norman Buchanan of St. Stephen reviewed mining ..... making specific mention to Charlotte county ...... Interesting. - The minister said nickel in 'the St. Stephen area' and copper on the 'south coast' of the province were still of interest to mining companies. He did not elaborate. '... Speaking of mining, sir, it is like a story I read the other day of a pink and blue surprise party held in one of the homes and after the lady opened all the parcels she said: 'I will tell you of another surprise, I am not expecting.' That is the way it is in New Brunswick. Nobody was expecting any discoveries would be made here. I didn't mean to be rude, sir. 'We might wonder why these mineral finds were delayed. To put it simply, it was because of the terrific overburden, excepting the Brunswick property which will be mined in the open pit method. 'The great difficulty was that the old methods of prospecting wouldn't apply. Prior to the discoveries in New Brunswick, geophysics was somewhat like water witching. They have proved themselves, they have shown their worth and discovered for us that which is going to be something of great importance. 'In geophysics we simply mean the magnetometer and electromagnetometer air and ground surveys. A magnetometer is a survey which measures the variation in the earth's magnetic forces. By these variations and the measures of the variations, different forces indicate different types of minerals. The electromagnetometer measures the phase difference between the current in the primary field and induced current. The measure of these phase differences then indicates to the prospector that there is a certain mineral there but the amount of it has still to be ascertained. Several Methods. - 'There are other things that contribute - geochemistry, which is the analysis of water and soil which indicate the proximity of minerals. 'There is geobotany which is the analysis of leaves and roots which indicates the proximity of minerals. Discovery depends on all of these things being taken together and studied with the use of maps and the study of geological structure, sir, and a high degree of application and perhaps some luck, because many anomalies are graphitic. 'This must be followed up by drilling to indicate the quantity of the quality. As Mr. Glendenning said, delimited as to attitude and grade of ore all done in logical sequence. This, then is followed by a study of the treatment and disposition of these ores which includes research of processing and separation. 'There has been some suggestion that we should be concerned because so much time has elapsed. When we think of other mining operations of this magnitude we understand that seven to ten years is not long to work out these problems. I do not think we should be disturbed. We should be mindful that the first orebodies were discovered in 1953 and their problems are much more complex. Apart from the known minerals we have also, inthe Moncton area, oil. Mr. Elwell from Boston indicated to me they were having some measure of success. The oil shale has been staked and worked on for some considerable time and we hope the young men working on this will come up with something worthwhile. Nickel Here? - 'Several parties have expressedinterest in our salt deposits.'The gypsum plant in Albert county has added new equipment and it would seem they have stabilized themselves.'The cement plant at Havelock is working full capacity and on last report had a full year's order ahead.'The nickel in the St. Stephen area and the copper in the southern coast still suggest interest tomany of the mining people.'The manganese in the Woodstock area at the moment is being treated in a pilot plant in the Niagara peninsula.'Just recently someone brought me a sample of asbestos and I trust it will prove successful. All this is indeed stimulating to our province. ...."

S.J. Daily Sun - Nov. 7, 1891 Mining Notes from New Brunswick. - (Correspondence of the Canadian Mining and Mechanical Review). - Without preamble let me say that mining in New Brunswick is comparatively of small dimensions, but there is hope for the future. The mining resources of the province have long lain dormant for want of a full and complete mining law. Last session this was remedied to a great extent, and a Mining Act passed similar in all respects to the Nova Scotia mining act - the only observable difference being in the royalty on gold, which is placed at 2 1/2 per cent., whereas in Nova Scotia it is only two per cent. Much dissatisfaction is expressed by many land owners at the new act, as by old statutes enacted some years ago, all mines on private lands were vested in the owner. The fact of it being so, however, never seems to have stimulated the mining industry in the province, hence the repeal of the same, and a general act empowering the government to issue rights of search, prospecting licenses, and leases on all lands, both private as well as crown lands. It is said the act will be, in many respects, amended during the coming winter. What is done will be fully reported to you at the time. Since the passage of the act, many persons have availed themselves of its requirements, and numerous applications for areas have been filed in the surveyor general's department, over which a number of disputes have risen already and which are being fully considered. Many persons in the province itself, are unaware of the existence of the mineral deposits of New Brunswick, but within its borders may be found most positive traces of gold, galena, copper, manganese, iron, coal (both hard and soft), gypsum, baryta, antimony, iron, pyrites, plumbago, nickel, and traces of tin and asbestos have been met with from time to time. In addition to this there is a strong indication of petroleum, natural gas, salt beds of importance, brine springs, from which the best salt in Canada can be manufactured, mineral springs in abundance, and granite and freestone quarries of the greatest value, and limestone in almost inexhaustible abundance. The famous Albertite coal of Albert County, atone time was the most extensive mining operations ever conducted in the province, from which thousands of tons of the precious Albertite was extracted, and its stockholders became very wealthy from its operation. The supply of the mineral, however, gave out; the mines were abandoned and all the costly machinery in due time removed and sold. Indications of this mineral are still to be met with in Albert, Westmorland and Kings counties, and much time and money has been spent in prospecting for it for years past. There are many who believe it will be found again in sufficiently large quantity to pay for working. In various parts of the province work of exploration is going on quietly for different minerals.In Charlotte County, at St. Stephen, much activity is being displayed in the development of an iron pyrite body which, to say the least, is attracting considerable attention from home and American capitalists. The ore, which seems to be a combination yielding copper, silver, with occasionally some gold, and a fair percentage of nickel is of a very large extent, being quite near to shipment, and in one case on what is known as the Hall farm, has shown a width of 250 feet, and can be distinctly traced for some distance. Numerous assays have shown from 1 per cent. to 2 1/2 per cent. at times of nickel, and considerable work of development has been and is now being done. A number of properties, it is said, have been bonded to American capitalists. What the final outcome may be it is hard to state, but many are confident that a body of ore, rivalling to a certain extent the famous nickel beds of Sudbury, are in this locality. One thing can be stated with accuracy, and that is that the ore from the Sudbury district and the St. Stephen ore are exact counterparts of each other so far as looks and appearances go.In Kings county, near Sussex, manganese exists. The Markhamville mines, which have been worked almost continuously for the past thirty years, are at present not showing up very well. It is said by many the ore is exhausted, while others scoff at such an idea. In other sections large bodies of manganese exist and only await the advance of the capitalists, and a market demand which, while frequently fluctuating, seems very quiet at present. This mineral also exists in good quantities in Albert county and some portions of St. John county. In Gloucester county exist splendid beds or belts of magnetic iron, and also every appearance of large andgood paying galena belts, some of which are being quietly tested, so it is stated, by American capitalists. On one of these veins or belts, assays of the ore have shown a yield of from 10 to 60 ounces of silver, and from 12 to 15 dwts. to as high as two oz. and more of gold in combination.Below St. John, for many years past, considerable money has been spent in the search for anthracite, and those interested firmly believe their efforts will be crowned with success.In York county, it is beyond doubt that valuable deposits of antimony exist. In past years mining operations were conducted there, but the matter assumed more of a stock gambling operation than that of legitimate mining, and together with reckless and extravagant modes of mining, the enterprise got a black- eye, so to speak, and that

Royal Gazette - Jun. 4, 1862 Cap. LXVIII.An Act to incorporate the Elgin Gold Quartz Mining Company. Section. Section. 1. Company incorporated. 6. Capital stock liable 2. First meeting, when to be for any call. Called. 4 3. Capital stock and shares. 7. How sale shall be 4. Liability of shareholder. Made. 5. Joint stock, &c. alone 8. Act void unless 25 liable for debts. Per cent be subscribed within one year. Passed 23rd April 1862. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That A. Edwin Botsford, James Steadman, Oliver Jones, Alexander McBean, W. Boyant Kaye, Alexander Wright, James Adams, Oliver Barberie, John Russell, Robert Dunlop, Paul R. Moore, Francis O'Reagan, and William C. Mullin, and their associates, successors and assigns, shall be and are hereby declared to be a body corporate and politic, by the name of ""The Elgin Gold Quartz Mining Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of the this Province, for the purpose of mining and crushing gold bearing quartz, and for erecting the necessary works and machinery there with connected, and for carrying on such other business as may be incident thereto. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the above named persons. 3. The capital stock of the said Company shall be ten thousand dollars, divided into two thousand five hundred shares of four dollars each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of, or to carry on the operations for which the said Company is incorporated; which call or assessment may be sued for and recovered in any Court of Record within the Province. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. The capital stock held by any shareholder in the said Company at the time of making any call or assessment thereon, shall be liable to the payment thereof; and in case of non-payment of such call or assessment at the time when the same shall be made payable, the Directors are authorized to order a sale to be made of so many of the said shares as they may think necessary for the payment thereof, with interest and expenses. 7. Such sale shall be made at auction, upon not less than thirty days' notice by the President, in some newspaper published in the City of Saint John, and the stock shall be transferred by the President and Secretary to the purchaser, who shall thereupon be entitled to a new certificate thereof; and the proceeds of such sale shall be applied towards paying the amount of such call or assessment with interest, and the costs, charges and expenses of such notice, sale, and transfer, and the residue (if any) to the former owner. 8. Unless twenty five per cent of the capital stock shall be subscribed within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the

Morning News - Apr. 30, 1862 Gold Quartz. - The fact that the Government introduced into the Legislature and carried without any opposition a ""Gold Bill"" to provide for anticipated discoveries of the precious metal, has led some persons to believe that perhaps there is something tangible in the reports which occasionally find currency - of gold having been found in different parts of the Province. What the precise nature of the Act is we do not know, as the members of the House appear to have thought it unnecessary this Session to forward copies of printed bills (in which the public generally take an interest) to the public journals for their information - not even in the case of important City bills which have been drawn up in Fredericton. But we suppose the Royal Gazette will contain it bye and bye. Be that as it may, we have here to notice that during a debate in the House of Assembly, specimens of gold which had been found in Albert County, were handed round among the members, and the opinion was expressed that very strong probabilities existed that important discoveries would be made in that county at an early day. Paragraphs have found their way into thenewspapers at different times respecting discoveries in other places. For instance, it was said that gold had been found at Hampton, and we ourselves have examined specimens in which gold could be detected with the naked eye. Next it was alleged that quartz raised at Chamcook and L'Etete in Charlotte County was found to bear gold; and some of this quartz was sent to a Boston chemist whose report states that there really was gold in it, but ago it was said that gold had been found on the Oromocto River, although this is probably only a repetition of a similar statement respecting that locality, which was circulated several months since - Whether there is any truth in it or not we have not heard. It is alsoconfidently stated that the precious metal has been found near Sackville. Whatever room there may be for exaggeration in the above it is nevertheless quite clear that gold has been found in the Province; and it is our opinion that if the parties who have made these discoveries - even though their labor has been very triflingly rewarded - would persevere with their searches, in the vicinity of theplaces they have taken the gold from, they may yet obtain very profitable returns. It is the belief of scientific gentlemen that gold exists in the Province; and one gentleman in the city who is well informed upon this subject, does not hesitate to say that it will yet be found in the streets of St. John! The number of places in Nova Scotia where it exists, is really remarkable, and all originating out of the Tangier discovery. When it was known that gold was found at Tangier people in other parts commenced prospecting and examining the stones and earth in their own locality. Inquiry was stimulated on all sides, and the desire to acquire wealth in the shortest possible time imparted a keenness to the eyes of ""prospectors"" which they had never before possessed. The result has been the discovery of gold in not one but twenty places - the gold being taken from quartz, as Lunenberg is the only place where it is found in washings. ""A miner"" who has spent some time and money in searching for the metal wrote his experience to the Halifax Chronicle a few days ago. He says he first went to the Lunenberg washings, and although report had exaggerated the richness of the sands, he saw enough to convince him that gold was there in paying quantities, requiring only improved appliances for separating it to make highly remunerative work. He next visited Tangier where, he says, the appearance of the quartz (to an unpractised eye, at least) indicated no great richness; and for want of proper ""crushers"" it was impossible to say whether money could be made or not. [This was before the introduction of good crushers for extracting the gold. We wish our readers to note the last paragraph particularly as we shall refer to it again.] The miner next went to Wine Harbor, Isaac's Harbor, Laidlaw's farm, and Sherbrooke. In all these places gold had just then been discovered, but there was no proper machinery for extracting it from the quartz; consequently it was impossible to tell the extent of its richness. After examining all these localities he has at last settled down at Sherbrooke, which he thinks affords the best field for the investment of capital, skill and labor. This person insists particularly upon the necessity of erecting quartz mills for extracting the gold, believing that without them the labor of the miner goes for nothing. He says that at Sherbrooke gold can be found anywhere in the ground over a pretty large area; and this being evidently the debris of the quartz, it shows that the ""leads"" must not only be rich but very numerous. Now, the point to be noticed particularly is that quartz may really contain gold, and yet the precious substance may not be visible to the eye. It would be a great mistake in a miner to throw away quartz simply because he cannot see the gold in it at once. If this plan had been adopted at Tangier and other places the mines would have been abandoned at once, and we would have heard nothing of ""nuggets"" which have occasionally turned up by the persevering men who have been at work there. It seems to us that if there be good reasons for supposing that gold exists in New Brunswick - or if (as has been the case) gold has really been found - the proper way would be to keep on searching and digging, and not give up simply because a man cannot see the gold shining out of every piece of quartz he turns up. The great fact being once established that gold does exist in a certain locality, is the main thing to look at; and after that patience and perseverance will probably have their reward in this field of industry as in every other. We have an abiding faith in the probable discovery of gold in this province; and for the following reasons. The character of the rocks in many places is similar to what it is in countries where gold has been found; the opinion of scientific men who have made the subject their study is decidedly in favor of the existence of gold in New Brunswick; then there is the fact that it has been found on the Canadian frontier on the North of us, and in all parts of Nova Scotia on the south east. But, the most powerful reason of all is that gold has already been found in two or three localities in the Province. If the same inquiry be made, the same intelligence displayed in searching for it in New Brunswick as has been done in other countries now celebrated as gold fields, the result may be the same. We say, then, to those whose turn of mind leads them in search of gold among our rocks, not to be discouraged if they do not immediately make a lucky hit. The California mines were not discovered until a few years ago. Australia - until a quarter of a century ago - was only looked upon as a place for the reception of convicts. It took a long time to find out that gold existed in Nova Scotia; and it was only yesterday (as it were) that the amazing wealth of British Columbia and New Zealand was known. Discoveries in all these countries have been sudden; but when ""the ice"" has once been broken new proofs of gold discoveries have flowed in from all sides. The same luck probably awaits us; and who knows but we may awake some morning and find ourselves the happy possessors of a country which will be able to boast of as extensive

Codes: 0043 / 0039 / SPRI / IDX_Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen; Mineral Springs;

N.B. Courier - Sep. 1, 1833 Mineral spring. - We learn from a communication in the St. Stephen ""Times"", that there has recently been discovered in the Parish of St. David, about a mile from the Ledge in St. Stephen, a Mineral Spring, the waters of which are considered as possessing stronger medicinal qualities than those of the celebrated Wilmot Springs of Nova Scotia. The waters have not yet undergone a chemical analysis; but there can be no doubt, (and such is the opinion of medical men,) that they will be found efficacious in many diseases. The waters are saline, discharging a soft white substance, resembling curdled milk. The springs are situated about four miles from the villages of St. Stephen and Calais. The correspondent of the Times also states, inSt. Stephen there are several Sulphur springs, and a spring lately discovered possessing chalybeate properties; and adds, ""When these waters are better known, together with the growing importance of the adjacent country, its salubrity and natural attractions, it is not too much to anticipate that St. Stephen and Calais will become pleasant and frequent resorts in the summer months, not only to the invalid, but to the gay and fashionable of

St. Croix Courier - Apr. 7, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - COPPER. - The ores of copper found in New Brunswick include native copper, copper glance, chalcopyrite or copper pyrites, bornite or erubescite, cuprite and malachite. NATIVE COPPER has been reported as occurringsparingly in connection with the basalt traps which form the northern half of the Island of Grand Manan. It hasalso been observed at Clark Point on the Mascarene shore of Passamaquoddy bay, and it is stated to have been found in small quantities along the coast, near the head of the Bay of Fundy. Little that is definite, however, is known of either locality. COPPER GLANCE accompanies the native copper in the traps of Grand Manan, where it has been found in small quantities of Grand Manan, where it has been described by Prof. E.J. Chapman as being sufficiently abundant to give promise of profitable extraction. Little effort, however, has as yet been made in this direction. The same mineral, and in larger quantities, has been found associated with other copper ores at different localities along the coast of Charlotte county, and on the adjacent islands among which may be mentioned Crow Harbor Island, Simpson's and Adam's Islands. It is,however, a less abundant mineral than the species nextdescribed. COPPER PYRITES OR CHALCOPYRITE is the most widelydistributed as well as the most abundant of the copperores of New Brunswick, and has been observed at many localities. The larger number of these occur along the southern seaboard, where a band of copper-bearing rocks, believed to be of pre-Cambrian age, is found to extend, with some interruptions, along the greater part of its length. Others are found in the interior, more particularly in connection with the older schistose rocks or the intrusive masses by which these have been invaded. A detailed list of these localities so far as they occur in the southern part of the province, will be found in the Report of Progress of the Geological Survey for 1870- 71. In the northern part of the province, the most noticeable localities are Bull's Creek, in the vicinity of Woodstock and the Tattagouche River, near Bathurst. InWestmorland county, ores consisting in part of this species occur in connection with rocks of the carboniferous age, near the town of Dorchester. BORNITE OR ERUBESCITE, sometimes known as peacock ore, accompanies the other ores of copper, more particularly about Passamaquoddy bay and the head of the Bay of Fundy, sometimes occurring to the exclusion of other varieties. Where abundant, it constitutes a very valuable source of the metal, and the ore of some of the most promising mines yet opened has been chiefly of this species. NICKEL. - Considerable deposits of pyrrhotitehave for many years been known to occur in different parts of Charlotte county, usually in connection with copper pyrites, but until recently have been considered to be without value. Attention, however, having been redirected to them in consequence of the developments at Sudbury, in Ontario, these have also been found to be nickeliferous, and attempts are now made to test their value. The deposits appear to be large, but, as at Sudbury, the nickel contents vary considerably. A fair average sample of 75 lbs., analyzed under the direction of Dr. Hoffman, of the Dominion geological survey, yielded nickel, 4.718 per cent., the material very closely resembling, according to Dr. Hoffman, a large proportion of the ore at Sudbury, Ont. BUILDING STONES. - Very extensive and valuablebeds of granite, freestones, slate, marble, etc., existsin the province, and in the case of the first two have been largely quarried for exportation, but have not beenthought to require extended notice in the presentconnection. The same is true of another of the rocks or minerals, including limestone, clays, infusorial earths, bog-ores, salt, &c. These may be made the subject of a subsequent contribution. LIMONITE. - In addition to the limonite referred to above as associated with the hematites of Carletoncounty, this same mineral is found at various localities in the form of bog ore. The largest deposits are upon the banks of the St. John river at Burton, in Sunbury county, and considerable quantities of the ore were removed during the continuance of operations at Woodstock, for admixture with the hematites of that locality. Spathic iron is only known to occur in the form of small veins in certain parts of Queen's and Charlotte counties. At West Beach, twelve miles east of the city of St. John, upon the shore of the Bay of Fundy, are beds consisting of red hematite mingled with specular iron ore, while at Black River, two or three miles east of West Beach, some of them with a thickness of 20 feet. They have not, however, as yet attracted the favorable notice of such iron experts as have visited them. Magnetite is not uncommon in the form of scattered grains in the crystalline rocks of the southern counties, and small veins are sometimes met with, but none has as yet been observed sufficiently large to

Codes: 0049 / 0275 / 1079 / A6 / S6 / J5 / GEOL / SPRI / IDX_Names: Tetagouche Falls Manganese; Woodstock Fe; Teagouche Copper; Westmorland County Coal; Kent County Coal; Northumberland County Coal; Geology - General; Mineral Springs;

Royal Gazette - Sep. 21, 1841 and N.B. Courier - Oct. 2, 1841 and St. Andrews Standard - Oct. 8, 1841 and Weekly Observer - Oct. 5, 1841 The following letters from Dr. Gesner to His Excellency the Lieutenant Governor, which have been handed to us for publication, contain much interesting and valuable details, in addition to those already beforethe Public of that gentleman's scientific labours in his geological researches in various sections of the Province:- Saint John, 17th June, 1841. Sir, - I beg leave to state for the information of His Excellency, that I have just completed a section across the country from St. Stephen's (Charlotte County), to Fredericton, in the direction of the new road now opening between those places. I have examined the uninhabited country on the Magaguadavic River, Loon Lake, Oromocto Lake, and the Wild Lands adjacent. Somewhat contrary to my expectations, I find there are large tracts of excellent land in this quarter, with occasional traces of intervale. Many of these lands are as I believe ungranted, and would afford excellent situations for immigrants. On the south east side of the Magaguadavic, where it is crossed by the road, there is some rocky and elevated ground; but these ridges are met by excellent soils which are capable of successful cultivation. The rivers are navigable for canoes, and abound in fish, (trout, &c.), but the most important circumstance for the new settler, is the opening of the beforementioned road, whereby access can be had with the sea shore for fish, and finally for a market; and also with the capital of the Province. The inhabitants (twenty six families) in the Harvey Settlement, are in a prosperous condition, and other Villages might be established, on some of the tracts alluded to. These circumstances will be communicated to the Board of Emigration here, and I have taken this liberty, knowing the interest His Excellency feels in Emigration, the best means of improving the condition of the country. The Coal Field is found to extend farther in this direction than was expected. The particulars concerning it and minerals in this quarter will be fully set forth in my report for the season. I intend leaving town on Monday next to explore the Schoodic River along the American line to the Monument and Eel River, and will if it shall seem necessary, communicate to His Excellency anything of importance which may be discovered on that tour through the Wilderness. I have the honor to be, Sir, Your most obedient, humble servant, Abraham Gesner. To Alfred Read, Esquire, Private Secretary, &c. &c. ---------Saint John, August 5, 1841. Sir, - I have the honor to inform you for the information of His Excellency, that my explorations have been recently directed to parts of the counties of Carleton and York.The most important examinations have been those of three several deposits of excellent iron ore, on the farm of Colonel Ketchum, at Woodstock. This Ore was discovered by the inhabitants several years ago. It is a compact red hematite, which will yield from 50 to 60 per cent of cast Iron. The united thickness of the beds is seventy five feet. The situation of the ore in the original forest of the country, and its inexhaustible quantity, offer every advantage for the manufacture of iron, and being placed on the American frontier, and high road to Canada, its value is much increased.Two remarkable Medicinal Springs have been found to exist on the Keswick River, about eighteen miles from Fredericton; the water has not yet been submitted to Chemical analysis, but it is evidently calculated to relieve several kinds of disease. Some singular discoveries have been made in regard to the change in the level in the Saint John. Below Woodstock the River has asserted its ancient bed, which is upwards of thirty feet above the present channel. This circumstance accounts fully for the terraces or steps of the valley at Woodstock. It affords me much pleasure to state that there is every prospect of a good crop, and the inhabitants of new settlements under their prosperity appear contented and happy. I have the honor to be, Sir, Your most obedient, humble servant, Abraham Gesner. To Alfred Read, Esquire, Private Secretary, &c. &c. --------Saint John, 27th September, 1841. Sir, - Having recently made a geological examination of the county of Kent, and a part of the County of Northumberland, I beg leave to transmit a brief report of my explorations, agreeably to the request of His Excellency the Lieutenant Governor, for whose satisfaction it is submitted. Information had been received, that indicationsof coal had been seen at the Tedish River, in the county of Westmorland, near the site where the probability of its existence had been previously noticed. Upon an examination of the banks of this River, the outcropping of coal measures was discovered, with a superficial stratum of Coal, eight inches in thickness. The occurrence of the usual shales with a perfect and continuous stratum of coal, renders it almost certain that there are far more extensive deposits beneath, which, from the horizontal position of the strata, do notappear at the surface. Another outcropping of coal was discovered by my son, on a Branch of the Cocagne River, in the county of Kent, and within two and a half miles of the harbour. The superficial coal stratum at this place, is situated in the bed of the stream, three feet beneath the water, which renders its admeasurements difficult, unless the rocks were bored. It appears, however, to be sufficiently thick to be worked advantageously, and the inhabitants are now preparing to raise a quantity of it for domestic purposes. Outcroppings of coal also appear on the Buctouche and Richibucto rivers; but the situations where the upper Coal stratum appears in this quarter, are too numerous to admit of having their particular details given on the present occasion. The discovery of coal in this part of the Great New Brunswick Coal Field, is important, in regard to the proximity of this mineral, to the site where the anticipated canal to unite the waters of the Bay of Fundy and Gulf of St. Lawrence, will probably be fixed. The whole of the county of Kent is situated on this vast coal field, which in this quarter presents a broad level surface, not elevated upon an average, more than twenty five feet above the level of the sea.A deposit of bog iron was found at Richibucto, and which might be worked with the coal in this vicinity. Having examined the banks of the principal streams of Kent, I next proceeded to the exploration of the Miramichi River, in the county of Northumberland.Coal exists here also, and thin strata appear about five miles below Chatham, and on the Bartibog River. It also appears in the banks of the Southwest Branch of the River, and numerous other situations near Boiestown, the Ranous stream and others. The rocks of this coal field will supply excellent freestones, flagging-stones, and grindstones. They abound in the remains and impressions of plants which are analagous to those now growing within the tropics, and such as could only have flourished in a warm climate, being entirely different form any now living upon the surface beneath which they are buried. The strata in general are covered by a deposit of debritus and beds of clay and sand, the whole averaging about four feet in thickness. The soil in general is light and sandy, and there are extensive tracts of a good quality of land. Almost the entire surface is capable of cultivation. Notwithstanding, there are occasional Carriboo bogs, and sandy barrens, unfit for settlement. An immense tract of country bordering upon the Miramichi, and its branches, was overrun with devouring fires in 1825. The groves of pine were robbed of their foliage, and still stand in leafless trunks amidst the underbrush and other kinds of wood, which are destined to succeed them. As this part of the country is low and level, the rivers are navigable some distance from their mouths; and the streams are not broken by falls and rapids, so as to prevent the passage of boats and canoes. From the Southwest Branch of the Miramichi, we descended the Nashwaak to the River Saint John, and found that all the rocks along this stream belong to the Great Coal Field, the boundaries of which will be reported when its North Western limits have been ascertained. The attention of the inhabitants heretofore appears to have been devoted almost exclusively to the transportation of pine and other kinds of timber, formerly abundant in this part of the Province. The best interests of the Country do not appear to have been advanced - agriculture has been much neglected - nor does the trade in timber seem to have been profitable to those who have been engaged in it. The inhabitants are settled along the banks of the principal streams. Remote from these, the country is in its native wilderness state; except where the lumbermen have removed the largest trees, or such as were adapted to the English market. Most of the rivers are lined on each side by tracts of excellent intervale. Many of these tracts still remain unreclaimed by the hand of industry. These intervales like those on the upper part of the Saint John, are remarkable for their terraces, which have evidently been formed by the bursting of lakes, and changes in the level of streams, by the lowering od their beds. Four of these terraces appear, are seen at some situations, and there are instances where the former beds of the streams are now covered with graceful elms. Some of the most extraordinary Geological facts in this Division of the country are seen in the evidences of changes of level. At Bathurst the country has been uplifted, while at the mouth of the Miramichi, the shore has been depressed within a comparatively recent period, and large peat bogs are now buried beneath the sea. A visit was made to a mining establishment of anEnglish Company at Bathurst, conducted by Mr. Stevens, a most enterprising individual. The first efforts of the Company were directed to the mining of Copper Ore, veins of which are evidently contained in the slates of Tete-a-gouche River. At present the mining of manganese is carried to some extent, and powerful machinery has been erected with sufficient water power, which will be directed to cleaning the Ore, and other operations. The Mine of Manganese is situated eight miles from the Town of Bathurst, the one occurs in veins and disseminated masses in Clay slate. Fifty tons were ready to be shipped at the time of my visit. The sterling price of the Ore is stated to be ten pounds to the ton. This is evidently a mining district, and one of great importance to the country. I have also analysed two kinds of marl in the county of Gloucester. They are superior in quality, and will soon be applied to agricultural purposes. The counties of Northumberland, Gloucester and Restigouche, are evidently rich in mineral wealth,

Codes: 0051 / X1 / GEOL / IDX_Names: Bathurst Copper; Grand Lake Coal; Geology - General;
The Mining Review: A Monthly Record of Geology, Mineralogy, and Metallurgy. - Oct. 31, 1840 and N.B. Courier - Nov. 28, 1840 and Miramichi Gleaner - Dec. 22, 1840 Geology and Mining Prospects of Gloucester and Restigouche, New Brunswick, by W.J. Henwood, F.R.S., F.G.S., &c.- Some gentlemen with whom I have the honour to be acquainted, thought fit to repose sufficient confidence in me to send me to New Brunswick to inspect the geologyand mining prospects of the counties of Gloucester and Restigouche. My report comprised an abstract of the geological characters of the district, and remarks on the economic portion. The first I am, of course, at libertyto make use of - the second, as it was a private affair, I am not at liberty to disclose. Taking the rocks of this portion of New Brunswick in the standing order, the lowest consists of granite, not very different incharacter from our Cornish granite. This is utterly devoid of mineral veins. On this reposes a thick-bedded slate, which Dr. Boase has called ""cornubiant"", and of which the types may be found at Dolcoath and Cook's Kitchen, in this county. This is traversed near the point of junction with the granite, by numerous granite veins, and also by other veins of sulphur much resembling our Cornish elvans. At still greater distance from the granite, the rock becomes deep blue, of a silky lustre, and very thick bedded - in fact, very like the blue killas of the Gwennap district. In some portions of this, I discovered remains of encrinites and numerous isolated pipe-like or vermicular masses of the grey oxide of manganese. This is very peculiar, and of a character that I never before met with. This mass contains veins and irregular patches of greenstone, in no way distinguishable from that of North Roskear, or St. Just. But this is also without mineral veins. Reposing in a comfortable manner, as regards the laminae of the slate, are certain beds of conglomerate, well exposed in the 5 banks of the Tattigouche. These conglomerates seem to belong to the coal measures, and numerous sandstones and conglomerates, belonging to the same formation, repose conformably on the granite before mentioned, and perfectly horizontal in the banks of the Nepisiguit. In this, ferns, and other plants of the coal measures, are found in great abundance. The beauty and the extent of these coal measures it is almost impossible to describe. In fact, we pass over nothing else from Fredericton to Miramichi, and thence to Bathurst, a distance of at least 150 to 160 miles. They consist of various beds of sandstone, shell, and conglomerate, with numerous thin seams of coal, few of which are not more than a foot or two in thickness. The whole of the district is particularly rich in fossil flora. In one of these beds, a blue shell, containing fern and other plants, is a peculiar formation of copper, specimens of which have been shown to Mr. Carne, Mr. Fox, and other gentlemen conversant with copper formations, and they, I believe, as well as

myself, never saw anything like them. Specimens of lignite, impregnated in the laminae as well as in the fracture by rich vitreous copper ore, and coated with green carbonate of copper, and isolated and detached nodules, from the size of a filbert to that of a walnut, sometimes wholly consisting of vitreous copper ore - Sometimes the nucleus of these in the external parts of common pyrites - and sometimes the interior of copper pyrites and the exterior of vitreous copper. So persuaded was I of this formation being a unique one, that when specimens of lignite containing vitreous copper ore and nodules of the same substance were shown me at Halifax, on my way home, by the Hon. Samuel Cunard, I thought I at once recognised them as Bathurst specimens, which they were exactly alike; but, to my astonishment, I was informed that they were not from that locality, but from the neighborhood of Pictou, in Nova Scotia, and that they were found there in considerable quantities, under precisely similar circumstances, in the coal formations which were worked there. This neighborhood has received considerable elucidation from the labours of Mr. Gesner, the provincial geologist of Nova Scotia and New Brunswick, whose works are, perhaps not sufficiently known or appreciated in this country; for in a new and unexplored region of this kind, much labour is unavoidably wasted in the mere mechanical process of moving from place to place, which in a civilised and cultivated country like our own, may be at once applied to the pure geological work of examining the rocks. Mr. Gesner has presented the Royal Geographical Society of Cornwall with copies of his works, and has promised us a series of geological specimens in illustration of them. It is, perhaps, also due to Mr. Gesner's individual labours, to say that he has at his residence in St. John's, New Brunswick, an admirable museum, wholly fitted 6 up by himself, illustrative of the geology, botany, and fauna of New Brunswick and Nova Scotia, which should be seen by every visitor to that place, and which, through the politeness of the proprietor, is freely open at all times. Serpentine occurs in isolated masses in several parts of the shores of the Bay of Chaleur. On one part of the shore of this bay I discovered remains of turbinolia, encrinites, and other organic bodies, which are the precise counterparts of some of those on the table presented to us by the liberality of Mr. Peach, of Goran, of this county. In fact, the resemblance is so close in mineral character, structure, and every other particular, that if they were mixed I believe it would be impossible again to separate them - and, indeed, they mark the same epoch of formation. In many parts of that bay, and in many places on the banks of the river Restigouche, which divides New Brunswick from Lower Canada, are seen trap dykes, and near Dalhousie on that river, between two such, I discovered a fine series of the Silurian rocks of Mr. Murchison, particularly rich in organic remains, many of which I have reason to believe, are quite new. Similar rocks are exposed to a great extent in the cutting of the Erie Canal, at Lockport, near Niagara. These have been examined and described in detail by the state geologists of New York, who have discovered many novelties among them. Large collections of these are on their passage; and whether it may be best for the interests of science that they should be placed in this society's collection, or whether it may not be better to hand them over to the inspection of that most accomplished geologist, Mr. Murchison, is a question on which I venture to give no opinion. But I am prepared to dispose of them in that manner which may be thought best and most useful to science. In reviewing these formations, according to the theories of modern and eminent geologists, the slate rocks will be considered the older formations - the granite next in age, its veins being injected through the slate - whilst the coal series deposited on both, but containing no vein of granite, will be considered the more recent of the whole. This, I believe, in conclusion, is an abstract, and a brief one, of the labours in which I have been engaged for three or four months past, and which, when opportunity offers, I may work out in more detail, and place it either before this society, or some other, where it may be most generally useful. Read at the late meeting of the Royal Geological Society of Cornwall, a detailed report of the interesting proceedings appeared in the Mining Journal of the 24th instant."

Codes: 0054 / 0059 / 0144 / EXPL / IDX_Names: Brunswick # 12; Shippegan Uranium; Brunswick # 6; Exploration - General;

St. Croix Courier - Aug. 8, 1957 Find Hematite Deposit on Shippegan Island. - Base Metals Development In N.B. Is 'Keeping Pace' - Fredericton. - Early August found fewer drills operating, but general development of the Bathurst-Newcastle base metal deposits keeping pace with a year ago. Commencement of drilling on a reportedly high grade uranium strike on Shippegan Island, 62 miles northeast of Bathurst, has touched off fresh interest and staking of 250 new claims around a 36 claim radioactive hematite deposit on the island. Discovered on the beach at low tide last year, Jack McCarthy, Bathurst prospector, reports the source of the float has since been traced to the island proper. A Montreal company has been given a 12 months option on the 36 claims, and a contract to drill six holes to a 3,000 foot depth let to a Bathurst drilling firm. Brunswick Mining and Smelting Co. has recentlyadded a seventh permanent headframe to New Brunswick's mineral belt skyline with the sinking of a second shaft at No. 12 (Anacon) property, 22 miles southwest of Bathurst. Underground crews are drifting at various levels, and a water tower for fire protection is being erected. Stripping operations and pilot mill tests arecontinuing at the company's no. 6 (Brunswick) property, some five miles distant. St. Joseph Lead Co., operators of the close to 60 million ton lead-zinc project, are convinced they have their metallurgical problems licked and have completed the design for a 2,000 ton concentrator to handle ore from both properties. A start has also been made on the design for a lead smelter at Bathurst. Construction of the concentrator is expected to start next year. North of Bathurst, Billiton Co., is sinking ashaft on the Nigadoo River property to 900 feet and developing a couple more levels. Some few miles distant,Anacon Lead Mines is doing underground development at its Sturgeon River mine, and there is some talk of the company erecting a 500 ton mill on the property. Since the installation of no. 2 section of its 1,500 ton mill early in the spring, Heath Steele has beengradually stepping up both mine and mill operations at its lead-zinc-copper mine, 24 miles northwest of Newcastle. Full scale testing of upwards of 60,000 tons of stockpiled ore is being carried out and regular shipments of copper concentrates have been made since the opening of the provincial highways to heavy traffic following the annual closing due to frost conditions. Meanwhile several miles of track have been laid and construction of the CNR's 22 mile line from Bartibog on its Halifax-Montreal main line into the mine isexpected to be completed shortly. Again this year midsummer found a number of Canadian, British, United States and European mining groups' field parties prospecting and doing geophysical work and diamond drilling on claims staked over hundreds of square miles extending from the Miramichi River north into Restigouche county and north shore west to the Tobique river watershed. Consolidated Mining and Smelting is reported tihave turned up a sulphide deposit in the Nine-mile Brookarea and to be drilling in the 44 mile Brook district. Anaconda Co. is said to have uncovered a find bytrenching in the Caribou district and to be doing some exploration in the Tetagouche Lakes area. Mining Corp of Canada has completed a drilling program in the Caribou-Tetagouche Lakes area on ground held by Coulee Lead and Zinc and are re-assessing. Madsen Red Lake and Headway Red Lake are doing general prospecting around Nine-mile Brook. Dominion Gulf is doing some soil sampling in the Caribou-Tetagouche Lakes area as well as some work on ground options from Area Mines in the 40-mile Brook district. They expect to drill later. A Karl J. Springer field crew is cutting lines on the Gloucester county holdings. Springer is said to have options on 100-claim group of Jack McCarthy and a 10 claim group of William McCarthy. Lucky Lake Mines is reported trenching and doing general exploration on claims in the Bathurst area. Kennco has called off a drilling program in the Bald Mountain area, where the company is reported to have a mine, and is doing geology work. The company expects to do more drilling later. Middle River Mining Co., Texas Gulf Sulphur subsidiary, Conwest and Great Sweet Grass are all reported to have discovered important strikes in the Bald Mountain district. Conwest is said to be drilling on its claims. New Rouyn Merger and Sand River have done a survey and are starting drilling in the Island Lake area, southeast of Heath Steele, in a couple of weeks. Arista Mines is doing a survey on one property in the Bathurst area and is to start drilling on a property adjoining Nigadoo Mines claims on the north. A Montreal company, Newcastle Mines Ltd., plans to start a program to check work on anomalies and further geophysical on claims in the Bathurst area. Anthonian Mining Corp. and DiNor Ltd., are drilling on separately held claims in the Tobique River district, near Plaster Rock. Rio Canadian is staking claims in the Miramichi River area, near Newcastle, and also in the Hampstead and Belleisle Creek districts in southern New Brunswick. Larum Mines and Glenburke are reported getting ready to drill in the Little Bald

Colonial Farmer. - Jul. 17, 1871 Geological Report. - Continued. VI. Tobique Valley and Tributaries. In the course of my explorations of last season, I undertook an excursion up the river Tobique and one of its most important branches, the Serpentine, partly with the view of making an examination of the great Lower Carboniferous outlier there, and partly to visit certain lands which had been leased from Government on the latterstream for gold mining purposes. The Tobique is a large tributary of the St. John, falling into the main stream about fifty miles above Woodstock, from the northeast, its general course thus coinciding with the strike of the rocks in the high lands constituting the water-shed between the St. John and the Gulf of St. Lawrence; one of its main branches, called the little Tobique, or Left-hand branch, with a general south-easterly course, connects by a short portage with the Nepisiguit flowing, into the Bay of Chaleurs; while the other or Right-hand Branch, falling into the main 6 river at the same point but from the opposite direction, through a very rugged mountainous country, :s, in its turn, composed of two branches, the Campbell and Serpentine rivers. These streams form a junction at the distance of ten miles from the main forks, from which point the Tobique flows through a rich and fertile valley in a southwesterly direction to join the St. John river, a distance of sixty-two miles, following the windings of the stream. On the Serpentine, which had not previously, so far as I am aware, been visited by any one with the special view of ascertaining its geological features, the land leased for mining purposes commences about three miles from its junction with the Campbell River, and extends some twenty miles higher, the stream for the greater part of the distance cutting across the strike of the rocks; but owing to the extreme difficulty of exploring this region, I was compelled to content myself with penetrating about seven miles from the commencement of the leased lands, or twenty miles from the main forks of the Tobique. The main Tobique, for about two miles from its junction with the St. John, flows with great rapidity through a deep, rocky gorge ..?.. coinciding with that of the slates, which dip N 70 deg. W <60 deg.; they are here highly calcareous, and enclose many seams and bunches of pure calcspar. Half a mile higher a narrow band of red and green slate occurs, associated with a tolerable pure compact or massive limestone, containing fossils, apparently in considerable profusion, although only visible on weathered surfaces. Among them, according to Mr. Billings, are Favosites Gothlandia, Atrypa reticularia, and Strephomena perplana, belonging to the Upper Silurian series. Above this the river assumes a course nearly at right angles to the strike, cutting sparingly calcareous but highly ferruginous and contorted brown weathering slate and quartzite, which must underlie those formerly referred to as prevailing at the mouth ofthe river. Small straggling strings of galena were observed at one place filling cracks in the rock, but are of no economic importance, except as indicated the metalliferous character of these rocks. At three and a half miles from the mouth, measured in a straight line on the strike, the soil assumes a red tint from the proximity of the red conglomerate of the outlier; a small patch of which is visible in the bank here, but is again succeeded by the older rocks, till reaching Red Rapids, four and a half miles up, where this formation; apparently identical in character with that mentioned in other parts of this report as the lowest rock in the Carboniferous series; appears in force in the bed and banks of the river, dipping due E. <4 deg., extending over half a mile farther up stream, and forming a steep, rocky channel. About this point the rock exposures are few, and 7 or a distance of nine and a half miles indicate no change, except in the prevalence of finer red calcareo-arenaceous sediments in ascending. - Then, about half a mile below the Wapskehegan, appear red and grey, and green marls, interstratified with blue limestone, all in thin alternating bands, still dipping slightly SE., and extending to the mouth of that tributary; a little above which the limestone re-appears in more massive beds, some being thirty inches thick, interstratified, as before, with red shales or marl, also of greater volume. This is a distance, in a straight line, of fourteen and a half miles from the mouth of the river, and here the outlier attains its greatest breadth, of about nine miles, of which by far the greatest proportion lies on the southeast side of the river. The general character of the limestone of the Tobique outlier is fine-grained, with conchoidal fracture, mottled red and pink and green, but sometimes bluish-grey; frequently lined with calcareous spar, and containing, according to Professors Hind's analysis, 82.6 per cent. of carbonate of lime. Superimposed upon the limestone and marl bedshere, are heavy beds of gypsum, which first appears at the mouth of the Wapskehegan, but in much greater development at Plaster Cliff, a mile and a quarter higher; where, for a distance of 80 or 100 yards, they rise perpendicularly from the left bank to the height of 120 feet. The great body of the rock is an impure, massive but earthy and exfoliating red and greenish gypsum, containing a varying proportion of carbonate of lime and silicious matter; but it is seamed with layers of pure white gypsum and of fibrous selenite, containing, according to the analysis of the late Dr. Robb, 77.7 per cent of sulphate, and 3.0 per cent of carbonate of lime. Nodules of nearly pure carbonate of lime are occasionally met with, imbedded in red gypsum. The whole appears to dip SE at a very low angle, and to be of limited extent, where it abuts upon the river; but I am informed, on competent authority, that the plaster beds are traceable at least four miles up the Wapskehegan, alternating with the other rocks of the series. Two small brooks were observed flowing into the river near the junction of the gypsum and marl beds, the waters of which were decidedlysaline and brackish; this character being, doubtless, derived from salt springs, which however, were not met with. Above Plaster Cliff, for a distance of eight miles, the strata, which are now horizontal, consist, as before, or grey and red sandstone and conglomerate, blue, red and green limestone, and marl; thereafter, at the point indicated, near Phillip's Brook, promontories and low knobs of dark brown amygdaloidal trap appear at intervals among the red rocks on the left bank, becoming more numerous and extensive in ascending the river. The red rocks, however, continue to occupy exclusively the 8 ed and right bank of the river, and occasionally also appear on the left bank, but now with westerly dip, until a point thirty-one and a half miles from the mouth is reached, where the outlier may be said to terminate; although for the last three miles of this distance, or from Blue Mountain upwards, only slight traces of its existence can be detected in the red color of the rocks in the bed of the river, where they are at rare intervals seen in place. Thus the total length of the outlier, measured in a straight line, may be stated at twenty-seven miles; it is of rudely elliptical form, and its total area is not less than 100 square miles. It is bounded on all sides by ferruginous and generally non-calcareous slates and quartzite, its outlines forming a very marked topographical feature, being defined by lofty ridges of the older rocks. A comparison of the rocks of the outlier, both in respect to their mineral character and apparent order of sequence, leaves little room to doubt that they belong to the same series which I have described as laying at the base of the main Carboniferous area of the

St. Croix Courier - Mar. 12, 1953 Buchanan Hopes For Successful Industry. - 30,000 Mine Claims Expected By Summer. - The Bathurst ore find has so stimulated interest in New Brunswick minerals that instead of having to hire prospectors and drill prospects at its own expense, the government is now scarcely able to cope with the demand for prospectors' licenses and the recording of claims. Hon. Norman B. Buchanan, M.C. minister of lands and mines, said in a luncheon address to the Prospectors and Developers Association at its 21st annual meeting in Toronto Tuesday, March 10. Record Rush. - Thousands of claims have recorded in the current rush and by early summer it is expected that the total will reach twenty-five or thirty thousand. 'This is certainly a record rush for New Brunswick and may be a record for any province,' the minister said. 'Many of these claims are based on pure speculation and have little relation to a systematic and productive search for minerals. We do not wish to dampen optimism nor do we wish to be held responsible for encouraging false hopes. Our hope is for the development of a successful and prosperous mining industry which will take its place in the economy of New Brunswick.' In Toronto the minister also attended the sixth annual meeting of the Geological Association of Canada. The two major conventions of interest to mining were held at the Royal York March 8-11. New Brunswick's secretary-treasurer, Hon. D.D. Patterson, also was a guest at the meetings and on Wednesday night spoke briefly introducing the federal mines minister, Hon. George Prudham. Buchanan's Address. - The text of Mr. Buchanan's address was as follows on the topic, 'Mining - New Brunswick's Business'. 'You may expect me to speak on the policy of the Government of New Brunswick concerning prospecting and mining development. But if you will imagine yourselves in my place, you will realize that this is hardly the time for any serious statement of policy. Your sudden interest in New Brunswick has raised many problems which we must work out together. We confidently expect your co- operation in this and do not anticipate any serious difficulty. In the long run, a healthy and prosperous mining industry will be good for you and for New Brunswick. 'Today I am only going to try to give you a bit of background that may help you to understand our attitude toward mining as a business in New Brunswick. 'Mining is one of New Brunswick's oldest industries. When Toronto was an Indian Village and 150 years before York was made the capital of Upper Canada, coal was being mined in New Brunswick for the first time in North America. The story is that Charles La Tour got help from Boston in 1643 in his struggle against his rival in the fur trade, Charnisay. After his friends had relieved the seige of his fort and driven Charnisay away, they sailed up the St. John River into Grand Lake and took on a cargo of coal. 'This export business has been going on for several years and coal mining has been New Brunswick's largest mining industry ever since that time. Methods have been changing and now several of the largest walking draglines are used in stripping the overburden from above the coal. Current production is worth about $5,000,000 a year. 'New Brunswick can also claim a first in oil. When the first wells were being drilled in Pennsylvania in 1859, several wells were also being drilled in New Brunswick. These yielded only small quantities of oil and development was discouraged by lack of market which caused the price to be as low as 49 cents a barrel. This industry has been operated on a small scale with the associated natural gas marketed in Moncton. It is not for me to talk to you about the chances of large scale developments but we can still hope. 'Another interesting early development was in iron and steel. Iron ore was discovered at Woodstock on the St. John River about 1836. This was mined and smelted with charcoal made from the trees of the area, which was heavily wooded. Limestone was obtained nearby. One of the products was mail plating used in the construction of gunboats for the British Navy. It is reported that, in tests, all other plates were shattered by the heavy ordnance designed by Sir William Armstrong but the New Brunswick plates were only slightly dented by a 230-pound shot from the Armstrong gun. Prospecting and Mining. - 'The records of prospecting and mining in New Brunswick contain many other interesting and intriguing items. There is the story of the 'Giberson Gold' which has grown with the telling and retelling. Then there is the story of thecopper mine near Dorchester where the copper was deposited by electroplating on lead. But these stories are part of our history and you are interested in the present and future. 'The hard facts are that although we have had many prospects in New Brunswick we have had too few successful mines. You may have read the summary concerning our mineral resources in the Canada Year Book of 1951. Coal, gypsum, petroleum and natural gas are mentioned and the quantities given. Since that time a cement plant has been added but mining accounts for only about three per cent of the total value of production bu our industries. Depression Effort. - 'During the depression and prior to World War II an attempt was made to encourage prospecting and provide useful training and employment for young men. The federal and provincial governments co- operated in a youth-training program. As many as nine prospecting parties were in the field at one time, each consisting of an experienced prospector and six trainees. 'Reports and records of their findings were turned in to the Department of Lands and Mines but no mines resulted from this effort. 'In spite of these discouraging results and lack of outside interest, efforts to discover and develop mineral resources were continued. These were assisted by an aerial photographic survey made in 1944 and 1945 and large scale maps were compiled from these photographs. An air-borne magnetometer survey of about one quarter of the area of the Province was made in 1951 by the federal Department of Mines and Technical Surveys. Seven of the magnetic maps out of about 30 involved in the area covered by this survey have been published and released and we have been told that others will be available in the near future. Present Situation. - 'During the past year, the attitude toward prospecting in New Brunswick has swung from extreme pessimism to extreme optimism. This has apparently been caused by reports of the discovery of a large body of ore in an area where the existence of smaller bodies has been known for many years. Instead of having to hire prospectors and drill prospects at government expense, we now find ourselves scarcely able to cope with the demand for prospectors' licenses and the recording of claims. During the present rush many thousands of claims have been recorded and at the present rate, it is anticipated that the total will be between 25,000 and 30,000 by early summer. This is certainly a record rush for New Brunswick and may be a record for any province. (That might make an interesting subject for an argument but we have been too busy to stir it up.) 'Many of these claims are based on pure speculation and have little relation to a systematic and productive search for minerals. We do not wish to dampen the optimism nor do we wish to be held responsible for encouraging false hopes. Our hope is for the development of a successful and prosperous mining industry which will take its place in the economy of New Brunswick. 'When you come to New Brunswick, if you have not already been there, you will find that only about 10 per cent of the land is cultivated and more than 80 per cent is covered with forests. The business of forestry and the manufacture of forest products is the foundation of our economy. The products of agriculture amount to less than half those of forestry in value and fishing less than one-quarter. Mining at the present time falls far below the others. 'We recognize the importance and advantages of a better balanced economy but it would be poor business to develop our mining at the expense of our forestry. You will understand our anxiety about the danger of forest fires in the present situation. Experience has proven that in spite of ordinary precautions, people cause fires including forest fires. We are, therefore, appealing to you for cooperation in organizing the necessary safeguards to prevent, not only the destruction of our forests, but also the very valuable loss of life and other property. Outlook For Mining. - 'In spite of this background it is difficult for us to avoid being infected with the spirit of optimism prevailing at the present time. Reports of recent discoveries have given us high hopes for the rapid development of a base metals industry. We are also confident that modern methods of prospecting and development and the renewed interest in New Brunswick will lead to the discovery of other mineral bodies of commercial size. You may be sure that the Government of New Brunswick will do what it can to encourage private enterprise in the

Chignecto Post - Jun. 5, 1884 The Geological Survey.- Explorations of Mr. Ells in Westmorland.- Coal Prospects.- Copper Developments.-Albertite.- Albert Shale Rocks.- Mr. Ells, of The Geological Survey of Canada, arrived in Sackville last week and has since been engaged in examining rocks in this vicinity. He was waited upon by a POST reporter yesterday and asked what his movements were. He said that Mr. Wood, M.P., had requested that an exploration be made of this district to ascertain the probability of the existence of workable coal in this county and he had been directed to examine the district. After leaving here, he would proceed to Cumberland to explore the country north of Spring Hill, and from there he intended to go to Londonderry, between which places he would spend the next three months. Reporter: Are there any members of the Geological Survey with you? Mr. Ells: Yes. Two assistants, Mr. Barlow and Mr. Giroux. R: What is the nature of your explorations in Spring Hill? Mr. E: I propose to examine the country with a view of determining the advisability of boring to ascertain the direction - east or west - of the Spring Hill coal fields, a matter that has puzzled coal prospectors, and also the general construction of the Spring Hill basin. R: Have you seen any developments of coal in Westmorland? Mr. E: Yes, but I have not seen any productive coal measures here. The rocks in Sackville show presumably the upper carboniferous - or rocks above productive measures; the intermediate strata containing productive seams are totally wanting, so far as known. R: Seams of coal have been found in Westmorland and on Aboushagan River? Mr. E: Yes, but only a few inches in thickness so far as known. The same seams - I think they are all one - I have met with over an area of hundreds of miles in New Brunswick - everywhere in a class of rocks that absolutely forbids the hope of any seam of considerable thickness being found. It is a common idea that coal increases in thickness from surface. Nothing is more delusive. The seams, at least so far as found in this Province, are pretty continuous and uniform in character, having a thickness varying in different districts from eight to twenty-two inches. R: Then there are no productive coals in this county. Mr. E: None, in all probability.R: Have you examined the copper formation? Mr. E: Two years ago, I was asked to examine the cliff at Dorchester, on which Mr. Couch had some openings. The copper prospects looked very well indeed. R: Is it an extensive deposit? Mr. E: Its extent has to be determined by actual prospecting or mining, and its existence cannot be inferred at other places because the same class of rocks exist elsewhere. The ore occurs both as the carbonate and grey copper ore or glance and is valuable. Its existence is accounted for in this way: The copper in solution is acted upon by the organic matter of the plant beds and is thereby precipitated. Whence the copper was derived is not yet definitely known, but the conditions are not such as apparently exist over large areas. Copper in a

Progress - Jun. 2, 1894 Dreaming About Gold and Put Their Money in a Holein the Ground. - The truth about Mining Ventures at Dorchester - How the Fever is Kept up - A Scheme at Present on Foot to Float Stock and Raise Money. - Dorchester, the shiretown of Westmorland County is noted for its quietness. It possesses one of the finest cemeterys to be found any where. Its people are justly proud of it. Mark Twain tells us the people of Bermuda base their pride on their onion, it is their symbol of excellence. A Bermuda father, he tells us, in sending a son forth in the battle of life, councils him to be an onion . A friend, in praising another, bankrupts applause when he says he was an onion . In a like manner the influence of Dorchester's cemetery permeates the whole community; quiet reigns, a Dorchester man never laughs, they all wear funereal visages. The influence shows itself in another direction, their fondness shows itself in another direction, their fondness for digging; having nobody to plant, it takes the form of digging for buried treasure. An old resident who knows most everything, particularly matters of ancient history; tells me, however, this characteristic is due to the influence of a man who died in A.D. 1802. This man was known to everybody as Uncle Billy (I have forgotten his other name). Uncle Billy was the seventh son of the seventh son, and he dreamed three times of buried treasure, but failed to locate it, or to specify its kind. He intended to have dreamed it all out later, but dying suddenly he left nothing behind to show whether it was bullion, gold in its natural state, copper or albertite coal. About fifteen years ago an old lady at Jolicure dreamed three times of buried treasure thereabouts, and a few days afterwards a cow in crossing a field put her leg down a hole; the owner of the cow upon investigation, found a peculiar shaped hole filled nearly full with earth of a different kind from the surrounding earth. It was at once concluded Capt. Kidd had been around there burying treasure. A strong company was formed and excavation continued for two summers, when at the depth of 150 feet hard pan was struck and the work discontinued. It then turned out that the old lady was not a seventh daughter after all, hence the disappointment. She was just an ordinary old lady and dreamed the same as other folk. I have visited the spot and like everyone for miles around, have viewed the hole. It is as nice a hole for the money as can be found anywhere. Dorchester's oracle was not responsible for this failure, it was hardly to be expected he was going to dream treasure for the Jolicurians. Before proceeding I must say the Jolicure hole is one of the institutions of the place, some visitors however, have not shown an appreciation of it, they remind me of Mark Twain's story of the blue-jays finding a knot-hole in the roof of an old building and starting in to fill it up with acorns. After working for hours, and from time to time looking down the hole to note their progress they got mad and went to work to fill that hole or die. After three days hard labor one of the jays happened to look in at the window and discovered they had been firing acorns on the floor all the time. The joke on them was so good that the birds from all parts came to look down that hole and laugh. They all appreciated it except an owl from Nova Scotia who took it in on his way to the Yosemite Valley, he said he saw nothing funny about it, he could show better knot holes in Pugwash, N.S. Returning to Dorchester, the people here occupy the most of their time discovering mines. It is considered a dull day when a mine is not discovered. I came nearly being a mine owner myself last fall. A local company were taking up a property and offered to let me in on the ground floor as they called it for $700. Being out of funds I had to let it slip me. How true the words There is a tide in the affairs of men, etc., etc. A number of years ago Albertite coal cropped outat Beliveau Village, Dorchester, and a strong company was formed and spent a lot of money to procure a few pounds of it. Later copper cropped up in the vicinity of Dorchester and an American company and a local syndicate vied with each other for its possession. They went chasing each other around with special trains and finally the American company got the copper properties, thus securing another of what should be a Canadian heritage. The Americans built some fine buildings, put up a mill and took four kerosene casks of ore away with them. The latest developments are, as you of course know, the gold mines of Memramcook, Gouldville and other points in this parish: the discovery that gold existed here was made by a medical gentleman an adept in the manipulation of the hazel rod. He had been prodding around Nova Scotia and other parts of New Brunswick with indifferent success, and finally he ran against this conglomerate . It is stated the pay dirt was formerly used for ballast on the I.C.R. and that the electricity generated on the wheels and friction took up the precious metal and adhered it to the wheels and that a wheel scraper in the car shop at Moncton had been secretly scraping it off and growing rich. The beauty about these mines is, that the gold runs all alike through the conglomerate, thereby assuring one of a steady output and none of that uncertainty experienced in placer mining and nugget out- crop. Mr. J.B. Neilly of Halifax is the chief promoter of the property at Memramcook and is now making a tour of New Brunswick accompanied by an ex-M.P.P. who is an interesting talker but at present out of a political job. They are disposing of shares, it being their idea that when you have a good thing you should pass it around for the general good. Joe Gould, an Acadian resident of Gouldville, called on me the other day and after getting the loan of a dime wherewith to buy Havelock water , intimated that on his next visit to town he was going to put me on to a gold mine. He had had a dream, he only wanted to have another dream at it before telling me about it. If any of your readers want to go into the gold business come to Dorchester. It is enjoyable, refreshing and exhilarating employment. Joe Gould says the Gouldville party last year had a perfect round of picnics and that the vicinity of the mine where they had the old Frenchman digging, is strewn with the exterior covering of Buchanan enough he says to patch a sheol a mile. Joe uses the revised version."

Daily Sun - Mar. 26, 1891 Legislature. - The Government Mining Bill Adopted With an Amendment. - Fredericton, March 25. - ... In the unavoidable absence of Hon. Mr. Tweedie, Hon. Mr. Blair committed the bill relating to mines and minerals. Hon. Mr. Blair said the bill would largely speak for itself. The government had given considerable attention to the matter and had made themselves familiar with the mining laws of Nova Scotia, P.E. Island, Quebec, Ontario and British Columbia. The present bill embodied the best provisions of all these laws and he thought it would be found very complete and calculated to put those engaged or interested in mining on a better footing than at present. Scientific men were of the opinion that the mining capabilities of this province were very great, and the present bill would facilitate and protect those interested in the business of mining. Under the bill the management would be placed in the department of the surveyor general and it was not intended that the law would entail any charge on the public treasury. Mr. Hanington asked if the bill would protect the rights of those who had purchased mines and minerals and given large values for the same, believing that the properties of the soil had a right to give a title. In this connection he made a special reference to the Dorchester copper mines. Hon. Mr. Blair said the matter referred to would have attention while the bill was under consideration. After supper the bill was further considered and the 137 sections were passed with a few slight amendments. Mr. Hanington moved the following as section 138: That in any case of granted lands where the owner of the soil or the assignee of such owner, who has gone to the expense in the purchase as he believed of mining rights, and interests therein, where explorations have been made or mining operations commenced, before the passing of this act no lease or grant of mines or minerals under said lands shall be made to any person other than such owner or assignee has been notified of any application therefor, and thereupon the surveyor general shall examine into the matter and premises, and such action shall be taken therein as shall under the circumstances be just, so as substantially to protect such owner or assignee; provided, however, that any such owner or assignee shall pay the like royalties as other lessees and otherwise conform to the provisions of this act reasonably applicable to such cases. Hon. Mr. Blair moved the following as an amendment, which was carried: In respect of granted lands wherein the owner of such lands (or the assignee of such owner who has gone to expense in the purchase as he believed of mining rights or interests), has made explorations or actually commenced mining operations before the passing of this act, no lease or licence shall be made under this act to any person other than such owner or assignee, until such owner or assignee has had notice of application having been made therefor, which notice may be sufficiently given by publication thereof by the surveyor general for thirty days in the Royal Gazette, or in such manner as the surveyor general may direct, and thereafter the governor-in-council shall examine into the matter and shall take such action as in his discretion shall seem best, taking into account the circumstances of each case; provided, however, that any such owner or assignee shall be subject to the payment of all royalties and to the other provisions of the act, so far as the same are applicable to his case. The bill as amended was agreed to. Hon. Mr. Pugsley introduced a bill amending the law relating to rates and taxes. The house adjourned at 11 o'clock."

Gazette - Nov. 16, 1899 A Mining Case Protest. - Special to the Gazette. - Fredericton, N.B., Nov. 15 - Surveyor General Dunn is here today hearing a protest made by Andrew Meyer of Boston, John B. Foster of Dorchester and Elmer Howe of Boston and the Westmorland Mining Co., against granting atwenty year lease of certain mining areas located at Dorchester to the Intercolonial Copper Mining Co.Geo. F. Gregory appears for Mr. Meyer, H.A. Powell for Mr. Foster, Dr. Pugsley for for Mr. Howe and M.G. Teed for the Westmorland Mining Co. R.A. Lawlor, of Chatham and A.W. Chapman of Dorchester appear for the Intercolonial Copper Co. Attorney General White is present as legal adviser to the surveyor general. Hon. H.W. Ladd, president of the Intercolonial Copper Co., J.W. Phillips, treasurer, T.J. Edwards sec'y, and J.W. Dickenson barrister, all of Boston are here watching the case, the last named gentleman appearing on behalf of the Westmorland Mining Co. It appears that last spring the newly organized Intercolonial Co. made application for a lease of some copper areas at Dorchester which the other company claims already belongs to them. They obtained the mining rights some years ago from the land owners but never received a license from the government. The Intercolonial Co. are applying for five square miles which includes a portion of the land purchased by the Westmorland Co. and the latter are kicking against the government granting the lease. The hearing will likely occupy all day."

IDX_Names: Woodstock Fe; Quaco Manganese; Markhamville Manganese; Lake George Antimony; Sandstone, Building Stone, Monument Stone, etc.; Granite; Gypsum; Albert / Kings County Oil Shales; Grand Lake Coal; Albert Mines; Geology - General;

Daily Telegraph - Jun. 30, 1876 Our Woods and Minerals at the Centennial. - The minerals of New Brunswick, which are treated in the second part of Messrs. Bailey and Jack's pamphlet, consist of iron, copper, manganese, antimony, gypsum, bituminous coal, bituminous shale, albertite, building stones and sandstones. Deposits of bog iron ore are found in several parts of New Brunswick, the best beds being above the rocks of the coal measures in Queen's, Sunbury and York. These measures sometimes cover considerable areas attaining a thickness of 4 or 5 feet, but no attempt has as yet been made to remove or smelt them. An analysis of some ore found in Sunbury yielded 47 per cent of metal. Of the red hematite of this Province, our authors say:-The iron ores of Woodstock were first discovered by the geological survey of the State of Maine, under Charles T. Jackson, as early as the year 1836, having been traced by him from the Aroostook region in the State above named northeastward to the St. John River, and more recently to the eastward of the latter in several bands for a distance of fifteen or twenty miles, or over a large part of the northern and northeastern portions of the County of Carleton. The principal locality from which the ore has been removed is in Jacksontown, about three and a half miles from Woodstock, and about two miles from the west bank of the St. John river. As seen at this point, the ore beds (portions of which are a true hematite, while others are a hydrous peroxide or limonite) are somewhat irregularly interstratified with a of clay slate, usually bright red or brownish red in the immediate proximity to the ore, but elsewhere of a pale grey color, and highly inclined. The width is from six inches to eight feet, the average thickness being about three and a half feet ....?.... their ....?.... variable. About 40,000 tons are said to have been smelted at the Woodstock works while in operation, the resulting metal being remarkable for its great hardness and strength, and admirably adapted for the manufacture of steel. It contains a considerable percentage of manganese. Copper ores exist in considerable quantities, the best being found in the rocks of the southern coast of the Province. The attempts so far made to work these ores have as yet met with but small success, although aspecimen from Salmon River is said to have yielded 62 per cent. of copper. It is to be hoped that the copper beds f this Province will eventually become profitable. With regard to the manganese beds found in this Province, our authors say:- Deposits of black oxide of Manganese consistingchiefly of pyrolusite but associated with more or less ofmanganite, are not of uncommon occurrence in connection with the rocks of the Lower Carboniferous formation, and have been mined to a greater or less extent at several points, such as Markhamville, Quaco and Shepody Mountain. At each of these localities the mineral is met with in connection with limestones lying at or near the base of the series, being distributed through the latter partly in the form of veins but chiefly in irregular masses or Pockets, some of which are of remarkable purity. The most important deposits which are being at present worked are those of Markhamville, under the direction of the Victoria Manganese Company. These were first opened in 1863, since which time the whole amount of ore removed has been about 6000 tons, the annual production varying from 500 to 1500 tons. Owing to the distance of the mines from railway transport, eleven miles, the ore is subject to a cartage of $3 per ton; but notwithstanding this drawback is profitably worked, the price at Sussex varying according to the quality, from $15 to $50 per ton. Manganese is also met with to a limited extent in rocks more ancient than those of a Lower Carboniferous age, near Bathurst, and in those of the Huronian system in King's County, and it is probably from these in part that the ores above described have been derived as secondary products. Another important metal is antimony, which is found at Prince William, and here again we cannot do better than to quote from the pamphlet:The occurrence of Stibnite, or Grey Sulphuret of Antimony, at Prince William, seems to have been known for a number of years, but attracted little attention until about the year 1862, when fresh discoveries indicated a considerable body of ore having been made, several companies were formed with a view to its development. Through the explorations of the latter the mineral was found to be more or less abundantly spread over an area of several square miles occurring chiefly in white quartz veins or veins of quartz and spar, intersecting hard clay slates and sandstones of undetermined age. These veins vary in thickness from a few inches to six feet, the ore being irregularly distributed through the quartz in strings or veinlets, sometimes attaining a thickness of twelve to fifteen inches. A large portion of the ore hitherto raised has been obtained within a short distance of the surface by means of trenches dug on the course of the lodes, but several shafts have also been sunk, attaining the depth of one hundred feet or more. In connection with these on the property of the Lake George Mining Company, somewhat extensive works have been erected, embracing an 80 horse-power engine, a 30 horsepower air compressor engine, a Burleigh steam drill, Blake's crusher, rollers, jiggers, etc., as well as furnaces for desulphurization and smelting. From these, when in full operation, 15 tons of metal were obtained about every six weeks; the charges (of 500 cwt.) yielding from 45 to 56 per cent. of reguins. The fluxes employed are charcoal, soda or salt cake and rosin. The value of the metal on the ground is 12 to 14 cents per pound. It is partly exported in cakes or ingots to the United States, being valued in Boston at $12.25 to $12.75, gold, per ton, and partly employed on the ground in the manufacture of Babbit metal (containing 15 to 20 per cent. of antimony with lead and tin, or in the better qualities with lead, copper and tin), valued at from 20 to 50 cents per pound.Gypsum or plaster is found in great abundance in this Province, as it is also in Nova Scotia. The largest deposits at present known are at Hillsboro', in Albert County, where the total head of rock is from 90 to 100 feet, about 70 of which is composed of soft plaster or true gypsum, which rests on beds of hard plaster of unknown depth. At Hillsboro', during the season of 1875, 129,000 tons of plaster were quarried, 5,500 tons of which were shipped in rock and 47,200 barrels ground and calcined. The uses of plaster are too well known to require any mention. The value of the deposits of plaster in this Province must increase year by year. Our authors do not give a very encouraging view of the coal mining prospects of this Province, and we quote their remarks in full: More than a third of the Province of NewBrunswick is occupied by rocks of the coal formation, which present the usual variety of conglomerates, sandstones and shales, met with in other coal regions, together with numerous and characteristic fossil remains. Seams of coal are also met with at various points, but so far as at present known, are all of inconsiderable thickness, only one, that of Grand Lake, attaining a thickness (22-26) sufficiently great to be capable of working. Being, however, usually nearly or quite horizontal, such beds as do occur cover considerable areas, and when sufficiently near the surface are readily removed. For the same reason but little information can be obtained from the surface as to the possible occurrence of thicker beds beneath, and it is necessary to resort to borings in order to prove the latter. The results so far obtained in this direction are certainly unfavorable to the existence of any such beds, or even to the probability of any great thickness to the coal formation as a whole in this region, but the latter being unconformable to the older beds upon which it rests, and these being highly disturbed, forming troughs and ridges beneath the carboniferous rocks, it is impossible that the latter may really at some point attain a much more considerable thickness and include workable beds of coal. The only locality in which mining operations for this mineral are at present conducted is in and about the Newcastle River and the shores of the Grand Lake, in Queen's county. The beds here having a thickness of about two feet, are usually met with within ten or fifteen feet of the surface, and have been removed at a great number of points over an area of over one hundred square miles, indicating a total productive capacity of about 154,948,147 tons. The coal is a true bituminous coal of the caking variety, and is employed both for household and blacksmith's use. The total annual production is at present about 3,000 chaldrons, which, delivered in the city of St. John, is sold, according to quality, from $4.50 to $8.00 per chaldron.Bituminous shales are found in considerable quantities in Albert County, and at one time an attempt was made to employ them largely in the manufacture of il, as much as 63 gallons to a ton being obtained, but this oil was unable to compete with the cheaper article from the wells. The same shales yield 7300 feet of gas per ton, and in 1865 some 2000 tons of shale was sent to the United States to be made into gas. With regard to Albertite, which is amongst the most remarkable of mineral products, our authors say:-This remarkable mineral, occurring in connection with the calcareo-bituminous shales or pyroschists above described, was first discovered by accident about the year 1850, and has been by some regarded as a true coal, by others as a variety of jet, and by others again as more nearly related to asphaltum. It resembles the latter closely in appearance, being very black, brittle and lustrous, with a broad conchoidal fracture, and like asphaltum is destitute of structure, but differs in fusibility and in its relation to various solvents. From the true coals it differs in being of one quality throughout, in containing no traces of vegetable tissues, and in its mode of occurrence, which is that of a vein and not that of a true bed. This vein occupies an irregular and nearly vertical fissure, has a varying thickness of from one inch to seventeen feet, and has been mined to a depth of 1,162 feet. The accompanying shales are in some portions abundantly filled with the remains of fossil fishes, (Paleoniscus) and it is not improbable that it was from these, in part at least, that the mineral was derived, existing perhaps at first in a fluid condition (in which state it has in some instances become the cementing material of conglomerate), and subsequently hardened into its present form. Vegetable remains are almost entirely wanting. Between 1863 and 1864, inclusive, 154,800 tons of albertite were shipped. It is capable of yielding 100 gallons of crude oil of 14,500 feet of gas per ton, and when employed with other coals it leaves as a residuum a valuable coke. About 120 men are employed at the Albert Mines.Among building stones our authors make mention of granite and syenite which form extensive beds, particularly in the county of Charlotte. Both yield good building materials, the red granite being capable of receiving a high polish, and it being possible to obtain blocks of it of any size up to 30 or 40 feet in length and 4 or 5 feet in thickness. The Bay of Fundy Red Granite Company vein gives employment to about 110 men.With regard to sandstones our authors say: This stone, commonly known in the United States as Nova Scotia stone, has been long known and highly prized, the Budreau Quarries having been first opened in the year 1856, since which time there has been shipped from that locality an annual amount of from 5,000 to 7,000 tons. The Caledonia Quarries were first opened in 1864, and now ship annually from 4,000 to 6,000 tons, while large quantities are also removed from the other localities mentioned above. The particular qualities for which these stones are prized are their colour, the facility with which they may be cut, dressed or ornamented, and their durability. The prevailing color in the Dorchester quarries is a yellowish or olive gray shading on the one hand

Codes: 0275 / 0007 / GEOL / IDX_Names: Woodstock Fe; Lake George Antimony; Geology - General;
S.J. Daily Sun - Jun. 10, 1885 The Geological Survey. - ...... In New Brunswick Prof. Bailey and W. McInnes will continue the survey in the section of the interior of the province as well as along the upper St. John, while R. Chalmers will explorethe northern portion and the district around the Baie des Chaleurs, with special reference to the surface geology thereof. In the report of progress recently issued, which is an unusually large and valuable one, containing nearly 800 pages, interesting reports appear from Prof. Bailey and Mr. Chalmers on the geology of western New Brunswick - the former treating of the structure and relations of the older rocks with characteristic clearness and ability, and Mr. Chalmers of the surface geology, the character of the soil, forest growth, etc., of the same region. A new geological map of this region embracing the western part of Sunbury, the greater part of York county, and the southern parishes of Carleton on a scale of four miles to an inch accompanies this report along with others, and appears to be one of the most detailed and accurate geological maps of any part of the province yet published. It is drawn largely from surveys made by Messrs. Wallace Broad and W. McInnes as well as from those of the Crown Land Department, while the geology has been studied by such well known men as Hind, Robb, Bailey, Matthew, Ells and others. No new minerals of economic importance have beendiscovered in the district, those which exist having beenpreviously well known; but the antimony mines at Prince William, York county, are described by Prof. Bailey, and the iron ore deposits of Carleton county referred to. Mr. Chalmers also describes the mode of occurrence of the bogiron at Maugerville. The geological survey of the province, which is now well advanced towards completion, shows that good work has thus far been done in mapping the rock structure and limits of the different groups, and many of the facts brought out in investigating the problems connected with its geology will have a permanent place in science."

S.J. Daily News - Oct. 14, 1864 Our Mineral Resources. - The development of the mineral resources of the Province is daily acquiring increased importance, not only in consequence of the gradual decline in the lumber trade which has so long been one of our most lucrative sources of profit, but because the attention of American and English capitalistsis being turned to our mineral lands to a greater degree than at any former period. This remark applies more particularly to the Americans, who are quietly securing the most valuable mining properties as yet opened out, and are anxious to extend their operations wherever a suitable and promising field for the investment of capital presents itself. The antimony mines of Prince William are in the hands of a Boston Company who will prosecute their development with energy and undoubted advantage. Parties from the same city are making careful enquiries respecting the range and probable extent of theiron bearing rocks of Woodstock with a view to share in the profits which those remarkable ores offer to enterprise and capital. Albert County itself bears witness to the singular advantages which the mining industry, properly directed, is capable of affording - its Albertite, Gypsum and building materials finding a greedy market in the United States, and the fortunate owners of the mining locations, well deserved profits for their investments. But we should like to see the people of the Province share, as they certainly ought to do, in the advantages presented by the mineral treasures of their own soil, and it was with much satisfaction that we noticed at the late exhibition at Fredericton a very marked increase in the representation of our mineral wealth. In describing the general features of the exhibition we glanced at the display exhibited by Professor Bailey, Mr. Matthew and Professor Hind, and we now propose to notice more at length the results of the explorations made during the past summer by the last named gentleman in the Northern part of the Province. Our readers are probably aware that Professor Hind has been engaged in ascertaining the probable area occupied by the already celebrated ""Quebec Group"" of Sir William Logan, the distinguished Canadian Geologist, which he discovered to exist on the Upsalquitch River in the county of Restigouche, in the early part of the summer. The ""Quebec Group"" is now known to be the great metalliferous formation of America, and it has long been recognized as such under different names, but without a suspicion of their relation to one another, by the American and Canadian Geologists. It was in 1860 that Sir William Logan first ascertained the true connection of the different metal bearing rocks of Canada and the United States, and because he satisfied himself that they constituted but one great metalliferous group and that this group was enormously developed in Lower Canada, and particularly near Quebec, he named it the ""Quebec Group,"" and as such it will very probably be recognized by the geologists of all the different States of the Union in which it is known to occur. As already stated, Professor Hind discovered in the early part of this summer that the ""Quebec Group"" comes to the surface on the Upsalquitch and the Nepisiguit Rivers, having there a breadth of about forty miles. He has subsequently ascertained that this important group stretches through the Province, and enters the State of Maine south of Woodstock, and extends a few miles north of that town - forming a belt across the Province not less than 30 miles broad. His collection of rock specimens with their associated minerals, at the late Exhibition, was chiefly from this group as it occurs in New Brunswick; and they were obtained from four lines of exploration which he has made across it. Among the minerals exhibited with the mother rock were copper bearing diorites, black magnesian slates which are supposed to be one seat of the gold not only of New Brunswick but of Nova Scotia and Canada. There were exhibited also what are called the ""Glauconite Slates"", an important member of the ""Quebec Group"", together with red slates and their associated iron ores, purple manganese slates, porphyries red and green, and gold obtained from the drift gravels and sands of the Nipisiguit, Upsalquitch, Tobique, Campbell river, Serpentine, &c. It results from a study of the mineral collection exhibited by

Professor Hind that some idea can be obtained not only of the mineral resources of the localities which have been the scene of his operations, but also of the direction in which practical miners should expend their energies. It will be apparent to every one that the ores of metals exhibited by themselves, without relation to their geological range or distribution, cannot convey to a stranger, or to scientific men who may be consulted by capitalists, an adequate idea of the mineral wealth of a parish, county, or Province, because such ores may represent the richest portion of a mineral vein which would soon become exhausted if vigorously worked, as, unhappily, the dear bought experience of many in this Province is able to prove; but when metalliferous rocks extending over a hundred miles or more in one continuous belt are discovered and properly described, we feel satisfied that it requires time only to reveal the mineral treasures which experience and science assures us they contain. The map which illustrated the geology of the carboniferous area in the valley of the Tobique points out to any and every enquirer the place where to find his sandstones, his grits for millstones, his limestones, his gypsums, his firestones, housestones, argillites, &c., and a map of the ""Quebec Group"" of New Brunswick would point out the copper bearing rocks, the manganese and iron series, the lead and antimony series, and we hope in due time the rock in which the eager prospector may find his gold. We shall look for Professor Hind's report with much interest, and are glad to learn from himself that he intends to spend the remaining portion of the season in examining the geology of Albert, King's, Queen's, Charlotte and St. John Counties. We must not omit to notice the beautiful sea green and red argillites, the dolomitic limestone and the fine blue slates of the Upper Silurian rocks which lie to the North of the ""Quebec Group"" in this Province. Although they have not exhibited much metalliferous wealth, yet they are rich in valuable materials for construction and decorative purposes."

Miramichi Gleaner - Oct. 15, 1864 Provincial Exhibition. - We are indebted to the St. John Globe and Telegraph, for full particulars of the Provincial exhibition which was brought to a close on Saturday last… The display of the richness of our rocks and the deposits in the bowels of the earth, must ultimately prove of great service to our people. ... Minerals. - The Mineral Resources of the Province are well represented. Some very fine specimens of antimony are shown by the New Brunswick Antimony Company, and masses of Pig Iron with the ores yielding the metal are sent by Mr. Best, of the Woodstock Iron Company. Albertite, from the mines in Albert County, and coal from Grand Lake, are displayed in fine masses. Our townsman, Mr. Matthew, exhibited his beautiful collection of New Brunswick minerals, which has cost him many year's labour, and Professor Bailey's Cabinet attracts general and well deserved attention. Professor Hind displayed a large assortment of specimens of Minerals in the matrix or mother rock, and arranged in geological order. The plan adopted by Professor Hind is worthy of special notice, as it exhibited not only the mineral itself, but the rock in which it is found and its geological relation to the rocks. His explorations during the past summer was confined to the country northwest of a line between Fredericton and Bathurst, and consequently, only about one half of the province is represented by the collection exhibited. The carboniferous area in the valley of the Tobique, 26 miles broad, illustrated by a geological map, showing the relation of the gypsum series, the limestone and sandstone series in that valley, with specimens ofhonestones, millstone grits, sandstones for grindstonesand building purposes, ochres, refractory materials, polishing powder, &c. which abound in the Tobique country. Four sections stretching across the country, occupied in part by the great metalliferous belt of North America, called the ""Quebec Group"", are represented in detail. The most interesting rock specimens from these sections, which averaged forty miles in breadth, are Drift Gold, from no less than eight different localities, viz., the Nepisiguit, the Portage River, the Upsalquitch, the Little Southwest Miramichi, Campbell River, Serpentine River, and two from tributaries to the Tobique. I noticed also the copper-bearing Diorites of Campbell River and the Tobique; the Iron ores from Woodstock, the Becaguimec and Southwest Miramichi with their associated Red Slates and Limestones; the Porphyries of the Serpentine, the right hand branch of the Tobique and the Nepisiguit, some of them copper bearing. The beautiful red and green conglomerates from the Blue Mountain Range on the Tobique, were shown as materials suitable for ornamental and constructive purposes; the Jasper series of Campbell River and the red and sea-green argillites from near the mouth of the Tobique, were exhibited with the same object. The traps and fossiliferous limestones from Cap Bon Ami, near Dalhousie, with their associated honestones, also found a place in this collection, together with moulding sands from the St. John and Yellow Dolomites or Magnesian Limestones, galena from the Tobique and copper ores from the St. John. - The collection exhibited by Professor Hind derives value from its scientific arrangement. A study of the different sections showed where each species of rock with its characteristic mineral might be found throughout the country explored. An Upper Silurian Dolomite, for example, holding the chain coral in profusion, was shown to mark the limit northwards of the ""Quebec Group"" on the Upsalquitch and on the Tobique; the same rock probably stretching continuously from one point to the other; so also with the Red Slates, with which the Woodstock iron ores are associated; these were represented in the different sections, as appearing on the Southwest Miramichi, a few miles above Boiestown; on the Becaguimec and on the Upsalquitch and Nepisiguit, thus showing the extensive range of this important rock with its iron ores. The copper-bearing Diorites were also represented in three of the sections, and the purpic slates with their associated manganese ores were shown to stretch from the Tattigouche to the Upsalquitch and beyond. The advantages of a scientific arrangement in illustrating the mineral resources of the Province can not be over-estimated, for, however numerous and beautiful isolated mineral specimens may be, they do not afford the miner or capitalist the requisite information respecting their distribution and probable commercial value. The following is from the Telegraph, Oct. 10, Fredericton, Oct. 8. - ... Minerals. - For the best collection of New Brunswick minerals the first prize has been awarded to Professor Bailey whose cabinet is much admired by all, the specimens being so classified, arranged and labelled that even the unscientific observer may understand them. The Professor in his late tour through the Counties of King's, Queen's and Albert, has added a large number of new specimens to his collection, and his Cabinet embraces specimens from almost every locality in the Province. I noticed Iron Ores from Carleton, St. John, Charlotte, Victoria, Queen's and Gloucester; and lead ore, from nine different localities.There are specimens of Gold, too, but of course no discoveries have yet been made in sufficient quantities to be of any service ... To attempt a mere enumeration of the different mineral specimens would be a hopeless task, and indeed it is a matter of surprise to persons less enthusiastic than the Professor, that during his comparatively short residence in the Province has made so perfect a collection of its native minerals. Professor Bailey has taken the first prize for useful minerals of New Brunswick. The second premium for New Brunswick Minerals has been awarded to Mr. G.P. Matthew, whose collection is highly creditable. Mr. Matthews has taken a prize also for Combustible Minerals of N.B., the only collection exhibited."

Codes: 0275 / 0276 / GEOL / IDX_Names: Woodstock Fe; West Beach; Geology - General;
Daily Morning Telegraph - Jun. 22, 1865 Prof. Bailey's Report. -To the incipient Geologist nothing can well appear more hopeless than the endeavour to reduce the chaos of rocks that are upheaved and tossed about in this part of our Province, to anything like an intelligible order. The alteration which they have suffered from heat renders it very difficult even for the skilful Geologist to arrive at a knowledge of their succession, which can only be attained by means of the fossils which remain unaltered. Till within the last few years little progress was made in mastering these difficulties. Some eminent Geologists had led the way to the interpretation of the stony record. Dr. Gesner had made a Geological Survey, in which some important facts were observed. Prof. Johnston had constructed a Geological Map. Dr. Robb's observations were also of a very important character. To Dr. Dawson of Montreal and Dr. Hitchcock of Massachusetts, we are indebted for solving some of the great difficulties. Science was also laid under obligations to Messrs. Hartt and Matthews - with some other young Geologists, prior to Professor Bailey's surveys, which, we feel happy in testifying are of the highest value. We have sincerely to thank the Professor for his arduous labours, and for the admirable orderly report in which the Geology of Southern New Brunswick is now brought before us. If any of our readers who take an interest in our Provincial Geology, will, in the first place, visit Portland, and examine the rocks from Fort Howe onward to the Kennebecasis, he will see what is held to be the most ancient sedimentary deposits in our Province. This group - on which, if all were now in the order of deposition, all the other rocks would repose as their base - consists of different kinds of rock, of which limestone is a prominent member. The rocks of this series are found stretching from the Narrows, on the St. John, to Hammond River, with various outcroppings on the road to St. Andrews. Upon these lowest strata there lies another group, which stretches from the Falls along the rear of the City - from which it is separated by the valley of the Marsh - to beyond the Coldbrook nail-factory. The next group is that which is seen all through our streets, set on edge with their ripple marks, worm tracks and shrinkage cracks, and running in a similar direction with the Portland and Coldbrook rocks. In these St. John rocks there has been found quite a number of fossils, especially trilobites. Another group occurs in the neighborhood of Kingston and other places, which from want of fossil remains seems difficult of relegation to its exact place in the series. Then there is another set, which from its character has been called the ""Mica Schist Formation"", and which may be seen in the district of Prince William, and occupies a very large space in the Province. All these series to which we have alluded belong to Silurian or first ages of the Earth. Then come the Bloomsbury and Little River groups, belonging to the Devonian Age; after these the sub-carboniferous and carboniferous - occupying very large portion of the centre of the Province, - and full of interest to us, as containing the most important deposit that has yet been found in the earth - the rand motor, the black geni which can invoke from the waters the giant who turns the mills of manufacturing kingdoms - steam. There are many other strata of more recent formation, to which we need not now particularly refer. We are sorry to find our Geologists generally agreeing in the opinion that, while what was popularly called the Carboniferous formation is to be found widely extended over our Province, yet the greater part of the area will be found unproductive; in fact that only a small portion of the Province contains the middle or true Carboniferous, the upper and the lower seldom presenting seams of Coal sufficiently thick to be workable. This portion is in the Grand Lake region. The sub-carboniferous, however, is wealthy too, inasmuch as it immediately overlies the Devonian, in which are the wonderful oil springs. Large portions of King's, Queen's, Albert, Westmorland, and other Counties are of this formation, and from the presence of albertite, bituminous shales and oil springs, it is predicted that at no distant day many may find themselves suddenly made rich, as they have been in similar formations in Pennsylvania and elsewhere. We may hear any day of an oil spring being struck in the neighborhood of Hillsborough or Dorchester, as companies are now at work boring for the precious fluid. Another product of great commercial value belongs to this series, namely, the Gypsum, which forms an article of large export to the United States. The limestones of the Province are of great value, those of the Portland series as well as others of more recent date. Next in commercial importance, if not superior to all - is the Iron - the finest deposits of which are tobe seen at Woodstock, and which may yet be found in manyother parts of the Mica Schist Formation; and that has also been found at West Beach and Black River, and other portions of the Cordaite Shales. Then come the Vernon, Alma, Gordon, and Williams Copper Mines, in the last mentioned Group. The antimony of Prince William, the manganese of many districts, and the silver, lead and gold which may yet be found in other localities. The great value of these Geological observations lies in directing the attention of the miner to those districts where he may expect to find the ores of which he is in quest. One might well suppose that the mere division of the rocks of our Province into Groups, known as the Portland, or Coldbrook, or St. John, would be of little service to that end; but when these different series are connected with similar formations, possessing the same fossil fauna and flora in other countries in which the peculiar riches of the formations are

well known, it will be seen at once how valuable are the observations that have accomplished this object. Thus, when it is known that the fossils peculiar to the English, Pennsylvania and Nova Scotia coal measures, are similar to those of the Grand Lake Mines, we have confidence that that district may yet be found rich in Coal. Also when we find the various characteristics of the sub-carboniferous the same in all oil region, we have great confidence that in the districts where are Gypsum, Salt springs, Albertite, and bituminous shale, will also be found the precious petroleum, while we are prevented from expending time and money in looking for any valuable seams of Coal over a large region where yet small quantities of the precious deposit may be found. Professor Bailey's report not only connects the various rocks in our Province at distant points, possessing common character and of the same age, but also in most cases and as far as has been possible, he has also connected them with the formations in other lands - thus enabling us to study all the better our own Province by giving us fixed and well known points with which to coordinate others where the same groups appear, while the characteristics are presented by which we can attach the special knowledge to that which we may possess of the general principles as laid down by Lyell, Murchison, Miller, Dawson, &c. In some instances this has not yet become possible, as in the case of what has been called the ""Mica Schist"" Formation, the exact age of which has not been determined but may soon be discovered. We have with this report, at least in connection with some of the copies, a Geological map of the Southern portion of the Province, in which an attempt has been made to give an idea of the districts in which the various groups of rocks are to be found, and which is very useful as a guide, although no doubt a fuller knowledge of the Geology of this part of the Province will make many changes in the shadings. It is quite possible that in various places there may be ""outliers"" of the Carboniferous or other formations, that the Portland, or St. John, or other groups, may be found intruding into districts now supposed to be occupied by other strata. This no one knows better than Mr. Bailey, but the map is nevertheless a most important guide, as we can learn so much more by the eye than by the ear. We trust that Mr. Bailey will continue his observations, and give us from time to time the results at which he may arrive. With other surveys and explorations, (such as the valuable one of Prof. Hind) we trust the time is not far distant when we shall have a tolerably full and accurate knowledge of the archaic history of our Province. No doubt the vast forests which cover the land impede the progress of the explorer, but as the farmer and the woodsman advance so will the man of science follow,

St. Croix Courier - Mar. 26, 1959 Buchanan's Speech. - ... Base Metal development. - The presence of base metal ores has been known for many years. It was not until recently that the other larger reserves which areknown now to exist were discovered and proven by surveys and drilling operations. These ore bodies indicate a great potential industry when the demand for such products provides reasonable profit incentive for production. During the years immediately following World War II there was a boom in the demand and price of base metals. The price of lead rose from 6« cents to 21« cents per pound and the price of zinc from 8¬ to 17 cents. Prices fell to about 9« cents per pound in 1949. During the crisis brought on by the Korean situation, base metal products were stock-piled by the United States at high average prices. Since that time prices have gradually declined to 11« cents for lead and 10.3 cents for zinc in 1958. Additional depression factor has been the imposing of quotas by the United States in October, 1958, which limited exports to 80 per cent of the average for the previous four years. Production of lead in the United States in 1958 was 21 per cent less than for 1957 and the lowest since 1890. Production of zinc last year was 24 per cent less than in 1957 and lower than for any year since 1933. The matter of base metal supplies and markets has been the subject for discussions by the representatives of 32 nations at a conference under the auspices of the United Nations held in London in September, 1958. This was followed by a similar meeting in Geneva in November, 1958 and plans are being made for a third meeting. It is in this atmosphere and depressed market prices that private enterprise is facing problems of investment in developing of known base metal ore bodies for potential production. May I also say, Sir, that it is at this particular time as well that risk capital is being employed which is giving returns which cannot be equalled. Many millions of dollars have been invested since1953 in survey, exploration and development work. Investments by Brunswick Mining and Smelting Co. Ltd., are estimated at 25 million dollars - may I repeat this - 25 million. Some disparaging remarks have been made but I do not believe they understood. May I also say I received a letter in connection with the manganese at Woodstock - and an additional 25 to 30 million dollars will berequired in preparation for the full scale production. Heath Steele Mines has made a capital investment of over 15 million dollars and there is prospects of further investment of a similar amount when production and concentration resumes. Many other interested companies have invested smaller amounts bringing the total to more than 50 million dollars. These facts are set out in greater detail in the Interim Report of the Commissioner on Mines tabled in the house recently. May I comment in that regard. This was certainly a most excellent report and I trust it will be read by the members of this assembly. Production. - Long term estimates and future demands indicate an increase in the world demand for lead in the next 25 years of approximately 50 per cent and an estimated increase of 62 per cent in the demand for zinc is indicated for the same period. It seems hopeful therefore that in the not too distant future prices will increase to a point where production from the base metal ore bodies in New Brunswick could be carried on at a profit."

Morning Journal - Feb. 16, 1866 Rock Records of New Brunswick - A Lecture, by Professor L.W. Bailey, A.M. (continued) : But through all this time there is nothing to tell us of our own Province, and when we do again find itparticipating in these events, what a change appears, what a scene of desolation meets our gaze! In place of the fertile valleys and wooded slopes, which in the ages last enumerated must have given shelter to such vast herds of animals, roaming even to high northern latitudes, and enjoying a warmth almost tropical, we now behold only vast fields of ice, covering the land and descending as glaciers from the higher mountain-summits, or swept along as floes and icebergs by the cold polar currents. Not a living thing remains; all is devastation and ruin. This was the great Glacial or Drift period in our history, and the evidences of its action may be seen in all portions of the Province. Wherever the rocky beds are laid bare, their surface may be seen to be worn and polished, or else to be deeply scratched and grooved as if by a cutting instrument of great power. All prominent ledges have been broken down, and the fragments detached from them may often be found at great distances from their original beds. Masses of rock occur about your city, which must have come from the cliffs of Kingston, crossing the Kennebecasis in their course. Pieces of the Woodstock iron ore are found on the slopes of the hills at Fredericton, while smaller pebbles are sometimes seenwhich would even seem to have travelled from distantCanada. Even masses of enormous size were sometimes moved, and left at great elevations on our mountain chains. Near the granite quarries in Queen's county I have seen detached and rounded masses of rock fully 30 feet in diameter, and which could not have weighed less than 4,000,000 pounds; while even on the summit of Mount Katahdin, in Maine enormous diluvial boulders are found at the height of 4,500 feet above the sea! They have invariably been transported in a southerly direction, showing that the moving force, whatever its nature, was one proceeding from the north! Geologists are divided in opinion as to the condition of America during this glacial period. All, of course, look to ice as the principal agent in producing these effects, (for water alone would be powerless to move such heavy masses,) but one party would assign the process to the action of glaciers; and the other to that of icebergs. The former supposes an elevation of the land sufficiently great to have caused the formation of one universal glacier, similar to that which now covers much of Greenland, and which, moving southward by the slope of the continent, ground away the summits of protruding ridges, furrowing and polishing the rocks like a gigantic rasp, and carrying along the worn materials frozen to its mass, we scatter them again when melted by a summer sun; the other, on the contrary, supposes a depression instead of an elevation of the land, this depression allowing the cold polar currents, which even now bring such quantities of bergs and floating ice along our North Atlantic coast, to carry the same farther west, and melting by contact with the Gulf stream or other equatorial currents, to deposit their burden, as is being done by the icebergs of the present day off the banks of Newfoundland. Which of these two theories is correct we cannot now stop to inquire. Both are ably maintained, and both would seem to account satisfactorily for the effects observed; - and it is with these that we have principally to do. What object may we ask was to be gained by thus replacing a warm and genial climate, a landscape teeming with luxuriant vegetation, and an animal life even richer than than that of the tropics, by a season of wintry cold, shrouding much of the earth in a dreary mantle of ice and snow? We have our answer in the words of Agassiz: ""The glacier was God's great plough, and when the ice vanished from the face of the land, it left it prepared for the hand of the husbandman. The hard surface of the rocks was ground to powder, the elements of the soil were mingled in fair proportions, granite was carried into the lime regions, lime was mingled with the more arid and unproductive granite districts, and a soil was prepared fit for the agricultural uses of man,"" - a soil not only capable of sustaining a vigorous vegetation, for this existed even before the glacial period, but a soil fitted for the growth of cereal crops, a grain growing soil, ""one especially adapted to those plants most necessary to the higher domestic and social organizations of the human race."" But the glacier was not the only agency involved in producing this result. Whether we accept or not the theory of great elevation during the Ice period, it is certain that towards the close of that period the land was depressed from two to five hundred feet below its present level, and that in our own Province all that portion now possessing a less elevation was then below the water. The river St. Lawrence was then a wide arm of the sea, and Lake Champlain was a deep bay, tenanted by whales and seals. The river St. John was a long estuary, extending certainly as high as Fredericton, while the Grand Lake and other smaller sheets of water were connected into one extensive tract, covering the great central basin of the Province. By these waters, whether lacustrine or marine, the materials already roughly distributed by the agency of ice were rearranged, flooded 18 streams filled the great valleys deep with fertile soil, and spread over the bare rocks a rich covering of earth. And when the land rose again, as it did before the introduction of Man, the draining which ensued still further carried on the fertilizing process, carving out the present channels of our river valleys, leaving here and there broad belts of rich alluvium and scattered sheets of water, either lakes or ponds, the great reservoirs to supply the land with constant moisture. All portions of the Province abound with evidences of both the depression and elevation of this period. Beneath some parts of your own city are beds of clay, filled with marine relics, (star fishes, shells, &c.), which were deposited when the waters covered the place where they are now found. All along the coast of the Bay of Fundy similar deposits may be seen, as well as along the St. John river, where also the the beautiful terraces which enrich its banks, as at Fredericton and Woodstock, mark the successive and interrupted epochs in the period of emergence. From the events of this period we may attempt to draw some conclusions as to the length of time involved in our great geological record. The beds of sand and gravel, washed down by torrents from the rising land, often

obstructed the former beds of streams and rivers, and turning these latter from their course, compelled them to seek new channels, often by carving them through solid rock. The Niagara River, thus diverted from its proper bed, was made to excavate the wild and deep gorge, seven miles long, which now connects the Falls with Lake Ontario. The same may in part be true of the St. John and of most of the rivers in your Province. The St. John formerly poured its waters into the Bay of Fundy probably by two channels, one crossing from the Kennebecasis to Courtenay Bay, the other, more directly, from the South Bay to Manawagonish. Both of these, during the Glacial period, became filled with the thick beds of sand and gravel which still occupy them, thus compelling the river to seek a new exit by carving out the wild and picturesque channel through which it now rushes. To be continued."

Codes: 0275 / G3 / LIME / GEOL / IDX_Names: Woodstock Fe; Granite; Lime - General; Geology - General;
N.B. Courier - Feb. 19, 1842 Geology Of New Brunswick. - A report of the labours of Dr. Gesner, in exploring the mineral resources of the Province, during the past year having been made public, we have much satisfaction in referring to the work as affording further satisfactory evidence in confirmation of the generally received opinion that New Brunswick is rich in mineral resources. In his late researches, we are glad to find that in order to meet the views of His Excellency the Lieutenant-Governor, Dr. Gesner has directed his attention to the agricultural character of the districts explored; and the features of the uncleared lands have accordingly been examined, with a view of making them at once available for settlement; and so favorable have been the results of these enquiries, that several new settlements have already been projected in districts selected for this purpose. Dr. Gesner returned to the City last week after locating a party of settlers at Eel River, and another party are now preparing for departure to the same vicinity. A present benefit will thus be reaped from the labours of our Provincial Geologist by many deserving families, who might otherwise have proceeded to the United States, or remained as drones about the City, and at times a positive burthen upon the community. Having copied from the Royal Gazette the short reports made to His Excellency from time to time, during the progress of last year's exploration, it is not perhaps necessary for us to make any lengthy extracts from the detailed Report, in which Dr. Gesner has ably and minutely set forth, all his discoveries as well of a topographical as of a geological nature. We cannot, however, omit noticing the valuableand extensive deposit of Iron Ore near Woodstock, in the county of Carleton, which, on several accounts, offers advantages for the manufacture of iron and steel scarcely to be found in any part of Europe, and which is capable of supplying the whole of North America for many centuries to come. - With respect to the Great Coal Field of New Brunswick, we quote a paragraph from the Report 2 giving a description of that very extensive deposit, which will give some idea of the immense mine of wealth possessed by our Province:- [see Gesner's Report.....] It must be gratifying to Dr. Gesner to find thatthe Marl and Lime discovered by him in the counties of Charlotte and Saint John, are coming into use, and that the former is found to be of great value in agriculture, as proved by a letter from Mr. Joseph Walton, an intelligent farmer at St. Andrews, in the Report beforeus. We have before noticed the immense advantage resulting to the Province from the Granite found on the Saint John. The demand for the article in this City, increased greatly during the past year, and in some cases could not be supplied. When the vast coal field above described, and the immense beds of Iron Ore and other valuable minerals known to exist in the Province, are brought into use and made to supply the existing demands, then will the benefits of the present geological exploration be fully developed. It is expected that the Survey will be brought to a close next season, when a Geological Map of the Province will be completed, and the characteristic features of the Province, in a geological point of view, will then be easily ascertained."

Royal Gazette - Apr. 1, 1857 Recently passed: An Act to revive, continue and amend an Act to incorporate the New Brunswick Mining Company."

Royal Gazette - Apr. 15, 1857 Cap. XXXIV. An Act to revive, continue and amend an Act to incorporate the New Brunswick Mining Company. Section. Section. 1. First meeting to be 4. Provincial Act continued held in London in force. 2. Capital, its amount 5. Verified names of officers and shares and the stock to be filed. 3. Assessment of shares 6. Act not to interfere with Act to be under Imperial 18, Vic. 1, n.8. Act. Passed 26th March 1857. Whereas the first meeting contemplated in the said Act was not held in conformity with the provision of the same; - Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That the first meeting of the said Corporation shall be held in London, under the provisions of the Imperial Act hereinafter referred to, within one year from the passing of this Act. 2. The capital stock of the said Corporation shall consist of sixteen thousand pounds sterling, and be divided into six hundred and forty shares of twenty five pounds each. 3. Whensoever it may be deemed necessary to levy and collect assessments on the shares held and owned in England, the amount so assessed shall be collected under and by virtue of the provisions of the Imperial Act, intituled An Act for the Incorporation and regulation of Joint Stock Companies and other Associations, 19th and 20th Victoria, Cap. 47. 4. The aforesaid Act to incorporate the New Brunswick Mining Company shall in all things be revived and continue in force except as far as the same may be inconsistent or at variance with the provisions of this Act. 5. That the names of the President and Directors and Stockholders of the said Corporation, and the amount of stock belonging to each, verified by the oath of the President of the said Company, shall be filed in the Office of the Provincial Secretary of this Province within one year from the passing of this Act, and so on annually during the existence of the said Corporation. 6. That nothing in this Act shall interfere in any way or repeal the provisions of the eighth Section of the said Act, intituled An Act to incorporate the New Brunswick Mining Company."

Carleton Sentinel - Mar. 14, 1857 March 11th - A Bill to revive and continue Act incorporating the New Brunswick Mining Company was reported as agreed to with certain amendments."

Codes: 0275 / GEOL / IDX_Names: Woodstock Fe; Geology - General;
Carleton Sentinel - Aug 6, 1864 Prof. Hind's Geological Explorations.-Many of our readers are aware that Professor Hind has been specially instructed by the Government to examine, and report upon, a particular series of Rocks, which have been ascertained to exist in this Province, called the ""Quebec Group"". But few, we imagine, know the nature or importance of this formation, or in what particulars it is of interest to geologists or to the public at large. The ""Quebec Group"" is the name given by Sir W.E. Logan to a series of strata which are distinguished by the extent and value of the minerals they contain. It is the great metalliferous rock series of North America, and abounds in the ores of iron, copper, antimony, lead, nickel, cobalt, and even silver and gold. Most of the newly discovered mines in Canada belong to this group of rocks. In it are found the celebrated copper deposits of Lake Superior, and the less known copper mines of Canada East. The gold of the Chaudiere Valley is derived from the ""Quebec Group"", and the greater number of the minerals sent by Canada to the International Exhibition, at London, which attracted so much notice, were the products of this great metalliferous belt. Its true character was first ascertained in the immediate neighborhood of Quebec, in 1860, and in honor of that ancient city, Sir William Logan gave it the name it at present bears. Its thickness in Canada is not less than 7,000 feet, and we understand from Prof. Hind that its thickness in New Brunswick will not fall short of, if it does not exceed, the development it has in Canada. The ""Quebec Group"" extends in a narrow band, or in bands of varying breadth, from Gaspe to near Montreal. It then passes in the form of a very narrow belt into Vermont, New York, Virginia and Georgia. The gold so long since obtained from auriferous drift of Georgia, and which now probably supplies the Confederates with no inconsiderable portion of their sinews of war, comes from rock belonging to the Quebec Group. Professor Hind has already ascertained that the breadth of this important formation is not less than 40 miles in the Counties of Restigouche and Gloucester, and about 47 miles on a line drawn from North West from Long's Creek to about 13 miles beyond Woodstock. On the South West Miramichi and Shiktehauk the breadth of the formation is about 10 miles. With the valuable ores of iron in our own neighborhood, we are all familiar, and the different branches of industry to which they have already contributed, and have in fact created. It is with much satisfaction that we are enabled to state upon the authority of Prof. Hind, that these ores not only exist over a tract of country, already known to be at least 30 miles in length, but they occur in two or more parallel lines, from 2 to 8 miles apart, and with the ores are associated bands of limestone. Drift clays and sand cover the outcrop of these deposits to a small depth in some parts of their course, but it is probable that over a considerable area of their known development they will be practically available. The country where they occur, particularly between the two Shiktehawks, is well wooded and in parts very fertile. It will not fail to strike the reader that we have thus, in our own immediateneighborhood, all the material requisites for great mining industries to spring up. Ore in abundance, limestone for smelting purposes, and timber for fuel, besides a fertile soil for farming pursuits. These are natural gifts which only require the hand of man to make them available and, commercially, most valuable. What we require is capital, and that will soon reach us when the resources of the country become known, and those resources described in a manner which shall inspire the confidence of scientific men in Europe, to whom capitalists are now in the habit of appealing for an opinion on subjects connected with mining enterprise, remote from their own observation. We understand that Prof. Hind is now about to ascend the Tobique and its south eastern tributaries to ascertain the outcrop, or north western limit, of the Quebec Group in that direction. We are aware that deposits, and very favorable indications of other metals, besides iron, are known to exist in our county within the limits stated above, and we confidently hope that ere long, these hidden treasures will be profitably brought to light. A great step has been gained in establishing the existence of so broad a belt of the metalliferous rocks of North America within the limits of the Province, and we trust that every facility will be afforded to Prof. Hind to investigate and describe the mineral wealth of the ""Quebec Group"", which he has already shown to occupy no inconsiderable portion of this and adjoining Counties."

Royal Gazette - Apr. 18, 1866 Cap. VIII. An Act to incorporate the Aberdeen Iron Company.Section. Section. 1. Company incorporated, 9. Suit against share-proviso. Holder, how brought. 2. Capital. 10. On trial, what proof 3. First meeting, when held. Is sufficient. 4. Votes, how apportioned. 11. Production of 5. Shareholders, for what Register prima facto liable. Evidence. 6. Assessments, how levied 12. Dividends, how and & collected, when paid. 7. Shareholder not to vote 13. Joint stock alone unless all calls are paid up. Liable. 8. Company not liable for any 14. Time and place of trust to which share may be holding meetings. Liable. 15. Amount to be subscribed within two years. Passed 16th April 1866. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Charles Connell, Robert A. Hay, George H. Connell, Charles P. Connell, M.D., William M. Connell, their associates, successors and assigns, shall be and are hereby declared to be a body corporate and politic, by the name of ""The Aberdeen Iron Company,"" and by that name shall have full power and lawful authority to have, hold, own and enjoy in any way, real estate in this Province, in fee simple or otherwise, and may alienate, encumber, lease, sell or otherwise deal with the same in any way; and shall by that name have all the general rights, powers and privileges, and be subject to all the liabilities incident to Corporations by Act of Assembly in this Province, for the purpose of digging and mining ore and converting the same into iron, and vending the same, and such other business as may be incidental thereto, and for establishing and maintaining wharves, buildings, erections, furnaces, forges, engines, machinery, implements and things as may be necessary and convenient for carrying on said business and operations; provided nevertheless, that the aggregate value of real estate to be held by the said

Corporation in this Province at any one time, shall in no case exceed the value of one hundred thousand dollars. 2. The capital stock of the said Corporation shall be twenty thousand dollars of current money of New Brunswick, divided into one thousand shares of twenty dollars each; provided however, that the said Corporation shall have power to increase the said capital stock to a sum not exceeding two hundred thousand dollars. 3. The first meeting of the said Corporation for the organization thereof, shall be called by the said George H. Connell, or in the case of his death, neglect, or refusal, by any one of the parties named in the first Section of this Act, at such time and place as he may appoint, by publishing notice of the same in two public Newspapers published in the county Carleton, for ten days previous to the day of such meeting, provided that such notice shall be published within three years after the passing of this Act. 4. Each and every person owning a share in the capital stock of the said Company shall be a member thereof, and shall be entitled to vote at all meetings of said Company ..?.. And members may give as many votes as they own shares, and may vote by proxy, such proxy being a stockholder and authorised in writing. 5. Each and every shareholder in the said Corporation shall be and be held liable to the said Company for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, or for the purposes of, or to carry on the operations for which the said Company is incorporated, which call or assessment may be sued for by the said Corporation, and recovered in any court of Record within the Province. 6. The Company, or the Directors if empowered by the bye laws of the Corporation, shall have power from time to time to levy and collect assessments upon the shares, or upon such of them on which the amount subscribed has not been paid up, of such sums of money as may be deemed necessary for carrying on the business, or for the purpose or operations of the said Company; and whenever any assessment shall be made as aforesaid, it shall be the duty of the Secretary or Treasurer of the said Company to give notice thereof in a public Newspaper printed in the County of Carleton, requiring payment of the same within not less than thirty days; and if any stockholder shall neglect or refuse to pay to the Secretary or Treasurer the amount of such assessment or any part of such amount, at the time in such notice prescribed, the same may either be sued for and recovered in the manner prescribed in the last preceding Section, or the Secretary or Treasurer may advertise all such delinquent shares for sale at public auction, giving at least thirty days notice of the time and place of such sale, by publishing a notice thereof in some one public Newspaper published in the County aforesaid; and all shares on which the assessment or any part thereof is not paid, with interest from the time such assessment became due, may be sold to the highest bidder; and after retaining the amount due on such assessment, and all interest due thereon, and all expenses of advertising and selling, the residue (if any) of the moneys for which such shares shall be sold, shall be paid over to the former owner or owners thereof, and a new Certificate or 4 Certificates of the shares so sold shall be made and delivered to the purchaser or purchasers thereof. 7. No shareholder shall be entitled to transfer or vote upon any share after any call shall have been made in respect thereof until he o she shall have paid all calls for the time being due on every share held by him or them. 8. The said Company shall not be bound to see to the execution of any trust whatever, express implied, or constructive, to which any of the said shares may at any time be subject; and the receipt of the party in whose name any such share shall stand in the books of the said Company, or if it stands in the name of more parties than than one, the receipt of any one of the parties in whose name the same shall stand in the Register of the stockholders, shall from time to time be a sufficient discharge to the said Company for any dividend or other sum of money payable in respect of such share, not withstanding any trust to which such share may then be subject, and whether or not the said Company shall have notice of such trust, and notwithstanding the owner or owners of such share or shares shall not have joined in such receipt; and that the said Company shall not be in any way bound to see to the application of the money paid upon such receipt. 9. In any action or suit to be brought by the said Company against any shareholder, to recover any money due for any call, it shall not be necessary to set forth any special matter, but it shall be sufficient for the said Company to declare that the defendant is the holder of one or more shares in the said Company, (stating the number of shares,) and is indebted to which the calls in the said Company in the sum of money to which the calls in arrear shall amount, in respect of one call or more upon one share or more, (stating the number and amount of each of such calls), whereby an action hath accrued to the said Company by virtue of this Act. 10. On the hearing of such action or suit, it shall be sufficient to prove that the defendant, at the time of making such call, was the holder of one or more shares in the said Company, that such call was in fact made, and such notice thereof given, as is directed by this Act; and it shall not be necessary to prove the appointment of Directors by whom such call was made, nor any other matter whatever, and thereupon the said Company shall be entitled to recover what shall be due upon such call, and interest thereon, unless it shall happen either that any such call exceeds the prescribed amount aforesaid, or that due notice of such call was not given. 11. The production of the Register of the shareholders shall be prima facie evidence that the parties whose names are therein entered as owners of shares are shareholders, and of the number and amount of their respective shares. 12. No dividend shall be paid in respect of any share, until all calls and assessments then due and that and every other share held by the person to whom such dividend may be payable, shall have been fully paid. 13. The joint stock and property of the said Company shall alone be responsible for the debts and engagements of the said Company. 14. The time and place of holding annual or semi-annual, and all special or other meetings of the said Corporation, as also the number, eligibility, duties and powers of Directors, officers and servants, their continuance in office, removal, or disqualification, the filling up of vacancies, the time and manner of election or appointment, and any and every other matter and thing whatsoever, connected with the objects and purposes for which the said Company is incorporated, may be established or regulated by bye laws of the said Company, to be made at any meeting of the said Company, or adjournment thereof, which bye laws, not inconsistent with this Act of Incorporation, they are empowered to

Colonial Farmer. - Jul. 10, 1871 Geological Report. - Continued. V. Calcareous Clay Slates in Carleton and Victoria Counties. - The narrow strip or belt of red conglomerate just described, together with the northwestern boundary of the outlier in Brighton, constitute, with their continuation on the strike on either hand, the limit of the non-calcareous slates; beyond which to the northwest, without any perceptible change of attitude or general conditions, commences a set of calcareous slates and quartzite, extending on the St. John River, to and far beyond the Province line. These rocks, which present a remarkable uniformity in character for very great distances, precisely resemble those which have been described by yourself as occurring and attaining a great development on Temiscouata Lake and the river Madawaska, and for a great distance down the St. John River, and are in probability the continuation of the same series, which you have determined to be Upper Silurian. The general description of these rocks given in the Report of Progress for 1849-50, page 60, is so concise and graphic, and at the same time, in its main features, so precisely applicable to those now under notice that I may be excused for quoting it here. ""The next five miles across the measures are occupied on the west side of the lake by calcareo-argillaceous slates, occasionally interstratified with noncalcareous bands, and some of the beds are more arenaceous than others. The colors, are dark bluish grey, light grey and black; the divisions of the original bedding are obliterated, and in fresh fracture it is only by the colors, the differences of which are often very obscure, that the stratification can be made out; but the action of the weather and water on the ice-rounded or moutonnee forms which come upon the lake, distinctly shown the bedding by the unequal wear of the more or less calcareous layers, the one standing out in beads, and the other reentering in grooves. The beds are almost universally thin, and the surfaces give a pictorial 4 display of a vast variety of the most complicated contortions, sometimes in folds leaning over each other to the northwest, and sometimes in involved arrangements which it is quite impossible to disentangle or understand without a larger exposure than usually appears. - Combined with the contortions there are often disruptions or dislocations which, however, show no veins of interposed foreign material; the torn and twisted mass having been apparently compressed together and become cemented in such a way that, except for the colors or unequal wear, it would never be suspected that it has been disturbed at all. In some parts, however, these contorted rocks are cut up by a multitude of small veins of calcareous spar."" I have to add to the above description that the bands of non-calcareous quartzite in the region explored by me, although in general conformable, appears sometimes to cut the rocks transversely to their strike; they vary from eight to thirty feet in thickness, and are usually traversed by small strings of calcspar. Where they abut upon the river banks the exposures are usually more extensive, than at other points, as if, from their superior hardness, they had more effectually resisted atmospheric influences and the erosive action of the river. There also occurs in this region a few apparently isolated patches of limited extent, of more or less pure limestone, probably lenticular in form, sometimes of a slaty structure, and sometimes massive. In two instances which came under my observation, where the rock seemed to have undergone little alteration, I discovered a few obscure fossils forms which, however, were scarcely visible except on weathered surfaces; but which have been recognized by Mr. Billings as Upper Silurian. Intercalated with the calcareous slates of this region are some remarkable bands of ferruginous red and green slates, sometimes traceable for great distances on the strike. The first and most important set of these bands is that in which are situated the deposits of iron ore which have been mined at Jacksontown, near Woodstock, and which, in their continuation to the northeast, display at their outcrop near the Beccaguimic, twelve miles from Jacksontown, very considerable quantities of a similar ore, being an impure slaty hematite. In the Beccaguimic district there are three parallel bands of red and green slates about half a mile apart; one of these only, that nearest the river, appears to contain workable deposits of ore. - Towards the southwest the Jacksontown band is traceable to the boundary line, it was charged with iron pyrites. Another band of the red and green argillites is traceable from Flanigan's Hill, in Simonds, to East Glassville, a distance of nearly eight miles, and has yielded in some places good specimens of hematite and specular iron; it is five and three quarter miles across the strike from the former. It 5 would seem reasonable to expect that these bands would serve to mark the structural arrangement; but as their attitude in every instances where they were observed is vertical, and their associations with other bands obscure from want of exposures, I have been unable as yet to make them available for this purpose. A remarkable band of diorite was observed in crossing the road passing through East Glassville, about two and a half miles south of Miller's Corner. - It appears to run in conformity with the slate rocks, and is 150 yards wide where it crosses the road; in its continuation to the northeast on the strike, it appears to run into a ridge of considerable elevation terminating at three miles distant in Garforth Mountain, which is about 800 feet high. The succession of rocks observed in the vicinity of the diorite band in traversing it from north to south is as follows: 1. Calcareous slates, being the prevailing rock of the country. 2. Black slate, a very thin band. 3. Diorite band, 150 yards wide, coarsely crystalline, of a prevailing dark-green colour, with many seams and joints filled with; 4. Slaty limestone eighteen feet thick. 5. Highly ferruginous decomposing calcareous slate. 6. Another band of diorite of a laminated or gneissoid aspect and narrower than the former. 7. Calcareous slate, as at the commencement of the section; the whole of which is comprised within a breadth not exceeding 500 yards, the attitude of all the rocks being vertical. In the region underlaid by the calcareous slates, the soil is, as might be expected, superior for agricultural purposes, to that in which the rocks devoid of lime prevail. (To be Continued)."

Carleton Sentinel - Jan. 30, 1925 Interesting Letter Written by Late Dr. L.W. Bailey. - To His Wife in the Early Sixties - Copy Found Among His Effects - Woodstock Without 'Electric Lights' - Visits Glassville in 'Forest Primeval' - Meets Many Pleasant People. - 'Mr. Selwyn is here and we have had some talks and one long walk together. He is quite the opposite of Dr. Hunt in appearance, manner, and, I mayadd, opinions. He is very tall, as thin as a lath, with long spindle legs, (with which he gets rapidly over the ground), with a rough pock-marked visage and shaggy beard - altogether not a prepossessing looking man, but not unpleasant in conversation. He holds some very different views on certain geological points from Hunt, and the two have already had some pretty sharp debates. I think I can see trouble ahead between the two, but this, of course, is between ourselves. We came up to Woodstock by the evening express, last Tuesday, getting here about midnight after a series of delays. The woods were on fire all along the route and sometimes the cars would be full of smoke. A large pile of cordwood blazing close by the track lit up the forest in grand style as we rolled past it. Near Cranberry station the cars stopped a few feet from a burning bridge. We had already run on trellis-work for some distance, and as we looked out from the window nothing could be seen but the sleepers and the foul lake below (breeding thousands of mosquitoes) the blazing bridge in front and the general darkness all around. For half an hour the men were carrying water from the lake to extinguish the flames, while we were in expectation of having either to pass the night in this cheerful spot or to run back to the almost equally cheerful McAdam Junction. However, their efforts were at last successful and very slowly, with a good deal of misgiving as to whether the bridge would give way and plunge the engine into the depths below, we got over, and sped on our way to Woodstock. It was past twelve o'clock when we reached here; no coaches to meet us at the cars, no lights in the town, and a delightful uncertainty on our part to which way to turn. Neither of us knew anything about the place, but after nearly breaking our necks over piles of railway sleepers, and taking an involuntary bath in the waters of the Meduxnakeag, we at last reached an hotel (not the one we wanted) where we again encountered more sleepers. We passed what remained of the night at the Cable House, and next morning shifted our quarters to the far more comfortable and clean house of Mrs. Donaldson. Wednesday we spent about Woodstock, visiting theiron mines, works etc., and in the evening went to Mr. Connell's, where we had been invited, finding a party of some thirty or more of the young and fair of this good town, with whom (2nd Miss Connell) I had a quadrille. Connell has a fine house and everything very nice - a beautiful garden etc. On Thursday and Friday we were out on our expedition to Glassville, which consists of one house and seven log cabins out in the forest primeval. Yesterday we spent in town, taking tea in the evening with Mr. Connell and finishing up at the house of a Mr. Grover, (whose son will come to college next year). It is a very fine house, nothing in Fredericton to equal it. Here we met, besides Mrs. Grover and daughters, a Mr. Pumpelly and daughter from New York, very pleasant and accomplished people, the daughter a fine singer; also Sheriff and Mr. Dibblee and Mr. Edward Jack. Mr. Selwyn - late Director of Canadian Geological Survey. Dr. Hunt - Dr. T. Sterry Hunt, the famous chemical geologist."

Codes: 0275 / LEGI / IDX_Names: Woodstock Fe; Legislation, etc.;
Royal Gazette - Feb. 28, 1838 Also - at the same time and place, will be offered, a lease for fifty years of the Mines and Minerals comprised within the Parish of Wakefield, in the County of Carleton, subject to the following restrictions: Conditions and Restrictions. That the purchaser shall have five years to explore and select his Mining grounds, and open any shaft or shafts; that after the expiration of the said five years, the purchaser will be confined to such mines only as he may have opened and worked, and shall then have in operation;and should it happen that during the said term of fifty years, any mine should not be worked for the space of twelve consecutive months, the said mine so remaining unworked, shall revert to the Crown, and that a per centage equal to one twentieth part of the produce of the mine, under the authority of the said lease, be exacted from and paid by the lessee or lessees, after the expiration of ten years from the date of the sale or 4 lease. Thos. Baillie, Com. Crown Lands. Crown Land Office, February 20, 1838."

Royal Gazette - Jun. 13, 1849 Cap LVIIAn Act to facilitate the operations of the York and Carleton Mining Company. - Passed 14th April 1849. Whereas the York and Carleton Mining Company have invested a large sum of money in commencing and carrying on their operations in the manufacture of iron in theCounty of Carleton, and have, by Petition to the Legislature, prayed that their present Lease for twenty five years may be extended to the term of ninety nine years, and that the present reservation of five per centum on the value of the Ore raised may be commuted into a fixed duty of one penny per ton on the Iron smelted, and that such other encouragement may be extended as may be deemed just; And whereas it is considered advisable to afford every encouragement to the said Company in the prosecution of their important enterprise. 1. Be it therefore enacted by the Lieutenant Governor, Legislative Council and Assembly, That from and after the passing of this Act, it shall and may be lawful for His Excellency the lleutenant Governor or Administrator of the Government for the time being, by and with the advice and consent of the Executive Council, to revoke, cancel and annul the present Lease, and to issue a new Lease in lieu thereof, for the term of ninety nine years, to commence at and from the date of the former Lease. II. And be it enacted, That it shall and may be lawful for His Excellency the Lieutenant Governor or Administrator of the Government for the time being, by and with the advice and consent aforesaid, to reserve in the said Lease a Duty of one penny per ton on the Iron smelted by the said Company, in lieu of the Duty of five per centum now reserved in the present Lease. III. And for the further encouragement of the said Company; Be it enacted, That there be granted to His Excellency the Lieutenant Governor or Administrator of the Government for the time being, the sum of one thousand five hundred pounds, to be applied towards the purchase of ten thousand acres of Wilderness Lands by the said Company, situated on the north eastern side of the River Saint John, in the said County of Carleton, to be selected by and surveyed at the expense of the said Company; and that the said money shall be applied as aforesaid, whenever it shall be made to appear to His Excellency the Lieutenant Governor or Administrator of the Government for the time being, that the said Company have smelted at least three hundred tons of Pig Iron at their Works in the said County of Carleton. IV. And be it enacted, That this Act shall not come into operation or be in force until the first day of September next."

Royal Gazette - Apr. 18, 1855 Cap XVII. An Act to incorporate the New Brunswick Mining Company.Section. Section. 1. Company incorporated. 5. Liability of shareholders 2. First meeting, how to the Company. called. 6. Capital may be increased. 3. Capital, amount, and 7. Shares may be assessed for time of payment. business. 4. Liability for debts. 8. Act to be void on a certain failure. Passed 3rd April 1855. Whereas the efficient opening and working ofMines in the Province of New Brunswick will be highly advantageous to the Province: And whereas the amount of capital necessary to be invested in such an undertaking renders it essential that the Company engaged therein should be incorporated; Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That William Stevens, his associates, successors, and assigns, shall be and they are hereby erected into a Company, and declared to be a body politic and corporate, by the name of ""The New Brunswick Mining Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by 10 Act of Assembly of this Province, for the purpose of opening and working of Mines in the Province of New Brunswick, and establishing all necessary works therewith connected, and for the convenient carry on and managing the same. 2. The first meeting of the said Corporation shall be held at Woodstock, in the County of Carleton, and Province of New Brunswick, and shall be called by any one Member of the said Company, by giving at least twenty days notice in the Royal Gazette published in this Province previous to such meeting. 3. The capital stock of the said Corporation shall consist of the sum of thirty thousand pounds, to be paid in such money as shall at the time of the several payments hereinafter expressed be a legal tender in this Province; fifteen per centum of the said capital stock to be paid in before the said Corporation shall be entitled to purchase any property, real or personal, or incur any debts; and the remainder of the said stock to be paid at such time and times, and in such parts or portions as the business of the Company shall from time require, the whole amount of such capital stock to be divided into twelve hundred shares of twenty five pounds each. 4. The joint stock and property of the Company shall alone in the first instance be responsible for the debts and engagements of the said company, and no creditors, or person or persons having any demand against the said Company, for or on account of any dealings with the said Company, shall have recourse against the separate property of any shareholder on account thereof, except in case of deficiency, or where the joint stock of the said Company shall fall short of or not be equal to the payments of any debt, due, or demand against the same, that then and in such case the goods and chattels, lands and tenements of each shareholder, shall and may be levied upon and seized respectively to satisfy such debt or demand, to the amount of the share or shares or interest of such shareholder in the joint stock of the said Company, but no more; and such amount, or so much as may be necessary to satisfy such debt, due, or demand, shall and may be levied and seized by process of execution in the same suit in which such debt, due, or demand may be recovered against the said Company. 5. Each and every shareholder in the said Corporation shall be held liable to the said Company for each and every call or assessment made (not however to exceed in amount the stock subscribed for) for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, or to carry on the operations for which the said Company is incorporated, and shall and may be sued for by the said Corporation, and recovered in any Court of Record within the Province. 6. So soon as the said capital stock shall have been paid in and expended for the purposes of this 11 Corporation, it shall and may be lawful for the said stockholders, at any general meeting to be for that purpose called, to increase the said capital stock from time to time in such sums as they may deem expedient, to a sum not exceeding one hundred thousand pounds, and they shall have power from time to time to increase the number of shares accordingly. 7. The said Company shall have power to levy and collect assessments upon the shares, from time to time, of such sums of money as may be deemed necessary for carrying on the business of the said Company; and whenever any assessment shall be made by the stockholders of the Company; it shall be the duty of the Treasurer to give notice thereof in a Newspaper printed and published in this Province, and also in the Royal Gazette, requiring payment of the same within thirty days; and if any stockholder shall neglect or refuse to pay to the Treasurer the amount of such assessment upon his shares at the time prescribed, it shall be the duty of the Treasurer to advertise all such delinquent shares for the sale at public auction, giving at least thirty days notice of the time and place of such sale; and all shares upon which the assessment is not then paid, with interest from the time such assessment became due, shall be sold to the highest bidder, and after retaining the amount of such assessment and interest due on each share, and the expenses of advertising and selling, the residue, if any, shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser; provided always, that no assessment shall be made except by a vote of the stockholders and a majority of all the shares. 8. Unless fifteen pounds per centum of the said capital stock shall be actually paid in for the purposes of the said Corporation, and a certificate of such payment made and verified on oath by the Directors of the said Corporation, or a majority of them, (which oath any Justice of the Peace is hereby authorized to administer) shall be filed in the Office of the Secretary of the Province before the expiration of three years after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the expiration of the said three years."

Royal Gazette - May 16, 1855 Cap. XLIV. An Act to facilitate certain Mining operations in the County of Carleton. Licence to W. Stevens to work Mines to fix rate of duty. Passed 12th April 1855.Whereas William Stevens, of Woodstock, in the County of Carleton, is the owner of certain lands in which Iron and other ores are said to exist; And whereas for the introduction of British capital for the purpose of opening up and working said Mines, it is desirable to fix the rate of duty on the iron smelted; Be it therefore enacted by the Governor, Legislative Council, and Assembly, - That the Governor in Council is authorized and empowered to grant to William Stevens, of Woodstock, in the county of Carleton, a licence to work the Mines on such lands as the said William Stevens shall produce the title of, or the right of mining obtained from the owners of the soil; suchlicence shall fix a rate of duty of one penny per ton on all iron smelted, and one per cent on all

Morning Freeman - Feb. 28, 1861 Legislature.... A bill to amend incorporating York and Carleton Mining Company, agreed to
...."

Codes: 0275 / LEGI / IDX_Names: Woodstock Fe; Legislation, etc.;
Royal Gazette - May 1, 1861 Cap. XLVII. An Act in amendment of and in addition to an Act to incorporate the York and Carleton Mining Company. Section. Section. 1. Act 40, V.c. 73, 3. Act voidable on non a. 4, repealed. fulfillment of specified 2. Joint stock and conditions. property clause responsible for the debts. Passed 12th April 1861. Whereas the existing individual liability of the shareholders of the capital stock of the York and Carleton Mining Company for the debts and engagements of said Company, as enacted in the fourth section of the Actof incorporation thereof, passed in the tenth year of the Reign of Her Majesty Queen Victoria, and intituled An Act to incoporate the York and Carleton Mining Company, has tended to prevent the investment of capital in the said Company and hereby greatly to limit its operations and usefulness:- Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 7 1. That the said fourth section of the said Act of incorporation shall be and remain in force, and shall apply to such only of the debts, contracts, engagements,and liabilities of the said Company as shall be due or owing, or shall exist, or have been made or entered into, at or previous to the time of the passing of this Act, in reference to all which it shall continue and remain in full force, and that so far as relates to the debts and engagements of the said Company that shall be contracted, made, or entered into after the passing of this Act, the said fourth section of the said Act of incorporation shall be and is hereby repealed. 2. That from and after the passing of this Act, the joint stock and property of the said Company shall alone be responsible for the debts and engagements of the said Company contracted, made, entered into, after the passing of this Act, any thing in the said Act of incorporation to the country notwithstanding. 3. That unless ten thousand pounds of the said capital stock of the said Company, over and above the amount already subscribed for and taken, shall be actually subscribed for and taken by bona fide shareholders, and twenty five per centum of the said additional amount shall be actually paid in for the purposes of the said Corporation, and a certificate of such payment, made and verified on oath by the Directors of the said Corporation, or a majority of them, (which oath any Justice of the Peace is hereby authorized to to administer,) shall be filed in the office of the Secretary of the Province before the expiration of two years after the passing of this Act, the operation of this Act shall cease, and the shareholders of the said Company shall be liable for the debts and engagements of the said Company contracted between the time of the passing of this Act and the time when its operation shall cease, and for all the subsequent debts and engagements of the said Company, in the same manner as is provided and enacted in the fourth section of the said Act of incorporation."

St. Croix Courier - Feb. 26, 1874 Iron.- We frequently hear a great deal regarding the resources of New Brunswick; they are spoken of as if they were hidden things of priceless value, which were to be brought to light at some unexpected moment by some unexpected agency, some wondrous lamp which in the hands of the peasant would cast its brilliant rays on glowing gold, precious stones of the first water, and countless other undescribed sources of wealth. It would seem as if we never would, by united action, bring to bear on this subject the aid of the skilled scientists who have made various industries their special study. It has been too commonly the way among us to undertake large operations under the guidance of unskilled men, and this relates particularly to mining and to manufactures requiring especial skill. If we wish a house plastered we call for the services of the plasterer, but if we are desired to invest our money in some lead or iron mine, the subject is generally brought to our notice by some retired merchant who has a greater redundancy of speech than of money; he will talk learnedly of Sulphurets or Carbonates, while he is entirely ignorant of the composition and properties of the substances about which he is talking. The natural result of investment under these circumstances, would be disastrous failure, bringing ruin on the investors and deterring many other capitalists from investing in promising undertakings even should they be under skilled guidance. We are led to make these observations by some remarks which we lately saw in the St. John Telegraph on the subject of New Brunswick iron. We have often made theenquiry, what is the cause of the failure of the Woodstock iron works; at one time we are told that the best iron was made there, at an other that it was nearly valueless. We hear again from Professor Hind and others, that large beds of iron exist in Carleton County on both sides of the St. John, 15 or 16 miles above Woodstock. We have it from good authority that 50 tons of iron per day are used in the foundries of the Province, which is imported either from Great Britain or the United States, and for which high prices are paid. We are also told, on equally good authority, that iron can be made in New Brunswick for $20 per ton, provided the ore beds which are found in Carleton and St. John Counties.....?.... neighborhood of Bathurst and Dalhousie are of sufficient size, and of good enough quality, to warrant the undertaking. The Provincial Government has of late being doing a great deal towards settling the Province, and we sincerely hope that these hardy Scotchmen have had all the skilled advice that they could have, and that the settlement of New Kincairdshire will prove a success. Yet New Brunswick requires the encouragement of other industries as well as farming; perhaps even more, since the Province, after all, is more a manufacturing than farming country. Would it not be well, therefore, for the Provincial Government to investigate the subject of iron manufacture in New Brunswick, and let us know whether our iron ores are not available for the purpose of manufacture, and their quality and extent, so that if possible we may keep among us the vast sums of money which annually leave our shores to pay for raw iron? Could not the Government employ a proper mining engineer

and chemist skilled in iron who could make examinations of iron localities, make assays and report to the Government the extent, position and quality of such beds and veins and the cost of fuel, etc.; such report would be of incalculable benefit, as it would if favorable, at once induce moneyed men to embark their means in blast furnaces. Our own, as well as all the other counties in the Province, is deeply interested in this matter, and the North as well as the South nearly equally affected by it. We hope, therefore, that the representatives of Charlotte will give this matter their attention at this session of the House, and show that the border county is foremost in every good work."

Daily Evening Globe - Dec. 26, 1862 Mineral Localities of New Brunswick. - A Paper Read Before the Natural History Society of New Brunswick, At Its Last Meeting, By Mr. G.F. Matthew. - As no systematic list of the various mineral localities in the Province has heretofore been published, and the greater number still remain unknown to those who have not access to the few existing sources of information on the subject, I have endeavored to supply a want by collecting the numerous notes scattered through Gesner's report on the Geology of New Brunswick, adding thereto notices of localities discovered since his survey was brought to a close. In this work the writer has received valuable aid from his brother, as also from the late Dr.Robb and Mr. Wm. Payne of Portland. As the two branches of Natural Science, Geology and Mineralogy, are so intimately connected, it will be necessary, in order to obtain a comprehensive view of the character of the mineral deposits mentioned in the accompanying list, to give sketch of their geological distribution. The Province of New Brunswick is mostly occupied by unaltered rocks of aqueous origin. It is traversed, however, by three metamorphic bands which originate in a district of the same character, occupying the greater part of the County of Charlotte, and extending thence westwardly into the State of Maine. The northern land, pursuing a N.N.E. course through the Counties of York, Northumberland and Gloucester, terminates on the Bay of Chaleur. The 4 southern, of which the intermediate band passing through King's County is a subordinate spar, skirts the Bay of Fundy on its northern side as far as Chignecto Bay. A metamorphic district, of which little, however, is known, also exists about the head waters of the Tobique, Upsalquitch and Nepisiguit Rivers. The triangular area intervening between the two bands of altered and igneous rocks is occupied by an extensive coal formation, having deposits of Limestone and Gypsum, principally in the lower beds of the basin. On the triangular side of the first mentioned metamorphic band is another large and comparatively level district in which calcareous and argillaceous shales, of Silurian age, prevail. No great variety of minerals has been found in either of these flat districts, nor is it to be anticipated that there will be. Those, however, which do occur, are mostly of economic value (ores of iron, coal, gypsum, &c.) To the metamorphic bands and the district in which they unite therefore, we may look for the principal and more varied accessions to our mineral wealth. The following remarks regarding the southern metamorphic district are based upon the writer's own observations.The limestones of St. John Co. to which the localities in Portland pertain may have been produced by chemical deposition; for, although, they are only partially altered in many places, no fossils, except obscure vegetable remains have been detected in them. From the abundance of magnesian silicates we might suppose that these calcareous beds are, in part, ""dolomite."" The granite and gneiss of the limestone district contain tourmaline, epidote and laumontite, and small quantities of the sulphurets of iron, copper and lead, besides their ordinary constituents. Epidote is eminently characteristic of the trappean beds of Upper Devonian age, which extend in a double curve from Musquash to Bloomsbury Mt., and probably beyond. It is usually accompanied by quartz, specular iron and chlorite. Sheldon's Point is in this belt, and the minerals of Kingston and Clifton occur in stratified greenstone, probably of the same age; while those of Cape Spencer, West Beach and Black River are in overlying beds of sedimentary origin, largely charged with volcanic products. It will be seen that none of the zeolites found in the Triassic traps of Nova Scotia have yet been detected in the Devonian beds of volcanic origin on the North Shore of the Bay of Fundy; these latter seeming to hold (with the exception of chlorite and prehnite) anhydrous silicates only. The N.S. zeolites have been met with at only one locality in the Province - the Island of Grand Manan. It is not improbable, 5 therefore, that the trap of this island, like that of Isle au Haut and the North Shore of the Basin of Minas, is an outlier of the great masses which skirt the southern shore of the Bay of Fundy. Mineral Localities. - (This list was prepared three years ago for a supplement to

Dana's Mineralogy which was not issued owing to the illness of the author of that work. I therefore feel that I am now at liberty to place it at your disposal. Alterations in the arrangement of some localities have been made, a few unimportant ones struck out, and others added. The marks used to distinguish the character of the specimens are similar to those in Dana's Mineralogy, viz: those which may be had in good specimens are underlined, (!) is added where they are remarkably good, (!!) where the specimens are unique. (NOTE - underlined articles are bracketed with square brackets, i.e. [coal] Albert County Grindstone Point and Island - Lignite, Iron Pyrites, Barytes. Hopewell - Gypsum, Selenite, [Alabaster].Albert Mines - Albertite !! Pollet River, 15 miles up - Coal. Shepody Mt. - Pyrolusite, [Calc spar], (rhombs with Manganese), Iron Pyrites, Native Alum, a clay. Turtle Creek - Coal. Carleton CountyWoodstock - Copper Pyrites, (mined) Wad, Bog Iron Ore. At Iron Mines - Hematite, Limonite. Charlotte County Beaver Harbour - Red jasper, Chlorite. Campobello island; at Welshpool - Iron Pyrites, Galena, Blende, Erubescite, Copper Pyrites. At head of Harbor de Lute - Galena, 4 in. vein. At Head Harbor - Iron Pyrites, Copperas. Deer Island, on N.W. side - Magnetic Iron, Calc Spar, (in Amygdaloidal) Hornstone, Quartz, (in trap). Digdeguash R., at Hog Island - Red jasper. On W. side of entrance - Calc Spar, (rhombs, in conglomerate,) Chalcedony, (in Greenstone,) At Rolling Dam - Graphite. Grand Manan Island, between Northern Head and Dark Harbour - Amethyst, Agate, Jasper, Hornstone, [Thompsonite, Stilbite, Heulandite, Calc Spar, Zeolite (Mesotype?), Apophyllite], Specular Iron, Magnetic Iron. At Whale Cove - Calc spar ! Heulandite ! Laumontite ! Stilbite ! Semiopal ! At Fish Head (2 miles S. of Eel Brook) - Chlorite, (abundant in qtz). At Ross's Island - Quartz Crystals. White Head - Chlorite, Quartz Crystals. At Kent's Island - Veined Marble. L'Etang Island and Harbour - Marble, Serpentine, Chlorite, Iron Pyrites. Le Tete - Galena, Erubescite, Copper Pyrites, Barytes. 6 Magaguadavic R., at entrance - Veins of copper pyrites, Malachite, Azurite. One eighth of a mile E. - Galena. Red Head, (on Mace's Bay) - Red jasper. Seeley's Cove, Hill 1/2 mile N. of - Quartz crystals, Calc spar, Magnetic Iron, Iron Pyrites. St. Stephen, 4 1/2 miles N. of - Graphite (in greywacke). Molybdenite, (in gneiss.) Milltown - Pyrites. Simpson's Island, on the Shore - Copper glance, Malachite. [See note]. Waweig R., 3 miles up, at Cormick's Mills, - Pyrites, Feldspar, Schorl and Garnet, (in boulder). At Bartlett's Pond - Quartz crystals. At Oak Bay - Hepatic Pyrites, in greywacke.) Gloucester County Bathurst - Malachite, (in coal). Eight miles from, on Tete-a-gouche R. - Manganite, (in crystals and crystalline,) [Copper Pyrites]. Kent County Buctouche R. - Coal. Cocaigne R., on branch, 3 miles from bridge - Coal. Richibucto R., 3 miles above Ford's Mills and at Big Brook - Coal. At Bass R. - Iron pyrites. Half mile W. of Liverpool - Bog Iron Ore. Kouchibouguaasis R. - Coal. Kings County Belleisle Bay, on N. Shore - Galena, (in limestone), veins of chalcedony, Jasper and Hornstone, (in trap). One and a half miles W. of Bull Moose Hill, on farms of Northrup and Benson - Large bed of Magnetic Iron. Clifton - [Orthoclase], (xls) Epidote, [(Pistacite)]. (common xls.) [Chlorite], (abundant granular,) Prehnite, all in bedded greenstone, Quartz crystals, Specular Iron. Hammond R., at Sherwood's - Graphite, (in limestone). Hampton, and at Darling's Lake, in loose pieces - Agate, Carnelian, Red jasper. Kingston, on ridge S. of village - Magnetic Iron, Magnetic Pyrites; also, Chlorite and Red jasper. Nerepis, near Hatfield's Mill - Iron Pyrites, (in greywacke). Near Mather's Inn - Amethyst, Quartz Crystals, Feldspar. Norton - Near Choat's Mill, on road to Belleisle - Argentif. Galena. One mile N. of Baxter's Inn - Specular Iron (xls) and Red Hematite. Quispamsis - Pyrites, Copper pyrites, Galena, Laumontite. Sussex, 1/4 mile from church, on McReady's farm - 7 [Selenite !] (hexagonal xls. forming in the mud of a spring.) [There are two fine groups of crystals from this locality in the Museum of the Mechanics' Institute.] Eight miles from Station, on Dutch Valley road - [Manganite], Pyrolusite, [Barytes.] Upham - Brine springs.Four miles E. of Titus Mill - Gypsum Northumberland County Boiestown - Coal. Barnaby's R., opposite mouth - Coal. Chatham - Coal, Iron Pyrites. Newcastle - Coal. Queens County Grand Lake, at Grand Point - Fossil Trees, containing Barytes, Pyrites, Copperas. Salmon River, (on Crawford's farm) - Coal, Caly, Iron Stone, Pyrites, Copperas. Newcastle - Coal mines. Coal Creek - Coal, (formerly mined.) Long Reach, opposite VanWart's - Chlorite. Washademoak River - Coal, (2 1/2 miles from Long's Creek.) Few miles above mouth on S.E. of a small cove - Hornstone, Jasper, Chalcedony, Carnelian, Quartz Crystals. Restigouche County Belledune Point - Verd Antique, Serpentine, Iceland Spar! Dalhousie, near to - [Agate], Carnelian. Point le Nim - Coal. St. John County Carleton, near Falls - Red Calcite. Chance Harbour - [Calc spar] (deep red xls) in quartz veins, Chlorite (in argill and talcose state). Brandy Brook - Quartz crystals. - Epidote (Pistacite) and Hornblende in boulders. Black R. settlement. - [Quartz crystals], Chlorite, Calc spar, Copper Pyrites, Specular Iron !(tabl. xls) Little Dipper Harbour, on W. side - Barytes, quartz crystals, Amethyst (in compact greenstone). Moosepath - Schorl (crystals), Hornblende (crystals), Felspar (red), Muscovite, Albite (?) Musquash, on E. side, Harb. at entrance - Graphite, Pyrites, Copperas. At Shannon's - Serpentine, Verd-Antique, [Chrysotile.] E. side of Musquash - [Quartz crystals] (veins in conglomerate). Portland, [Crow's Nest - Serpentine,] Chrysotile, Steatite, Magnesite, Asbestos. [Drury's Cove] - Indurated Talc, Pyrallolite (?), Graphite, Pyrites.[At the Falls] - Graphite (impure bed 4 ft.) [Fort Howe Hill] - Graphite, Calcite (several forms, viz: dogs-tooth spar, nail-head spar, &c.) [Howe's Road], 1 1/2 miles from St. John - Epidote (in syenite). ! 1/2 mile from road [Tremolite], Steatite, Mica (?). [Lily Lake] - Serpentine, Chrysotile, Talc, (radiated), Steatite, Graphite. [White Augite] (?). Quaco, Light House Pt. - Manganese, ([Pyrolusite]), (bed 4 ft). W. of Point - Lignite. E. of Quaco, Fuller's Creek - Graphite, Iron Pyrites. Farther Eastward - Schorl, Asbestos, Chrysotile, Serpentine. Sheldon's Pt. - [Epidote] (Pistacite and Zoisite), Actinolite, Asbestos, Calcite, Specular Iron, Malachite. Cape Spencer - Specular Iron (crystals), Calcite (crystals), Talc, Chlorite, Asbestos. Ten Mile Creek - Coal in slate and sandstone. West Beach - At Evan's - Quartz Crystals, Talc, Chlorite. Half Mile W. of Evan's - Vein of Magnesite with Talc, Chlorite and Magnetic Iron, Copper and Iron Pyrites, [Hematite], [Specular Iron]. [See note.] Point Wolf and Salmon R. - Iron and [Copper] [Pyrites], Asbestos, Chlorite, [Erubescite], Chrysocolla, [Cuprite.] Sunbury County Oromocto River, N. Branch, 10 miles up - Coal. Lincoln - Wad, Bog Iron Ore. Victoria County Tobique River - Red Jasper, Carnelian, Agate. At mouth, S. side - Galena. At mouth of Wapskehegan R. - Gypsum, Salt Springs. Three miles farther up - Stalactites (abundant). Quisibis River - [Blue Phosphate of Iron] (in clay). Westmorland County Bellevue - Iron Pyrites. Dorchester, Taylor's Farm - Cannel Coal, Clay Iron Stone. On Ayre's Farm - Petroleum, Asphaltum. Grand Anse - Gypsum, [Selenite] (large crystals), Apatite, (vide Gesner). Memramcook - Coal, [(Albertite).] Shediac - 4 miles up Scadouc R. - Coal. York County Harvey Settlement - Wad. Nashwaak River - Coal. Tay Creek - Coal. Pokiok River - Tin pyrites (in granite vein). Three miles from St. John River, in direction of Lake George - Stibnite ! [See note]. 9 In order to obtain a clearer view of the value of the mineralogical resources of the Province as thus far developed, let us take a glance at the more important facts to be deduced from the foregoing list. Many of the minerals noted in its columns are not of economic importance, and therefore will not receive any further notice. Serpentine and marble, both of which are largely used in ornamental work, are known to occur at many localities; but few of those which have been examined yield blocks sufficiently perfect to be useful to the manufacturer. Of such well known and widely distributed minerals as limestone and gypsum it is scarcely necessary to speak. Both, the former especially, are abundant in many parts of the Province. Heavy beds of limestone are common in the southern metamorphic belt, also on the Bay Chaleur. Unaltered deposits may be seen skirting the margin of the great coal field. Gypsum is confined mostly to the Lower Carboniferous series of King's, Albert, and Westmorland; but occurs also in the red sandstone district of the Tobique River. Chlorite or ""pipestone"" and Steatite or ""soapstone"" have been found at a number of places; but no deposit of the latter mineral, sufficiently large to be available for manufacturing purposes, has yet been discovered. Barytes, or ""heavy spar,"" has been met with only at a few localities, and not in any considerable quantity, unless we may except that in Sussex and a large deposit said to occur at Le Tete. This mineral is largely used in the manufacture of white paint, and also for other purposes. It resembles calcareous spar, but differs in cleavage and is much heavier. The only gem which this province has thus far yielded is that very common one called, according to its color, white stone or rock crystal, false topaz, and amethyst. Other varieties of this mineral, such as carnelian, agate and jasper, which are frequently used in jewellery, occur at several places. Garnet is reported from Waweig river, but it has not been found ""in situ"". All the tourmalines mentioned are of the ordinary black variety. It will be seen on examination of the catalogue, that all the metals in ordinary use as well as some others which are more infrequent, occur in this province. But of the commoner ones several have not been found in sufficient quantity to be worth extracting. Indications of tin were observed in the granite of the Pokiok river, by Dr. Gesner. Lead ore has been met with at Tobique River, Norton, Campo Bello, and other places, but not in sufficient quantities as to assure a profitable return to 10 the miner. Zinc blende is found at Campo Bello and a few other localities, but not even so abundantly as lead. This mineral is usually of a dark brown color, and is frequently associated, as at Campo Bello, with galena and copper pyrites. Several ores of copper, chiefly sulphurets and carbonates occur in various parts of the Province, but few of the mines opened in these deposits have been permanently worked. Those of Bathurst and Woodstock have been abandoned. But mining on a small scale is still continued at Salmon River and Le Tete, and experimental operations on the deposit at Simpson's Island have been commenced. Two ores of this metal have been newly added to the list of those already known to occur in the Province. These are the Suplhuret called copper glance, from Simpson's Island and cuprite, or the red oxide of copper found at Salmon River. Iron and manganese are the metals which above all others are most abundant. Heavy ore beds of the former are exposed at Woodstock, Nerepis Road, Bull Moose Hill, West Beach, and other localities referred to in the list. At the first mentioned place the ore has been worked for a number of years. Manganese occurs in greatest quantities and purity near the eastern terminations of the two metamorphic bands to which allusion has already been made. The earthy variety called Wad is also common. The mine near Bathurst which affords beautiful crystals of the grey oxide has been abandoned on account of the irregularity and unreliable character of the deposit. Operations, however, are still carried on at Sussex and Shepody. Of the precious metals, silver has been detected in some of the lead ores, in the ore of antimony near Pokiok, and in the copper ore of Simpson's Island, but only in minute quantities. Gold, so far as we are aware, is yet undiscovered; at least, there is no tangible evidence to show us that it has been found in the Province. If reliance may be placed on the results of the geological survey, the northern metamorphic band, the County of Charlotte, the region about the headquarters of the Tobique, and that part of the southern band which has not been shown to be of Devonian age, are the most promising districts for the gold seeker. The discovery of a rich gold field would undoubtedly give a great spur to the development of our Provincial resources, but, at the same time, would probably have a tendency to attract a lawless and reckless population. Seams of coal have been found at numerous localities within the great central area, covered by deposits of Carboniferous age. Few of these, however, promise to be productive. The unique variety found at Hillsborough has proved to be a mine of wealth to its owners. Operations have also been successfully carried on at the mines on Grand Lake for many years. But in no other part of the Province have beds of this mineral sufficiently large to attract the attention of capitalists, been opened. Those best qualified to judge (Drs. Robb and Dawson) of the productiveness of New Brunswick coal measures, gives us little reason to hope that they will yield stores of fossil fuel as large as, considering the extensive area which they cover, we might anticipate. Still the discovery of extensive beds is not altogether hopeless, for we should bear in mind that a great part of the area underlaid by these rocks remains unsettled and uncleared; and we may traverse parts of it for scores of miles through an unbroken wilderness. Although New Brunswick is not favored with the possession of mineral attractions so brilliant as some of her Colonial sisters, she is not altogether devoid of some solid advantages as the preceding summary will show. The many openings for the advantageous investment of capital, which are to be found in a young and flourishing colony is no doubt the reason why the abundant mineral wealth, with which bountiful Providence has endowed us, still remains undeveloped. As population increases, however, and our wants become more diversified, this source of a prosperous and remunerative commerce will receive the attention which it deserves. Already we see signs of the approach of such a period in the careful investigation which several newly discovered metallic deposits are receiving. [In these remarks I have endeavored as far as possible to occupy ground different from that taken up by Prof. L.W. Bailey in this valuable little publication on the mineral resources of the Province, as exemplified by the metallurgical collection of the University of New Brunswick; considering that a repetition of what has recently been made public would be superfluous.] Addenda. -Iron Ore of West Beach. - The bed of ore at this place inwhich the mine has been opened is included in the upper part of a large mass of coarse reddish-grey conglomerate, dipping to the S.E. at an angle of about 30ø, and distant a furlong from the shore. The pit or quarry from which the ore has been extracted has been opened in a bed of dark, reddish, brown hematite. One or more schooner loads have been taken away, and a quantity still remains awaiting shipment. The conglomerate is abundantly seamed with quartz containing scattered masses and veins of micaceous and specular iron in tabular crystals. Two or three miles eastward of the mine the iron ore again appears on the hill side. Here, however, three or four beds of ore (one of them 20 feet thick) are visible; and the associated rocks are different, consisting of beds of trap-ash, trap-ash slate, and talcomicaceous slate. The ore beds were not traced on the eastern side of Black River. Were it not for their variable thickness they might be sought for here with much probability of success. A continuation of the same rocks holds beds of limestone at Emerson's Creek, a few miles to the eastward. The facilities for working this ore are therefore, in some respects, unusually good, but no smelting operations have hitherto been undertaken. From its association it would appear that this ore was originally deposited in the state of a finely divided ferruginous mud, in a shallow sea and within the influence of active volcanoes. I hope to be able to show at some future time that the accompanying rocks do not possess the antiquity ascribed to them in the geological reports of Dr. Gesner, but are of a later date than the sandstones and shales of St. John, which have yielded such an abundant harvest of Devonian plants. [For the information regarding the two following localities, I am indebted to Edward Allison, Esq.] Copper Ore, Simpson's Island. -The vein of green carbonate (malachite) recently discovered, occurs in a small island, (not exceeding 100 acres in extent) about one mile south of Deer Island, andseven miles from Eastport. The island is composed of trap-rock, through which protrudes a band of slate, with nearly vertical layers, which extends across the island in an East and West direction; it being about four feet wide on the West side, and from ten to twelve feet wide where it terminates in a small cove on the East side of the Island. The copper lode occurs in this slate, and was discovered on the West side of the Island in a beach which extends (from high to low water) abut 400 feet. This beach is composed of rock covered with seaweed, except near high water mark, where it is shingle. The copper lode, where discovered, is about four feet wide, and about 150 feet from low water mark; it has been traced about 150 feet toward the shore and to low water mark. Several tons of this ore have been taken out and sent to Liverpool to be tested. A small sample sent some time since yielded 27 per cent of copper, and nearly four ounces of silver to the ton. The value of the ore as taken out is reported to be £27 stg. per ton. [Pieces of Copper glance (sulphuret of copper) were scattered through the Carbonate which forms the mass of the ore at the surface, and were found to increase when the evacuation was deepened. At a greater depth the ore probably consists of the former compound, as the carbonate seems to result entirely from decomposing agencies at work at and near the surface] - G.F.M. Antimony of York Co. -The vein of antimony recently discovered occurs in York Co., Parish of Prince William, about 20 miles above Fredericton, and is on the S.W. side of the river Saint John. The rise of the land from the river at this place is gradual, till the summit of the slope (about 300 feet high) is reached, when the ground falls away toward Lake George, and the Pokiok Stream. Near the top of the slope a band of primary rock, having a course about N.W. and S.E., protrudes through the soil, and is shown particularly where it crosses the highway. This band of rock contains the vein of antimony referred to. It was discovered in

The following remarks regarding the southern metamorphic district are based upon the writer's own observations.The limestones of St. John Co. to which the localities in Portland pertain may have been produced by chemical deposition; for, although, they are only partially altered in many places, no fossils, except obscure vegetable remains have been detected in them. From the abundance of magnesian silicates we might suppose that these calcareous beds are, in part, ""dolomite."" The granite and gneiss of the limestone district contain tourmaline, epidote and laumontite, and small quantities of the sulphurets of iron, copper and lead, besides their ordinary constituents. Epidote is eminently characteristic of the trappean beds of Upper Devonian age, which extend in a double curve from Musquash to Bloomsbury Mt., and probably beyond. It is usually accompanied by quartz, specular iron and chlorite. Sheldon's Point is in this belt, and the minerals of Kingston and Clifton occur in stratified greenstone, probably of the same age; while those of Cape Spencer, West Beach and Black River are in overlying beds of sedimentary origin, largely charged with volcanic products. It will be seen that none of the zeolites found in the Triassic traps of Nova Scotia have yet been detected in the Devonian beds of volcanic origin on the North Shore of the Bay of Fundy; these latter seeming to hold (with the exception of chlorite and prehnite) anhydrous silicates only. The N.S. zeolites have been met with at only one locality in the Province - the Island of Grand Manan. It is not improbable, 5 therefore, that the trap of this island, like that of Isle au Haut and the North Shore of the Basin of Minas, is an outlier of the great masses which skirt the southern shore of the Bay of Fundy. Mineral Localities. - (This list was prepared three years ago for a supplement to Dana's Mineralogy which was not issued owing to the illness of the author of that work. I therefore feel that I am now at liberty to place it at your disposal. Alterations in the arrangement of some localities have been made, a few unimportant ones struck out, and others added. The marks used to distinguish the character of the specimens are similar to those in Dana's Mineralogy, viz: those which may be had in good specimens are underlined, (!) is added where they are remarkably good, (!!) where the specimens are unique. (NOTE - underlined articles are bracketed with square brackets, i.e. [coal] Albert County Grindstone Point and Island - Lignite, Iron Pyrites, Barytes. Hopewell - Gypsum, Selenite, [Alabaster].Albert Mines - Albertite !! Pollet River, 15 miles up - Coal. Shepody Mt. - Pyrolusite, [Calc spar], (rhombs with Manganese), Iron Pyrites, Native Alum, a clay. Turtle Creek - Coal. Carleton CountyWoodstock - Copper Pyrites, (mined) Wad, Bog Iron Ore. At Iron Mines - Hematite, Limonite. Charlotte County Beaver Harbour - Red jasper, Chlorite. Campobello island; at Welshpool - Iron Pyrites, Galena, Blende, Erubescite, Copper Pyrites. At head of Harbor de Lute - Galena, 4 in. vein. At Head Harbor - Iron Pyrites, Copperas. Deer Island, on N.W. side - Magnetic Iron, Calc Spar, (in Amygdaloidal) Hornstone, Quartz, (in trap). Digdeguash R., at Hog Island - Red jasper. On W. side of entrance - Calc Spar, (rhombs, in conglomerate,) Chalcedony, (in Greenstone,) At Rolling Dam - Graphite. Grand Manan Island, between Northern Head and Dark Harbour - Amethyst, Agate, Jasper, Hornstone, [Thompsonite, Stilbite, Heulandite, Calc Spar, Zeolite (Mesotype?), Apophyllite], Specular Iron, Magnetic Iron. At Whale Cove - Calc spar ! Heulandite ! Laumontite ! Stilbite ! Semiopal ! At Fish Head (2 miles S. of Eel Brook) - Chlorite, (abundant in qtz). At Ross's Island - Quartz Crystals. White Head - Chlorite, Quartz Crystals. At Kent's Island - Veined Marble. L'Etang Island and Harbour - Marble, Serpentine, Chlorite, Iron Pyrites. Le Tete - Galena, Erubescite, Copper Pyrites, Barytes. 6 Magaguadavic R., at entrance - Veins of copper pyrites, Malachite, Azurite. One eighth of a mile E. - Galena. Red Head, (on Mace's Bay) - Red jasper. Seeley's Cove, Hill 1/2 mile N. of - Quartz crystals, Calc spar, Magnetic Iron, Iron Pyrites. St. Stephen, 4 1/2 miles N. of - Graphite (in greywacke). Molybdenite, (in gneiss.) Milltown - Pyrites. Simpson's Island, on the Shore - Copper glance, Malachite. [See note]. Waweig R., 3 miles up, at Cormick's Mills, - Pyrites, Feldspar, Schorl and Garnet, (in boulder). At Bartlett's Pond - Quartz crystals. At Oak Bay - Hepatic Pyrites, in greywacke.) Gloucester County Bathurst - Malachite, (in coal). Eight miles from, on Tete-a-gouche R. - Manganite, (in crystals and crystalline,) [Copper Pyrites]. Kent County Buctouche R. - Coal. Cocaigne R., on branch, 3 miles from bridge - Coal. Richibucto R., 3 miles above Ford's Mills and at Big Brook - Coal. At Bass R. - Iron pyrites. Half mile W. of Liverpool - Bog Iron Ore. Kouchibouguaasis R. - Coal. Kings County Belleisle Bay, on N. Shore - Galena, (in limestone), veins of chalcedony, Jasper and Hornstone, (in trap). One and a half miles W. of Bull Moose Hill, on farms of Northrup and Benson - Large bed of Magnetic Iron. Clifton - [Orthoclase], (xls) Epidote, [(Pistacite)]. (common xls.) [Chlorite], (abundant granular,) Prehnite, all in bedded greenstone, Quartz crystals, Specular Iron. Hammond R., at Sherwood's - Graphite, (in limestone). Hampton, and at Darling's Lake, in loose pieces - Agate, Carnelian, Red jasper. Kingston, on ridge S. of village - Magnetic Iron, Magnetic Pyrites; also, Chlorite and Red jasper. Nerepis, near Hatfield's Mill - Iron Pyrites, (in greywacke). Near Mather's Inn - Amethyst, Quartz Crystals, Feldspar. Norton - Near Choat's Mill, on road to Belleisle - Argentif. Galena One mile N. of Baxter's Inn - Specular Iron (xls) and Red Hematite. Quispamsis - Pyrites, Copper pyrites, Galena, Laumontite. Sussex, 1/4 mile from church, on McReady's farm - 7 [Selenite !] (hexagonal xls. forming in the mud of a spring.) [There are two fine groups of crystals from this locality in the Museum of the Mechanics' Institute.] Eight miles from Station, on Dutch Valley road - [Manganite], Pyrolusite, [Barytes.] Upham - Brine springs.Four miles E. of Titus Mill - Gypsum Northumberland County Boiestown - Coal. Barnaby's R., opposite mouth - Coal. Chatham - Coal, Iron Pyrites. Newcastle - Coal. Queens County Grand Lake, at Grand Point - Fossil Trees, containing Barytes, Pyrites, Copperas. Salmon River, (on Crawford's farm) - Coal, Caly, Iron Stone, Pyrites, Copperas. Newcastle - Coal mines. Coal Creek - Coal, (formerly mined.) Long Reach, opposite VanWart's - Chlorite. Washademoak River - Coal, (2 1/2 miles from Long's Creek.) Few miles above mouth on S.E. of a small cove - Hornstone, Jasper, Chalcedony, Carnelian, Quartz Crystals. Restigouche County Belledune Point - Verd Antique, Serpentine, Iceland Spar! Dalhousie, near to - [Agate], Carnelian. Point le Nim - Coal. St. John County Carleton, near Falls - Red Calcite. Chance Harbour - [Calc spar] (deep red xls) in quartz veins, Chlorite (in argill and talcose state). Brandy Brook - Quartz crystals. - Epidote (Pistacite) and Hornblende in boulders. Black R. settlement. - [Quartz crystals], Chlorite, Calc spar, Copper Pyrites, Specular Iron !(tabl. xls) Little Dipper Harbour, on W. side - Barytes, quartz crystals, Amethyst (in compact greenstone). Moosepath - Schorl (crystals), Hornblende (crystals), Felspar (red), Muscovite, Albite (?) Musquash, on E. side, Harb. at entrance - Graphite, Pyrites, Copperas. At Shannon's - Serpentine, Verd-Antique, [Chrysotile.] E. side of Musquash - [Quartz crystals] (veins in conglomerate). Portland, [Crow's Nest - Serpentine,] Chrysotile, Steatite, Magnesite, Asbestos. [Drury's Cove] - Indurated Talc, Pyrallolite (?), Graphite, Pyrites.[At the Falls] - Graphite (impure bed 4 ft.) [Fort Howe Hill] - Graphite, Calcite (several forms, viz: dogs-tooth spar, nail-head spar, &c.) [Howe's Road], 1 1/2 miles from St. John - Epidote (in syenite). ! 1/2 mile from road [Tremolite], Steatite, Mica (?). [Lily Lake] - Serpentine, Chrysotile, Talc, (radiated), Steatite, Graphite. [White Augite] (?). Quaco, Light House Pt. - Manganese, ([Pyrolusite]), (bed 4 ft). W. of Point - Lignite. E. of Quaco, Fuller's Creek - Graphite, Iron Pyrites. Farther Eastward - Schorl, Asbestos, Chrysotile, Serpentine. Sheldon's Pt. - [Epidote] (Pistacite and Zoisite), Actinolite, Asbestos, Calcite, Specular Iron, Malachite. Cape Spencer - Specular Iron (crystals), Calcite (crystals), Talc, Chlorite, Asbestos. Ten Mile Creek - Coal in slate and sandstone. West Beach - At Evan's - Quartz Crystals, Talc, Chlorite. Half Mile W. of Evan's - Vein of Magnesite with Talc, Chlorite and Magnetic Iron, Copper and Iron Pyrites, [Hematite], [Specular Iron]. [See note.] Point Wolf and Salmon R. - Iron and [Copper] [Pyrites], Asbestos, Chlorite, [Erubescite], Chrysocolla, [Cuprite.] Sunbury County Oromocto River, N. Branch, 10 miles up - Coal. Lincoln - Wad, Bog Iron Ore. Victoria County Tobique River - Red Jasper, Carnelian, Agate. At mouth, S. side - Galena. At mouth of Wapskehegan R. - Gypsum, Salt Springs. Three miles farther up - Stalactites (abundant). Quisibis River - [Blue Phosphate of Iron] (in clay). Westmorland County Bellevue - Iron Pyrites. Dorchester, Taylor's Farm - Cannel Coal, Clay Iron Stone. On Ayre's Farm - Petroleum, Asphaltum. Grand Anse - Gypsum, [Selenite] (large crystals), Apatite, (vide Gesner). Memramcook - Coal, [(Albertite).] Shediac - 4 miles up Scadouc R. - Coal. York County Harvey Settlement - Wad. Nashwaak River - Coal. Tay Creek - Coal. Pokiok River - Tin pyrites (in granite vein). Three miles from St. John River, in direction of Lake George - Stibnite ! [See note]. 9 In order to obtain a clearer view of the value of the mineralogical resources of the Province as thus far developed, let us take a glance at the more important facts to be deduced from the foregoing list. Many of the minerals noted in its columns are not of economic importance, and therefore will not receive any further notice. Serpentine and marble, both of which are largely used in ornamental work, are known to occur at many localities; but few of those which have been examined yield blocks sufficiently perfect to be useful to the manufacturer. Of such well known and widely distributed minerals as limestone and gypsum it is scarcely necessary to speak. Both, the former especially, are abundant in many parts of the Province. Heavy beds of limestone are common in the southern metamorphic belt, also on the Bay Chaleur. Unaltered deposits may be seen skirting the margin of the great coal field. Gypsum is confined mostly to the Lower Carboniferous series of King's, Albert, and Westmorland; but occurs also in the red sandstone district of the Tobique River. Chlorite or ""pipestone"" and Steatite or ""soapstone"" have been found at a number of places; but no deposit of the latter mineral, sufficiently large to be available for manufacturing purposes, has yet been discovered. Barytes, or ""heavy spar,"" has been met with only at a few localities, and not in any considerable quantity, unless we may except that in Sussex and a large deposit said to occur at Le Tete. This mineral is largely used in the manufacture of white paint, and also for other purposes. It resembles calcareous spar, but differs in cleavage and is much heavier. The only gem which this province has thus far yielded is that very common one called, according to its color, white stone or rock crystal, false topaz, and amethyst. Other varieties of this mineral, such as carnelian, agate and jasper, which are frequently used in jewellery, occur at several places. Garnet is reported from Waweig river, but it has not been found ""in situ"". All the tourmalines mentioned are of the ordinary black variety. It will be seen on examination of the catalogue, that all the metals in ordinary use as well as some others which are more infrequent, occur in this province. But of the commoner ones several have not been found in sufficient quantity to be worth extracting. Indications of tin were observed in the granite of the Pokiok river, by Dr. Gesner. Lead ore has been met with at Tobique River, Norton, Campo Bello, and other places, but not in sufficient quantities as to assure a profitable return to 10 the miner. Zinc blende is found at Campo Bello and a few other localities, but not even so abundantly as lead. This mineral is usually of a dark brown color, and is frequently associated, as at Campo Bello, with galena and copper pyrites. Several ores of copper, chiefly sulphurets and carbonates occur in various parts of the Province, but few of the mines opened in these deposits have been permanently worked. Those of Bathurst and Woodstock have been abandoned. But mining on a small scale is still continued at Salmon River and Le Tete, and experimental operations on the deposit at Simpson's Island have been commenced. Two ores of this metal have been newly added to the list of those already known to occur in the Province. These are the Suplhuret called copper glance, from Simpson's Island and cuprite, or the red oxide of copper found at Salmon River. Iron and manganese are the metals which above all others are most abundant. Heavy ore beds of the former are exposed at Woodstock, Nerepis Road, Bull Moose Hill, West Beach, and other localities referred to in the list. At the first mentioned place the ore has been worked for a number of years. Manganese occurs in greatest quantities and purity near the eastern terminations of the two metamorphic bands to which allusion has already been made. The earthy variety called Wad is also common. The mine near Bathurst which affords beautiful crystals of the grey oxide has been abandoned on account of the irregularity and unreliable character of the deposit. Operations, however, are still carried on at Sussex and Shepody. Of the precious metals, silver has been detected in some of the lead ores, in the ore of antimony near Pokiok, and in the copper ore of Simpson's Island, but only in minute quantities. Gold, so far as we are aware, is yet undiscovered; at least, there is no tangible evidence to show us that it has been found in the Province. If reliance may be placed on the results of the geological survey, the northern metamorphic band, the County of Charlotte, the region about the headquarters of the Tobique, and that part of the southern band which has not been shown to be of Devonian age, are the most promising districts for the gold seeker. The discovery of a rich gold field would undoubtedly give a great spur to the development of our Provincial resources, but, at the same time, would probably have a tendency to attract a lawless and reckless population. Seams of coal have been found at numerous localities within the great central area, covered by deposits of Carboniferous age. Few of these, however, promise to be productive. The unique variety found at Hillsborough has proved to be a mine of wealth to its owners. Operations have also been successfully carried on at the mines on Grand Lake for many years. But in no other part of the Province have beds of this mineral sufficiently large to attract the attention of capitalists, been opened. Those best qualified to judge (Drs. Robb and Dawson) of the productiveness of New Brunswick coal measures, gives us little reason to hope that they will yield stores of fossil fuel as large as, considering the extensive area which they cover, we might anticipate. Still the discovery of extensive beds is not altogether hopeless, for we should bear in mind that a great part of the area underlaid by these rocks remains unsettled and uncleared; and we may traverse parts of it for scores of miles through an unbroken wilderness. Although New Brunswick is not favored with the possession of mineral attractions so brilliant as some of her Colonial sisters, she is not altogether devoid of some solid advantages as the preceding summary will show. The many openings for the advantageous investment of capital, which are to be found in a young and flourishing colony is no doubt the reason why the abundant mineral wealth, with which bountiful Providence has endowed us, still remains undeveloped. As population increases, however, and our wants become more diversified, this source of a prosperous and remunerative commerce will receive the attention which it deserves. Already we see signs of the approach of such a period in the careful investigation which several newly discovered metallic deposits are receiving. [In these remarks I have endeavored as far as possible to occupy ground different from that taken up by Prof. L.W. Bailey in this valuable little publication on the mineral resources of the Province, as exemplified by the metallurgical collection of the University of New Brunswick; considering that a repetition of what has recently been made public would be superfluous.] Addenda. -Iron Ore of West Beach. - The bed of ore at this place inwhich the mine has been opened is included in the upper part of a large mass of coarse reddish-grey conglomerate, dipping to the S.E. at an angle of about 30ø, and distant a furlong from the shore. The pit or quarry from which the ore has been extracted has been opened in a bed of dark, reddish, brown hematite. One or more schooner loads have been taken away, and a quantity still remains awaiting shipment. The conglomerate is abundantly seamed with quartz containing scattered masses and veins of micaceous and specular iron in tabular crystals. Two or three miles eastward of the mine the iron ore again appears on the hill side. Here, however, three or four beds of ore (one of them 20 feet thick) are visible; and the associated rocks are different, consisting of beds of trap-ash, trap-ash slate, and talcomicaceous slate. The ore beds were not traced on the eastern side of Black River. Were it not for their variable thickness they might be sought for here with much probability of success. A continuation of the same rocks holds beds of limestone at Emerson's Creek, a few miles to the eastward. The facilities for working this ore are therefore, in some respects, unusually good, but no smelting operations have hitherto been undertaken. From its association it would appear that this ore was originally deposited in the state of a finely divided ferruginous mud, in a shallow sea and within the influence of active volcanoes. I hope to be able to show at some future time that the accompanying rocks do not possess the antiquity ascribed to them in the geological reports of Dr. Gesner, but are of a later date than the sandstones and shales of St. John, which have yielded such an abundant harvest of Devonian plants. [For the information regarding the two following localities, I am indebted to Edward Allison, Esq.] Copper Ore, Simpson's Island. -The vein of green carbonate (malachite) recently discovered, occurs in a small island, (not exceeding 100 acres in extent) about one mile south of Deer Island, andseven miles from Eastport. The island is composed of trap-rock, through which protrudes a band of slate, with nearly vertical layers, which extends across the island in an East and West direction; it being about four feet wide on the West side, and from ten to twelve feet wide where it terminates in a small cove on the East side of the Island. The copper lode occurs in this slate, and was discovered on the West side of the Island in a beach which extends (from high to low water) abut 400 feet. This beach is composed of rock covered with seaweed, except near high water mark, where it is shingle. The copper lode, where discovered, is about four feet wide, and about 150 feet from low water mark; it has been traced about 150 feet toward the shore and to low water mark. Several tons of this ore have been taken out and sent to Liverpool to be tested. A small sample sent some time since yielded 27 per cent of copper, and nearly four ounces of silver to the ton. The value of the ore as taken out is reported to be £27 stg. per ton. [Pieces of Copper glance (sulphuret of copper) were scattered through the Carbonate which forms the mass of the ore at the surface, and were found to increase when the evacuation was deepened. At a greater depth the ore probably consists of the former compound, as the carbonate seems to result entirely from decomposing agencies at work at and near the surface] - G.F.M. Antimony of York Co. -The vein of antimony recently discovered occurs in York Co., Parish of Prince William, about 20 miles above Fredericton, and is on the S.W. side of the river Saint John. The rise of the land from the river at this place is gradual, till the summit of the slope (about 300 feet high) is reached, when the ground falls away toward Lake George, and the Pokiok Stream. Near the top of the slope a band of primary rock, having a course about N.W. and S.E., protrudes through the soil, and is shown particularly where it crosses the highway. This band of rock contains the vein of antimony referred to. It was discovered in

Royal Gazette - May 9, 1860 An Act to incorporate the Saint John Iron Works Company. Section. Section. 1. Company incorporated; name 6. Capital may be and capabilities. increased. 2. First meeting, by whom and 7. Company authorized to how to be called; powers. assess shares; 3. Capital stock, amount, and proceedings against when payable. delinquents. 4. Liability for debts. 8. Corporation to 5. Liability of Stockholders terminate unless 10 per for stock subscribed. cent of capital be paid up within three years. Passed 9th April 1860. Whereas the efficient opening and working of Mines at West Beach in the County of Saint John, and elsewhere in the Province of New Brunswick, will be highly advantageous to the Province; And whereas the amount of capital necessary to be invested in such undertaking, renders it essential that the Company 7 engaged therein should be incorporated; - Be it therefore enacted by the Lieutenant Governor, Legislative

Council, and Assembly, as follows:- 1. That Alfred Phillips, William Henry Scovil, and the Reverend William Scovil, their associates, successors and assigns, shall be and they are hereby erected into a Company, and declared to be a body politic and corporate by the name of ""The Saint John Iron Works Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of opening and working Mines at West Beach, in the County of Saint John, and elsewhere in the Province of New Brunswick, and establishing all necessary works therewith connected, and for the convenient carrying on and managing the same. 2. That the first meeting of the said Corporation shall be held at the City of Saint John, and shall be called by any one member of the said Company, by giving at least twenty days' notice in the Royal Gazette published in this Province, and any two of the Newspapers published in the City of Saint John, previous to such meeting; at which meeting the Company shall be declared constituted, bye laws established, and Directors, or a Manager and other officers appointed, as by such bye laws shall be prescribed, and which they are hereby authorized to make. 3. That the capital stock of the said Corporation shall consist of the sum of thirty thousand pounds; ten pounds per centum of the said capital stock to be paid in before the said Corporation shall be entitled to purchase any property, real or personal, or incur any debts, and the remainder of the said stock to be paid at such time and times and in such parts or portions as the business of the said Company shall from time to time require; the whole amount of such capital stock to be divided into three thousand shares of ten pounds each. 4. That the joint stock and property of the Company shall alone in the first instance be responsible for the debts and engagements of the said Company, and that no creditors or person or persons having any demand against the said Company, shall have recourse against the separate property of any shareholder on account thereof, except in case of deficiency, or where the joint stock of the said Company shall fall short of or not be equal to the payment of any debt, due or demand against the same, that then and in such case the goods and chattels, lands and tenements of each shareholder, shall and may be levied upon and seized to satisfy such debt or demand, to the extent of the share or shares or interest of such shareholder in the joint stock of the Company, and no more, and that such amount shall and may be levied by process of execution in the same suit in which such debt, due or demand may be recovered against the said Company. 5. And be it enacted, that each and every shareholder in the said Corporation shall be held liable to the said Company for each and every call or assessment made, not however to exceed the amount the stock so subscribed for, and shall and may be sued for the same by the said Corporation in any Court of Record within the Province. 6. That so soon as the said capital stock shall have been paid in and expended for the purpose of this Corporation, it shall and may be lawful for the said stockholders, at any general meeting to be for that purpose called, or the major part of them then present, to increase the said capital stock from time to time in such sums as they may seem expedient, to a sum not exceeding one hundred thousand pounds, and they shall have power to increase the number of shares accordingly. 7. That the said Company shall have power to levy and collect assessments upon the shares from time to time, of such sums of money as may be deemed necessary for carrying on the business of the Company; and whenever any assessment shall be made by the stockholders of the Company, it shall be the duty of the proper officer to give public notice thereof in two Newspapers published in the City of Saint John aforesaid, and in the Royal Gazette, requiring payment of such assessment within thirty days; and if any stockholder shall neglect or refuse to pay the amount of such assessment upon his shares at the time prescribed, it shall be the duty of such officer of the Company to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale, and all shares upon which assessment is not then paid, with interest from the time such assessment is due, shall be sold to the highest bidder, and after retaining the amount so due on such shares and interest, with all expenses of selling and advertising, the residue, if any, shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser; provided always, that no assessment shall be made, except by a vote of the stockholders, and a majority of the shares. 8. That unless ten pounds per centum of the said capital stock shall be actually paid for the purposes of the said Corporation, and a certificate of such payment made and verified on oath by the majority of the Directors of the said Corporation, (which oath any Justice of the Peace is hereby authorized to administer,) shall be filed in the Office of the Secretary of the Province before the expiration of three years from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the end of the said

N.B. Courier - Jul. 28, 1838 Geological Survey. - We omitted to mention in a former number, that Dr. Gesner had re commenced his Geological Survey of the Province; having proceeded to Charlotte County for that purpose. We understand that Gentleman will not publish any account of his proceedings, until he has finally made his Report in the Autumn; but we have reason to believe that hisdiscoveries in that quarter are of a highly interestingnature; and that he has examined the Saint Croix from itssource to some distance above Saint Stephen's and the country in that neighborhood, together with the Islands in Passamaquoddy Bay which belong to the British, with the exception of Grand Manan; where valuable Lime andGranite quarries and Mineral Springs have been found. Lead Ore has been obtained on Campobello; and there is anabundance of Marl, which is valuable to the farmers in that quarter, and remarkable tertiary deposits containing numerous fossil shells. These features of the country in a geological point of view are new and interesting; and the inhabitants of this Province generally, may promise themselves much advantage from Dr. Gesner's valuable labours. -

Codes: 0310 / LEGI / IDX_Names: Adams Island; Legislation, etc.;
Royal Gazette - May 20, 1891 Crown Land Office, May 16th, 1891. To the Owner or Owners of Adams Island, (near outer Passamaquoddy Bay, Charlotte County), or their Assignees of Lessees (if any), who may claim to have made explorations or actually commenced Mining operations thereon, and all others whom it may concern:Notice is hereby given, that application has been made to me for a Mining Lease of said Island, under the Act 54th Victoria, Chapter 16, and that The Governor in Council will examine into the matter, and take action, &c., as provided for by the 138th Section of said Act. L.J. Tweedie, Sur. Gen."

Codes: 0311 / LEGI / IDX_Names: Letete Mine; Legislation, etc.;
Royal Gazette - May 9, 1860 Cap. LXXXV. An Act to incorporate the LeTete Mining Company. Section. Section.1. Company incorporated. 5. Liability for debts. 9 2. First meeting, time and 6. Act void if 25 per place of. Cent of capital be not 3. Capital, amount and division subscribed within one into shares. Year. 4. Liability of stockholders for stock subscribed. Passed 9th April 1860. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That John Ward, Charles Merritt, John Duncan, Samuel Dick, Richard S. DeVeber, William Davidson, John G. Woodward, George Dick, Edward L. Thorne, John Owens, Henry B. Robinson, their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The LeTete Mining Company,"" and by that name have all the general powers and privileges made incident to a Corporation by Act of Assembly in this Province, for the purpose of opening and working Mines in the county of Charlotte, and establishing all necessary works connected there with, and for the convenient carrying on and managing the same. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the above named persons. 3. The capital stock of the said Company shall be twenty five thousand pounds, divided into two thousand five hundred shares of ten pounds each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of or to carry on the operations for which the said Company was incorporated; which call or assessment may be sued for by the said Corporation and recovered in any Court of Record within this Province. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. Unless twenty five per cent of the capital stock shall be subscribed within one year after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be terminated."

Daily Sun - Apr. 10, 1891 New Brunswick Geology. - Mr. Chalmers' Report on His Work Last Year. - The Counties of Kent, Westmorland and Northumberland. - Mr. Chalmers left Ottawa on the 5th of June to continue the survey and mapping of the surface geology of New Brunswick, his field of work being the area included in the quarter sheet map No. 2, S.E. This sheet embraces the county of Kent with adjacent portions of the counties of Westmorland and Northumberland. Hisassistants were John H. McDonald of Brockville, Ont., from the date of his leaving Ottawa till the 4th of October, and W.J. Wilson of St. John, N.B., from the 30th June till the 15th of August. The following is Mr. Chalmers' report on the season's work: In the district to which this report relates the surface features are, generally speaking, uninteresting and monotonous, presenting the aspect of a low, level plain, which, however, rises gently towards the north-west margin.

Between river valleys this flat middle carboniferous area is comparatively undrained, and hence much wet, barren land exists upon it, and shallow peat bogs are common. Making Weldford Station our headquarters in the first part of the season, we examined the country along the Intercolonial railway to the north and south. Numerous cuttings exposed good sections of the superficial deposits, and the rock surfaces exhibited striae in many places. Two well defined sets of these were observed. The first set occurs along the railway to the north of Richibucto River, the striae trending abut due east, and this course was found also near the coast in the Buctouche and Cocagne districts, varying in some places to points between east and northeast. The second set was seen along the Intercolonial railway to the south of the Richibucto river, the striae there having a nearly north and south course. Good examples of the latter were discovered just south of Weldford Station, where rock surfaces were exposed during the construction of the railway, exhibiting finely preserved striae with a course of S. 5 deg. W. This is upon the watershed between the Richibucto, which flows eastwardly into the Straits of Northumberland, and the Salmon River, flowing south westwardly into the St. John, or rather into Grand Lake, the elevation of this watershed not being more than 200 to 250 feet above the sea. These two sets have evidently been produced by two different bodies of ice, both of which, to all appearance, have been local, the east and west striae by ice which moved towards the straits mentioned, and the north and south set by ice which flowed either northwardly into the valley of the Richibucto, or southwardly towards that of the St. John river. Boulder clay is sparingly found in many places on the higher grounds, but the chief covering of the rocks is a coat of their own debris, in the form of gravels, sands, etc., intermixed with boulders, chiefly local, with which, however, transported ones occur in greater or less numbers. The local debris referred to is unusually masked by stratified materials, the relations of the two being seen in river banks, especially below the 200 feet contour line. The whole superficial covering of the carboniferous rock, indeed, appears more or less stratified in the upper part, and is, generally speaking, deeper than that resting upon the other geological systems or formations of the province. It conceals the rocks from view everywhere, except along river valleys. The millstone grit, in its decay, seems, however, to have crumbled down largely into arenaceous materials. Sandy loam is met with along river courses, and clay beds constitute the basal member of the stratified series in certain places, but are not common; hence the conditions necessary for the preservation of the shells of marine animals in the post-tertiary deposits of this district are rare, and consequently very few of these are found in the fossil state. A noteworthy feature of the surface beds upon the area referred to is the presence of boulders of granite, felsite, diorite, etc., scattered broadcast over them and often embedded therein. The boulders are obviously from the Cambro-Silurian, Cambrian and preCambrian rocks to the northwest. Near the coast and below the 200 feet contour line, however, they are sparingly intermingled, in same localities at least, with others that are not so easily accounted for, and which appear to have been borne thither by floating ice. The direction in which the boulders on the higher parts of the district have been transported is exemplified by their greater or less abundance in the different localities as we recede from the parent beds. For example, along the southwest Miramichi those of granite and other crystalline rocks are unusually large and abundant, and in many cases angular, being near the parent rocks; but as we proceed eastwards across the carboniferous basin they become smaller and more scattered. These transported boulders, are, however, merely the residual specimens of the vast numbers which have been borne thither. Remains of others which have crumbled to pieces are seen in the coarser gravels and sands in numerous places. The other superficial deposits of the district presented no new features worthy of consideration. The evidence regarding the pleistocene subsidence indicates that it may have been slightly less here than in the Bay of Fundy and the Baie des Chaleurs basins. An old shore line, quite distinct, we observed at Galloway, near Kingston, at a height of 150 to 160 feet above sea level. A similar ancient shore line, at about the same elevation, occurs in the Miramichi valley. After Mr. Wilson joined our party on the 30th of June he and Mr. McDonald examined the southern part of the district, following all the roads and streams. While they were engaged I first visited the ship railway, now under construction across the Isthmus of Chignecto, for the purpose of re-examining the formations disclosed in an excavation for docks which is now being at its western end. The excavation is opened in the margin of the Amherst salt marsh, between the mouths of the LaPlanche and Missiguash rivers. The section exhibits in descending order - (1) marsh mud, (2) blue clay holding shells of Mya arenaria, Macoma graenlandica, and the young Buccinum undatum?, (3) peat or humus, (4) red clay, and (5) boulder clay, with local boulders. The bottom of the boulder clay is not reached, although the excavation is upwards of 60 feet in depth. Afterwards I proceeded to Grand Manan, to examine one or two doubtful points there. Striation by ice, apparently from the mainland, and a few boulders evidently belonging to rocks other than those on the island, were observed on the higher parts, 350 to 400 feet above the sea. Returning to Kent County, I then made a canoe trip along the coast and around the lagoons inside of the sand dunes, which here form barriers along the shallow shores. Many interesting facts were noted regarding the formation of the sand beaches, lagoons, peat beds, salt marshes, &c. On the 3rd of October I visited St. John, with a view of re-examining the boulder clay beds at Negrotown Point and the Fern Ledges. In company with Mr. Wilson, I measured a section of them at the latter place, to enable me to make a diagram exhibiting a deposit of stratified clay intercalated therein. From St. John I went to St. Andrews to make some further observations on the glaciation of that section, more especially at Chamcook mountain, etc. It was found that ice had ground completely over that hill, and that the summit, 637 feet above sea level, was scored and polished in a remarkable manner. Regarding the soil of the district examined the past season, it may be remarked that it is, on the whole, good, especially along the coast and river banks, and also on some of the higher grounds between the streams. But large tracts are swampy, or covered with boggy material, constituting so-called barrens. Whereever the natural drainage is sufficient to carry off the surplus waters due to precipitation, the land is fit for cultivation. It is, however, deficient in lime, and requires frequent applications of that material to bring it up to its highest yielding capacity. Good farming districts are found along the Richibucto valley, more especially on Nicholas River and Coal Branch, also in the Kouchibouguacis valley, and in the Buctouche and Cocagne districts. The forests of this part of the province, formerly so dense, and consisting of a mixed growth of trees, such as pine, spruce, birch, hemlock, cedar, hacmatac, etc., are now being greatly depleted. Large areas have been overrun by fires, and present little else but bare trunks and a scanty second growth. The destruction of timber from this cause alone is enormous. During the summer of 1888 the fires which swept over a large portion of the area under review destroyed valuable tracts of the forest. The materials of economic value met with in the district are few and unimportant. Peat is found in extensive bogs along the coast, especially near the Kouchibouguac, the Kouchibouguacis, Aldouane, Richibucto, and in many other places. These bogs are often deep, and produce abundant crops of cranberries. In the interior, large bogs often occur upon the flat, undrained portions of the district, but they are usually shallow, and in many cases support scrubby growth of hacmatac and black spruce. No use has yet been made of peat in this part of the country. Gravel and sand, suitable for ballasting, road- making, etc., were observed in nearly every locality, and clay, available for brick-making, occurs in many of the river valleys. Fine blown sands are abundant everywhere along the coast, forming the dunes or barriers already referred to. In the latter part of the season I visited thedeposit of so-called magnetite, near the head of Millstream, Gloucester County, specimens of which, analyzed by Professor Donald, chemist and assayer, Montreal, are reported to have yielded upwards of 60 per cent of metallic iron, with ten per cent of silica, etc. Considerable portions of the ore appears to be highly pyritous. About two miles distant from this deposit there occurs a vein of pyrites and galena, the former containing traces of gold and the latter of silver,according to an assay made by Mr. Hoffman,

Royal Gazette - Aug. 24, 1889 Notice of Granting Letters Patent. Public notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the twenty fourth day of August, A.D. 1889, incorporating John A. Shea of Grafton, farmer; Solomon Perley, of Upper Woodstock, contractor; John Graham, of Woodstock, grocer; Albert Brewer, of Upper Woodstock, contractor; David W. Jackson, of Upper Woodstock, millwright; Frederick H. Hale, of Grafton, gentleman; Samuel T. Baker, of Woodstock, carriage maker; F. Herbert Dibblee, of Woodstock, silver plater; Robert Stephenson, of Woodstock, mechanic; G. Randolph Ketchum, of Upper Woodstock, gentleman; all in the county of Carleton, Province aforesaid, for the purpose of the acquiring, holding, selling and conveying of lands and of rights and interests in lands within the Province of New Brunswick; for mining, and other purposes incidental to mining and the working of Mines, and the raising, selling and exporting of and dealing in ores and minerals of all kinds, and all other purposes connected with the business of mining, by the name of The Northern New Brunswick Mining Company, with a total capital of Two hundred thousand Dollars, divided into Two hundred thousand Shares of One Dollar each. Dated at the office of the Provincial Secretary, at Fredericton, the twenty fourth day of August, A.D. 1889. David McLellan, Provincial Secretary." Royal Gazette - Jul. 17, 1889 Notice. We, the undersigned, hereby give notice of our intention to apply to the Lieutenant Governor in Council for incorporation by Letters Patent under the privileges of The New Brunswick Joint Stock Companies' Letters Patent Act. 1st. The proposed corporate name of the Company is The Northern New Brunswick Mining Company. 2nd. The objects for which the Company seeksincorporation are - The acquiring, building, settling and conveying of lands, and of rights and interests in lands within the Province of New Brunswick, for Mining and other purposes incident to Mining and the working of Mines, and the raising, selling and exporting of and dealing in Ores and Minerals of all kinds, and all otherpurposes connected with the business of mining. 3rd. That the office and chief place of business of the proposed Company is to be established at Woodstock, in the County of Carleton, in the Province of New Brunswick. 4th. The amount of the Capital Stock of the proposed company will be Two hundred thousand dollars. 5th. The number of shares is to be Two hundred thousand, of One Dollar per share. 6th. The names, addresses and callings of the several shareholders respectively are as follows, of whom the three first named, John A. Shea, Solomon Perley and John Graham, are to be the first and Provisional Directors of the Company under the proposed incorporation:- John A. Shea, Grafton, Carleton Co., farmer; Solomon Perley, Upper Woodstock, Carleton County, contractor; John Graham, Woodstock, Carleton County, grocer; Albert Brewer, Upper Woodstock, Carleton County, contractor; David W. Jackson, Upper Woodstock, Carleton Co., millwright; Frederick H. Hale, Grafton, Carleton Co., gentleman; Samuel T. Baker, Woodstock, Carleton Co., carriage maker; F. Herbert J. Dibblee, Woodstock, Carleton Co., silver plater; Robert Stephenson, Woodstock, Carleton Co., mechanic; G. Randolph Ketchum, Upper Woodstock, Carleton Co., gentleman. Dated this 15th day of July, A.D. 1889."

Colonial Farmer. - May. 15, 1871 Geological Report. - Continued. Although the general colour of these rocks is grey, they are occasionally reddish, purple and yellow, and more rarely of a greenish hue, and sometimes stained black with oxide of manganese; these differences being apparently quite capricious in their modes of occurrence, depending rather upon local circumstances than upon the stratigraphical position of the beds exhibiting them. At the few spots where thin seams of coal have been discovered, they are overlaid by a correspondingly thin band of drab coloured arenaceous and micaceous shale, showing scanty and imperfect impressions of ferns and other coal plants, and rest upon a similar stratum, abounding in nodules of iron pyrites, but destitute of organic remains, so far as I could discover. I am not aware of any true stigmaria underclays of other indications of productive and workable coal seams having been found in the region under notice. Near Thompson's Mills, at the mouth of the Nashwaaksis, about three miles north of Fredericton, two large prostrate trees have been found imbedded in the solid sandstone, one measuring fifty feet long and two feet diameter at the base; of these I have obtained fragments, but the species has not yet been identified. The altitude of the various strata above enumerated, which appears on the whole to be conformable, is nearly horizontal. From local irregularities,

however, in the apparent surfaces of bedding, it is exceedingly rare to obtain an unequivocal observation of strike or dip by direct measurement and from the want of continuity of the beds their precise attitude cannot be deducted from bearings and levels taken at moderately distant points. From a somewhat comprehensive series of observations, I believe I am justified in setting down the average dip, throughout the region explored by me, as E 6 deg. - 10 deg S at an angle of 5 deg. This is at and near the rim of the area; as we proceed towards the centre the strata become more and more nearly horizontal. The grey grits and conglomerates being composed of materials little liable to disintegrate by the influence of the weather, especially towards the outer rim, have resisted denudation, and are generally found standing out in bold bluffs or more shelving ridges of various elevations up to 900 feet above tide level; while the softer and more readily decomposed red and calcareous rocks at their base occupy lower ground, and partially influence the course of some rivers; their ruins producing, as might be expected, good arable land. The grey sandstones, on the other hand, produce by their disintegration rather poor and meagre soils; and the uplands overlying these rocks being either for the most part encumbered with looses blocks, or swampy from want of natural drainage, the progress of agriculture in such circumstances slow. The trappean rocks to which I have referred as associated with this group, occur only in connection with its lower members. The areas of these eruptive rocks, of which I have noted seven distinct localities in the region explored by me, are generally of very limited extent, but locally they appear to have exercised a considerable influence upon the character and distribution of the rocks penetrated and overlaid by them. Having thus indicated the general features and conditions of the Carboniferous rocks in this region, I shall proceed to give a few details of the more notable localities in which they were observed. - It has long been known that the great Carboniferous area of New Brunswick has a triangular form, the base resting on the Gulf of St. Lawrence, and the apex situated a little to the west of Oromocto Lake, near the boundary line between the counties of York and Charlotte. It is at this latter point that my observations commence, extending thence in a northeasterly direction to the county of Northumberland, at Boiestown on the southwest Miramichi River. The river Magaguadavic skirts this line transversely just at the apex of the Carboniferous triangle, and seems to have excavated its channel in the soft calcareous and marly rocks at the base of the formation; the country beyond, to the west and north, forming a very extensive elevated plain, underlaid by the metamorphic rocks. The succeeding members, crop out in bold bluffs, nearly 250 feet above and two-thirds of a mile from the river; the apparent dip being N. 70 deg. E. log. 15 deg. Oromocto Lake, which is situated two miles eastward from the brow of a cliff, and is about sixteen square miles in superficial extent, is from 80 to 100 feet below the level of the escarpment referred to, and 370 feet above the level of tide water, while the general level of the great plain to the west is 250 feet; thus presenting the extraordinary phenomenon of a very considerable body of water supported at a height of 120 feet above the plain in the immediate vicinity, and yet draining through a very great area in the oppositedirection. At Lister's Mills ten miles north from the escarpment, and on the north-east branch of the Magaguadavic, the rocks at the base of the Carboniferous series present an interesting development of their peculiar characters where affected by trappean intrusions. Mottled red and green highly calcareous shales and conglomerates, some of the layers holding nodules of pure calcspar, layers of chert and strings of fluorspar, occur mixed with rocks apparently of eruptive origin, and with others bearing much resemblance to the older metamorphic rocks. (To be

N.B. Courier - Oct. 7, 1837 LETTER IV. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor and Commander in Chief of the Province of New Brunswick, &c. &c. &c. May It Please Your Excellency: In endeavoring to discover the geological features of any country, and to obtain sufficient data whereby particular examinations are rendered less difficult, I have alwaysobserved that the sea coast, and the banks of the rivers wherever they occur, afford facilities not to be obtained through any other medium, where deep mines and quarries have not been opened. Convinced of these facts I have endeavored to lay before Your Excellency a few particulars relative to the Tantamarre, Memramcook, and Kennebecasis Rivers, and the characters of the formations through which they extend, so far as they were observed on my route. From the two former streams the River St. John is different in two important particulars; one in respect to its inestimable advantage to the country, and another in regard to the sources from which the diluvium on its banks has been derived. That part of the St. John which extends from above the falls into the interior of the country, receives no alluvial matter from the sea, as its navigable channel is elevated at least forty feet above the harbor at low water. The falls which might be considered by some an obstruction to navigation, absolutely extend it to a great distance. The impediments placed at the ""narrows"" and the sudden descent of the water at the falls preserve the level of the river above, which may now be compared to a lake. Were all the obstructions removed, and this majestic stream allowed to pass through a broad open mouth into the sea, dangerous rapids would be formed above, and its use as a common canal, and thoroughfare would be greatly diminished. It is certainly an admirable river where all the rapids are collected at its entrance - where they are locked up by the ocean twice every twenty four hours. The descent from the Meductic falls at Woodstock, (at least one hundred and thirty miles up river) is so gradual, and consequently the current of water so feeble, that long before the river can be emptied, the ""tidelock"" of the falls is closed, and a current throw back into the channel which seems to supply the waste that has taken place during the previous ebb. Instead of receiving constant supplies of sedimentary matter from the wasting rocks of the coast, during each tidal influx of the sea, the elevated situation of the river's bed and the barrier set up at its narrow mouth, prevent the admission of sand and mud, which on the banks of other rivers are so abundantly deposited. Nor do the border of this noble stream require it. Skirted with the detritus swept from the mountain's brow by falling showers, and clothed by the alluvium brought downward by each bubbling brook, a fertile deposit is formed on each of its banks, which are submersed beneath the waters of the vernal ad autumnal floods. About three miles from the Indian House, the limestone formed by the sides of the ""Narrows"", is met and overlaid by conglomerate, which is regularly stratified, and dips north-east. It evidently belongs to the formation of that rock so abundant along the Kennebecasis, being like it in every particular. The Nerepis river empties into the St. John ten miles above the Indian House - at its entrance a great change may be observed in the scenery. Instead of the bold rugged cliff of limestone and conglomerate the shore slopes gradually down to the main river, and cultivated fields decorate its border. Continuing their course in a south-west direction, the highlands already mentioned cross the St. John, and taking within their range the mountains of the Nerepis, they form a distinguishing feature of the Province. Beginning at their base, the great coal district of the country is spread out far and wide in a northerly direction, and its rocks are strongly contrasted with the oval summits of the granitic hills, and the grandeur of this primitive region into which the Nerepis extends. On the shores of Long Reach several beds of clay, sand, and gravel were observed, and to a stranger, the enormous rafts of floating timber, occupied by comfortable cabins, and whole families - the groups of children sporting on the buoyant pine - all moving slowly towards St. John, afford a truly interesting spectacle. Such is the scenery in a Province possessing four thousand miles of navigable lake and river, and such are some of the natural advantages the country enjoys. Advancing up the Long Reach the conglomerate and a coarse sandstone, may occasionally be seen forming bold eminences on the side of the river. At the ""head of the Reach"", there are two islands, apparently formed altogether of alluvial matter, from the particular direction of the current. A long arm of intervale extends along the west side of the river at a place called the ""Mistake"", where a deep creek has often been mistaken, even by good pilots for the main channel; hence this name has arisen. On this part of the St. John there are some beautiful views; at the head of the Reach the river becomes narrow, from this circumstance a blockhouse and battery were erected during the last war, on its eastern side. Not far from the lower end of Spoon Island there isa hill of granite, from which mill stones are quarried. But having passed rapidly up the stream in a steamboat, I am unacquainted with many of the interesting formations along its shores. There can be little doubt, however, that any who shall follow up those limited examinations, will reap a reward for their labour. It would be necessary to travel along both banks of this extensive river, in order to examine faithfully their structure, 3 and collect their minerals; and the time cannot be far distant when the Provincial Government will explore the hidden resources of the country and open up new channels of industry and wealth. A coarse sandstone apparently belonging to the lower strata of a coal basin, and approaching what is usually called the mill-stone grit, was observed at Gagetown, a delightful spot sixty miles from Saint John and thirty from Fredericton. I had not an opportunity to examine its extent, and the indications of coal appearing in that neighborhood. A remark has been made, and perhaps believed to be just by many, that after the timber of New Brunswick has been felled and transported, the resources of the country will be dried up, and consequently, the Province will fall even below the level of the other American colonies - but let any one make an excursion one hundred and fifty miles up the St. John, and that opinion will be discarded from the mind. From Long Reach to the Grand Falls, a distance approaching two hundred miles following the course of the river; there are many tracts of the most fertile soil, and almost every spot along the shores of this admirable stream is capable of cultivation. The vast quantity of intervale between Belleisle Bay and thirty miles above Fredericton is of itself, sufficient to enrich the central portion of the province. Already invested with chains of cultivated fields and rich meadows, occupied by the hardy sons of Loyalists, this useful river offers to its industrious and rapidly increasing population a fair compensation for their labor, and a home for their posterity. Nor is the scenery on the river less pleasing - during the summer months when the floods of spring have subsided, there are numerous landscapes along its embankments that will vie with the richest of other countries. The dark and winding river, shaded by the tops of lofty elms, or crested with the drooping willow - the distant village seen through the fringed opening of the forest - the unwieldy raft and smoking steamboat, make up that singular variety so pleasing to most travellers, and agreeable to the fixed inhabitant. The St. John, between the Falls and Fredericton will probably average a mile and a half in width, and when the number of smaller streams, lakes and creeks, all emptying into this common reservoir are viewed, the quantity of water it conveys cannot appear surprising; and that floods should occur during the heavy rains of autumn, and from the dissolution of the snow in spring are effects common to all rivers of the kind. But it must not be supposed that all the water rushing into this lake-like receptacle, is precipitated over the falls near the city of Saint John. Many from their own observation, have supposed that a subterraneous passage to the sea gives vent to a part of the water. That idea is certainly 4 erroneous. The quantity of water is reduced by evaporation alone - this during the summer months, and under particular conditions of the atmosphere, is quite sufficient to account for the supposed phenomenon. When so large an aqueous surface is exposed to the air during dry weather, the escape of vapor is very great, and it is certain that the river will rise when the atmosphere is dense, and the weather lowering, at times when there has been no previous rain. A circumstance readily explained by the atmosphere being in a condition more or less favorable for the conveyance of water in an teriform state. I have observed many small streams to become dry at their mouths in the summer season, while toward their sources they sent forward a much greater quantity of the evaporating fluid than could be absorbed by the earth. Of all the agents employed in modifying the earth's surface none of more active than water. Its effects are certain whether they are produced by the falling shower or the rushing of the mighty torrents. Particle after particle becoming loosened from the hardest rocks by its disintegrating influence, is swept from the summit of the mountains to form new deposits in the valleys. Even the largest rocks are torn from their native beds and transported by its force to great distances. The soil thus formed is always accumulated at the lowest levels, and distinctly points out the height to which water has risen. The matter collected by these means, whether it is large stones, sand, gravel or mud, is identical with the rocks from which it is derived, unless mixed with decayed vegetables or has undergone some change by chemical affinity. The large tracts of intervale on the St. John river, have thus been deposited from the debris of its surrounding hills, and each successive freshet brings down a new stratum of sediment that semi yearly renders the soil more fertile. The vast accumulation evidently belongs to two distinct and separate periods of time. The first or most ancient is limited in extent, and forms what is generally called the high intervale. It consists of different layers of rounded pebble, gravel, sand, and sometimes beds of clay. These, whenever they appear, occupy a higher level than the more recent alluvium and are seldom or never entirely inundated by the highest floods of the present period. This, the earliest of these collections is well displayed at Fredericton, and the town is built on one of the most beautiful situations. Opposite the Capital of New Brunswick, and near a bark camp village of its aboriginal inhabitants, there is a bed of good clay, and collections of fine sand, may be seen on the level land on the border of the river at other places. These deposits belong to those called by Mr. Lyell, Newer Pliocene, although I have not been able to discover in them any organic remains whereby their relative age might be determined. The other collection of alluvium is comparatively recent, 5 and has been formed by causes now in operation. In it I obtained two species Mtyila and other shells, all belonging to the kinds now living on the shores. This deposit forms almost all the intervale along the river and being placed in the lowest situation, ie. submerged during the floods of spring and autumn. It is more than probable that the site of the river and all its intervale was at one time a Lake, whose surplus waters made their exit into the sea by a passage remote from its present mouth. It was observed that the sediment collected on the borders of the channel increases more rapidly than near the upland. This arises from the particles of alluvium being thrown down in time of freshet before they reach the more remote places, and hence also the coarse materials by falling first, will be found upon the bank, and the finer particles only are conveyed to the lowest and most remote parts. Such is the case of the Mississippi, which has been represented ""as a river running on the top of a long hill or ridge, with an elevation of twenty four feet in its highest part, and a base three miles in average diameter. First, however, remarks that this picture is not very correct, for notwithstanding the comparative elevation of the banks, the deepest part of the river is uniformly lower than the lowest point of the alluvium."" About six miles from Fredericton on the opposite side of the river, and near the Nashwasis, there is a remarkable cliff, averaging one hundred and fifty feet high, and extending some distance along the east side of the Royal Road. This cliff is composed of trap rocks which have been thrust upwards, and now form a lofty dyke in the coal measures, that were found to reach even further westward than the mouth of the Keswick. The precipice presents a bold front, and by constantly crumbling down has formed of debris rudely piled along its base. The trap is of the compact, and amygdaloidal varieties; the latter often contains numerous hollow cavities, and is perfectly vesicular. In other instances these cavities are filled with calcareous spar, and in this respect is different from the amygdaloid of Nova Scotia, which most frequently contains Zeolites. Good specimens of magnetic iron ore were found at the foot ofthe precipice, and a considerable quantity of that mineral was observed among the fractured masses forming the slope. I had much pleasure in being accompanied to this interesting spot by the Hon. J.S. Saunders, and the Rev. Dr. Jacob, with some of the students of Kings College, and the effects produced among the sandstones by the heat that accompanied the elevation of these volcanic rocks, rendered the excursion very interesting to the highly respectable party. A coarse sandstone similar to that observed atGagetown occupies the highest grounds in the rear of 6 Fredericton, the beautiful site of King's College is on this formation, and its massive columns are fine specimens of a similar rock brought from the Nashwaak, a stream nearly opposite the town. Occasionally covered with conglomerate the same rock continues its course near the entrance of the river Keswick nine miles above the capital. At numerous places the strata are covered with large boulders formed of its broken layers, and beds of gravel, sand, and clay. The impressions of leaves and other vegetable remains appear frequently, but in general they are imperfect from being exposed to the vicissitudes of the weather. The St. John here becomes more rapid, and winds its way among a number of islands. These, in summer, are decorated with green meadows, and the drooping branches of lofty elms add much to the natural beauty of the country. About two miles from the entrance to the Keswick on the south side of the river, new red sandstone forms a kind of a belt, and may be seen on both sides of the main stream. At the place where it is crossed by the road, it is very red and contains marl with a considerable quantity of oxide of iron. A bed of limestone is embraced by it, and may be observed forming a small declevity near the turnpike. The limestone is also highly colored, and as far as it was observed contains but few organic remains. Whoever exposes this lime to calcination, will find its quality improve by taking it as far from the surface as possible - by opening a deep quarry, and rejecting such masses as are in contact with its red marly covering. Near this place, I discovered in a mass of greywacke the remains of a beautiful species of a fossil coraline. The branches of this plant are spread out in the hard rock, and yet retain their original beauty, appearing as natural as if they had only been compressed between the leaves of a book. A part of this fossil is in the valuable collection of the Hon. J.S. Saunders, a gentleman of science and to whom I am much indebted for aid in making examinations in this part of the country. Following the course of the road on the south side of the St. John River, and passing over new red sandstone to the distance of two miles, greywacke slate and slate, are the prevailing rock to within two miles of Capt. Cheyne's farm, twenty five miles from Fredericton. These rocks have nothing peculiar in their appearance, and although no good roofing slate was found, it is highly probable it may be discovered here by a proper examination of the schistose hills in the vicinity of the river. The strata are almost perpendicular, and high ridges with deep ravines, give the country a most uneven appearance, and the road a number of hills not to be forgotten by any who have passed over them. Large rolled masses of granite syenite and greywacke are much more common in this than in the eastern parts of the Province, 7 where the solid formations of these rocks are placed at a great distance from the newer deposits on which these boulders are found. If it be true that these detached masses have been swept from their former positions by currents of water, these currents must have acted with less force in the western district of New Brunswick, than in other parts of the world, where they have been exiled to great distances. The effects produced by the watery elements are not, however, less manifest, for the detritus of the neighboring hills is collected in the valleys and the rocks are covered with water now blocks broken from their own strata. At the mansion of the worthy veteran officer, the coarse sandstone was again seen. This rock greywacke, and granite were observed alternately along the road to the Pokiok, where the granite prevails, and extending along the river a number of miles occupies a considerable tract of country. There are many delightful spots on the border of the main river, where it flows from among the mountains of these primary and transition rocks. One of the most beautiful of these is at a place called the Barony, the country residence of the late Judge Saunders. Four miles from the Barony, and forty two from Fredericton, there is the most singular waterfall, called the Pokiock, which rolls over one of the granite ridges of the primary mountain chain previously mentioned. The Pockiok is a narrow chasm in the granite about twenty-five feet wide, seventy-five feet deep, and one-eighth of a mile in length. Into this narrow opening the river descending from its higher channel falls over a perpendicular mass of rock, and bounding from step to step - whirling in oblique cascades, reaches the Saint John. Covered with the transient foam the main stream glides peacefully along, being scarcely disturbed by the introduction of this its noisy tributary. At the head of these falls several mills have been erected by Messrs. Allan, of a respectable family, and the owners of this romantic estate. A bridge is thrown over the dark and narrow opening, where the overhanging trees seem endeavoring to conceal the frightful gap beneath. Upon examining the remarkable chasm, it was

St. Andrews Beacon - Feb. 9, 1893 and St. Croix Courier - Feb. 9, 1893 The last Royal Gazette contains notice of the application for the incorporation of The West Isles Mining Company. The purposes for which such incorporation is sought are - Mining and developing mining properties, and the acquiring, buying, leasing and holding real estate, with such plant, machinery and property as may be necessary and convenient for all the purposes of successfully prosecuting that object. The office or chief place of business shall be in St. Stephen. The capital stock is $1,000,000, divided into 100,000 shares of $10 each. The applicants are: Henry B. Witter, Boston, miner; James M. Lord, West Isles, Charlotte county, fisherman; Fred P, Greenwood, Boston, merchant; Eben A, Holmes, Eastport, merchant; James F. Marley, Boston, manufacturer, and Samuel D. Leavitt, Eastport, lawyer. The first three are to be the first or provisional directors."

S.J. Daily Sun - Oct. 7, 1880 Minerals No. 2. - Geological Sequence Collection of the N.H.S. - Passing around to the northern side of the table where the mineral exhibits are placed another upright case comes into view, containing a collection of New Brunswick minerals, the property of the Natural History Society. They are chiefly for the instruction of the student and geologist, and with this object are arranged in geological sequence; that is, the minerals of each of the rock formations which exist in the Province are grouped together and so arranged that they present to the eye the natural succession of the formations in time, the oldest, or Laurentian, which from its position is called the fundamental or formation gneiss in Scotland, being represented by a row of minerals on the lower shelf - minerals which have been found mostly in the neighborhood of St. John. On looking over them we observe that they are mostly minerals from the limestones of the Town of Portland, together with ornamental varieties of these limestones, and a few minerals and ores from the gneissic rocks. The second shelf contains the minerals of the Huronian, a formation which in other parts of America has proved to be rich in metalliferous deposits. One is not surprised, therefore, to see a preponderance of the ores of metals among the minerals on this shelf. There are here also specimens of the Indian pipe stone, and of barytes, a mineral used in the manufacture of paint. More than half of the minerals on this shelf are from the metalliferous belt of rocks extending from Mispeck to Upper Salmon River in Albert County. On the third shelf are shown minerals of Silurian formation. Here also there is a great preponderance of metallic ores, including iron, lead, antimony, manganese, copper and zinc. The ores of this formation are from various parts of the Province, including the coast of Charlotte County, York County and the neighborhood of Woodstock and Bathurst. The localities of antimony ore are in this formation, and it is the one in which gold has (so far) been found in this Province. The Devonian formation present but a meager display of minerals, rock crystal from Musquash and anthracite from Lepreaux being all that are shown from it. The next formation, however, abounds in handsome and valuable minerals. Such are the manganese ores, which, though occurring in the Silurian, are in far greater abundance and perfection in this. Agate, carnelian, and chalcedony, ornamental stones, are chiefly found in this formation (Lower Carboniferous) in New Brunswick. Gypsum, alabaster and albertite are also valuable minerals, and abundant in this formation. With the exception of coal the next formation(Coal Measures) does not show valuable minerals in any abundance except at Bathurst, where there is a considerable deposit of copper mixed with lignite or coal. This copper deposit is interesting as showing how organic matter (decaying plants, &c.) can seize upon metals in solution in water and produce ore bed; and it is also interesting as showing how the minerals of one formation may be derived from another, for the copper ore the Tetu-a-gouche (Bathurst) of the Silurian slates are considered to be the source of the copper in the coal measures near Bathurst. From the Triassic, which in New Brunswick is confined to the island of Grand Manan, only two minerals are shown, and they are of a kind quite abundant in the North Mountains of Nova Scotia. Lastly, on the top shelf are displayed the minerals which have been found in the recent deposits of New Brunswick, viz., the surfaces, clays, sand, etc. The ores shown in this group are due to chemical changes which have transferred them from older formations, as the Silurian and the coal measures to the surface bed. The most interesting mineral shown here is the selenite crystal of gypsum taken from a spring in Sussex, showing how the formation of mineral species in crystalline form is going on at present time. Altogether, this collection, though not very large, is sufficient to show the

great range in time during which the minerals species of New Brunswick have been formed, and the preponderance of certain kinds (as the metallic ores) in some formations and scarcity in others. Other Collections of Minerals in The Exhibition. - This case contains also a small collection of combustible minerals of New Brunswick, which is complete, however, in that it contains specimens from all the districts where combustible minerals in quantity sufficient to be economically available for fuel has beenfound. The collection contains coal from Grand Lake, anthracite from Lepreaux, bituminous shale from the Caledonia works in Albert, and other minerals of less importance. On the table beside the case containing theexhibit of the Natural History Society stands a flat case with the ores and products of the Revenue Silver Mining Company, whose mine is situated on Letete Peninsula in Charlotte Co. They exhibit a quantity of specimens of galena and zinc blende, which, by the analyses of Prof. Jno. Burwash, are shown to contain both silver and gold in quantities from $16 to $22 per ton, the gold appearing mostly in the blende-ore. This company show in their case a sample of the ore ground to a fine powder, and in the same dish a button of silver, produced by the reducing process which the powder undergoes, as a sample of the actual product of the mine. Next the box of silver ores is a handsome show case in which Mr. Wm. F. Best exhibits a tastefully arranged collection of Useful Minerals of New Brunswick, comprising such as are used for fuel for the production of metals, and various processes in the arts. Among these may be mentioned coal from Grand Lake, Albert Coal, from Hillsboro, Red Granite, from St. George, atnimony ore and metal, Pottery clay, Iron ore from Woodstock, Manganese from Sussex, Graphite from Portland, and Lime from various localities, with Red Ochre, Lead ore, etc. On the opposite side of the table is a case containing samples of silver ore from Yarmouth, N.S., sent by Mr. F. Killam and others by Mr. R. Sentall, fromKing's County, N.B. There are also turned and polished balls of red granite from the workshop of Mr. O'Neill, at St. George. In this case also Mr. Markham has placed his Electric Batteries to show the means by which that powerful and useful explosive dynamite, or giant powder, is operated in the modern methods of mining. Near by, on the table, stands a box of copper conducting wire, so that all the necessary apparatus, except the fuse, caps and the dynamite are present. Between the two stands Mr. Markham's case ofManganese ores, showing all the varieties worked at the mine, including Pyrolusite (the most valuable),manganite, a variety supposed to be braunite and an ore mixed with iron. Hematite iron ore encrusting the manganese, is also shown. These latter ores were formerly thrown away as waste products, but have now become valuable in connection with the modern processes used in the production of steel. Beside Mr. Markham's case is a box of silver-lead ore from Mr. Wanamake of St. Martin's. The crown ornament of the Mineral Department for beauty and elegance, is the display of Petroleum and its products from the wells of Ontario. Nothing could be more chaste and striking than the ornamental work in paraffine wax, exhibited under Mr. Bullock's charge, in a large show case in the middle of the table. The centre is occupied by a handsome pyramid in bleached wax and the ends by ornamental tablets of the same material. The rest of the case is filled by masses of wax and various ornamental objects made from it. On the table near by are samples of crude wax, and of the tar, gum and coke taken from the distilling retorts; and also of the oil in various conditions, from the crude oil as it flows from the wells, to the products prepared for lubricating purposes and for illumination. Scattered through the building are other exhibits which may be considered as belonging to the Department of Minerals, such as the trophy of the Spring Hill Mining Co.; the marble manufactures of Messrs. McNamee, the freestone of the Budres & Bay of Fundy Co.'s and of J.M.Steeves and Co., &c. But most of those have been described elsewhere."

Daily Telegraph - Oct. 8, 1880 Minerals. - We had to limit our reporter yesterday in this department. He continues his notes today. ..... Canadian petroleum and its products are exhibited by Mr. Joseph Black..... In the collection of minerals from the Mechanics Institute, which we already enumerated, pretty specimens of amianthus or rock-silk, and asbestos from Charlotte Co., are to be seen. They occur in serpentine, a green mineral, of which specimens are also exhibited.On the upper shelf Mr. John O'Neil exhibits polished granite, red and grey.The zinc blende in the collection of the Revenue Silver Mining Co. contains 1.13-00 oz. troy weight of gold to the ton, not 13-00 as reported in our issue of yesterday. Probably if the mine were deepened a larger percentage might be found. The specimens from which the assays were made were taken from 10 to 15 feet below the surface only. The silver and lead ores found in this company's mine at Letete are worth $61.20 per ton, according to the assay of Prof. Burwash. The mine has not been sunk more than 50 feet yet. Nova Scotia

Royal Gazette - Jun. 4, 1862 Cap. LXXI. An Act to incorporate the Williams Mining Company. Section. Section. 1. Company incorporated. 5. Stock, &c. alone liable for debts. 2. First meeting, when held. 6. Act void unless 25 3. Capital stock. Per cent be subscribed 4. Stockholders liable to within one year Company for calls. And 10 per cent paid. Passed 23rd April 1862. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That James J. Fellows, Stephen Semmens, William Davidson, Israel Fellows, J.V. Troop and David H. Hall, and their associates, successors and assigns, shall be and are hereby declared to be a body corporate and politic, by the name of ""The Williams Mining Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of the this Province, for the purpose of mining copper or other minerals, and for manufacturing the same, and such other business as may be incident thereto. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the above named persons. 3. The capital stock of the said Company shall be one hundred and twenty thousand dollars, divided into two thousand five six thousand shares of twenty dollars each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by

him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of, or to carry on the operations for which the said Company is incorporated; which call or assessment may be sued for and recovered in any Court of Record within the Province. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6 6. Unless twenty five per cent of the capital stock shall be subscribed, and ten per cent paid in, and a certificate thereof verified on oath by oath of the President or Treasurer of the Company shall be filed in the office of the Register of Deeds for the County, within one year from the passing of this Act, the operation of this Act shall cease."

Royal Gazette - Feb. 25, 1891 Notice. Notice is hereby given, that application will be made by the applicants hereinafter named, to His Honor the Lieutenant Governor in Council, for a Grant of lettersPatent under the Great Seal, according to the provisions of the Act of Assembly 48th Victoria, Chapter 9, and Acts in amendment thereof, incorporating the applicants and such others as may hereafter become shareholders in the proposed Company, a body corporate and politic, under the name and for the purposes hereinafter mentioned.1. The proposed name of the Company is The New Brunswick Mineral Developing Company. 2. The objects for which incorporation of the Company is sought are the prospecting and searching for Minerals, and the buying, leasing, acquiring, owning, developing, managing and controlling, and the selling, leasing and disposing of mines and mining lands, mining leases and licences, and other real and personal estate, property and machinery; and the mining, quarrying, manufacturing, crushing and selling of minerals, ores and metals, and the erection of buildings and improvements, and to do whatever may be necessary therefor or incidental thereto. 3. The office or principal place of business is to be in the City of Saint John, in the Province of New Brunswick. 4. The nominal capital stock of the Company shall be Fifty thousand dollars, to be divided into five thousand shares of Ten dollars each. 5. The names, full addresses and calling of each of the applicants are as follows:- James DeWolfe Spurr, of the City of Saint John, Province of New Brunswick, gentleman; Gabriel Wetmore Merritt, of the same place, merchant; Henry Allison Drury, of the same place, merchant; Robert Caldwell Elkin, of the same place, shipowner; Byron Gordon Taylor, of the same place, insurance agent; the first three named of whom are to be the first or Provisional Directors of the said Company. Dated at the City of Saint John, N.B., 23rd February, A.D. 1891. J.R. Armstrong, Solicitor for Applicants."

Royal Gazette - Mar. 18, 1891 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act and Amending Acts, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the thirteenth day March, A.D. 1891, incorporating James DeWolfe Spurr, of the City of Saint John, in the City andCounty of Saint John, and Province of New Brunswick, gentleman; Gabriel Wetmore Merritt, of the same place, merchant; Henry Allison Drury, of the same place, merchant; Robert Caldwell Elkin, of the same place, shipowner; and Byron Gordon Taylor, of the same place, insurance agent; for the purpose of prospecting and searching for Minerals; and the buying, leasing, acquiring, owning, developing, managing and controlling, and the selling, leasing and disposing of Mines and Mining lands, Mining Leases and Licences, and other real and personal estate, property and machinery; and the mining, quarrying manufacturing, crushing and selling of minerals, ores and metals; and the erection of buildings and improvements; and to do whatever may be necessary therefor or incidental thereto; to be called The New Brunswick Mineral Developing Company, with a total capital of Fifty thousand dollars, divided into five thousand shares of Ten dollars each. Dated at the Office of the Provincial Secretary, at Fredericton, the thirteenth day of March, A.D. 1891. James Mitchell, Provincial Secretary."

Daily Morning Telegraph - May 9, 1865 Professor Hind's Report. -The Report is entitled ""A Preliminary Report on the Geology of New Brunswick, together with a Special Reporton the distribution of the Quebec Group in the Province."" It contains 293 pages, is divided into twelve chapters, and is supplied with an Appendix and a copious Index. Several maps in manuscript, illustrating the Geology of particular parts of the Province, were laid before the House at the same time as the report. The introduction contains a notice of what has been done by other Geologists in relation to the Rocks of the

Province. A ""most creditable and able paper"" by our young townsman Mr. G.F. Matthew, is referred to in the language between our quotation marks. The late Dr. Robb's labours are highly spoken of, and the author ""ventures to express not only a very high opinion of the value of the work he has left behind him, but a strong appreciation of his trustworthy observations and of his scrupulously conscientious record of facts."" His works ""manifest viewsin relation to the once vexed question of the nature of Albertite (Albert Coal, so-called), which he would probably long since have successfully developed, had the Almighty been pleased to have prolonged his life."" The Introductory Chapter also contains a correspondence between Professor Hind and Sir W.E. Logan, in which Sir William most generously agrees on behalf of himself and his colleagues, Professor Hunt and Mr. Billings, ""to institute a comparison between the Geology of Canada, and that of her sister Colony, and in some degree to make available our ascertained results in forwarding your (Professor Hind's) investigations and promoting the development of her mineral resources."" Sir William also states that, ""In making serviceable in the investigation, the experience and practice we have acquired on the Canadian Survey, we should be only carrying out a suggestion which has already been placed before the respective colonies, by the adoption of which the labour of the investigation would be shortened and the cost cheapened, while a unity of design would be given to the whole subject, rendering the result, both economic and scientific, intelligible to the world with much less study than would otherwise be required."" Sir William asks no recompense for this laborious undertaking, and even offers to defray the expenses of the transmission of the specimens to Canada, if they become the property of the Geological Museum at Montreal. He adverts to the existence of the ""Quebec Group"" in New Brunswick, and points out its immense importance to the Province. The First Chapter is devoted to ""Leading Geographical Features"" and embraces some notices of the early history, derived chiefly from the Relations of the Jesuits, which abound in interesting memoranda respecting the condition of th country between the years 1611 and 2 672. As these ""Relations"" are written in the quaint old French of the period to which they relate, it is probable that some new historical facts will be found in this chapter possessing general interest; but as our object is to give an outline of the Geological features of the Province, we pass on to the second chapter, which relates to the nomenclature adopted by Professor Hind and to an outline of the Geology of New Brunswick. The nomenclature by which our rock formations are distinguished, is essentially the same as that adopted by Sir William Logan in Canada and recommended by Sir Roderick Murchison, the Director of the Geological Survey of the British Isles. Prof. Hind strongly objects to the introduction of a new nomenclature; he quotes Sir W. Logan's words in support of the necessity for employing names already well known in America and Europe in preference to new names for well known rock masses, and he argues that by this means a uniform system of colouring can be given to a Geological Map of the whole of British North America and the adjoining States of the Union, and an opportunity offered of ""rendering homage to those whose labours have aided us in understanding our own rocks,"" and ""that a stranger to the geographical position of the part of the country they represent may not be subjected to the trouble and loss of time which a new nomenclature so often involves."" In this respect we notice at the outset a marked difference between the Report of Professor Hind and the ""Observations on the Geology of southern New Brunswick"" by Professor L.W. Bailey, Messrs. Geo. F. Matthew and C.S. Hartt, which was laid before the House simultaneously with Professor Hind's Report. These gentlemen have introduced many new names for the Rock formations they have described and coloured on their Map with separate tints. - They have their ""Portland Group,"" ""Coldbrook Group,"" ""Saint John Group,"" ""Bloomsbury Group,"" ""Little River Group,"" ""Mispeck Group,"" ""Kingston Group,"" and ""Mica Schist Formation."" They employ on their Map fifteen different colours, and as Professor Bailey states, ""as far as possible the colours chosen are intended to represent the prevailing colour of the formations which they indicate."" In Chapter II, we find a lengthy description of the character and age of the Granite belt which stretches from the Atlantic coast of Maine to the Bay of Chaleurs. It is our guide to the leading Geological features of the country, and is stated to consist of a large number of narrow belts, not less than ten having been observed on the Miramichi. - The important Metalliferous Slates of the ""Quebec Group"" come up between these narrow granite belts, which are represented to be of Devonian age. The southern Granite Belt is next described, and its relation to the metal-bearing series of the Quebec Group pointed out. Chapter III relates to the Carboniferous Series of 3 ew Brunswick. This is divided into the Lower and Upper Carboniferous, the Lower rocks being found in the Tobique Valley and on the rim of the Coal Basin from Bathurst to Oromocto, and thence to Westmorland, Albert and part of King's Counties. There are no workable seams of coal in these rocks, but abundance of Limestone, Gypsum, Grits for millstones, and sand-stones, firestones, ochres, bog manganese, &c. The base of these rocks consists of the Albert shales, which are described as very valuable rocks, more than one thousand feet thick, and in many places capable of yielding from 60 to 90 gallons of crude oil to the ton. They are regarded as of great importance as a source of Gas fuel for regenerating gas-furnaces, which are fast superceding the old blast and reverbatory furnaces in Europe and England. The true coal measures are shown by fossil remains to exist at Grand Lake, and the opinion is expressed that valuable workable seams of Coal will be found all the way from Grand Lake to the mouth of the Richibucto on the Gulf coast. Chapter 5, is altogether devoted to a discussion of questions relating to the origin of Albertite, and the Albert Shales. Albertite is shown to be an inspissated or hardened petroleum, and Professor Hind states that it will most probably be found in remunerative quantities from Apohaqui Station to Westmorland County, along a ridge in a North-Easterly direction, and along another ridge passing through the Albert Mine in a direction South-West and North-East. - The Petroleum, from which the Albertite originated, is stated to have its source in underlying Devonian rocks of the same age as those which yield the oil in Canada and Pennsylvania. The opinions of numerous Geologists are enumerated and discussed, and credit is given to Dr. Robb for having hinted at its true origin some fifteen years ago. Professor Bailey in 1864 pronounced it to be ""undoubtedly"" a highly bituminous coal, but we find from his recent ""Observations"" that he has changed his mind and now tells us that, ""in the opinion of Mr. Matthew and myself, the Albertite is neither coal nor jet, but an exydized oil, derived from the decomposition of fish remains, and subsequently changed by chemical action."" (Observations, &c., page 105.) The Petroleum Wells are next noticed, but Professor Hind thinks that the prospectors, where they are now working will have to sink 1200 to 1500 feet before they tap the main source of supply, for at the Albert Mine they have already sunk their shaft 1,000 feet, and found no petroleum. We notice, however, in a paragraph having reference to boring for brines, that petroleum might be reached in part of Sussex, and an adjoining parish. There are Parishes north, south, east and west of Sussex; which Parish is it? Among the conclusions advanced with reference to the origin of Albertite, the Professor states that there were two 4 eriods of injection from below, and that it occurs in all the rocks of Lower Carboniferous and, probably, Upper Devonian age, in this valley of the Kennebecasis and Peticodiac. Its distribution, as well as the occurrence in force of the Albert Shales, is regarded as of vast importance to the Province. A notice of the gas regenerative furnaces, by Sir Michael Faraday, is introduced in connection with the Albert shales of King's, Albert, and Westmorland Counties, and the opinion expressed that there is no reason why extensive metallurgical operations should not be carried on in the Province by means of the gas fuel of the above named counties. Chpater 6 is occupied with a description of theDevonian Series, and a lengthy account is given of the Vernon Mines, and the origin of the copper ores on the coast of the Bay of Fundy. These ores are stated to originate from copper-bearing intrusive traps, which have a wide and most important development in St. Martin's parish, east and

Royal Gazette - May 9, 1860 Cap. LXXXI. An Act to incorporate the Saint John and Albert Mining Company. Section. Section. 1. Company incorporated. 5. Liability for debts. 2. Capital, amount and 6. Act void if 25 per division of shares. Cent of capital be not 3. First meeting, time and subscribed within one place of. Year. 4. Liability of stockholders for stock subscribed. Passed 9th April 1860. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That James Vernon, Gideon Vernon, and their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Saint John and Albert Mining Company,"" have all the general powers and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of mining, smelting, and refining of Copper and Copper ore, and all other ores, minerals, metals, and metallic minerals, and vending the same, and such other business as may be incident thereto. 2. The capital stock of the said Company shall be two hundred and fifty thousand pounds, divided into fifty thousand shares of five pounds each. . The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by the said James Vernon. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purpose of, or to carry on the operations for which the said Company is incorporated; which call or or assessment may be sued for by the said Corporation and and recovered in any Court of competent jurisdiction. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. That unless twenty five per cent of the capital stock shall be subscribed within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be terminated."

Royal Gazette - Apr. 20, 1864 Passed 13th April: An Act to incorporate the Vernon Mining and Smelting Company."

Codes: 0662 / LEGI / IDX_Names: Vernon Mine; Legislation, etc.;
Royal Gazette - May 18, 1864 Cap. LIX. An Act to incorporate the Vernon Mining and Smelting Company. Section. Section. 1. Company incorporated, 5. Stock alone liable. Proviso. 6. Place of business of 2. When first meeting held. Company. 3. Capital. 7. Amount of work to be 4. Liability of stockholders paid in, and when. For calls. Passed 18th April 1864. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Owen Jones, Charles Desmond, Joseph S. Fay, and George H. Jones, and their associates, successors and assigns, shall be and are hereby declared to be a body corporate and politic, by the name of ""The Vernon Mining and Smelting Company,"" and by that name shall have full power and lawful authority to have, hold, own and enjoy in any way, real estate in this Province, in fee simple or otherwise, and may alienate, encumber, lease, sell or otherwise deal with the same in any way; and shall by that name have all the general rights, owers, and privileges, and shall be under the same liabilites, provisos, and restrictions, as are contained and set forth in Chapter 119, Title xxxi, of the Revised Statutes, ""Of Corporations""; and also in and by an Act 11 made and passed in the twenty fifth year of the Reign of Her present Majesty, intituled An Act relating to Corporations, and of any Act or Acts made or to be made in addition to or amendment of the same or either of them, for the purpose of mining, smelting and refining of copper and copper ores, and other ores, minerals, metals, and metallic minerals, and vending the same, and such other business as may incident thereto; provided nevertheless, that the aggregate value of real estate to be held by the said Corporation in this Province at any one time shall in no case exceed the value of fifty thousand dollars in amount. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the herein before mentioned persons. 3. The capital stock of the said Company shall be three hundred thousand dollars, divided into thirty thousand shares of ten dollars each; provided however, that the said Corporation, whenever they may deem it advisable so to do, shall have power to extend the said capital stock of the said Corporation to five hundred thousand dollars, and shall increase the number of shares accordingly, and that such increase may be made from time to time in such sums, portions of the said increase, as the said Corporation may think expedient. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed for by

him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of, or to carry on the operations for which the said Company is incorporated; which call or assessment may be sued for and recovered in any Court in this Province of competent jursidiction. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. That the said Corporation shall keep an office at the City of Saint John in this Province, and an agent there for the transaction of business connected with the said Corporation, and that such office shall be and be deemed their principal place of business; and service upon such agent of all processes, notices, or other documents, shall in all cases be deemed and taken to be lawful service on such Corporation. 7. That unless fifteen per cent of the said capital stock shall be subscribed and paid in within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be and be deemed to be terminated."

Morning Journal - Feb. 7, 1866 Rock Records of New Brunswick - A Lecture, by Professor L.W. Bailey, A.M. (continued) : Let us return again from our wanderings to our starting point, the river and City of St. John. I have already said that a large portion of the town rests upon the hardened clays and sands of old Primordial beaches. Towards the lower portion of the city, however, near the present site of the gasworks, and thence extending downwards and outwards into the Harbour, are beds of a very different character, and formed at a much later period; they now rest conformably or nearly so on the older Silurian rocks, and not against their tilted edges, showing us the latter had been slightly, if at all, raised before the beds now under consideration were deposited. As the earlier Azoic rocks formed an island, along whose sides the waves washed up the earlier Silurian beaches, so the latter in turn, formed a shore for the deposition of the later Devonian beds. These latter are very various and of great thickness, fully 10,000 feet indeed, showing that this portion of the Province always changeable, but comparatively firm during the Silurian period, had again become the theatre of 4 rapid oscillations. Volcanoes were again active on a gigantic scale. The high ridge in the Parish of Simonds, known as Bloomsbury Mount, represents one of these volcanic vents and is indeed composed of the materials, once molten lava and glowing ashes, thrown from the earth's interior. The fiery streams spread far and wide. We may still trace them over much of the country, crossing the Harbor from Red Head to Manawagonish, while in Charlotte County, similar outbreaks formed the wild and picturesque hills of Chamcook and the St. Croix. But these eruptions were in part at least submarine and therefore less destructive in their action. Nor did they characterize the whole age, being most powerful at its beginning and its close. For immense periods the land was comparatively undisturbed. It was probably of an upland rather than of a marshy character, and was clothed to some extent with vegetation. Ferns, with the most graceful of foliage, were abundant and probably farlarger than now, while trunks of pines found here and there imbedded in the rocks, tell us that there were also forms of terrestrial animal life. Insects we know hadmade their appearance, for we may find their remains, still beautifully preserved, in their stony tombs. In the cliffs of Carleton the action of the sea is constantly revealing their curious forms, and both ferns and insects may be there obtained with little difficulty. Some of them were like our modern Day Fly, though far larger, while others more nearly recall our common locust. The honor due to the discovery of these interesting remains, interesting because they are the very earliest traces of insect life yet found upon the globe, is due to a native of your Province, now absent in Brazil, and is such as may well stimulate others to similar researches. In the seas of the Devonian age there had also been an introduction of new forms of life. Fishes, nowhere to be found in the earlier seas, now lived in vast numbers, and, to judge from their remains, of very great size. Though not yet recognized in the rocks of the Province they are abundant in the Devonian beds of New York, and especially in Scotland, where the writings of Hugh Miller have rendered famous the Old Red Sandstone beds which formed their place of burial. I would gladly here delay to describe in more detail these curious inhabitants of the ancient ocean, but as my purpose in this lecture is chiefly to confine myself to the actual occurrences and fossil animals of our own Province, and as many curious changes yet remain to be described, I must deny myself the pleasure. I cannot, however, dismiss the consideration of the great Devonian age, without calling your attention to the large area which the rocks of this period now occupy in your own and adjacent counties, and the promise which they afford of large and valuable mineral deposits. The greater portion of the Parish of St. Martins, in St. John County, fully one half of Albert County, and a portion probably of King's, are covered by them. The large and rich deposits of iron ore at West Beach and Black Riverappertain to this series, as do also the Vernon Copper Mines at Goose Creek, and the Alma and Gordon Mines at Salmon River. At those and at many other localities the ores are good and promise to be abundant, while there is every reason to expect that when the woods, which now everywhere densely cover this promising district, shall have been removed, new and equally rich deposits will be found. The metalliferous beds, in many peculiarities, very closely resemble the copper bearing rocks of the ""eastern townships"" in Canada, and may, like them, yield rich returns of iron, lead, zinc, copper, nickel, chromium and titanium, as well as silver and gold. The presence of these metals in the rocks of the Devonian series naturally leads us to the consideration of their origin - and now I must invite your attention, while I endeavour to make plain to you one of the grandest events in the geological history of New Brunswick, an event indeed which not only marked the period in which it occurred, but which has also done much to shape the whole subsequent history of the Province. Recall if you please to your minds the series of changes which we have so far witnessed. We commenced, you will remember, our geologic history with the elevation of the Portland island as a low narrow strip of land, and have found that as the periods advanced, this island gradually increased in extent by the deposition of new beds around its borders, the results of wave action and the currents of the sea. The movement, however, was not wholly one of elevation, for the Primordial rocks are found on both sides of the Portland Ridge, and both they and the later Silurian and Devonian strata probably once covered its summit, showing that a dpression, equal at least to their thickness must also have taken place. As this thickness amounts to over 12,000 feet by actual measurement, it follows of neccesity that which belongs to the Devonian ..?.. being formed near the ocean level, the Portland rocks must have been 12,000 feet below that level, a difference equal to the depth of the great telegraphic plateau in the present Atlantic Ocean. There were then, through all these earlier times, movements of vast extent in this portion of America. They were, however, probably slow in their action, perhaps not exceeding a foot in a century, and though of constant recurrence and of sufficient magnitude to change the geographical conditions of the continent, did not disturb the general tranquility, nor result in any wide-spread extermination of life. We have seen that these oscillations became more and more frequent towards the close of the Devonian age and that volcanic action, upon a gigantic scale, then plainly indicated increasing instability in the earth's solid crust. Vast force had been long at work, of which those outbursts were but the signs, and though from time to time they might find some local vent, their action was only delayed and not subdued. The strain upon the continent was becoming greater and greater with every successive era. At last it could be withstood no longer, the period of tranquility was over, and an era of disturbance, or upheavals, and of mountain-making now began on a vast scale. The strata which in all the earlier periods must have been horizontal or nearly so, (for water can only deposit horizontal beds), were now pressed into gigantic folds, huge crevices were opened here and there to the profoundest depths, and from these depths issued hot vapors and mineral exhalations or streams of fiery fluids, poring over and baking by their intense heat the surrounding rocks. Everywhere around us we may trace the signs of this eventful period. You may see it in every street of your city. The beds, above which we sit, once soft sand and clay upon the beach, now stand in many places quite on end, and are at times even turned completely over, while they have at the same time been hardened into compact and unyielding slates. Nor has this taken place upon a small scale only. Whatever Silurian or Devonian rocks are found in the Province, they are similarly folded and hardened. Some of these folds are of gigantic size, the span being as much as several miles and the height not less than 2000 feet. Of course, when these folds were forming, the rocky beds must have been far softer and more pliant than at present, yet, they did not always yield. Near the summits of the folds, where of course the stream was greatest, they frequently gave way, and deep chasms or gigantic cracks were formed. Sometimes the beds on one side of the fissure would slide down along those on the other, and there is a locality, a few miles south of and parallel to Loch Lomond, where the beds have thus slid bodily down to a

St. Croix Courier - Mar. 31, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - From a paper by Prof L.W. Bailey, written for the Canadian Mining and Mechanical Review and published in the Crown Land Report, we take the following extracts concerning minerals in Charlotte county:- New Brunswick has, as yet, certainly established no claim to prominence as a mineral producing country. This is the more remarkable as within her borders are not only to be found those geological formations which elsewhere are usually the seat of valuable ore deposits but these occupy extensive areas, and present features in the way of plication, metamorphism, granitic and igneous intrusions, which would greatly enhance the probability of occurrence of such deposits. It is, however, to be remembered that very large portions of the province, and particularly those which might be expected to be metalliferous, are still densely forest clad, and that while the limits and age of the different rock formations have been worked out and mapped with a considerable degree of accuracy by the officers of the Geological Survey, but little has yet been done in the way of intelligent and systematic prospecting. ANTHRACITE. - This mineral is found to be limitedin extent in the Devonian rocks in St. John county. In many instances it is evidently the result of alteration, wholly or in part, of the individual trunks of fossil trees scattered throughout the sandstones of the Devonian formation; but in a few cases the vegetable accumulations would seem to have been such as to give rise to actual beds of coal, though of no great thickness. The best known locality for these beds is that of Lepreaux basin, near the western border of St. John county, and not far from the mouth of the Lepreaux river. A seam of mixed coal and shale is here met with, having a total thickness of fifteen feet; but the shale is irregularly distributed through the coal, and the latter, where purest, does not exceed a thickness of four feet, while it also contains much earthy matter. Analyses of samples from the outcrop, made by Dr. Harrington, gave 36.38 per cent of ash. The beds at this locality are all highly disturbed, and the area over which they are distributed is but small. MOLYBDENITE. - Molybdenum sulphide, or molybdenite has been observed at several localities, but chiefly in connection with the gneissic and micaceous strata, which border the great central granitic axis of the province, or in the granite itself. It has been thusfound near St. Stephen in Charlotte County, near thegranite belt in York county, and below the Pabineau Fallson the Nepisiguit river in Gloucester county. At the second of these localities it appears to be quite abundant. GRAPHITE. - Graphite or plumbago, in a finelydivided state, is not unfrequently disseminated through the altered rocks of the older formations to which it imparts a dark color and more or less glossy aspect. It is most abundant with the pre-Cambrian rocks which are believed to represent the Laurentian system in St. John county. Much of the limestone of this formation is dark grey or even black from this cause, while in places the graphite assumes the form of veins, pockets or well defined beds. A band of this character crosses the mouth of the St. John river at the falls, and is traceable both east and west for several miles. Mining operations for its removal have been frequently undertaken, and at one time (1868-1870) about 6000 barrels per year, averaging when crushed and screened about 4 cwt. to the barrel, were removed. The beds vary in thickness from one to four feet. The mineral itself is somewhat impure and incapable of being directly applied to the uses for which the finer qualities of graphite are employed, but has been found to answer well for foundry facings, stove polishes and the like, and by appropriate treatment can be rendered available for other purposes as well. Quite recently these mines have been reopened. Of other formations containing considerable quantities of graphite may be mentioned the Cambro-Silurian and the Devonian. The slates and schists of the former, as found near St. Stephen and elsewhere in Charlotte county and in the parish of Canterbury, York county, are often highly plumbaginous, but neither in these nor in the Devonian are there any known deposits of economic value. GOLD. - The amount of positive information regarding the presence of this metal in New Brunswick at present possessed is very small. Reports of its discovery have indeed been frequent, but in the very few instances in which these appear to have eminated from reliable sources the amount of gold observed has been so small as to discourage further efforts to obtain it. While, however, the amount of the metal actually obtained is thus insignificant, it is worth while to notice that rocks very nearly resembling those of the auriferous belt of Nova Scotia, and believed to be of the same age, are largely developed there, and further, that it is in connection with these same rocks that very many of the reported discoveries of gold have been made. The rocks referred to are those comprising the slate and quartzite belts which border the great central granitic axis of York and Northumberland counties, and which with the latter traverse the entire breadth of the province. Much of this region is still densely forest clad and difficult of access, but should any portion of it prove to be auriferous the discovery would be of inestimable value to the province, as helping to open up an extensive region otherwise likely to remain permanently in a wilderness condition. Among the points in which gold has been reported in small quantities may be mentioned the vicinity of the St. Croix river in Charlotte county, theNashwaak river above Stanley, in York county, the Muniacriver, in Carleton county, and the Serpentine river, inVictoria county. (to be continued)"

Daily Telegraph - Oct. 11, 1889 While exploring a natural cave, a portion of the Glebe manganese mine, near Waterford, a few days ago, Messrs. John C. Boyer and John Friars discovered underneath a lot of loose earth and stones the skeletons of seven moose and 15 wolves, in a good state of preservation. The conclusion arrived at was that theanimals had been buried in a landslide, as they were all near each other. One pair of moose antlers is on exhibition at the store of Mills Bros. & Huestis. One of these measures nearly four feet from tip to tip."

Moncton Daily Transcript - Oct. 12, 1889 and Weekly Record - Fri., Oct. 18, 1889 A natural cave was discovered near the Glebe mine containing skeletons of 7 moose and 15 wolves ..."

Miramichi Gleaner - Nov. 23, 1861 Geological Survey. - Last week we penned some remarks on this survey, which we published. We give below some extracts from the Colonial Empire on the same subject, which convey some interesting intelligence respecting the Geological features and the Mineralogical capabilities of the Northern Counties:- ""It may not be generally known, that Sir William Logan extended his researches in Gaspe into this Province, as far as Bathurst, in order to complete his observations upon the limestone rocks of that district. These limestones are of the Silurian formation, and abound in the fossils which characterise it. When Sir Roderick Murchison, about twenty years since, was contending for the establishment of what is known as the 'Silurian System', he went himself to Archangel in Russia, and sent an Agent to this Province (the secretary of the Geological Society of Cornwall), who visited the Restigouche, and found close to Dalhousie, under the cliffs near the Bon Amie rocks, (Charlefort's Hill) in the Silurian limestones there, a variety of fossil remains well developed, which proved beyond a doubt the soundness of Sir Roderick's theory. When taken to England the fossils were found to correspond exactly with the fossils obtained from a similar formation, by Sir Roderick himself, at Archangel; and the soundness of his Silurian theory has not since been disputed. ""To the Southward of the Silurian basin of the County of Restigouche, there is a belt of metamorphic rocks which crosses the Province from Mars Hill to the Nepisiguit; in this formation copper and manganese have been found extensively, and gold was observed more than ten years ago. ""Passing over this belt of rocks, which stretch across the whole breadth of New Brunswick from Southwest to Northeast, and offer a great barrier to the construction of a railway through the entire province, there is found a wide extent of sandstone country,belonging to the coal formation, which extends along the whole eastern coast of New Brunswick, from Baie Vert to the Bay of Chaleur. From its wide base on the Gulf of St. Lawrence, this sandstone country narrows to the eastward, and on the river St. John, is found 30 miles from thesea, beyond the granite quarries at the head of the Long Reach. Between these quarries and the Bay of Fundy, there is another belt of metamorphic rocks, containing beds of altered slate with veins of quartz of the description known elsewhere as producing gold. That gold will be found in the district, there can be very little doubt; but in what quantity, has yet to be determined. A nugget of half an ounce was found several years ago, in the bedof the River Digdeguash, worn quite smooth by attrition, thus affording proof that it had been borne from some spot near the source of that river. ""At this moment, researches are going on at the expense of private parties, in the County of Albert, which bid fair to produce valuable results. In that country, in addition to the wonderful coal, called Albertine, which furnishes such quantities of Paraffine oil, other minerals of value have lately been discovered.

Among these are veins of copper ore, which in beauty of colour and crystallization almost rival the Siberian malachite. A nodule of this ore bearing 60 to 70 per cent of copper, nearly egg-shaped, and weighing about three pounds, is now in the City, and is intended to be sent to the Great Exhibition in London next year where there be little doubt it will attract quite as much attention as the gold of Nova Scotia. ""A mine of manganese in King's County has latelybeen opened, and is now being worked. - The ore is nearly black, highly crystallized, and is being carted to the Railway Station at Sussex, for transport to this City, whence it is shipped to England. Last week quantities of it were at the Sussex Station, affording ocular proof of the mineral wealth of New Brunswick. ""All these things point out clearly the absolute necessity of a complete Geological Survey of this Province, by competent persons. There is evidently great mineral wealth within its boundaries, and the structure of its rocks from the St. Croix to the Restigouche, are of a character to indicate that they are worthy of the most careful examination, and will furnish much mineral wealth of various descriptions, Gold included."

Kings County Record - Feb. 15, 1929 Should Stimulate Mining Activity. - Locations of Areas in Kings County Where Prospecting is Now Being Carried Out. - Geological Formation Explained by Mr. H.G. Wildman, of C.N.R. - The following details of the mineral resources of Kings County are culled from an extensive report of New Brunswick mining activity prepared by Mr. H.G. Wildman, mineralogist of the Canadian National Railways. He writes in part as follows: It is a matter of common knowledge that the deposition of minerals is more likely to occur in certain series of rocks than others. It therefore follows that, in dealing with the subject, it is necessary to pay some regard to the simple aspects of the geology of that area under consideration. The province of New Brunswick embraces an area of 27,985 square miles which may be roughly classed in three divisions, as follows:- (a) The northern section, the New Brunswick Highlands, a series of granitic hills, which may be said to commence with Mars Hill, situated near the Maine border, in the county of Carleton, rising 1,650 feet above sea level and forming one of a series of numerous peaks extending to the Baie de Chaleur to the northeast, having an average width of about forty miles. (b) The low-lying region in which is found the coal district of Chipman and Minto. This basin is remarkably uniform in its height above sea level, averaging in the neighborhood of 185 feet. There is, however, a slight rise near Coal Creek of 259 feet. (c) The plateau, surmounted by a range of hills, extending through the counties of Charlotte, Kings, Saint John, to Albert and Westmorland. The highest of these peaks is the Chapel on the road to Sussex Vale, which has an elevation of 1,140 feet above sea level. The whole country has been more or less glaciated, the ice, on its recession, having left a heavy covering of drift and boulder clay which to a large extent conceals the rock formation, this condition, together with the very general dense brush, renders prospecting extremely difficult. An overburden of 20 feet is frequently encountered. The general contour of the country has little changed since the Pre-glacial Period. The larger riversfollow virtually the same course as that along which they flowed prior to the advent of the ice. At the same time, areas are to be noted where changes have occurred in the surface of the country and the filling of the then channels by glacial drift have caused new channels to be cut through the surrounding country. There is abundant evidence of a greater elevation in relation to the sea level in early times, which caused the rivers to cut deeper channels due to the erosive action of swiftly running waters. From the Bay of Fundy, in a northwesterly direction, the topography of the county is characterised by a series of elevation and depression having a general northeasterly direction - a height of land stretching through St. John and Albert counties paralleled by a depression forming the valley of the Kennebecasis. The adjoining highland of Kings County include Jordan and Keirstead Mountains and other similar elevations of the series extending nearly to Moncton, paralleled by other series of highlands and lowlands across the province to the Quebec boundary. Antimony. - In the autumn of 1927 information reached this Department of a discovery of stibnite float over an area of about one mile in the Mountaindale (Marrtown) district. As a result of our investigations Messrs. R.G. Heughan and Company, and other independent parties in Montreal, were led to stake most of this area. Some development was carried on during the past summer on the Heughan and Brown stakings. No stibnite was found in place until September 1928, when a small stringer was discovered on the Heughan property. It is proposed to follow this up in the spring of 1929 as a large mineralized zone is indicated in the district. A reported discovery of stibnite at Stewarton, during well sinking operations was investigated. It was stated that two feet of stibnite was penetrated during the work but this statement could not be confirmed, owing to the well being full of water. There was no apparent surface indication of such an occurrence, but a thorough investigation will be made in the spring of 1929. Arsenic is found at Bellisle, in a very narrow veins in a basic lava. Copper. - Annidale, situated midway between Annidale and Scotch Settlement is the copper property now being developed by the Annidale Copper Mining Company Ltd., as the result of recommendations made to them by this department. Here a number of test pits have been sunk and a few carloads of ore shipped. The main shaft has been located between two outcroppings of mixed chalcopyrite and pyrite, averaging 7 p.c. copper, and has already attained a depth of 108 feet. It is the intention to drift on to both veins and a further program of diamond drilling is to be mapped out. At Irishtown, about five miles east of Annidale there is a nice showing of chalcopyrite, upon which no work has been done. On Jordan Mountain a considerable amount of work has been done disclosing a body of copper carbonate of low grade. Similar exposures of copper carbonate are noted at Goshen, to the southeast, where Consolidated Mining & Smelting Company have been diamond drilling. Gypsum. - At Upham, there is a very large depositof high-grade rock which lies contiguous to the Canadian National Railways line between Hampton and St. Martins, and about 25 miles from the sea. Five hundred tons of gypsum was shipped from this property in 1905 when the shaft was invaded by water from the river. Another very promising deposit is found adjacent to the main highway between Sussex and Apohaqui. It is very white in color and remarkably free from anhydrite. Manganese. - At Markhamville, eight miles southof Sussex, the mineral occurs in a grey limestone and is reported to have been the largest producer of manganese in New Brunswick, having shipped 30,000 tons some years ago. There is a considerable extension of the ore-bearing formation in which other bodies may be found and offers a promising area for the energetic prospector. Two assays of ore from this vicinity gave the metallic content as 44.65 and 42.77%. The property at Jordan Mountain is about six miles north of Sussex and has been worked by a trench 75 feet in length in what appears to have been a pocket of high-grade ore. Several hundred tons have in the past been shipped to the smelter. The property is now owned by J. Starr Tait, attorney, of Saint John, who is endeavoring to interest American capital in its further development. A selected sample from the district assayed 59% manganese. Near Jordan Mountain, shales, similar to those in Albert County, are found again near Sussex are two smallareas. Salt. - The occurrence of salt in the Carboniferous area of southern New Brunswick has long been known, a small operation having been carried on by George Hendricks, east of Sussex, in 1887, which was apparently the first commercial plant for the production of salt in the province. Saline springs occur in several places along the valley of the Kennebecasis and Sussex Vale, notably those at Upham and Anagance, an analysis of the former giving sodium chloride 1293.648 grs. per imperial gallon, that at Anagance having a similar saline content. The potassium content of these springs is low."

Codes: 0691 / LEGI / IDX_Names: Markhamville Manganese; Legislation, etc.;
Royal Gazette - Jun. 17, 1885 Notice. The subscribers intend to apply to His Honor the Lieutenant Governor in Council, for the incorporation by Letters Patent under the provisions of the New BrunswickJoint Stock Companies Letters Patent Act, of a Company tobe called The Dominion Manganese Mining Company. The object for which such incorporation is sought, is the mining for Manganese and all other Mineral substances, the buying and selling of mineral lands and mining property, and goods and chattels, wares and merchandise, connected with and incidental to a mining business, the making and maintenance of roads, tram-roads, railroads, buildings and works on the Company's property for mining purposes and the carrying on a general mining business, with all manner of business incidental thereto and connected therewith, and to do, build, erect, own and maintain any building, structures, work, machines, machinery and erection necessary therefor, with such other things as are incidental thereto. The place within the Province of New Brunswick in which its Office or chief place of business is to be established, is Sussex, in the County of King's. The amount of the Capital Stock of the said Company is one hundred and twenty five thousand dollars, divided into twelve thousand five hundred shares of ten dollars each. The names of the Provisional Directors of the said Company are as follows:- William Pope, of Boston, in the State of Massachusetts, in the United States of America, Merchant; William Carroll Pope, of Boston, in the State of Massachusetts, in the United States of America, Merchant; And Henry Dorr Dupee, of Boston, in the State of Massachusetts, in the United States of America, Merchant. Dated the 5th day of June, A.D. 1885. William Pope, of Boston, in the State of Massachusetts, in the United States of America. Merchant; William Carroll Pope, of Boston, in the State of Massachusetts, in the United States of America, Merchant; Henry D. Dupee of Boston, in the State of Massachusetts, in the United States of America, Merchant; Lysander F. Babcock of Boston, in the State of Massachusetts, in the United States of America, Merchant; Irving A. Keans (?) of Boston, in the State of Massachusetts, in the United States of America, Banker; Alfred Markham of Markhamville, in the Province of New Brunswick, in the Dominion of Canada, Mining Engineer."

Royal Gazette - Nov. 13, 1889 Notice. Notice is hereby given, that the undersigned intend applying for Letters Patent, pursuant to the provisions of Chapter nine of the Acts of the General Assembly of the Province of New Brunswick, passed in the year of our lord one thousand eight hundred and eighty five, intituled An Act respecting incorporation of Joint Stock Companies by Letters Patent, for the incorporation of a Company for mining Manganese and other Ores, Minerals and Metals, and for the other objects hereafter set forth. 1. The proposed name of the Company is The Pope Manganese Company. 2. The objects for which incorporation of said Company is sought, are the buying, selling, leasing, owning, and managing of Mines and Mining lands, property and machinery, and the mining and selling of Manganese and other Ores, Minerals and Metals, and to do whatever may be necessary thereto. 3. The office and chief place of business of Company isto be established at Markhamville, in the Parish of Sussex, in King's County, in the Province of New Brunswick. 4. The amount of the Capital Stock of said Company actually subscribed is Seventy five thousand dollars. 5. The number of shares of the said capital stock is seven hundred and fifty, and the amount of each share is One hundred dollars. 6. The names, addresses and calling of each of the applicants are as follows:- Charles H. Converse, of Newton, in the State of Massachusetts, in the United States of America, merchant; William Pope, of Boston, in the State of Massachusetts, in the United States of America, merchant; Alexander Pope, of Boston, in the State of Massachusetts, in the United States of America, artist; William C. Pope, of Boston, in the State of Massachusetts, in the United States of America, merchant; Francis Ware, of Boston, in the State of Massachusetts, in the United States of America, merchant. 7. Charles H.

Converse, Alexander Pope and William C. Pope, three of the above named applicants are to be the first or Provisional Directors of the said Company. Dated at Markhamville, in King's County, in the Province of New Brunswick, this sixteenth day of November, A.D. 1889. R.C. Skinner, Solicitor for Applicants."

S.J. Daily Sun - Oct. 23, 1891 and Weekly Record - Fri. Oct. 23, 1891 The surveyor general's court was held Thursday last in the office of White, Allison & King to hear evidence in the matter of protests against the issuing ofmining licenses to Alfred Markham, F.W. Stockton and Theron C. Gue and A.C. Van Meter. Hon. Mr. Loggie was accompanied by T.G. Loggie of the crown land office. The persons protesting against the license to Alfred Markham were T. Crawford, Pope Manganese Co., John Lisson, Thos. Lisson, Richard Lisson, T. Williams and E.L. Price. Against license to F.W. Stockton - Alfred Markham. Against license to Messrs Gue and Van Meter - James Domville and Joshua Vernon. C.N. Skinner, M.P., appeared for the Pope Manganese Co.; J.R. Armstrong for A. Markham, G.W. Fowler for Thomas Crawford, John Lisson, Richard Lisson, Thos. Lisson and Thos. Williams. Mr. Van Meter represented Messrs Gue and Van Meter. The first case taken up was that of A. Markham. After some evidence was taken and much informaldiscussion by the lawyers on the many features of the mining law, Mr. Markham withdrew his claim for license covering lands held by Pope Manganese Co., thus ending this part of the case. The protests of Thos. Lisson, Thos. Crawford, John Lisson, Thos. Lisson and Richard Lisson were taken up. E.L. Price did not appear. J.R. Armstrong addressed the court, sustaining the claim for license to issue and was followed by G.W. Fowler against the claim. The case of Theron C. Gue and A.C. Van Meter was then taken up. The parties protesting were Jas. Domville and Joshua Vernon. The former did not appear. The latter stated that he would withdraw his objections on condition that the license should issue without prejudice to his lumbering rights, and accordingly it was ordered that it be recommended that the license should issue as prayed for, saving Mr. Vernon's fights. F.W. Stockton being temporarily absent from the province it was ordered that the hearing of the protests in this case should stand over until the 27th of November, after which the court adjourned. Much interest was taken in the proceedings these being the first contested cases under the new act which have been heard in Kings."

Daily Telegraph - Oct. 23, 1891 Who Has The Right? - An Interesting Session of the Surveyor General's Court - Major Markham Wants Manganese. - Surveyor General Tweedie held court at Sussex yesterday, for the purpose of hearing evidence on certain applications made for licences to search for mines. One of the applications was from Mr. Alfred Markham, who applied for a license to search a certain tract of land five miles square in which was included the manganese mines of the Pope Manganese Company and lands owned by John Lisson, Richard Lisson, Thomas Lisson,Thomas Williams and Thomas Crawford. The application was made under section 81 of the General Mining Act, which reads:- The surveyor general may upon application grant licenses to search, to be in force for one year from the date of application therefor, to enter upon any lands in the province not already applied for or under license or lease for mining purposes, and to dig and explore for such minerals other than gold or silver as the crown holds for the benefit of the province, a bond being first given to the surveyor general, with sufficient sureties to his satisfaction, that in the event of entry being made upon private lands, recompense shall be made for damages, in the manner hereinafter provided. The Pope Manganese Company had neglected to procure a license in association with the new law. Mr. C.N. Skinner appeared on behalf of the manganese company to resist the application. Hon. A.S. White and Mr. Geo. W. Fowler represented the other owners. Mr. J.R. Armstrong looked after Mr. Markham's interests. Mr. Skinner protested against Mr. Markham being granted a license to search the lands occupied by the company on the ground that it was now and had been for years used for mining purposes. Mr. Markham there upon withdrew his application in so far as it referred to land occupied by the manganese company, but pressed his claim for a license to search the rest of the tract mentioned in his application. The five owners, named above, were put on oath and testified that at times they had prospected and searched for minerals on their lands, and hoped to develop them themselves. Mr. Armstrong contended that all the exploring done by the witnesses didn't amount to much, and that the mines would never be developed if left to them. Mr. Fowler in reply claimed that the owner had the first right to a license. Section 41, relating to mines of gold and silver, which by section 81 is made to apply to mines other than gold or silver, reads as follows:- No lease nor any prospecting license, or license to search, shall authorize entry upon any buildings, or the curtilage appertaining to any house, store, barn or building reserved for ornament or under cultivation for growing crops or enclosed, except with the consent of the occupier or by license of the governor in council, authorizing such entry to be granted on special application setting forth the circumstances under which the same is applied for and on such terms as the case may require. The surveyor general will make his recommendations to the governor in council as to whether or not the license should be granted. Mr. James Byrne, owner of lands west of Smith's Creek, protested against Mr. F.W. Stockton being granted a license to search the aforesaid lands. This case was adjourned until Nov. 27th, at the Royal Hotel, St. John. Thos. C. Gue and Alban Van Meter applied for license to search certain lands in St. John county on the coast of the bay, the ownership of which was in dispute between Mr. Jas. Domville and Mr. Joshua Prescott. Mr. Prescott was on hand. He testified that he owned the lands, and that he had no objection to the

S.J. Daily Sun - Nov. 12, 1894 Mining Licenses. - Surveyor General Tweedie held court in the equity court room on Saturday to decide on three cases. The first was the complaint of A. Markham against the Pope Manganese Co. Mr. Markham complains that they have not complied with the mining laws, and since 1890 have not operated the manganese mines at Markhamville. Mr. Markham is the owner of the soil. C.N. Skinner appeared for the company. Mr. Markham was present on his own behalf. Mr. Skinner said the company would operate the mines by February next, or else they would vacate the license. Mr. Markham consenting, the surveyor general allowed the matter to stand until then."

S.J. Daily Sun - Oct. 19, 1889 The Mines of Canada. - New Brunswick does not take a conspicuous position in Mr. Brumell's returns, but still makes a respectable showing. Here are the items with the values as far as the returns enables the New Brunswick product to be separated from that of the other provinces. Value Grindstones … 3,793 tons $30,729 Coal … 5,730 tons 11,650 Graphite … 150 tons 1,200 Gypsum … 44,369 tons 48,764 Plaster of Paris …50,000 bbls 31,000 Manganese (exported) … 1,181 tons 16,073 Building Stone … 1,953 yds 19,680 Lime … 440,225 bush 82,993 Bricks … 5,064 m 32,294 The statement does not include granite, which for the whole Dominion is valued at $147,305. This may be a fair statement of the value of the rough stone but it is far below that of the polished granite produced in this province alone. The returns of lime produced in the province are evidently incomplete. The New Brunswick lime exports for the year are stated at $97,318, and the value produced was, of course, considerably larger. Adding to the $300,000 credited to New Brunswick by Mr. Brumell the value of granite produced, we find that the mineral product of this province is considerably

Daily Sun - May 17, 1892 The Geological Survey. - Robert Chalmers' Report on His Investigation in New Brunswick. - Superficial Deposits in Westmorland, Kent, Albert and Northumberland. - [From the Geological Survey Report] - Robert Chalmers left Ottawa on th 8th of June for New Brunswick withinstructions to continue the detailed survey and mapping of the superficial deposits in the counties of Westmorland, Kent, Albert and Northumberland, and the investigation of the glacial phenomena connected with these deposits. The following is his report on the progress of this work: The maritime parts of this area have now been pretty thoroughly studied. But the district drained by the southwest Miramichi river requires further exploration, especially that portion lying to the west of the main river, and another season's work will be necessary to complete the whole. A great part of the area examined is level or slightly undulating, but in Albert county it is hilly and broken. Around the head of the Bay of Fundy the surface is diversified by ridges which attain a height of from 200 to 400 feet. Between these, tongues of salt marsh extend up the valleys. These marshes are a characteristic feature of the scenery. The surface geology of this part of New Brunswick is of profound interest; and the glaciation of the isthmus of Chignecto, in its relation to that of the mainland of New Brunswick and Nova Scotia, is of special importance. The facts when studied in detail will, in my judgement, show the action of floating as well as of land ice. On the site of the marine railway, now under construction across the isthmus, and along the New Brunswick and P.E. Island railway, the exposed ledges exhibit striae varying from S. to S. 50ø W. (true meridian). These have been produced by ice moving across the isthmus from the northeast. And as no high land exists in that direction nearer than Labrador or Newfoundland, the hypothesis of there having been caused by floating ice during the Pleistocene subsidence of the land here seems a reasonable one. This view is supported by the facts respecting the glaciation of the higher grounds on both sides of the isthmus. In eastern Albert and Westmorland and Kent counties, N.B., the striae indicate ice movements directly towards the Bay of Fundy and Strait of Northumberland, while in Cumberland county, N.S., the ice-land appears to have moved down the slopes westwardly towards the Bay of Fundy, or Pleistocene sea, then forming a strait between New Brunswick and Nova Scotia. On the whole, the district is one offering special advantages for the study of the relative movements of land and floating ice. An increased interest was given to the study of glacial phenomena and pleistocene changes of level

by the visit in October of Baron G. de Geer, a member of the geological survey of Sweden, who is actively engaged in similar investigations for that survey. He made special investigations in New Brunswick respecting the height of the pleistocene shore line, or, as he terms it in Scandinavia, the 'marine limit', and by independent measurements made at St. John, Moncton, Bathurst and Dalhousie Junction he found that this limit of the marine beds, as laid down by me, is approximately correct. The hypothesis that the Pleistocene upheaval was greater in New Brunswick than in Nova Scotia was sustained by observations made by Mr. Wilson and myself later on. East of Nappan River, N.S., we discovered a well-defined shoreline 135 feet above tide level and traced it upwards of four miles. The importance of this pleistocene 'marine limit' lies in the fact that when the land was at this level (viz., 225 feet at Moncton, N.B., and 135 feet at Nappan, N.S., lower than it is at the present day), the Bay of Fundy would be connected with the Straits of Northumberland, and, consequently those parts of the isthmus of Chignecto on which the striae are found would be submerged to a depth sufficient to allow floating ice to pass over them. A discovery of some importance made by Mr. Wilson was that of marine fossils in the boulder clay at Negrotown Point, St. John harbor. The deposit was also examined by Baron de Geer and myself. The recent and stratified deposits of Westmorland and Albert counties are varied and interesting, and those of tidal origin, viz., the salt marshes, are unique. These marshes comprise, in Westmorland and Albert counties alone, an area of 35,000 acres, and have long been noted for their fertility. Of late years, however, they have deteriorated. This remark applies more especially to those portions which have been dyked and cropped continuously for a century or more, without the application of any fertilizing material to the soil, which has, in consequence, become deficient in plant food. Lime and wood ashes have been recommended; but improving them in this way is slow and expensive. A scheme inaugurated by the more intelligent farmers of Sackville would, if systematically carried out, be more effective, viz., the cutting away of portions of the dykes and aboideaux and flooding the marshes with the tidal waters of the Tantramar and other rivers, which flow through them. The tides, which rise high enough to overflow these marshes, if the dykes were broken, carry in red mud and deposit it on their surface. This is an admirable fertilizer, its efficiency having been abundantly proved by the experience of the Sackville farmers. This system of improving them will probably be adopted by all the owners of exhausted marsh lands around the Bay of Fundy. It seems the natural method of restoring them, partially at least, to their original fertility. The depth of the marsh mud is variable, but increases seaward. Immediately underlying it is a layer of fossiliferous blue clay, which rests on a peat or forest bed. At Aulac, Intercolonial railway, the latter attains a thickness of 20 feet, and is overlain by 80 feet of marsh mud. These marsh and peat beds indicate, therefore, a subsidence of the land here within the recent period, of about 80 feet. Intelligent observers inform me that the peat or forest bed is continuous or nearly so, throughout, underlying the salt marshes everywhere. In reference to the soil on the higher grounds, it may be stated that the eastern part of Westmorland county comprises some of the best agricultural lands in the province. Along the Peticodiac river there are also fine farming tracts. On the Millstone grit area, however, the soils are deficient in lime and would be much benefited by frequent applications of it. In Westmorland county the forest growth is recent, except in a few limited areas. The ore extensively wooded portions of Albert and Kent counties are, however, covered by the original forest, which still contains large spruce, hemlock and hardwood trees. In the last mentioned county, forest fires are rapidly destroying the timber tracts. The materials of economic importance found in the surface deposits of the district examined may now be briefly referred to. Bog manganese occurs in Albert county, near theDawson Settlement. On a branch of Weldon Creek an extensive bed of it has been opened up, and a branch of the Albert railway constructed to it. Kilns for drying the material have also been erected. This deposit covers about 25 acres of ground, and appears to be quite thick - in one opening the thickness being 26 feet. The ore is a loose, amorphous mass, which can readily be shovelled up, and contains, in layers and patches, a considerable percentage of bogiron ore, or red ochre. Indeed, very little of the material appears to be wholly free from iron, though large portions have merely a trace of it. The deposit lies at the foot of the hill, and its accumulation there appears to be due to springs. these are still running down the hillside, and, doubtless the process of producing bog manganese is still going on. Operations have temporarily ceased at the mine. Indications of other and similar beds of bog manganese have been met with at the base of this hill further west. Bog iron ore was found on the

City Gazette - Oct. 20, 1827 and Miramichi Mercury - Nov. 6, 1827 Minerals and Mineral Springs. - We have the satisfaction to lay before the public, a list of valuable Minerals and Mineral Springs, situated in King's and in Westmorland Counties. For a knowledge of their several localities, as well as for the discovery of most of them, we are indebted to a Gentleman of this City, who has lately spent a considerable time on an exploring excursion. To most of our readers it will be interesting, and to all a novel fact, that no less than three Hepatic (sulphureous) Springs, of the same nature and medicinal properties of the Harrowgate waters, have been found, and analysed - thus laying open infallible fountains of health, in many cases of disease. We hope that some excitement will continue to be kept up, on the Mineral resources of the Province. The present successful attempt will, doubtless, encourage further exploration, and we look sanguinely to a period, when Mining operations will be ranked among the lucrative branches, to which the industry of our people will be directed. 3 King's County.Kingston Hematite (a crystallized species of Iron Ore). Colonial Farmer. - Jul. 3, 1871 Geological Report. - Continued. IV. non-Calcareous Slate Band Northwest of the Granite. This division comprises the rocks underlying parts of the counties of York and Carleton, extending on the St. John River from Sullivan's Creek to a point alittle above Woodstock, or a breadth of sixteen miles; and on the Miramichi seven miles, measured in a straight line across the strike; from the forks of the north and northwest branches. These rocks present few characters to distinguish them from the band already described as lying on the other side of the granitic belt, and, in the absence of evidence to the contrary may be assigned to the same geological age. It will therefore be unnecessary, on the present description, and I shall proceed to notice a few of the most prominent points of distinction which have come under my observation. On the St. John river, immediately above Sullivan's Creek, extending about five hundred yards upwards, and apparently in contact with or close proximity to the granite, occurs a band of highly ferruginous finely laminated micaschist, traversed longitudinally by large quartz veins, and dipping NW 30-50 deg. - This is succeeded by ordinary clay slate and quartzite, which continues, with many sharp convolutions and folds, but preserving the prevailing northwesterly dip at high angles, to Patchell's Ferry, four and a half miles from Woodstock. Here the rocks begin to assume a more crystalline aspect, and all around Woodstock afford evidence of an abnormal and disturbed condition. Bands of crystalline rocks, resembling granite, syenite, diorite, (occasionally with trappean rocks) and sometimes holdingepidote, iron and copper pyrites, galena and other minerals, are intercalated in the manner of conformable or imbedded masses. Some of these I have represented upon the map, but they are too numerous and too varied in character, and have not long been studied sufficiently in detail to admit of an exact description. I observed isolated patches, generally of no great extent, of an altered slate conglomerate composed of rounded and angular fragments of the surrounding rocks, cemented by a feldspathic paste into a hard rock; these are probably lenticular masses occupying depressions in the older rocks. About half way between Upper and Lower Woodstock, on the right bank of the river, an interesting exposure of green quartzose and epidotic rock, jointed so as to present some appearanceof columnar structure, occurs; near the Iron Works the same kind of rock, but devoid of the peculiar structure referred to, occupies a considerable breadth, and near Lower Woodstock a narrow band of red and green fine grained and very regularly laminated slate, not over thirty feet in thickness, was observed running conformably with the general strike, but dipping SE 40 2 deg. The whole district is exceedingly interesting to the geologist, and especially so in connection with the deposits of iron and copper ore in the vicinity; but would require, in order fully to elucidate its structure, a more careful and detailed examination than I had it in my power to give. In this section, a remarkable exception to the general character and distribution of the rocks, as above described, occurs in the form of an extensive outlier of supposed Lower Carboniferous strata, occupying an area of probably not less than sixty or seventy square miles, chiefly in the parishes of Brighton and Peel, in Carleton County. This outlier has not previously, been specially described, so far as I am aware. On the left bank of the St. John River, opposite Campbell's Island, two miles below the mouth of the Beccaguimic, a band of conglomerate, 500 yards broad, abuts upon the river. It is here of the character described as belonging to the silicious conglomerate band of the main Carboniferous area; or rather partaking of a combination of this with the underlying red calcareous conglomerate of the same series, with which, on tracing it is some distance inland, it becomes completely assimilated. The northwestern outcrop of this outlier, as delineated upon the maps, has been traced by me, at intervals, for a distance of twelve miles; and a partial traverse has been made near the centre to a distance of one and a half mile; where at S.B. Orser's (?) mill, on the north branch of the Beccaguimic, coarse red sandstone and conglomerate appear to dip NW 27 deg. For the further information which has enabled me to trace approximately on the maps the boundaries of the outlier, I am indebted to Mr. Edward Jack, who, in the course of his surveys for timber locations, traversed this region in the fall of last year, and at my request, noted any remarkable geological facts which came under his observation. His remarks in reference to this outlier, which were not communicated

to me until after my return to this city, are necessarily somewhat general, although sufficiently explicit to justify me in assigning to it provisionally, the limits laid down on the map; and I consider it unnecessary to give them in detail, as you will probably deem this interesting field worthy of further special research. On the right bank of the St. John River, a little below the band of silicious conglomerate already referred to, a somewhat similar deposit, but entirely resembling the red calcareous conglomerate and sandstone of the Carboniferous series, is displayed to the extent of 1,200 yards in breadth. Where evidence of stratification occurs in this deposit, it appears to dip to the northwest in the same direction as the metamorphic slates by which it is enclosed on both sides, although at a lower angle. The same band is traceable for seven miles on the strike, extending to the rear of the Woodstock Iron Works, where it turns out to a point, and terminates about 100 yards south of the Jacksontown Road. This is probably connected with the conglomerate and sandstone area in Brighton, as already described, but here is either brought into position by a dislocation, or occupies a narrow and shallow wedge shaped cavity in the older rocks. The only distinction I can observe between its condition and that of the lower red calcareous conglomerate of the main Carboniferous area consists in the fact that here the rock appears to be affected by numerous small faults or slips, which, in maintaining their straight course, have cut through pebbles and matrix alike."

Weekly Record - Fri. Jun. 16, 1893 Charters letter #3 (extract below) .... The mineral displays from Ontario, Quebec and British Colombia are certainly fine and deserving of the highest praise. To the dismay and disgust of all Nova Scotians the mineral exhibit from that province is mean and unworthy: from New Brunswick nothing was expected, as the Local government did not take any active part, but in Nova Scotia it was understood the government had enteredinto the spirit of things vigorously and liberally and of all other objects the mines should have had a splendid showing. As it is, while quite a few minerals have been sent forward, nothing massive was forwarded to denote the vast coal, gypsum, iron and gold wealth of the province. It is much to be regretted so poor a showing has beenmade. From New Brunswick the Albert Manufacturing Co., have sent a tasty exhibit of ordinary and alabaster plaster, which causes much attention. The manganese ofMarkhamville and Jordan Mountain; the freestone from theMiramichi stone quarry near Newcastle; the magnetic iron,gold and silver and copper ores from Messrs. Payne &Ellis, of Bathurst, all have occasional inquirers. Smith's mineral water from Apohaqui is also here, but there is as yet no systematic showing of it. In a stone jug tightly sealed up, its virtues will probably never be known, unless John has some one to open it out to the admiring gaze of the public. I might say the shaft and bases representing the gold yield of Nova Scotia causes much comment. The statement thereon shows that up to 1893 the quartz crushed was 762,036 tons, and yielded in gold 551,000 ounces, or something over eleven millions in gold. To be more correct and account for stolen gold, and gold obtained on which the government never received any royalty, about one-third more should really be added to this total...."

St. Croix Courier - Apr. 6, 1893 Crown Lands... Year 1891 Year 1892 Mining receipts .... $2,264.50 2,305.83 ... A considerable portion of thereport is devoted to mining matters. Up to December 31st, 1892 four licenses to search, covering 12,800 acres, andtwo renewals of licenses to search covering 4,480 acres, were issued in Charlotte County. Several applications have been made during the year, by mining companies, for assisting in working and developing their properties. Only one of these companies - the Elm Tree Silver Mining Company of Gloucester county - fulfilled the requirements of the act in making their applications, and on the report of John E. Hardman, a competent mining engineer of Nova Scotia, the surveyor general recommended that an order-in-council be passed authorizing the expenditure of the sum of $750 to assist said company in further exploring and developing their mining property. Some exploration and development have taken placein what is known as the Rocky Brook mine in Gloucester county, in which Messrs. McNichol of Calais, Me., and John Sivewright of Bathurst are interested, and it is encouraging to learn that this company anticipate that on further development the property will prove a paying one. Coal is reported to have been found in several localities in the province during the year, but as prospectors do not report the result of their work to the mines department of the crown land office, it is difficult to state, with any degree of accuracy, what those results are. Most of the areas of the Province in which mines are supposed to exist are so heavily wooded that prospecting is carried on under considerable difficulties, and altogether prevented in many cases, owing to the expense involved. In consequence of this, the work of thoroughly prospecting over the whole province necessarily makes slow progress. The report contains a number of appendices which are valuable... relating to .... the mineral resources of the province and mining matters..."

Royal Gazette - Jan. 13, 1892 Notice. Notice is hereby given, that application will be made by the applicants hereafter named, to His Honor the Lieutenant Governor in Council, for a grant of Letters Patent under the Great Seal, according to the provisions of the Act of Assembly 48th Victoria, Chapter 9, and Actsin amendment thereof, incorporating the applicants, and such other persons as may hereafter become shareholders in the proposed Company, a body corporate and politic under the name and for the purposes hereinafter mentioned. 1. The proposed name of the Company is 'The Petit Rocher Silver Mining Company.' 2. The object and purposes for which such incorporation is sought is and are:- (1st.) For searching for Mines and Minerals in the County of Gloucester; (2nd.) The working and development of Mines in said County of Gloucester; (3rd.) The sale and exportation of such minerals and others acquired by them. 3. The chief place of business of the Company shall be in Petit Rocher in the parish of Beresford, 4. The proposed amount of Capital Stock of the said Company is Twenty five thousand dollars, to be divided into five thousand shares of Five dollars each. 5. The names, full addresses and calling of each of the applicants are as follows:- Jerome Boudreau, Petit Rocher, Gloucester Co., N.B., School Teacher. John Morrison, Petit Rocher, Gloucester Co., N.B., Clerk. Joseph F. Comeau, Petit Rocher, Gloucester Co., N.B., Merchant. Frederick Comeau, Petit Rocher, Gloucester Co., N.B., Merchant. Jerome H. Comeau, Petit Rocher, Gloucester Co., N.B., Merchant. J.A. Langis, Petit Rocher, Gloucester, N.B., Surgeon and Medical practitioner. Who are to be the first or Provisional Directors of the said Company. Dated at Petit Rocher, this 22nd day of December, A.D. 1891"

Weekly Observer - Mar. 3, 1840 Second Report on the Geology of New Brunswick by Dr. Gesner. - We have perused this Second Report with great pleasure, first, because it is written in a very easy and pleasing style, avoiding technicalities as much as possible, and secondly, because it conveys the gratifying information that New Brunswick possesses within herself hidden treasures, greater even than were anticipated by the most sanguine, and which lead us to expect that further and richer discoveries may follow those which have already been made by the enthusiastic zeal and laborious research of our Provincial Geologist. The tract of country under examinations the past season is situated eastward of the Saint John. A line from the entrance of Bellisle River to Shediac will mark its northern side; its eastern limits are fixed at Cape Tormentine and its southern side lies along the shore of the Bay of Fundy, and the Nova Scotia boundary, or isthmus between the Cumberland Basin and the Gulf of St. Lawrence. The length of this tract is about one hundred and thirty miles, and its mean breadth forty-five miles; it embraces the Counties of Kings, St. John, and Westmorland. We have not sufficient knowledge of Geology to follow the writer through the various details connected with the survey of this valuable portion of the Province, but would barely notice some of the leading features of the Report. Of these, the great Coal Field of the County of Westmorland is by far the most important and striking in its character. This great Coal field commences at Shediac and extends along the eastern shore as far as Tedish River, thence running along an irregular line southward it approaches Sackville and meets the new red sand stone near Dorchester Island. A line drawn from Shediac to the Petitcodiac about ten miles below the Bend, marks its northern side. To the westward of the Petitcodiac the coal field becomes more narrow, but maintains an average breadth of ten miles westward until it reaches Sussex Vale; here its extremity is forked; one branch is curved northwest until it meets the source of Studholm's Mill stream, the other becomes very narrow, and disappears a few miles southwest of Sussex church. The whole length of this coal field is upwards of seventy miles, and its average breadth about seventeen miles. The remaining part of the country explored is composed chiefly of new red sandstone, and conglomerate, containing numerous deposits of gypsum, limestone and rock salt, with mineral springs. At the close of the season, Dr. Gesner discovered in the greywacke system, near this city, some fossil trees, accompanied with anthracite coal; and fine specimens of the cactus accompanying indications of the same description of coal, were found in Charlotte street, near the residence of his Worship the Mayor, and also in King's Square. - These discoveries were made in consequence of the cuttings made for levelling the streets, and open a wide and curious field for enquiry. The fossil trees were discovered on the north side of Little River near the Bridge, upon land owned by J.R. Partelow, Esq., in a quarry which had been opened to supply stone for the new Penitentiary. In removing the rock, the trunks of two large fossil trees were exposed, and several of smaller dimensions. The largest was two and a half feet in diameter, and ten feet of its trunk was exposed; the other was sixteen inches in diameter and nine feet long - both were

nearly cylindrical. The original trunks are now composed of sandstone, anthracite and sulphuret of iron; the vegetable fibre of the plants still remains distinct, and is now represented by these minerals. These trees belong to the fir tribe; other small plants and impressions of leaves were also found, among them a calamite, a species of reed. According to the latest discoveries, these plants belong to the first classes of vegetables that ever flourished on the earth; they are different from any now growing on its surface, and are relics whose history cannot be traced, reminding the Geologist of the changes each kingdom of organic nature has sustained, since they were first established on this globe. The various discoveries which were made public by Dr. Gesner's first Report, have already, in several instances, been made available, and we have no doubt that those comprised in this second report will call theenergy and enterprise of the people of the Province into operation most profitably. The marl discovered near St. Andrews last year, has already been extensively employed in enriching the soil - the excellent granite on the St. John, at the head of the Reach, is now being quarriedvery extensively, and we shall this year see it employed in the rebuilding of the burnt district, and be quite independent both of Nova Scotia and the United States for the necessary supply of that most useful and durable material. But for the researches of the Provincial Geologist this granite might have remained undiscovered for many years, and we should still have continued importing an article which exists so very near to us, in abundant quantity, and of superior quality. Limestone has been discovered in many places and pointed out to the neighboring farmers, who have almost invariably availed themselves of it. Numerous lime kilns have been established in places where a few years since no limestone was supposed to exist, and lime could only be procured at much expense and with difficulty. The greatdeposit of iron, in Queen's county, has also attracted attention, and as we understand, has been brought under the notice of some English capitalists, who intend prosecuting inquiries respecting it the coming season, and we trust it may prove all that they anticipate. The discovery of the Westmorland coal field has already raised up a host of petitioners for mining leases, and we observe that a special committee of the House of Assembly has been appointed to take the various petitions into consideration, and decide on the best course to be adopted for the interests of the province. If the unassisted labours of Dr. Gesner during two seasons have effected so much, what may we not expect if those labours are continued, and a liberal provision made for carrying them on more extensively, and in a more minute manner. We trust that the Legislature in their wisdom will see the propriety of following up these researches without delay, and on a more extensive scale, for we believe the real interests of the country will thereby be consulted, and many advantages derived, not only in an Agricultural, but a Commercial point of view. Meantime we recommend a perusal of the second Report, confident that it will

Royal Gazette - Apr. 25, 1888 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the fourth day of April, A.D. 1888, incorporating Edward J. Baxter, or Norton, in King's County, Province aforesaid, Farmer; Alexander J. Grant, Editor; William K. Kennard, Carpenter; Charles A, Ingalls, Engineer; Jeremiah J. McGowan, Gentleman; John T. Watson, Trader; J. Crowell Farrell, Manufacturer; and Frederick J. Alley, Hotel Keeper, all of Bar Harbor, in the State of Maine, in the United States of America; for the purpose of the purchase and holding of all kinds of Mineral lands and lands which Minerals are supposed to be, with land necessary and requisite to carry on a Mining business, and the selling, mortgaging and encumbering all or any such lands; the carrying on of a general mining business, and searching for Mines and Mineral substances, and the purchasing, holding, owning, and selling of all kinds of property connected with, and necessary and convenient for the carrying on of a general Mining business; and the digging for, mining for, and procuring by all lawful means, of all manner and kinds of mineral and mineral substances; and the erection and maintaining of all necessary works, buildings and ways, and doing all things necessary to the carrying on the business of the said Company, with such other things as are incident to the attainment of these objects, by the name of The New Brunswick Silver and Gold Mining Company. with a total capital of Two hundred and eighty thousand dollars, to be divided into one hundred and forty thousand shares of two dollars each. Dated at the office of the Provincial Secretary, at Fredericton, this Twenty fourth of April A.D. 1888 David McLellan, Provincial Secretary." Royal Gazette - Mar. 7, 1888 Public Notice. We, the undersigned, hereby give notice of our intention to apply for Letters Patent to incorporate the Company hereinafter named under the provisions of Chapter 9, 48th Victoria, of the Acts of Assembly of the Province of New Brunswick, intituled An Act respecting the incorporation of Joint Stock Companies by Letters Patent. 1. The proposed corporate name of the said Company is the The New Brunswick Silver and Gold Mining Company. 2. The objects of the Company are the following, namely:- The purchase and holding of all kinds of Mineral Lands and lands in which Minerals are supposed to be, with land necessary and requisite to carry on a Mining business, and the selling, mortgaging and encumbering all or any such lands; the carrying on one of a General Mining business, and searching for Mines and Mineral substances, and the purchasing, holding, owning and selling of all kinds of property connected with and necessary or convenient for the carrying on a General Mining business; and the digging for, mining for and procuring by all lawful means, of all manner and kinds of Minerals and Mineral substances, including Silver, Gold, Lead, and every other kind of Minerals and Mineral Substances; and the erection and maintaining of all necessary works, buildings and ways; and doing all things necessary to the carrying on the business of the said Company, with such other things as are incident to the attainment of these objects. 3. The Office or chief place of business of the said Company is to be established in the Parish of Waterford, in the County of King's, in the Province of New Brunswick. 4. The amount of Capital Stock of the said Company shall be two hundred and eighty thousand dollars ($280,000), to be divided into one hundred and forty thousand shares (140,000) at two (2) dollars each. 5. The amount of Capital Stock actually subscribed at the present time is fifty thousand shares, amounting to one hundred thousand dollars. 6. The names of those chosen as the first or Provisional Directors of the said Company are - Edward J. Baxter, Farmer: of Norton, King's County, in the Province of New Brunswick; Alexander J. Grant, Editor, of Bar Harbour, in the State of Maine, and William K. Kennard,

Carpenter, of Bar Harbor, in the State of Maine. 7. The names of the applicants are - Edward J. Baxter, Farmer, of Norton, King's County, New Brunswick. Alexander J. Grant, Editor, of Bar Harbor, Maine, United States. William K. Kennard, Carpenter, of Bar Harbor, Maine, United States. Chrales A. Ingalls, Engineer, of Bar Harbor, Maine, United States. J.J. McGowan, Gentleman, of Bar Harbor, Maine, United States. John T. Watson, Trader, of Bar Harbour, Maine, United States. J.C. Farrell, Manufacturer, of Bar Harbor, Maine, United States. F.J. Alley, Hotel keeper, of Bar Harbor, Maine, United States. C.N. Skinner, Solicitor for Promoters."

S.J. Globe - Mar. 8, 1888 New Mining Company. - Notice is given in the Royal Gazette of an application to the Local Government for the incorporation of a company, to be known as The New Brunswick Silver and Gold Mining Company. The object of the new Company is the purchase and holding of all kinds of lands, on which Minerals are supposed to be; the carrying on of a general Mining business, and the buying, selling and mortgaging of all such lands; the holding erecting of all necessary works, buildings, etc., for the requirements of the business. The Office of the company is to be established in the Parish of Waterford, King's county. The amount of the Capital Stock of the said Company shall be $280,000, to be divided into 140,000 shares at two dollars each. Fifty thousand shares, one hundred thousand dollars has already been subscribed. The names of those chosen as the first or Provisional Directors of the Company are - Edward J. Baxter, of Norton, King's, Alexander J. Grant, Bar Harbour, Maine, and William K. Kennard, Bar Harbor, Maine. The names ofthe applicants are - Edward J. Baxter, Norton, King's County, and Alexander J. Grant, William K. Kennard, Charles A. Ingalls, J.J. McGowan, John T. Watson, J.C. Farrell, and F.J. Alley, Bar Harbor, Maine. C.N. Skinner is Solicitor for Promoters."

Codes: 2046 / GEOL / IDX_Names: Grand Falls Gold; Geology - General;
Fredericton Capital - Sep. 20, 1880 Geological Explorations.- Prof. Hitchcock, in his able report on the Geology of Maine, says that he knows of no State or Province which affords a more promising field for the discovery of valuable mineral deposits than New Brunswick. A professor of Geology from a United States college, who spent several weeks upon the Tobique River and in that neighborhood, expressed, in conversation with the writer, the same opinion, and added that an exploration, to be of any value, would have to be made by practical men. He further said that he found traces of gold in many places; and that his experience in practical geology led him to the belief that thorough prospecting by competent persons might lead to very valuable results. We have not at hand the report of Prof. Bailey on this section of the province; but think we may say, speaking from memory, that Prof. Bailey found gold and other valuable minerals in small quantities, and expressed belief that the indications were favorable for the existence of larger deposits. During the past twenty years, many persons have found gold in the tributaries of the upper St. John. The writer has seen it washed fromthe sands at Little River and Falls Brook, Grand Falls, and several places along the main Tobique, at the Salmon Hole on the Campbell River, or Right Hand Branch (so called) of the Tobique, at the mouth of the Serpentine, a branch of the same stream, at a point two miles below the Serpentine Falls. But his observations have been limited in comparison with others. Mr. Ward C. Burpee, of Grand Falls, has had a most interesting experience in this connection, and has, or recently had, in his possession a number of specimens of gold-bearing quartz, which were found in the County of Victoria, and is able to give a great deal of information upon the subject. Mr. Shea, Mr. C.A. Hammond, ex-M.P.P., Mr. Longstaff and Mr. J.H. McPhair, of this city, have also, among others, had more or less success in their explorations. In addition to the places mentioned above, gold has been found in the Muniac, The Becaguimec, the Wapskehegan, the Nepisiguit and indeed in nearly all the streams which have their source in or near the great belt of azoic rocks which stretches across the Province from the St. Croix to the Baie Chaleur. Indications and specimens of other minerals have been found. Mr. Jack, it is needless to say, has devoted some attention to this matter; and his admirable habits of observation have enabled him to learn very much which would be of value in the prosecution of an exploratory survey. Among the minerals of which he and others have observed indications, beside gold, there are silver, copper, lead, iron and antimony. We do not know that any one person has found all these, but there are numerous witnesses of the existence of each of them in small quantities at least. It is, of course, impossible to detail in a paper of this description all the testimony which can be given as to the likelihood of a profitable discovery some day or other. We can only indicate its character, and we do so for the purpose of recommending that if an exploration is at any time made,the person to whom it may be entrusted will inform himself as to what observers who have preceded him, not the scientific ones merely, but others as well, have been able to discover. It is worthy to note in this connection, that there is increased activity in gold mining in Quebec; and a number of New york capitalists have invested money in quartz mining. If we are not mistaken, these gold mines are upon one of the great divisions of the Alleghanies. This range of highlands divides near New Hampshire, Maine and Quebec - one branch extending across the State of Maine and into New Brunswick, south of the Tobique, and forms in Maine the range which Great Britain claimed as the boundary line previous to the Ashburton Treaty, and in New Brunswick what was claimed by the then province of Lower Canada as its boundary. The other continues parallel, or nearly so, to the St. Lawrence, and forms the present boundary between Maine and Quebec. If gold exists in one of these branches, it is not unreasonable to look for it in the other. It is also worthy of remark, that mining is becoming an important industry in Maine. The existence of minerals there of economic value was considered at the most as exceedingly problematical until very recently; that is, until a thorough exploration of the State was made. In a country like New Brunswick or Maine, where the rocks for the most part are covered with a thick carpet of living and dead vegetation, and support a tangled forest, it is difficult, - it is indeed impossible - in the explorations which a college professor can make, whose sole staff consists of his Indian guides and perhaps a single companion, can lead to any valuable results, particularly when he is asked to report upon the thousand square miles of rugged country in as many weeks. A thorough and systematic investigation is requested: one made by a

staff of men sufficiently numerous to enable them to accomplish the labor which is really necessary. We ask our representatives at Ottawa to give the matter their consideration, and to solicit from the Government an appropriation sufficient to warrant the inception of the exploration during the coming summer in a manner reasonably calculated to

Codes: 2050 / LEGI / IDX_Names: Birch Island Gold; Legislation, etc.;
S.J. Daily Sun - May. 4, 1891 and Weekly Record - Fri. May 8, 1891 New Brunswick Mining Notes - Halifax Critic: My notes are rather few and far between but really there has been nothing very exciting of late to tell you of. The government at last session passed a mining act to all intents and purposes very similar to your Nova Scotia mining act. They however made the royalty on goldand silver 2 1/2 per cent. Other minerals and metals about same as your own. There is considerable difference of opinion in the matter among many of our mining men, and much objection is made by some, but as a whole I think the new regulations will be regarded favorably. As New Brunswick has not been fully prospected, it would perhaps have been a wise policy if the government had included a clause, making all mining operations free and exempt from royalties for a period of say ten years, which would probably have had the effect of encouraging capitalists to more fully look into and explore the mineral deposits of the province. Not much is being done in the shipment of manganese at the present time. A number of manganese properties are reported as being on the market for development and sale… Reports of probable paying gold claims at Stanley in York county, above Fredericton, await verification. Fair sized leads of gold and silver in combination in Gloucester County, are reported, and it is said negotiations with a view to opening up the same are in progress. The prospects are that a more vigorous research for minerals and metals in different sections of the province will be made this summer than heretofore, as a better chance is offered under the new mining act to acquire leases and prospecting licenses."

Codes: 2052 / LEGI / IDX_Names: Cross Creek Gold; Legislation, etc.;
N.B. Reporter - Mar. 29, 1899 The Gold Region. - Samples of Cross Creek gold continue to be brought down for examination, and the York County Klondyke has assumed such proportions that the Surveyor General has found it prudent to make this proclamation in the Royal Gazette: I do therefore, by virtue of the provisions of the said General Mining Act of 1891, and amendments thereto, proclaim the district in the county of York, limited and bounded as follows, that is to say:- Beginning at the Mouth of Cross Creek, where the northern line of the parish of St. Mary's, in the county of York, intersects the same, thence running by the magnet west 6 1/2 miles to the Douglas parish line, thence north along said line 10 miles, thence east 10 miles, south 10 miles to St. Mary's Parish line aforesaid and thence west 3 1/2 miles to place of beginning; to be a gold district under the provisions of said act and amendments thereto."

St. Andrews Beacon - Mar. 30, 1899 The New Brunswick Klondike. - The Cross Creek gold boom still continues. Already over one thousand areas have been taken up by prospectors. The Provincial government has given the boom recognition by establishing Cross Creek as a gold district, with limits and bounds asfollows:- Beginning at the Mouth of Cross Creek, where the northern line of the parish of St. Mary's, in the county of York, intersects the same, thence running by the magnet west 6 1/2 miles to the Douglas parish line, thence north along said line 10 miles, thence east 10 miles, south 10 miles to St. Mary's Parish line aforesaid and thence west 3 1/2 miles to place of beginning; to be a gold district under the provisions of said act and amendments thereto."

Codes: A1 / Y2 / LEGI / IDX_Names: Kings County Gold; Saint John County Gold; Legislation,
Morning News - Sep. 25, 1861 Mines and Minerals. - It is to be hoped that at the next meeting of the Legislature, some action will be taken with respect to the law controlling all Mines and Minerals found, or to be found, in this Province. The law as it now stands operates against the development of some of the best resources of the Province, and militating most seriously against the introduction of population and capital, two things essential to our progress and prosperity. The chief objection to the law is that the Government are prevented from granting leases (say for gold mining purposes) for a longer period than three years, subject of course to renewal, but upon uncertain terms; and the lessee is to pay 5 per cent. on the value of all he obtains by his operations. The objection to this will at once present itself. No man, or Company, will set to work and spend large sums of money - a preliminary necessity - in the way of sinking shafts, and preparing machinery - in order to mine advantageously, they shall be allowed to continue their operations. We are informed upon good authority, that had it not been for this law, lead, copper and silver mines - these articles are known to abound in certain localities - would have been opened long before this, and perhaps thousands of men would be employed to-day more remuneratively than they could have been in any other way. Some time since we hinted that gold-bearing quartzwas to be found in certain quarters in Kings County. Since then we have heard of the precious metal having actually been taken out of the quartz; and the quartz of a rich quality, has been found in various parts of the Province - as near our City as Lily Lake, at Musquash, &c. To our personal knowledge, gold exists in a certainlocality, known to a few persons. But the trouble in the way is the law. People say, and very justly, ""of what use is it for us to dig and spend our money, first find out the gold and open up the mines for the benefit of others, even for the benefit of those who may have thrown obstacles in our way, or laughed at us, who will have an equal claim with ourselves, and the same chance of succeeding, and yet would not risk a copper at the start"". The reader will at once see the force of this objection. A Company is to be formed immediately; but no work will be done until after the Legislature has met, and it is known whether the Company will be allowed to commence operations upon more favorable conditions. If the Legislature fails to make any relaxation in the Law, the company will be disbanded and the gold remain in the earth, or not worked out to any extent. The secret of its whereabouts will remain with

the owners of the soil and a few others. Now we believe that this law is coeval with the days of old fogyism, when high protection principles ruled all legislation, when free trade was a nightmare, an ogre of most frightful mien. The right for the exercise of this Royalty, as it regards this Province, is founded upon the concessions made by the English Government at the time of surrendering to us the control of the casual and territorial revenues, including the ""mines and minerals,"" and everything else appertaining to the soil. It was simply a transfer from the Imperial to the Colonial Governments, made upon certain conditions. Our Legislature, therefore, has the right to alter or abolish this anti-free trade restriction altogether. But, the question may be asked, has the Government any more right to the gold, the silver, the copper, to be found upon a man's private property, than it has to the crops which grow upon the same soil, or the timber which is converted into a marketable commodity. It is labour in all cases that makes the thing productive. The government in point of justice, has as much right, which is no right at all, to tax the farmer 5 per cent., upon the produce of his Farm, as it has to tax him 5 per cent. for his labor in digging gold out of the bowels of the earth, which after all is only an article of merchandize, as much so as the marsh muck which is purchased by the farmer of his neighbors, for the enrichment of his upland. We contend then that the Crown has no right to tax a man for the products of his own property; and that he ought to be at liberty, or lease his right to others, to take out all the gold and silver he can find upon it, whether in the shape of turnips, potatoes, stones, of the thing itself called gold. Gold found upon ungranted lands is of course the property of the Government, and therefore should be subject to its control. If wrong in the conclusions we have arrived at, we shall be obliged to some correspondent to state his objections. Of course we are prepared for the answer that the Government of Nova Scotia exercises jurisdiction over its Mines and Minerals. But this answer does not meet the case - it is far from furnishing a reason of justification for the arbitrary exaction complained of. We must have an answer sustained by sound reasoning - by arguments the weight of which no man of common sense will fail to discern the force of. In California there is no Government interference - no taxation on mining operations. Any man has a right to prospect and dig for himself, wherever he pleases, so long as he does not meddle with the claims or rights of others. In Australia there is no restriction. An excise duty is levied upon gold exported. This seems to be fair enough. The effect of this free trade system if carried out in this Province would be most beneficial. We believe, if the law is repealed, or modified in a satisfactory way, that there will be mining operations going on next summer in at least twenty places, far and near, on the line of railway and the post roads. The gain to the Province will be an increase of population, which we want - an increase in the general revenues - in fact, the advancement, prosperity and general contentment of the inhabitants. Are not these of more importance than the supposed benefits to be derived from the restrictions under the present law? On the other hand, if the law remains as it is the effect will be just the opposite to that we have just stated, because there will be no gold digging operations. We shall get along just as at present, without any of those advantageous aids which a little wisdom might have obtained for us. We hope that some hon. member will be prepared to bring this subject forward next winter."

Royal Gazette - Aug. 15, 1866 Cap. XXXIII. An Act to incorporate the Provincial Oil Company.Section. Section. 1. Company incorporated. 5. Stock of 2. First meeting, when held. Shareholders, for 3. Capital stock. What liable. 4. Stockholders, for what 6. Sale of stock, when liable. And how made. 7. Joint stock alone liable. 8. Proviso. Passed 9th July 1866. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Charles Parker, George E. Leonard, and John Howarth, their successors and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Provincial Oil Company,"" and by that name shall have full power and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of mining coal, shale, asphalt, 8 or asphaltic rock, and for the manufacturing and trading in oils and other illuminating or lubricating substances, and for purchasing, owning or selling mines or real estate required or necessary for these purposes, and for such other busines as may be incident thereto. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the above named persons. 3. The capital stock of the said Company shall be one million of dollars, divided into ten thousand shares of one hundred dollars each, with the privilege, within three years, to increase the capital to one million five hundred thousand dollars, divided into fifteen thousand shares of one hundred dollars each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed for by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of, or to carry on the operations for which the said Company is incorporated; which call or assessment may be sued for and recovered in any Court of Record in this Province. 5. The capital stock held by any shareholder in the said Company at the time of making any call or assessment thereon, shall be liable to the payment thereof; and in case of non-payment of such calls or assessment at the time when the same shall be made payable, the Directors are authorized to order a sale to be made of so many of the said shares as they may think necessary for the payment thereof, with interest and expense. 6. Such sale shall be made at auction, upon not less than thirty days notice by the President in some Newspaper published in the City of Saint John, and the stock shall be transferred by the President and Secretary to the purchaser, who shall thereupon be entitled to a new certificate thereof; and the proceeds of such sale shall be applied towards paying the amount of such call or assessment with interest, and the costs, charges and expenses of such notice, sale and transfer, and the residue (if any) to the former owner. 7. The joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 8. Provided always, that the existence of the Corporation shall cease (except so far as regards the rights of creditors to sue for and recover debts due by the Corporation,) unless within two years from the passing of this Act there be filed in the Office of the Provincial Secretary a Certificate under the Seal of the Corporation, and verified by the oath of the President or Secretary, (which oath any Judge or Commissioner for taking affidavits in the Supreme Court is hereby authorized to administer,) setting forth that the Corporation have in assets and paid up stock in value, a sum equivalent to fifteen per centum of the proposed capital stock of one million of dollars."

St. Croix Courier - Apr. 20, 1899 Legislature. - ...Mr. Tweedie... dwelt at some length on the mining prospects of the province, particularly the oil industry, that have already yielded a revenue of $2,000, and the shale of Albert County...."

Royal Gazette - Aug. 12, 1840 Crown Land Office, } August 11, 1840. } The right of working the Coals, and other Minerals in the following described Districts in the county of Westmorland, subject to the following regulations and conditions, will be offered at Public Auction at this Office on Monday the 5th day of October next, at the upset price of Fifty Pounds on each District, Sale to commence at 12 o'clock, noon. Mining Lots in the County of Westmorland. Description of the Lots. The first Lot to extend from the junction of thePetitcodiac and Memramcook rivers, north till it meets a prolongation of the lower side line of Lot No. 45, granted to Peter LeBlanc in Dorchester, and to extend eastward from the Petitcodiac River to the rear line of the first tier of lots on the east side of the Memramcook, and to be bounded on the south by the lower side of Lot No. 14, granted to Charles Dixon, containing 3 30 square miles, more or less. The second Lot to extend from the Petitcodiac River, easterly to the rear line of the first tier of Lots on the east side of the River Memramcook, to be bounded on the South by the lower line of Lot. No. 45, (granted to Peter LeBlanc), and its prolongation; and to be bounded on the north by the lower line of the escheated DesBarres Tract, and its prolongation, containing 18 square miles, more or less. The third Lot to extend from the Petitcodiac across to the Memramcook River, to be bounded on the south by the lower line of the escheated DesBarres Tract, and on the north by a line to be run due east (true east) from the mouth of Hall's Creek, (at the Bend of the Petitcodiac), till it strikes the River Memramcook, containing 40 square miles, more or less. Regulations and Conditions. 1st. That the upset price on each lot be œ50 (fifty pounds) and the whole amount of the purchase money on each lot to be paid on the day of the sale to the Receiver General or other person authorized to receive the same. 2nd. That the right of mining on each lot be separately put up for the term of twenty five years, at a fixed rent of five per cent. on the value of the minerals raised, with the exception of coal, on which a duty of one shilling currency per chaldron shall be paid quarterly, on the 1st of January, 1st april, 1st July, and 1st October, in each year, to the Receiver General, or an Agent for that purpose to be appointed by the Government. 3rd. That two years be given to each purchaser, from the day of sale, to explore his mining ground, within the lot purchased by him, which ground so to be selected is in no case to exceed three miles square. But no mining operations are to be commenced or prosecuted until the lease be taken out. 4th. That the purchaser of each lot, after having explored and selected his ground, shall cause a survey and plan thereof to be made by some duly authorized Deputy Surveyor of the Province, and filed in the office of the Surveyor General; and that after such plan shall have been confirmed at the said office, a lease of the mines comprised therein shall be forthwith made out in accordance therewith. 5th. That after the said lease is executed and delivered, the lessee shall be allowed to work the said mines for three years, free of any rent or charge. 6th. That if the lessee shall not have actually commenced mining within two years after the date of the lease, the same shall be forfeited. 7th. That if the rent be behind or unpaid for the space of thirty days after the same shall become due, the lease shall be forfeited. 8th. That the lease contain a clause of renewal; and that the Government may take the improvements at a valuation to be made by arbitrators mutually chosen by the Surveyor General for the time being, and

by the lessee or his assigns. 9th. That in no case shall a lease be executed for more than three miles square. 10th. That if the lessee or his assigns shall neglect to work the mines within his lease for any one year during the continuance thereof, the said lease shall be forfeited and revert to the Crown. John S. Saunders, Surveyor General."

Codes: B4 / IDX_Names: Jolicure Shaft, Westmorland Co.;
S.J. Daily Sun - Oct. 27, 1879 Seven Cartloads of Treasure Mostly Gold. - (Special Correspondence of the Sun). - Sackville, Oct. 25. - About three years ago a short-horned cow, taking an afternoon promenade on the property of a Mr. Rufus Coates in Jolicoeur, Westmorland County, lost bottom with one or more of her feet, which sunk away down through the surface of the ground. In extricating the animal from her uncomfortable position it was discovered that she had slipped through between some timbers long decayed, that evidently had been placed over an ancient excavation made for some mysterious purpose. Within an elliptical area of six or seven feet in diameter from that on the outside. The circumstances seemed to fairly indicate that here was awaiting discovery one of the long lost hoards of the festive Captain Kidd, a famous pirate, whose favorite pastime, according to faithful tradition, was the burying of enormous treasures of doubloons, diamonds, golden images, &c., which were so plenty in his day that an enterprising, industrious freebooter could collect a whole cargo of them in a week's holiday excursion among the merchant shipping on the high seas. Kid (perhaps it is an injustice to his memory to spell his name with only one d) was a generous and high-toned kid, and despised the meanness of burying silver coin, which, with his usual acuteness, he could foresee night some day be dug up and subjected to the ignominy of a discount at the banks. So he kept all his silver for spending money and for his sailors to play pitch and toss with, and in the numerous deposits which he distributed all along from Florida to Cape Breton he planted nothing short of pure gold for the use of posterity. The neighbours came round and heard the news of this important discovery, examined the indications and talked the matter over. Some of the men of enterprise and means in Sackville and other places in the vicinity solicited the privilege of taking a hand in the discussion and in the means to be adopted for the securing of the anticipated prize. They all compared notes and exchanged traditions with the proprietors of the cow revelation, and finally a company was formed and a capital subscribed whose amount was discreetly withheld from interviewers on the outside. It was thus determined to solve the mystery. Most fortunately, at the outset they heard of the fame of a female native of the Feejee Islands, who is a lineal descendant of a scriptural character once interviewed by Saul, King of Israel, to whom she correctly gave some important information. This enchanting Feejeean is well posted in the mystic arts of her female ancestor. The new company obtained her address and communicated with her through a County of Westmorland missionary scattered around there, or through Esther Cox or some spiritual medium. But that is no matter; she knew all about this investment of Kid's and remembered very well having in a vision seen the gallant captain and his jolly tars dump seven cart-loads of treasure into that very spot and cover it up very carefully; she noticed, too, it was mostly gold. Having subsequently applied to several mediums and astrologers in Boston and received unanimous corroboration of the truth of Mrs. Feejee's information the company went to work excavating. They went down nicely until it became necessary to use pumps; deeper they went till hand pumps became insufficient; then they fitted pumps worked by threshing machines, both horse and steam, and their dilated eyeballs were at last greeted with the sight of a surface of masonry about four feet square. This was late last autumn and late in the evening; the workers stared, then solemnly pinched each other to make sure they were awake; They knew now they were on the eve of a glorious golden morrow; they entertained themselves that eve with a jolly banquet, and dreamed all night of hauling up from that excavation statues of Captain Kid in solid gold, each specimen staggering under a load of gold necklaces and watches and smoking a pipe whose bowl was encircled in diamonds and rubies of countless value. But next morning they found a cave-in had occurred and the masonry was no longer visible; it had been covered up or had sunk down deeper like a clam surprised at his devotions. Before proceeding further the whole company proceeded to a magistrate and invested fifty cents a piece in an awful solemn iron-clad oath of secrecy and mutual fidelity; consequently they decline to state particulars as to the proportions in which the treasure under the stone was to be divided. They continued their labors till the autumn leaves were shrouded in their wintry sepulchre and then reluctantly adjourned until the spring of 1879. This season work was resumed with the alacrity and enthusiasm naturally inspired by the absolute certainty of an immediate triumphant result, but just as the crisis was again neared all the pumping facilities within reach were found inadequate to the task of removing all the water that bubbled up into that hole. The company generously offered all the farmers within a radius of seven miles all the water required for the irrigation of their marshes and farms, free gratis, provided they would accept delivery of it at the bottom of the excavation; but not one of them responded to the invitation, as none of them sold much milk in that vicinity. It then became necessary to send a commission to New York to examine all the pumps that were exhibited at the Centennial; the envoys returned with the very best one of the lot. It throws a continuous stream of three or four inches in diameter and is worked by a powerful steam engine, and with the aid of the other pumps, keeps the water down. The hole has caved in at various times, is now at the top about fifteen feet by ten, the sides plank-walled to a depth of about thirty-five feet. Large posters forbid the approach of inquisitive spectators, but they peep in sometimes. Not a word is ever allowed to be spoken within the excavation, as it is a fact well known to moneydigging experts, that at the sound of the human voice, buried treasure always sinks away down into the depths or, what is worse, slides off to one side and hides itself. Last accounts say that a most extensive deposit of quicksand has been reached, into which an iron bar may be probed twenty feet or more in every direction, but it has not yet probed any iron chest or hard substance like masonry. About two thousand dollars are said to have been expended thus far, and unless a paying market can be found for quicksand in the United States, the neighbors fear a slight decline in the stock quotations of the company. It is thought by some that either the cow or the Feejee lady may have made a mistake of a few feet in the location of this treasure; but the company are yet

disheartened; they know Kid's money is around here somewhere, and they are bound to follow up that masonry they once saw, till they find it; then they intend sending a basket of the choicest specimens as a present to the office of the Sun, and perhap some of the other papers will be remembered."

GEOL / Albert / Kings County Oil Shales; Westmorland County Oil
Shales; Grand Lake Coal; Geology - General;
Daily Telegraph - Aug. 21, 1866 Professor Bailey on the Coal of New Brunswick -No. 2. - In our last issue, we copied Professor Bailey's remarks on the true coal of this Province - the product of the Upper and Middle Coal Formation. At present we quote the Professor's statements relative to the Lower Coal Formation. The area occupied by rocks of this formation comprises from 3000 to 4000 square miles, and includes large portions of the Counties of King's, Albert, and Westmorland, with smaller areas in St. John, York, Queen's, Sunbury, Northumberland and Victoria. The rocks of the formation are thick and coarse conglomerates, with some sandstones, usually of a bright red color, and associated with large and valuable beds of limestone and gypsum; also grey and brown flags and shales, the latter very abundant and highly bituminous, passing into an important cannel coal, and associated with large and valuable deposits of asphalt or altered bitumen, and occasionally oil springs. Manganese ore, freestone, grindstones, &c. are among the more abundant and valuable products of the series.The formation under consideration underlies the productive coal measures, and is not known to contain any workable seams of true coal, unless the ""Dunsinane"" coal included in Table A be found to appertain to this series. The character of the formation, however, is not such as to forbid its occurrence, and as workable coal beds have been found in the same formation both in America and Europe, further exploration may yet lead to its discovery in this portion of the Continent. The most interesting and important mineral of the Lower Coal Formation in New Brunswick is that above termed Asphalt or altered bitumen, and locally known as Albertite. Formerly regarded as a true coal, and later as a variety of jet, it is now generally believed to have been originally a fluid mineral oil or petroleum, subsequently changed and solidified by chemical action. It is a black, brittle, lustrous mineral, breaking with a high conchoidal fracture, and differs from coal in its mode of occurrence, (in regular veins instead of beds), in its homogeneity, (being indivisible into layers and of one quality throughout,) as well as in its chemical composition and physical characters. It occupies an irregular and nearly vertical fissure in disturbed bituminous shales, has a varying thickness of from 1 inch or less to 17 feet, and has been mined to a depth of over 900 feet. From the original locality, discovered in 1849, large quantities of Albertite have been annually removed and exported from the Province. About one hundred men are usually employed in connection with the works, and several large engines (one of 400 horse power) are in constant operation. The mine is favorably situated, not more than six miles from the Bay of Fundy, with which it has been connected by a railway. The original deposit, above alluded to, is the only one of Albertite yet thoroughly tested, though other openings have been made, with more or less success, in the immediate vicinity. The very characteristic accompanying rocks have been traced over a large extent of country, and small veins of Albertite have been observed within this district at points distant from each other as much as fifty miles. The expectation may therefore be entertained that other and equally rich deposits will be discovered. This expectation is strengthened by the supposed origin of the Albertite as an altered Petroleum, by its geological position, which is the same as that of the oil wells of the United States, and by the actual occurrence of such wells upon a limited scale in the district under consideration. Several attempts have been made to open the latter, but as yet without profitable results. The Albertite has never been employed as a simple fuel. It is far better adapted to the manufacture of oil and gas, for which purposes it is unequalled by any other minerals known. The demand for the substance is in excess of the amount raised, but the Company refuse to extend their operations beyond 18,000 and 20,000 tons per annum. As another source of oil and gas, the bituminous shales above alluded to, and very extensively developed in the County of Albert, are

beginning to acquire considerable economic importance. Numerous mining claims have recently been taken out for operations in this substance, both in the above named County and in that of Westmorland. In the latter work has been begun, and I am informed that 2000 tons were removed in the year 1865, and were shipped to the United States, selling in that market for $6 per ton. The cost of quarrying is said to about $1 1/4 to $1 1/2 per ton, and the freight to Boston, $1 1/2. In consequence, however, of the low price of mineral oils in the United States, it is considered necessary that the distillation of these shales should be carried on before exportation. For this purpose a Company on the Memramcook River are about erecting one hundred retorts, with which they expect to work up 100 tons of shale per diem. As a source of oil and gas, the Albertite far 11surpasses even the richest of the bituminous shales above described. The following are some facts, derived from reliable sources, bearing on this point. The mineral in the Albert mine is said to yield 100 gallons of crude oil per ton, or 14,500 cubic feet of gas, of superior illuminating powers, while in the latter case, where employed in connection with other coals, the residuum is a valuable coke. The yield of the bituminous shales is veryvariable, that of the best bed at the Caledonia mine in Albert being 7,500 per ton of gas, or 63 gallons of crude oil. That of the Westmorland Company above alluded to will yield only from 37 to 40 gallons, while other varieties contain a still smaller proportion. Moreover, unlike the Albert coal, the residuum of these shales is bulky and worthless. For comparison it may be stated that the Grand Lake coal will yield about 8,500 cubic feet ofgas per ton, but of a very inferior quality. From the Professor's tables we learn that in 1863 the Albert Mine produced 18,168 tons of Albertite, in '64, 19,463 tons, in '65, 18,658 tons - total in the three years, 56,289 tons. Of the total, 2,298 tons went to Nova Scotia, 4,520 tons to St. John, and the remainder to the United States. 2,260 tons came to St. John last year - double the quantity in '63 and '64. The value of the Albertite sent to the States, each of the last three years, has averaged about $150,000. The only coal mining property from which the Government obtains a Royalty is the Albert Mine, which paid to the Government in '63, '64 and '65, $8,089.29 Professor Bailey remarks that ""the trade on Coal and Mineral Oils, both of Export and Import, has been subject to great fluctuations, due in part to the great development of Petroleum Springs in the United States. In consequence of these fluctuations, expensive works have been constructed in the Province and again abandoned. The distillation of Bituminous Shales promises to add within a few years very greatly to the Export Oil Trade of the Province.""""

Codes: CAVE / IDX_Names: Caves;
Morning News - Feb. 3, 1843 A Cave! - A cave was accidently discovered a few days since, near Mr. Peters Cottage, which Dr. Gesner, with two or three other persons went out to examine. The entrance was very small, so that the Doctor could not enter, owing to his size; but his son, with several others, gained admittance. They report that it is about 250 yards in length, that the passage is so narrow, it will only admit a person of ordinary size, with the exception of one opening, which is about six yards wide. Nothing was found in the Cave, except some bats, which had quartered there for the winter."

Codes: CAVE / IDX_Names: Caves;
N.B. Courier - Feb. 4, 1843 A Cavern. - During the past week Messrs. Cornelius Harbell, Jackson McDonald and John Jones accidently discovered a singular opening in the rocks half a mile northward of Lily Lake, and a mile and a half from the city, and explored it to some distance. The mouth of this cavern is in a grove of small spruce and cedar and opens through a narrow chasm in the rocks fifteen feet deep. The passage is then sufficient to walk upright to the distance of twenty yards, where it becomes low, and turns to the eastward. At this place another small grotto ascends in the hill to the northwest, which was explored until it became too narrow to give passage to a boy fifteen years old. The main passage is also contracted at the turn, being only a narrow fissure. After passing this fissure there is more room, and a chain of small descending grottoes leads to a larger grotto, which is thirty feet high and sufficiently spacious to contain fifteen persons. The passage then descends, almost perpendicularly, fifteen feet, and winds its way to some distance, until it becomes a narrow cleft. From the mouth, in a westerly direction, it is somewhat wider, and there are several deep and dangerous pits, the bottoms of which are occupied by small basins of limpid water. A part of this extremity of the cave has fallen in, and its original course may be distinctly traced upon the surface. The rock is a blue and white marble, fluted by the stream running along the floor of the cave. - The stream takes its rise from a cedar swamp, passes through the cavern, and makes its exit at the foot of the hill to the eastward, one hundred feet below the cave's mouth. The whole length of this opening in the earth is about two hundred yards. It contained but a few small stalactites, and the torpid bats that had taken up their abode in the dark subterranean vault were the only animals found in it. The thermometer stood at 45 degrees, and the air, from containing more than the ordinary quantity of carbonic acid gas, greatly diminishes the light of the candles used. These chasms have evidently been formed by the action of running water, and it is probable that more spacious grottoes may be discovered in the limestone northward of the city. We have the above facts from Dr. Gesner, who examined the cave in person, with a number of young gentlemen from town, on Tuesday last, with whose assistance and that of his sons, he explored it as far as it was practicable to do so. A small sum of money, we understand, would make the cave more easily accessible to visitors generally than it now is; we therefore trust that some steps will be adopted to render a visit to this interesting natural curiosity, in our immediate vicinity, both easy and agreeable."

St. Andrews Standard - Jun. 17, 1846 A cave of considerable depth, says the New Brunswicker, was discovered last week at Green Head,about five miles from St. John, on the banks of the River. It has been explored to the distance of about one hundred feet."

Morning Freeman - Feb. 2, 1865 Gesner's cave discovery ...[Issue missing]"

Morning Freeman - Feb. 4, 1865 Mr. Editor:- Observimg in the Freeman of today a notice of the recent discovery of a remarkable cavern near the city, I beg to state that many years ago, in company with William Gesner, son of Dr. Gesner, I examined the same cavern, and obtained some very fine specimens of stalactites, which were added to Dr. Gesner's Museum, now in the possession of the Mechanics' Institute. I stated some time ago to Mr. George Matthew where, as near as my memory would serve me, he should find the cave, and also described it to him; which description corresponds with that which was published in today's paper. I am, &c., &c., T. Otty Crookshank. Simonds, Feb. 2nd, 1865."

Morning Freeman - Feb. 7, 1865 Mr. Editor:- In your paper of Saturday last I observed a communication from T. Otty Crookshank, in which, (having referred to the discovery of the cavern, an account of which appeared in your paper of Thursday last) he states that ""many years ago, in company with William Gesner he explored the same cavern,"" and "" that some time ago he stated to Mr. George Matthew where he should find the cave,"" thereby insinuating that my brother, having acted upon information obtained from him, had found and explored the cave, and published it abroad as a new discovery, when it was not so. Far from doing that, however, let me inform Mr. C., through your columns that he never gave either of us the slightest information in regard to this cavern, having never known of its existence himself. The cave to which he refers is commonly known as Gesner's Cave, (a description of which may be found in the Courier of February 4th, 1843), a tortuous chasm, the largest chamber in which, according to Gesner's own statement, will only accommodate 15 persons; and which is at least a mile distant, and in a very different direction from the one lately discovered. If Mr. C. will only read the description of Gesner's Cave, as given in the Courier referred to, I think he will find it rather difficult to recognize it as the one described in your paper of Thursday. By inserting the above, you will much oblige, Yours Truly, R. Matthew. February 6th, 1865."

Morning Freeman - Feb. 11, 1865 To the Editor of the Freeman. -Sir:- The question of the visit made by Mr. R. Matthew to the cave the other day is not so great importance that it must lead to a controversy, but he impeaches me with ""insinuating that his brother, having acted upon information obtained from me, had found and explored the cave, and published it abroad as a new discovery, when it was not so."" Mr. R. Matthew, by the above paragraph, has perverted the meaning of my note, and also overlooked the sentence where I stated: ""From the description published in the Freeman of the 2nd inst., corresponded with that of a cave which I had visited in company with William Gesner, and which I had described in a conversation with his brother, George Matthew."" And furthermore, in the conversation enumerating the peculiarities of the cave, I mentioned that of a well, the depth of which we had not ascertained. With all due deference to Mr. R. Matthew, I am still of opinion that the cave I visited, and the cave he explored and gave such a graphic description, are one and the same. Excuse me for taking up the space in your paper, which should be occupied at the present time with more interesting matter. Yours, &c., T. Otty Crookshank. Simonds, Feb. 7th, 1865."

S.J. Daily News - Sep. 16, 1871 Caves in New Brunswick. - A correspondent of the Moncton Times thus writes of two unexplored caves in this Province: - One is located within two miles of Butternut Ridge Corner, and of more than five fathoms from the middle of the Public Road leading up the Ridge (so called). Whether it is true or not as has been asserted, that some have gone through to Canaan by this route, I have never yet heard of a person who has made the attempt to penetrate to its remotest depths, and have no doubt that its exploration would prove curiously interesting to say who might have the daring enterprise to undertake it. Another is situated not far from the rear of a lot of land now owned and occupied by Michael Creighton in Dutch Valley. Although the opening in the surface of the ground is only about the size of a table or bed, all attempts to find a bottom to it have thus far proved a failure.- Whether sticks or stones are thrown in, there are but a few faint echoes of contact with projecting points of rock until the sound is lost in unfathomable depths. A few years ago one man mustered courage to allow himself to be let down a short distance into it by others of his party; but he soon gave the signal to be brought to the surface again, and I have not since heard of the experiment being made by any other."

S.J. Daily Sun - May 9, 1890 An Albert County Wonder. - A gentleman from Albert County informs the Sun that there is a remarkable underground lake in the plaster rock to the west of Demoiselle Creek and near Wilson's station, on the Albert railway. The lake is about 75 feet below the surface of the ground, the rock having fallen in from above. The Sun's informant clambered down and found there a lake of clear water in an underground cave, with a roof about 18 feet high and perfectly smooth. He walked along the side of the water for some distance but it was dark and he did not care to explore further. A stone thrown with considerable force did not seem to meet any obstacle but fell in the water away beyond. The story is an exceedingly interesting one as told by the heroic explorer."

St. Andrews Beacon - May 15, 1890 An Underground Lake in Albert County.- The people of Albert County are excited over the discovery of an underground lake to the west of Demoiselle creek and near Wilson's station, on the Albert railway. The lake is about 75 feet below the surface of the ground, the rockhaving fallen in from above. One man clambered down and found there a lake of clear water in an underground cave, with a roof about 18 feet high and perfectly smooth. He walked along the side of the water for some distance but it was dark and he did not care to explore further. A stone thrown with considerable force did not seem to meet with any obstacle but fell in the water away beyond."

Weekly Record - Fri. May 16, 1890 A gentleman from Albert Co. informs us that there is a remarkable underground lake in the plaster rock tothe west of Demoiselle Creek and near Wilson's Station, on the Albert railroad. The lake is about, 75 feet below the surface of the ground, the rock having fallen in from above."

S.J. Daily Sun - Sep. 21, 1894 Hopewell Cape, Sept. 18. - Hopewell Cape Sabbath school picknicked at the wonderful underground lake at Demoiselle Creek on Saturday. Torches were provided andthe chamber of gypsum containing the beautiful sheet of water was explored. The blaze of the torches caused the reflection of the arched ceiling of plaster rock to appear in the placid waters of the lake, and in the flash of the lights upon the snowy walls of the immense cavern made a picture of indescribable beauty."

Chignecto Post - Jan. 23, 1896 Mr. Odbur Dunphy, a well known farmer of Nashwaak, a few days ago made an exploration of a cave on his farm. He succeeded in getting down to a depth of between 60 and 70 feet. A quantity of hard material was brought to the surface and a gentleman who has been among mines a great deal contends that it is composed of iron, coal and antimony. It will be submitted to a competent geologist for examination. A further examination will be made shortly. It seems to be prevailing opinion that this cave is the ruins of an old volcano, as the hills surrounding it are very much honeycombed. At all seasons of the year steam issues from the mouth of the cave."

S.J. Globe - Mar. 30, 1910 Boys Penetrate Cave And Make Discoveries. - New Passages and Chambers Likely in Howe's Cave - An Interesting Trip. - Howe's Cave was explored on the morning of Easter Monday by forty boys, members of the Y.M.C.A. Juniors' Hikers' Club, under the leadership of Mr. W.H. Moor and Mr. John G. McKinnon. The forty met at the ice house in Rockwood Park at ten o'clock and proceeded to the cave, which they entered armed with candles, lanterns and electric flash lights. The party penetrated to the known limits of the cave and made a discovery which may lead to the exploration of new passages and chambers. The boys enjoyed the trip immensely and spent about an hour and a half in the cave. After entering the cave the passage descends at an angle of about 45 degrees a distance of thirty two feet, running into a narrow hall through which some of the larger members had difficulty in passing. After entering a small chamber the party continued by a passage so low as to necessitate crawling for a distance of sixteen feet. Travelling twenty four feet more in a stooping posture led them to the main chamber, sixty feet long and ten or twelve feet high, the floor of which slopes sharply downward. To pass this required squirming through an opening barely high enough to squeeze through and which was twelve feet long. This brought them to another large chamber of peculiar formation. From this hall a slope leads downward at an angle of about fifty or sixty degrees to a well which has hitherto proved the end of all explorations. A discovery was made, however, of an opening on the other side of the well which looked promising, and later in the year when the water in the well is lower an effort will be made to follow this opening in the hope of finding new features of the cave. The fact that although the large party was in the cave for an hour and a half the air remained perfectly pure indicates that there must be another opening somewhere which permits of ventilation. The party returned to the city about one o'clock."

Codes: CAVE / IDX_Names: Caves;
Kings County Record - Feb. 3, 1944 Ice Found In Caves in Waterford and Millbrook All Year. - Right here in New Brunswick, at Waterford, Kings County, on the farm of Mrs. James Chambers, are to be found ice caves, which have been there for many years, probably for centuries. The entrance to these caves is surrounded by small trees and shrubs, and is large enough for a person to enter in a bent position. The cave or caves, as there are several, are about 12 to 14 feet below level. The floor is of smooth ice and the walls and ceiling are covered with ice. No one knows the depth, as no one has ever attempted to explore very far, there being a gradual slippery declevity, but it is thought the tunnel runs a long distance underground. All the year the caves remain in this icy condition and on the warmest day in summer one can remain inside only a short time because of the extreme cold. It is believed this is the only cave of this nature in New Brunswick. - Telegraph Journal. -- Those ice caves at Waterford are not the only ones found in New Brunswick. Another cave, not many miles distant, is found on the Talbert Arnold farm between Millbrook and Waterford. The cave extends down between crevices in the huge rock formation to a depth of 200 feet and ice is found there the year around. The cave is cold and dark and difficult of access, and foliage on the trees is very scant and late in coming out. Ice melting during the hottest days of summer feeds a little brook that runs out from the cave, It is known as Dry Brook when there is no melting of ice to feed it."

St. Croix Courier - Mar. 27, 1902 Natural Curiosities in New Brunswick. - ..... Sent in by Prof. G.W. Ganong ..... (1) Underground Waters. - The underground lake near Hillsborough, in Albert county, is well known. It is often mentioned in newspaper articles, and there is a good popular description of it in the New Brunswick Magazine, Vol. 11., 306-310, by C.A. Steeves. Mr. C.J. Osman, M.P.P., who knows it well, tells me it is simply a basin in one of the plaster fissures common in that region. But an exact scientific examination of it remains to be made, and would no doubt yield some points of interest. About the headwaters of the Serpentine River the guides and surveyors report a remarkable open boulder barren, in which there are many clear little lakes. I suspect these many lakes are but part of one, filled more or less by the boulders, a point which will easily be settled by noting whether the levels of the small lakes are the same. Streams which in the time of

low water in summer flow entirely out of sight among large boulders are not uncommon in the bouldery districts of New Brunswick. Probably of this kind is the part of Bulls Creek, in Carleton county, mentioned by Joseph Bouchette in a letter written while conducting the internationalboundary survey in 1817 (MS in possession of Rev. W.O. Raymond): 'The river is said to be tolerably wide and passes for one hundred yards underground and again appears in a fine, broad stream and clear water.' But possibly the underground part may be of another nature. (2) Ice Caves, or Freezing Caverns. - Caves in which ice lies all the year round are said to occur near Waterford, in Kings County, but I have not been able to obtain any exact information about them. Mr. C.J. Osman, M.P.P., tells me there is a deep hollow near Hillsborough in which the snow lies all through the year. Such caverns have been elaborately investigated in the other parts of the world, with results summarized in Balch's excellent work. He concludes that the ice simply exists as in an ice box, through the summer, and is formed only in winter, the popular opinion to the contrary not withstanding. McGee, however, has recently pointed out that this popular idea is not yet entirely disproved, and suggests possible methods of summer ice formation under special conditions. The ice caves (or wells, if such exist) of New Brunswick should be investigated. (3) The Warm Spot on Blue Mountain. - It is reported among the guides on the Tobique that there is on Blue Mountain, Tobique, a small area on which snow never lies long in winter, and on which a man may sleep with comfort without blankets or other shelter in very cold weather, though the ground is said to not to feel warm to the hand. Perhaps there is no foundation in fact for this statement, but in connection with it attention may be called to the fact that this mountain is of igneous origin although the fires are supposed to have been cooled for many geological ages. The investigator of the legend must go to its solution armed with delicate thermometers. It is also reported in the same quarter that remarkable underground rumblings are sometimes heard on a mountain on the Wapske. If there is any truth in this statement, the noises are probably related to those described in the first note of this series."

Royal Gazette - Jul. 1, 1874 CAP. XCVI. An Act to incorporate the Elgin Mining Company. Sec. Sec. 1. Company incorporated. 8. Stock exempt from 2. Capital stock. taxation for three. Place of business, where years. established. 9. First meeting by whom 4. Power of Company to levy called and where held. and collect calls. 10. Annual meeting, when 5. Qualification of Directors. and where held. 6. Vote to be by ballot. 11. Management of 7. Joint stock alone liable affairs in whom vested. for debts Passed 8th April, 1874 Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Joseph D. Steeves, Robert H. Goggin, David M. Steeves, James Acton, Frederick W. Steeves, George S. Hallet, Robert D. Robinson, LeBaron Godard, Jacob Beck, Senior, Samuel W. Goggin, William P. Robinson, Stephen Hopper, H.D. Acton, Merriam & Eastman, Hugh Davidson, Samuel J. Beck, Jacob Beck, Junior, W.H. Webster, Joseph C. Blakney, George Killam, George M. Killam, Ezekial Steeves, Jacob Steeves, Oliver C.J. Steeves, Solomon Horseman, Alexander A. Barchard, W.A. Colpitts, Esquire, Thomas A. Colpitts, and George Stewart, and such other persons as shall from time to time become proprietors of shares in the Company hereby incorporated and established, their successors and assigns, shall be and are hereby erected into a body politic and corporate under the name and style of the ""Elgin Mining Company,"" and by that name shall have a common seal, sue and be sued, plead and be impleaded, answer and be answered unto, defend and be defended, in all Courts and places whatsoever, and shall have power, right and authority to purchase, lease, hold and sell mining lands and mineral rights, and of boring, mining, raising, digging and searching for coal, shale, petroleum, or any other mineral, on their lands in Elgin, County of Albert, and purchasing, holding, using, selling and conveying real estate and any other property required for constructing, holding, or operating roads and tramways for the transportation of coal, shale and other substances, and supplies, to and from their works, and using the same for the purposes aforesaid, and all other purposes for which roads and tramways may be used, and of constructing and holding dwellings and other works and buildings for the use of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes, ar any of them; and the said Company shall have all other powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be ten thousand dollars, with power to increase the capital stock to fifty thousand dollars, in shares of twenty dollars each, which shall be personal property, transferable and assignable as such by assignment recorded, in the books of the Company. 3. The place of conducting the general affairs of the Company shall be at Elgin Corner, or at such other place in New Brunswick as may be deemed expedient by the Company; the Board of Directors shall consist of seven persons, who shall be stockholders in said Company, and they shall be chosen annually; but should the Company fail to elect Directors on the day appointed, those previously elected shall continue in office until successors are chosen and accept office in their stead; any vacancy in the Board of Directors caused by death, resignation, or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The said Company shall have power to levy and collect calls upon the shares from time to time of such sum of money as may be necessary for carrying on the business of said Company, in all not exceeding the nominal value of the shares; and when any call shall be made by the shareholders or Directors of the said Company, it shall be the duty of the Treasurer to give notice thereof in writing, requiring payment of the same within thirty days, and if any stockholder shall refuse or neglect to pay the amount of such call upon his share or shares at the time described, he may either be sued for the same in any competent Court, or the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale; and all shares upon which the call is not then paid, with interest from the time such call became due, shall be sold to the highest bidder, and after retaining the amount of such call and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the share or

shares so sold shall be made out and delivered to the purchaser or purchasers thereof. 5. No person shall be eligible as a Director unless he holds at least five shares of the capital stock of the said Company, and is of the full age of twenty one years. 6. On every occasion when the votes of the shareholders are to be given, they shall be given by ballot, and the number of votes shall be in the proportion of one to each share of stock; absent shareholders may vote by proxy, provided the proxy be a shareholder and produce sufficient authority in writing. 7. The joint stock and property of the said Company shall alone be responsible for the debts and engagements of the said Company. 8. All property and shares of said Company shall be exempt from taxation for the period of three years from the passing of this Act. 9. That the first meeting of the said Corporation for the organization thereof, shall be called by any two stockholders of said Company, such meeting to be held at or near Elgin Corner aforesaid, on Thursday the seventh day of May one thousand eight hundred and seventy four, between the hours of two o'clock, p.m., and eight o'clock, p.m., the same day; notices of such meeting shall be given at least ten days previous to the day of meeting, by posting the same in at least six public places in the said parish. 10. The annual meeting of the stockholders of the said Corporation shall be held at Elgin Corner on the first Tuesday in June in each and every year, for the purpose of choosing seven Directors, and such other officers of said Corporation as may be deemed necessary for the management of their affairs, which Directors so chosen shall remain in office one year, or until others are chosen in their places, and shall at the first meeting after their election choose one of their number President of such Company; provided always, that not less than four Directors do form a quorum for the transaction of business; and in case of absence of the President, the Directors shall have power to appoint one of their number Chairman for the occasion. 11. The Directors and officers of the said Company, or a majority of them, shall have full power and authority to manage the business of the said Corporation, subject to the bye laws of said Corporation and the provisions herein contained, may appoint any agent or other persons by them deemed necessary, may declare annual

Codes: E2 / E2 / J8 / A2 / T3 / P1 / T6 / GEOL / IDX_Names: Oil and Gas - Kings Co.; Oil and Gas - Kings Co.; Albert Mines; Albert / Kings County Oil Shales; Dover Oil; St. Joseph Oil; Westmorland Oil / Dorchester Oil; Geology -

Morning Journal - May 12, 1865 Professors Bailey and Hind on the Petroleum in New Brunswick. - We shall be unable to do justice to the valuable reports made by these gentlemen, during the sittings of the House of Assembly, but we cannot with hold the following extracts. From Professor Hind's Report:-Petroleum Springs in Albert and Westmorland. -Natural petroleum springs have long been known in these counties. Attempts are now being made to reach the source of supply by boring. The following information respecting the depth of the borings was obtained from workmen at Steeves' Ravine well, in October of the present year:-1. The Steeves Ravine well. - The petroleum spring here has long been known. The oil occurs on the surface of the water in an excavation under the north bank of the ravine. Its odour and colour reminded me of the petroleum wells of Enniskillen in Canada. The depth of the wells was then, (October 15, 1864.) 186 feet. The sand pump brought up fresh water, and very little oil. 2. The Dover well, about three miles north of Hillsborough, on the east side of the Petitcodiac, 106 feet down, with a strong flow of fresh water. 3. Cummins Well, Westmorland County, DorchesterParish, about a mile from the Dover Well, 530 feet down; salt water in the pump, small show of oil. 4. Memramcook, about 140 feet down, very small show of oil. An idea of the depth to which it will be necessary to bore before oil in remunerative abundance may be expected, will be gathered from the fact that the main shaft of the Albert Mines has already been excavated to the depth of one thousand feet, without a trap of oil being met with. It is not probable therefore, with this splendid test well in view, that the prospectors will be successful at a less depth than 1300 or 1500 feet, and it yet remains to be seen to what extent the Devonian Rocks, the probable source of the oil, are developed on that part of the Province. The inflammable gas which is copiously evolved near the Albert Mine, and in several places in Albert County, is not necessarily connected with petroleum, as it proceeds from rocks destitute of bitumen. Conclusions With Reference to Albertite. - As the question of an increased supply of Albertite is one of very considerable moment to the Province, it may not be an unnecessary recapitulation to state briefly and in order the conclusions which have been advanced in preceeding page. It is submitted that it has been shown - 1st. That the Albertite wherever it has been found in situ, occupies fissures produced by dislocations in the rocky strata, or exists as a cementing material in conglomerates, or occurs as an integral part of the rock, as in the Albert Shales. 2nd. That the Albertite, under all circumstances, has been injected from below. 3rd. That there were at least two periods of injection. 4th. That when it occupies fissures, these are on the lines of anticlinal axes. 5th. That it is an inspissated or altered petroleum. 6th. That its source lies beneath the Albert Shales, or in other words beneath the Lower Carboniferous Series. 7th. That it is consequently of Devonian or prior origin, and proceeds probably from rocks of the same age as those which yield the Petroleum of Pennsylvania, Ohio, and Canada. 8th. That it may with confidence be anticipated that a search made in accordance with the views which have been expressed respecting its origin, will result in valuable deposits being found over an extensive area between Dorchester in Westmorland and Norton in King's Counties; but this search must be continued along the lines of anticlinal axes which have been shown to exist within the limits specified. The quantity of Albertite raised since the opening of the Mine in Albert County, is estimated to be about 170,000 tons. At $10 a ton (the minimum price at which I was informed it has been sold), this would amount to one million seven hundred thousand dollars. From Professor Bailey's Report:-Petroleum. - In connection with the discussion of the characters and position of the Albert coal, and the oil-yielding strata of Baltimore, it is interesting to allude to the various points at which the last-named substance has been found to exist as a naturally formed product. The presence of petroleum, or mineral oil, in the Parish of Dorchester, was early recognized by Dr. Robb, Dr. Jackson, and others, but it is only within the last few years that any attempts have been made to open distinct wells. The principal locality at which operations have begun, is that where the presence of this substance was earliest pointed out, viz:

the district lying between the Petitcodiac and Memramcook River, near Dover. The ""Westmorland Petroleum Company,"" incorporated in 1864, have erected buildings suitable for their undertaking, and have sunk by boring to a depth of over 400 feet. The rocks passed through, as enumerated in a Report to the Company, are as follows, in descending order:- Blue clay. Shale. Soapstone(?). Blue limestone, full of crevices. Red sandstone. Shales ---, Depth, 90 feet. Several veins of Oil. Sandstone and Conglomerate. Depth 120 feet. An excellent show of Oil. Soapstone (?). Limestone and Conglomerate, very hard, and with many crevices. Red Sandstone. Grey Shales. Depth 207 feet. Evidence of Copper, the tools coming up coated with that metal. Conglomerates, with Iron and Manganese. Very hard rock. Depth 300 feet. Struck a vein of salt water. Gas strong and burning on the Sand Pump. 60 feet of Black compact Shale. Small vein of Oil below. Conglomerates. Hard rock, Shales and Sandstone - 400 feet; Gas very strong; Struck a vein of salt water and Oil. Sandstone, 430 feet. The general character of the rocks enumerated, would seem to imply that the strata passed through belong near the base of the Lower Carboniferous Series, and are similar to what may be observed at the Manganese Mine, on Shepody Mountain. The so-called Soapstone is probably a fireclay, such as occurs at the last named locality; while the indications of copper and manganese may be due to secondary ores derived from subjacent metamorphic beds. I have not however seen any specimens of the rocks removed, and am therefore unable to pronounce positively on their character. At the time of my visit, operations had been temporarily suspended, during the putting down of copper pipes for pumping. I observed, however, the strong escape of gas from the well, bubbling through a mixture of water and oil, and also observed the latter substance floating on the surfaces of the springs in the vicinity. I have since been informed, that after the sinking of the pipes, several gallons of oil were removed in a single day's pumping. Besides the locality above referred to, petroleum has been observed at several other points in this district, sometimes in a liquid form, escaping with the water of springs, at others in an oxydized condition, forming a thick tarry substance, termed maltha. On the western side of the Petitcodiac, an American Company have undertake to bore for oil, on Steven's Brook, near Hillsborough. At the time of the examination of the locality by Mr. Hartt, operations had but just commenced, and pending the arrival of a steam engine, the boring was carried out by hand. The depth then reached was only twenty five feet, the excavation being made in a friable red sandstone. A few feet from the latter, an adit had been driven into the foot of the hill, and had become partially filled with water, on the surface of which a thick mineral oil was floating by bucketsfull. With the Sandstones of this locality are beds of bluish shale, and compact impure concretionary limestone, with numerous irregular masses of jaspery agate. The last point at which I have had an opportunity of observing the presence of mineral oil, is the neighborhood of Elgin Corner in Albert County, where several of the springs were found to be thoroughly impregnated with this substance, so as to be rendered unfit for ordinary use. The most marked of these springs is on the land of David Steeves, and but a short distance from where we had already recognized the existence of Albert shales. A gas bubbles constantly from the water,
General;
and the latter tastes and smells strongly from petroleum. I did not, however, observe any distinct oily films, though the iridescence due to the latter was sometimes present. In attempting to arrive at positive conclusions as to the probable quantity and value of Petroleum in Southern New Brunswick, we are immediately met by the uncertainty which still prevails in other portions of North America, with regard to the origin and mode of action of oil wells. In the absence of certain data from which to judge, we may briefly allude to the principal facts which favour a belief in the existence of the latter in the districts above enumerated. In the first place, the geological age of the formations where these springs occur (already shown to be near the base of the Lower Carboniferous Series), is the same as that of the great oil-regions of Pennsylvania and Ohio. Secondly, the large quantity of Albertite, if the latter be properly regarded as an altered oil, shows the former existence of this substance in a fluid condition, filling cavities in the disturbed strata. If we suppose the greater part of the oil to have become converted into the so-called coal, it is not reasonable to suppose that only a single deposit of the latter exists, and if not, other large beds of Albertite are to be expected, a result as important economically as would be the discovery of oil-wells. Thirdly, the wide area over which actual indications of petroleum have been observed, goes far to indicate the general presence of the latter. It is no objection to such a belief that but trifling quantities of oil have as yet been obtained at the several localities, for such is often the case, where continued search leads to profitable yields. Indeed, so great is the uncertainty attending the discovery of actual wells, that in the Pennsylvania oil-district, according to

Codes: E2 / GEOL / IDX_Names: Oil and Gas - Kings Co.; Geology - General;
St. Andrews Standard - May 24, 1865 From Professor Hind's Report:- Petroleum Springs in Albert and Westmorland. - Natural petroleum springs have long been known in these counties. Attempts are now being made to reach the source of supply by boring. The following information respecting the depth of the borings was obtained from the workmen at Steeves' Ravine well, in October of the present year:- 1. The Steeves Ravine well. - The petroleum spring here has long been known. - The oil occurs on the surface of the water in an excavation under the north bank of the ravine. Its odour and colour reminded me of the petroleum wells of Enniskillen in Canada. The depth of the wells was then (October 15, 1864) 106 feet. The sand pump brought up fresh water, and very little oil. 2. The Dover well, about three miles north of Hillsborough, on the east side of the Petitcodiac, 106 feet down, with a strong flow of fresh water. 3. Cummings Well, Westmorland County, Dorchester parish, about a mile from the Dover well, 530 feet down; salt water in the pump, small show of oil. 4. Memramcook, about 140 feet down, very small show of oil. An idea of the depth to which it will be necessary to bore before oil, in remunerative abundance may be expected, will be gathered from the fact that the main shaft of the Albert Mines has already been excavated to the depth of one thousand feet, without a trace of oil being met with. It is not probable therefore, with this splendid test well in view, that the prospectors will be successful at a less depth than 1300 or 1500 feet, and it yet remains to be seen to what extent the Devonian Rocks, the probable source of the oil,

are developed in that part of the Province. The inflammable gas which is copiously evolved near the Albert Mine, and in several places in Albert County, is not necessarily connected with petroleum, as it proceeds from rocks destitute of bitumen."

Royal Gazette - Apr. 2, 1856 Cap. X. An Act to incorporate the New Brunswick Oil Works Company. Section. Section. 1. Company incorporated. 10. Proof, what shall be 2. Capital stock. sufficient. 3. Calling of first 11. Register to be prima meeting. facie evidence.4. Shareholders to be 12. No dividend for shares members of the in arrear. Corporation. 13. Joint stock alone 5. Liability of responsible. shareholders. 14. Class A shares may be set 5 6. Assessment on shares, apart. when and how to be made. 15. Preference to Class A 7. No transfer of shares shares. in arrear. 16. Other security to Class A 8. What shall be a shares. sufficient discharge. 17. Class B shareholders to 9. Declaration in suits receive six per cent before for calls. Class A receive more. 18. What may be regulated by bye laws. Passed 26th March 1856. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That William H. Adams, Joseph A. Crane, James D. Lewin, Edmund Kaye, John Kerr, the Reverend William Scovil, Nathan S. Demill, Thomas E.G. Tisdale, William D.Pickup, Edward L. Thorne, James DeWolf Spurr, John McGrath, John H. Harding, their associates, successors, and assigns, be and they are hereby declared to be a body corporate, by the name of ""The New Brunswick Oil Works Company,"" with all the general powers and privileges made incident to Corporations by Act of Assembly in this Province, for the purpose of trading in, making, or producing oils and other illuminating or lubricating substances, and for purchasing, constructing, establishing, and maintaining all such lands, wharves, buildings, engines, machinery, implements, and things as may be necessary or convenient for carrying on said business and operations, and such other business as may be incidental thereto. 2. The capital stock of the said Corporation shall be fifty thousand pounds of current money of New Brunswick, divided into five thousand shares of ten pounds each. 3. The first meeting of the Corporation for the organization thereof may be called by the said James DeWolf Spurr, or in case of his death, neglect, or refusal, by any one of the parties named, at such time and place as he may appoint, by publishing notice of the same in two of the Newspapers published in the City of Saint John at least one calendar month before such meeting is held. 4. Every person owning a share in the capital stock of the said Company shall be a member thereof, and be entitled to vote at all meetings of the said Company; and members may give as many votes as they own shares, and absent members may vote by proxy, such proxy being a stockholder and authorized in writing. 5. Each and every shareholder in the said Corporation shall be held liable to the said Company for each and every call or assessment made, not however to exceed in amount the stock subscribed to him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation or for the purposes 6 of, or to carry on the operations for which the said Company is incorporated, which call or assessment may be sued for by the said Corporation and recovered in any Court of Record within the Province. 6. The Company or the Directors, if empowered by the bye laws of the Corporation, shall have power from time to time to levy and collect assessments upon the shares, or on such of them on which the amount subscribed has not been paid up, of such sums as may be deemed necessary for carrying on the business, or for the purpose or operations of the said Company, and whenever any assessment shall be made as aforesaid, it shall be the duty of the Treasurer or Secretary to give notice thereof in a Newspaper printed and published in the City of Saint John, requiring payment of the same within not less than thirty days; and if any stockholder shall neglect or refuse to pay to the Treasurer the amount of such assessment upon his shares, or any part of such amount at the time prescribed, it shall be the duty of the Treasurer to advertise all such delinquent shares for sale at public auction, giving at least thirty days notice of the time and place of such sale; and all shares upon which the assessment or any part thereof is not paid, with interest from the time such assessment became due, shall be sold to the highest bidder, and after retaining the amount due on such assessment, and interest due thereon, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made and delivered to the purchaser. 7. No shareholder shall be entitled to transfer or vote upon any share after any call shall have been made in respect thereof, until he or she shall have paid all calls for the time being due on every share held by him or them. 8. The said Company shall not be bound to the execution of any trust, whether express, implied, or constructive, to which any of the said shares may be subject, and the receipt in whose name any such share shall stand in the books of the said Company, or if it stands in the name of more parties than one, the receipt of one of the parties named in the Register of stockholders, shall from time to time be a sufficient discharge to the said Company for any dividend or other sum of money payable in respect of such share, notwithstanding any trust to which such share may then be subject, and whether or not the said Company have had notice of such trusts; and the said Company shall not be bound to see to the application of the money paid upon such receipt. 9. In any action or suit to be brought by the said Company against any shareholder to recover any money due for any call, it shall not be necessary to set forth 7 the special matter, but it shall be sufficient for the said Company to declare that the defendant is the holder of one share or more in the said Company, (stating the number of shares) and is indebted to the said Company in the sum of money to which the calls in arrear shall amount, in respect of one call or more upon one share or more, stating the number and amount of each of such calls whereby an action hath accrued to the said Company by virtue of this Act. 10. On the hearing of such action or suit it shall be sufficient to prove that the defendant at the time of making such call was the holder of one share in the said Company, and that such call was in fact made, and

such notice thereof given as is directed by this Act; and it shall not be necessary to prove the appointment of the Directors who made such call, nor any other matter whatever, and thereupon the said Company shall be entitled to recover what shall be due upon such call, and interest thereon, unless it shall appear either that any such call exceeds the prescribed amount aforesaid, or that due notice of such call was not given. 11. The production of the Register of the Shareholders shall be prima facie evidence of such defendant being a shareholder, and of the number and amount of his shares. 12. No dividend shall be paid in respect of any share, until all calls then due in respect of that and every other share held by the person to whom such dividend may be payable, shall have been paid. 13. The joint property and stock of the said Company shall alone be responsible for the engagements and debts of the said Company. 14. The Company may at any meeting of shareholders set apart any number of shares of the said Company to be denominated as Class A shares, and all other shares may be designated as Class B Shares. 15. The shareholders of the said Company at any meeting may from time to time grant to the holders of Class A shares in such manner as they may think, a preferential interest or dividend not exceeding six per cent per annum, on such terms and conditions as the said Company may impose. 16. The shareholders of the said Company may from time to time subject and charge, in such manner as they think fit, the lands, goods, and other property, income, and profits, present and future, of the said Company, or such parts thereof as the said Company may think fit, to secure the payment or other satisfaction to the holders of Class A shares, of any interest or dividend aforesaid, not exceeding six per cent as aforesaid. 17. No greater dividend than six per cent per annum shall be made to Class A shareholders until Class B shareholders shall have received full six per cent per annum interest or dividend on the amount of stock paid up by them, with interest on arrears of such individuals, if any. 18. The time and place of holding annual or semi-annual and special meetings of the Corporation, as also the number, eligibility, duties, and powers of Directors, officers, and servants, their continuance in office, removal, or disqualification, and the manner of election or appointment, and any other matter connected with the objects and purposes for which the said Royal Gazette - May 9, 1860 9 Cap. LXXIII. An Act to enable the Victoria Coal and Oil Company of the State of New York to hold property in this Province. Section. Section. 1. Company authorized to hold 2. Company to keep an real and personal estate; Office and Agent in limit Hillsborough. Passed 9th April 1860. Whereas Lyman W. Gilbert, Henry Adams, James A. Alexander, William Hickok, and James Blight, have formed themselves, with their associates, successors, and assigns, into a Joint Stock Company, in the State New York, in the United States of America, by the name of 'The Victoria Coal and Oil Company,' for carrying on Mining and Manufacturing operations in this Province, and are desirous of being enabled to hold real and personal property in this Province, as such Company;-Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. The Victoria Coal and Oil Company of the State of New York aforesaid, and their successors, shall and may by that name have full power and lawful right and authority to have, hold, own and enjoy in any way, real estate and lands of all kinds in this Province, whether in fee simple, or by lease, or in any other way; and to have and to hold personal estate of all kinds in this Province, in any way, and to alienate, encumber, lease, sell or deal with the same in any manner; provided always, that the real estate so owned by the said Company shall not at any one time exceed in value the sum of twenty thousand pounds. 2. The said Company shall keep an Office in Hillsborough, in the County of Albert, in this Province, and an Agent there for the transaction of business connected with the Company in this Province, service upon whom of all processes, notices, and other documents, shall be deemed sufficient service upon the said Company."

Semi-Weekly Telegraph - May 3, 1899 Bills passed.... 2. An act to encourage the discovery and development of Oil and Natural Gas within the Province of New Brunswick."

Gazette - Oct. 28, 1899 N.B. Petroleum Company. - A meeting of the New Brunswick Petroleum Co. Limited, was held at the Brunswick on Wednesday at which about fifteen of the stockholders were present. The meeting was held for organization purposes and officers were elected as follows: Senator King, Chipman, president. Hon. A.D. Richard, Dorchester, first vice president. H.C. Read, Sackville, second vice president. M. Lodge, Moncton, secy treasurer. Board of Dorectors - Hon. G.G. King, Hon. A.D. Richard, M. Lodge, H.C. Read, A.P. Barnhill, Ernest Hutchinson and Willard Kitchen. The meeting of directors was adjourned to Monday, 30th inst. at 15 o'clock and the meeting of stockholders was further adjourned to the same date at 16 o'clock to complete organization. - Moncton Times."

St. Croix Courier - May 8, 1958 Unveils New Government Policy. - Buchanan Forecasts Expanded Search To Find N.B. Oil, Gas. - A more vigorous exploration and developmentprogram of New Brunswick's oil and gas resources was forecast in Fredericton last week by Lands and Mines Minister Norman B. Buchanan. In a statement to a legislative committee, before prorogation of the 1958 sitting of the house, Mr. Buchanan outlined modifications to a lease between New Brunswick Oilfields Limited and the provincial government. Mr. Buchanan said the modifications 'should correct some of the disadvantages which formerly obtained and make possible a more vigorous exploration campaign, covering far wider areas of the province than heretofore.' The text of his statement follows: Co-operation. - 'The subject of natural resources potential has engaged the attention of every government in the world during the past few years. The government of New Brunswick for some time has been giving great attention to the problem of increased utilization of our natural resources so that more direct benefit will be secured. 'I am very glad to say that in the course of our investigations and consideration of the problems involved, we have received a very generous measure of c0- operation from the private companies which have leased or have in some other way secured development rights for resources held by the crown. 'Mention has been

made of the possibilities of increased utilization of our forest resources and the matter of mineral resources has received a great deal of attention during the present session. 'Now I am pleased to be able to inform the committee that another phase of natural resource development has been receiving careful thought and reconsideration. Moreover, with the co-operation of the private interests connected with this particular resource, the government, through the department of lands and mines has been able to work out details of a new policy which should prove of great benefit to the economy of the province. 'I refer to the prospects of developing the resource potential of petroleum and natural gas in the province - resources which have produced tremendous wealth for the governments of some of the western provinces. Lease of 1907. - 'The development of petroleum and natural gas resources in New Brunswick is almost entirely based upon a lease which was issued to the New Brunswick Petroleum Company Aug. 16th, 1907. This was the Lease 115 which covered 10,000 square miles (6,400,000 acres) of areas in the southern and central portions of the province. 'The developments which have taken place as a result of this lease pretty well comprise the history of exploratory and industrial utilization in the past 50 years. 'In 1909 active exploration began in the so called Stony Creek field in Albert county.An important natural gas discovery was made which resulted in the introduction of natural gas into the city of Moncton in 1911 and considerable industrial expansion in the Moncton area in the next few years. 'From 1909 until 1940 various companies and agencies operated under the lease for exploration and development purposes. Records indicate that 126 wells were drilled in that period with the deepest going down to 4500 feet. Most of these were in the Stony Creek field. 'From 1909 to 1955, the Stony Creek field has delivered 24,388,500 M cubic feet of gas and 323, 215 barrels of oil so that it has constituted a valuable addition to the local economy in the Moncton area. 'Of late years two explorations of importance have been made through arrangements with the holders of the lease to search for oil in the southern and southeast section of the province. I refer to the drilling carried out by Shell Exploration New Brunswick Limited between 1947 and 1950. These were largely unsuccessful and no development has resulted from them. Drill Wells. - 'In 1954, O.H. Parker, a famous oil operator from the United States, entered into an agreement with New Brunswick Oilfields Limited and applied his special methods to the problem. A number of wells were drilled and one old well reactivated in the course of this attempt to locate oil. 'This brief history of oil and gas exploration in the province is a preface to the announcement which I now wish to make concerning the new policy which has been worked out as a result of co-operation between New Brunswick Oilfields Limited, holders of the lease, and the government of the province. 'Possibly, at this point, it would be well for me to read into the record the outstanding points of Lease 115. They are as follows: Lease 115, N.B. Oilfields Limited. Petroleum and Natural Gas: Royalty, five per cent of wellmouth value. How acquired, license to search first granted, then crown lease. Term, 99 years (or to 2006) and renewable. Work requirement - 'The lessee during each and every year of the said demised term, shall be bound bona fide and to the satisfaction of the lieutenant-governor in council to continue to explore for oil and natural gas throughout the area in said lease demised, and to expend in boring for the same each year of the said demised term a sum not less than twenty thousand dollars, provided always, however, that if at any time the lessee makes it appear to the satisfaction of the lieutenant-governor in council that there is no reasonable prospect of discovering oil or natural gas by so boring, then and in such case the lieutenant-governor in council may on such terms as to the lessee releasing to the crown any portion of said area held under said lease, and the rights of the lessee therein, or otherwise as to the lieutenant-governor in council may seem right in the premises, relieve the lessee from the necessity of thereafter so expending in boring, as aforesaid, the whole or such portion of the said annual sum of twenty thousand dollars, as may seem to the lieutenant-governor in council just and reasonable. Lauds Attitude. - 'As you will note from these details, Lease 115 was to cover 99 years and be renewable. The lease would extend to 2006 A.D. and be renewable under these conditions. 'You will also note that it covered a large acreage and was very comprehensive - only a small part of the acreage has been explored of exploited to any extensive degree and under these conditions it would be difficult to believe that the full potential of our oil and gas resources was being realized. 'May I pay tribute to the management of New Brunswick Oilfields for their intelligent and generous approach to this problem, the difficulties of which they realized as much as the government. I would make it plain that the new policy which has been worked out has come about as a result of co-operation between New Brunswick Oilfields Limited and ourselves. Their management has always been able to meet us in a friendly and business- like way and, throughout, they have shown a conscientious appreciation for the public responsibilities faced by the government. 'Modification of Lease 115 should correct some of the disadvantages which formerly obtained and make possible a more vigorous exploration campaign, covering far wider areas of the province than heretofore. Cites Changes. - 'The important modifications are as follows: 1. The tenure of Lease 115 will be for 21 years from Jan. 1, 1958. The holder of the lease shall have the right to renew such portions of the lease that are capable in the opinion of the lieutenant-governor in council of being operated at a profit of not less than six per centum per annum. 2. The holder of the lease shall relinquish 1,000,000 acres of the leased area within 90 days of reaching an understanding with the government. The areas relinquished shall be according to a grid system determined by the government. 3. The holders of the lease shall relinquish an additional 2,000,000 of the leased area not later than two years from the date mentioned and again the relinquishment shall take place under a grid system determined by the government. 4. The area of Camp Gagetown shall be considered part of Lease 115 for the purposes of 2 and 3. 5. Royalty payable to the crown shall be one half that received by the holders of the lease but shall not in any case be less than five per cent of well mouth value. 'It is felt that these modifications of considerable importance and scope, will be productive of good results in encouraging exploration and development of our oil and gas resources. You will note that 3,000,000 acres - almost half the area

Mines; Oil and Gas - Kings Co.; Geology - General;

Morning News - Nov. 21, 1855 Geology of New Brunswick, &c. - At a recent meeting of the Boston Society of Natural History, held in this city, some interesting reports were submitted, a portion of which related to the Geology of this and the adjoining Province of Nova Scotia. Those who have an interest in the development of the mineral resources of the Provinces, will be gratified to see that we have within our borders a field for investigation, and whichit seems has attracted attention. From the Boston Traveller, which contains an account of the meeting referred to, we learn that a variety of mineral specimens were laid before the society, as the products of this Province. Among these were two very pretty fossil star fishes, which were presented by Robert Foulis, Esq., of this City, a corresponding member of the society. They were obtained from the postpliocene marls near the gas works, and in return the unanimous thanks of the Society were voted to Mr. Foulis for this and several other donations. During the past summer, Dr. C.T. Jackson was employed by C.D. Archibald, Esq., of London, to make Geological explorations in those provinces. In company with John L. Hayes, Esq., of Washington, the Doctor 8 commenced his search at St. John, and traced rock formations hence along the road leading to Petitcodiac. At the meeting referred to, Dr. Jackson gave a brief sketch of the Geology of New Brunswick and Nova Scotia, and described some of the species of rocks found in these Provinces. We condense his remarks. In St. John, he says, ""we found slates and metamorphic limestones, which, from the occurrence of them of a bed of hard sandstone containing a fossil tree, are regarded as belonging to the Devonian group. No molluscs, or indeed any fossils, are found in the limestone, which is made up of a mixture of the blue and grey varieties, highly metamorphosed by heat, and much disturbed in their stratification. Masses of Sienite, consisting of flesh-colored feldspar and hornblende, without much quartz, are observed at Indian Town, and are rocks of igneous origin. All along the Kennebecasis river, are observed red sandstones of the old red or Devonian group, and atSussex Vale we come to the celebrated salt springs, which rise from the saliferous sandstones, and produce by evaporation the finest and most agreeable table salt. In Hillsboro' we find the lower members of thecoal series, so remarkable for the abundance of fossil fishes of the genus Paleoniscus, and for that highly bituminous quality of coal which has been called Albertite. Hills of snow white gypsum, and some extensivebeds of Anhydrite, occur in Hillsboro', and in otherparts of Albert county. Naptha Springs also exist near the shores of the Petitcodiac river, and Petroleum floats on the surface of the waters that arise from them, and is deposited as a soft bitumen among the grass roots, and in the soil, it being left in its thickened and oxidized state by the water, as it periodically rises and falls with the seasons. On reaching the mouth of Chepody Bay we come to Mary's Point, and Grindstone Island, where beautiful buff-colored, and light red sandstones, of the Carboniferous Group, are quarried for building stones, and a blue variety of the same formation which is used for making grindstones is found. The Mary's Point quarries present a scene of activity, owing to the enterprise of Mr. Archibald, who has employed upwards of seventy-five quarrymen, under the directions of Mr. George Lang, in quarrying out the freestone for architectural uses. - Those sandstones are found to be of excellent quality for building purposes, and are now being largely imported into the United States under the Aegis of the reciprocity Treaty between the United States and Great Britain. Mr. Alger has demonstrated the durable nature of this sandstone, before this society, and our observations authorise us in confirming his opinion, that it withstands the action of the frost even in the climate of St. John. The largest amount of the stone is of a yellowish 9 tint, or buff-colored, but there are also beds of lightred, and grey-colored varieties. They belong to the true coal bearing strata, as is proved by the fossil plants clearly impacted between the beds of stone, and thin seams of bituminous coal, occasionally discovered in them. An outline of rock called the ""Squaw's Cap"" presents us with an abundance of fossil trees, and roots, with smooth and striated surfaces. Occasionally we find siliceous nodules in the blue sandstone, which are called ""bulls-eyes"". They injure the grindstones when they occur, and stones containing them are avoided. Grindstone Island is one mile long, and half a mile broad, and is estimated to contain about 140 acres of quarry stone. The average height of the island above highest tides is 60 feet. In obtaining slabs of the blue sandstone for making grindstones, the tides perform valuable services, for the quarryman has only to split out the rock at low water, and fasten it by chains to his flat boat and allow the rising tide to float it, so that he can transport the stone to high water mark, and leave it where he can work upon it at his leisure. The best grindstones are obtained from the strata which are submerged at every tide. The strata all dip down under the Bay of Fundy, at an angle of 38 degrees to the southward, and the trend of the strata is nearly east and west. The extensive quarries are supplied with heavy and massive cranes and a railway, for the removal of the stones to the wharf, where they are put on shipboard. On examining the ""posts"" of the quarry, we found that stones of from one foot to eight feet in thickness, and of any length and width, could be obtained, and that a supply of coloured stones could be procured in abundance. Most of the stones sent from Mary's Point are sold in New York, Philadelphia and Baltimore, no agency having yet been established in Boston. The exploring party next travelled around the head of Cumberland Bay, and reached the Cobequid Mountains, they found rocks of igneous origin, and colored slate, which lay under the grey sandstones of the coal formation. Mr. Dawson describes these slates as belonging to the Devonian order; contiguous to them are extensive deposits of ocherous oxide of iron, with different species of iron ore, and manganese carbonate of lime, known under the name of ""amberite"". Mr. Dawson has given as his opinion that the immense deposits of yellow oxide of iron have resulted from the decomposition of the carbonate of iron in the antherite. These are the Acadian Iron Mines of Londonderry, N.S. It is supposed that a subaqueous eruption has produced the pulverulent peroxide abounding in these mines. There are small veins, bunches and films of black oxide of manganese in these ores of 10 iron, and this renders them more particularly valuable in the production of steel, since it has been discovered that this ore contains 52 38-100 per cent of pure metallic iron, and if the manganese is all reduced and alloyed with the iron, it will amount to 1 53-100 of manganeseism, the proportion which will make the iron into the finest kind of steel. There is just one blast furnace now in operation at the Acadian mines, smelting these ores, and six Catelan forges are also employed. The iron produced is remarkable for toughness and strength - and is sold exclusively to steel makers in Sheffield, Eng. Since the immediate country around is hardwood forest land, an abundance of charcoal fuel can be obtained, and there will soon be other furnaces built near the mines. Having completed the survey of the numerous mines near the Acadian furnaces, the Doctor and his associates next proceeded to Windsor, thence to the Valley of the Annapolis to Nictaux, where they examined the inexhaustible beds of iron ore which are worked by Mr. Archibald, and have been named the Victoria Mines. Geological examinations of these ore beds were first made in the year 1827 by Mr. Francis Alger and Dr. Jackson. These beds are remarkable for having a great profusion of fossil shells, seeming to indicate that these ancient molluscs had a preference for an iron bed rather than one of clay. - The Report indicates that there are Orthocera and several others, as yet unknown or undescribed molluscs, in these ores, and it is difficult to determine their species. They all appear to belong to the Niagara and Clinton Groups of the New York system. One of the most curious phenomena presented at these mines is the magnetic state of some of the ores, while others not far removed are wholly devoid of magnetism. A great number of mines have been opened lately on these ores, and some new beds have been discovered since the original survey was made. There are two beds, which vary in thickness from 6 to 10 feet, and they have been traced 5 miles in length, and probably extend to Bear River. There are several distinct beds beneath the main ones - very compact and magnetic, others are softer and not magnetic ore. The last variety is seen in the red slates of Little River, and the others near Nictau River. It was found impossible to rely on the compass needle in surveying the magnetic ore beds, for the needle was static over them, and was attracted even when quite remote from the ore - the North point invariably pointing towards the iron ore. These mines may be considered to be inexhaustible, and the wood of the country around, though it may supply fuel for many years, is not adequate to smelt more than a small proportion of the ore in view. Hence it is advisable to export much of the ore to the United States, as well as to make charcoal iron for steel on the spot, for exportation to England. 11 This is being done under the new laws of reciprocity in trade with the British Colonies, which will allow of the exportation of Anthracite to Nova Scotia, free of duty; but the iron made in Nova Scotia cannot be brought to the United States without paying duties, and hence it will be sent to England. Anthracite will smelt the Nictau ores with great ease and iron made will be good but not so valuable as charcoal iron. The result of smelting of the ores proves that either white forge or grey foundry pig iron can be made equal in toughness to that from Russia and Sweden. It also makes fine cast steel, as has been proved by trials made of it in Sheffield, Eng. John L. Hayes, Esq., confirmed Dr. Jackson's statement with regard to Nova Scotia iron. He remarked also that iron, manufactured by means of charcoal, was

Codes: E5 / SPRI / IDX_Names: Sussex/ Plumwesweep Salt; Mineral Springs;
1792 - Copied form: The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 42-3 Of Bishop Charles Inglis' visit to Sussex Vale, edited by Dr. W.O. Raymond, we read: "". (August 10, 1792) ... There is on Major Stockton's land a salt spring, saltier than the water of the ocean by one-eighth as is computed. What is curious, a fine spring of fresh water issues out of the ground a few feet from the salt spring. Several other salt springs are found in the neighborhood.""

Novascotian - Sep. 16, 1850 Resources of Nova Scotia. - The London Tablet furnishes the subjoined relative to Nova Scotia ... We have heard that a proposition was made by Dr. Gesner a few years ago, to the then leader of Lord Falkland's government to survey some portions of this province, containing large quantities of mineral resources which through some mistake, we suppose, do notfall under the surveillance of the Mining company. But for some reason or other this suggestion was not complied with. The truth is this Mining Association possessing as it does almost unbounded wealth exercises a corresponding amount of influence and we very much fear that the evils of which the Tablet complains and which we are apparently destined to bear for many years to come, are beyond the reach of those most interested. But we must let the Tablet tell its own story in its own way:- ...... There are many most valuable mines in Nova Scotia and New Brunswick, of metals, coals, plaster, paints, &c., but all of these have long ago been given by George the Third to his hopeful son, the late Duke of York, of anti-Catholic memory. His Royal Highness got over head and ears in debt by gambling and profligacy, 15and made over all his interest in the mines of those regions to his creditors. His creditors are Englishmen, and they lay claim to everything in the shape of stone, or cement, or coals, or metals found beneath the surface of the earth. The consequence is, that iron monopoly binds and benumbs all the resources of this region, like the enchanted maidens which we used to read of in our boy-days, who were held captive in enchanted castles till the knight errand deliverer arrived. Now, lest people may say I talk at the English Government merely for talk's sake I supply two facts, which exhibit the true state of things here. Twenty-seven miles north of Fredericton, in Brunswick, resides a Mr. Marshall, who, some couple ofyears ago, bought and paid for a farm to the agent of the government. He began to cultivate it, and in the course of his labors discovered a coal mine. He opened it, and began to dig the coal, and found it good to burn; soon he began to sell coal, but the Government agent soon snuffed the cent; notice to desist was served on Mr. Marshall; the mine was soon sold to another, with a right, through Mr. Marshall's land, to enter to the mine forever; a forced trespass in perpetuity by order of the Queen.There is a lead mine in the neighborhood, also, amountain of stony substance, of which Spanish brown paint is made - but all these treasures are sealed by the Queen's authority, in behalf of the monopolists, created by former patents, or to be created by patents to come. ..."

St. Croix Courier - Nov. 20, 1902 Some people must still think that there are minerals in Charlotte County. James N. Clarke has applied for a license to search for minerals on land on Dennis Stream, St. Stephen, and B. Dick and Melvin

Simpson want prospecting licenses on land at Mascarene. Probably nobody will oppose them."

Codes: EART / IDX_Names: Earthquakes;
Feb. 5, 1663 (see N.B. Courier of Mar. 19, 1842 for details) Earthquake"

Codes: EART / IDX_Names: Earthquakes;
Feb. 5, 1663 (from List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898) 5:30 p.m., 8 p.m. This earthquake was of considerable violence, and was felt throughout the St. Lawrence Valley, Acadia and New England. (Can. Nat., Oct., 1860)."

Copied from N.B. Courier - Mar. 19, 1842. As tending perhaps to throw some light on this question, and explain not a few of the peculiarities of the rocks of this Province which have yet been accounted for, a literary friend, well versed in the history of this continent, has requested us to bring under Dr. Gesner's notice, an account of the great earthquake, or rather series of earthquakes, which visited this part of North America in 1663, as that great event does not seem, as yet to have attracted his attention. Many notices of this earthquake appear in the works of the early French writers on America, some of which are, no doubt, very much exaggerated; but not very long since, a manuscript was discovered in the library of the Jesuit's College at Quebec, giving a singular and striking description of an event, which appears to have effected very extensive and wonderful changes in the physical features of this part of America. This manuscript is admitted to be of undoubtful authenticity, and from it the following account of the great earthquake is condensed. On the 5th of February, 1663, about half past five o'clock in the evening, a great rushing noise was heard throughout the whole extent of Canada. This noise caused the people to run out of their houses into the streets as if their habitations had been on fire; but instead of flames or smoke, they were surprised to see the walls reeling backwards and forwards, and the stones moving, as if they were detached from each other. The bells sounded by the repeated shocks; the roofs of the buildings bent down, first on one side and then on the other, while the timbers, rafters and planks cracked. Animals fled in every direction, and children ran crying and screaming in the streets; men and women, seized with affright, stood horrorstruck with the dreadful scene before them, unable to move, and not knowing where to fly for refuge from the tottering walls and trembling earth, which threatened every instant to crush them to death, or sink them into a profound and immeasurable abyss. Some threw themselves on their knees in the snow, crossing themselves, and calling on their Saints to relieve them from the dangers with which they were surrounded. Others past the rest of the dreadful night in prayer; for the earthquake ceased not, but continued at short intervals, with a certain undulating motion, resembling the waves of the ocean; and the same qualmish sensations, or sickness at the stomach, was felt during the shocks, as is experienced in a vessel at sea. The violence of the earthquake is described as greatest in the forests, where it appeared as if there was a battle raging between the trees; for not only were their branches destroyed, but even their trunks are said to have been detached from their places, and dashed against each other with inconceivable violence and confusion - so much so that the Indians in their figurative manner of speaking, declared that all the forests were drunk. The war also seemed to be carried on between the mountains, some of which are described as being torn from their beds and thrown upon others, leaving immense chasms in the place from whence they had issued. During this general wreck of nature, the ice, upwards of six feet thick, was rent and thrown up in large pieces, and from the openings in the earth, in many parts, there issued thick clouds of smoke, with fountains of dirt or sand, which spouted up to a considerable height. The springs were either choked up or impregnated with sulphur, while several rivers are alleged to have been totally lost; others were diverted from their course, and their waters were, for a time, totally corrupted. Some of the rivers became yellow, others red, and the great River St. Lawrence appeared entirely white as far down as Tadoussac on the Saguenay. This extraordinary phenomena will astonish those who know the size of that river, and the immense body of water it contains, which must have required an abundance of matter to whiten it. Montreal, at that period, was surrounded by picketing or palisades, and an account is given, from that place, of the manner in which the pickets jumped up, as if they had been dancing; the rolling and heaving of the earth at Montreal is described minutely and forcibly by a person who visited there. An account from Three Rivers states that the first shock there was the most violent, and commenced with a noise resembling thunder. The first shock is said to have lasted half an hour or more, but its greatest force was not more than a quarter of an hour. At Tadoussac, (about one hundred and fifty miles below Quebec) the effect of the earthquake was not less violent than in other places; and such a heavy shower of volcanic ashes fell in the neighborhood, particularly in the River St. Lawrence, that the waters were as violently agitated as during a tempest. Near St. Paul's Bay, (about fifty miles below Quebec) a mountain about a quarter of a league in circumference, situated on the shore of the Saint Lawrence, was precipitated into the river, and became a small island. Lower down the river towards Point Alouettes, an entire forest of remarkable extent, was loosened from the main bank and also slid into the St. Lawrence. But the circumstance which renders this earthquake particularly remarkable, is its duration, it having continued from February to August, almost without intermission! It is true, the shocks were not always equally violent, and the first appears to have been by far the most severe. In the mountains behind Quebec, the thundering noise and trembling motion continued successively for a considerable time. At Tadoussac, the shocks are described as continuing for two or three days at a time, with considerable violence. Sometimes the motion was felt like the pitching of a large vessel and it was this which caused many to have a giddiness in their heads, and qualmishness at their stomachs. At other times the motion was hurried and irregular, with sudden jerks which were extremely violent; but the most common was a slight tremulous motion, with but little noise. A number of French inhabitants and Indians, who were eye-witnesses of the scene, stated that up the river called Trois-Rivieres, the hills which bordered the river on either side, and which were of a great height, were torn from their foundations and plunged into the river, causing it to change its course, and to spread itself over a large tract of land, then recently cleared. With respect to the extent of this earthquake the manuscript states that it was universal throughout the whole of New France, including Acadia or Nova Scotia, and what is now New Brunswick, and that it reached into New England. Its effects at L'Ile Perce and in Gaspe are particularly mentioned, and it is stated that as far as could be ascertained, the earthquake extended more than six hundred miles in length and three hundred in breadth; and that one hundred and eighty thousand square miles of land were convulsed on the same day, and at the same moment. In the course of this violent and extensive convulsion of nature, lakes appeared where none had ever existed before; mountains were overthrown, leaving on their places frightful chasms or level plains; falls and rapids were changed into gentle streams, and gentle streams into falls and rapids; the features of the country were, in many places, so completely altered as scarcely to be recognized by those who had previously seen them.".

Codes: EART / IDX_Names: Earthquakes;
Nov., 1755 (from List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898). Three or four shocks are recorded as having been felt in New England and Nova Scotia (then including New Brunswick). Sir William Dawson states (Can. Nat., October, 1860) that two of these shocks were
N.Y. Post-Boy - No. 1141, p.3, col. 1 [By the Hartford Post] Boston, November 8: We hear from St. John's in the Province of Nova Scotia, that on the 30th of September last, at 12 o'clock at Noon, they had a very severe Shock of an
Sept. 30, 1764 (from List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898) About noon. In the Halifax Gazette (Nova Scotia), December 13, 1764, occurs the following news item: ""We hear from St. John's, in this Province, that on the 30th of September last, about 12 o'clock at noon, that a very severe shock of an earthquake was felt there."".

Aug. 1817 - Copied from: St. Andrews Beacon - Aug. 18, 1904 Old Time Earthquake. - A writer of reminiscences for the St. John Globe says that on the 22nd May, 1817, asevere shock of earthquake was felt. ""By accounts from St. Andrews we are informed the earthquake was very severely felt at that place, the alarm was so great as to occasion the soldiers to leave their barracks, and many inhabitants their dwellings. It was felt all over the Island of Grand Manan."""

May 22, 1817 (from List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898) - 3.31 a.m. - Felt in all parts of New Brunswick. The following account is from the Courier: ""A heavy shock of earthquake was felt in St. John on the 22nd, 31 minutes past three o'clock, a.m. It was preceded by a noise as if a gale of wind sprang up, after which the earth began to shake violently, rumbling as if heavy carriages were passing. The trembling continued 15 seconds. The air was clear, with not a breath of wind. A minute after the shock moanings were heard from the southward. The earthquake was felt at Fredericton, fully as violent as at this place. At St. Andrews the shock was severely felt; the alarm was so great as to occasion the soldiers to leave their barracks. The shock at Fredericton occurred at 3.25 a.m.; tremulous motion lasted 25 seconds; profound calm; atmosphere heavy."" The same journal has also an account of the shock as felt at Grand Manan, which is of interest: ""The earthquake of 22nd May was felt at Grand Manan; occurred just before daybreak, commencing with a loud sound, at the same time a violent shaking of houses. The shaking did not continue, but the sound lasted from 30 to 45 seconds. All agree in describing the motion as violent and the sound very loud. Weather fine and serene; light wind from northward; previous day uncommonly hot. Peter Fisher, in his HIstory of New Brunswick (1825), refers to this shock in the following paragraph: ""New Brunswick appears to be but little liable to the great convulsions of nature, such as earthquakes, hurricanes, tornadoes, etc. There has been but one shock of an earthquake experienced by the present inhabitants since they settled in this country (1.e., 1783-1825). This shock happened on the 22nd May, 1817, at 25 minutes past 3 o'clock in the morning. The duration of the shock was about 45 seconds. It was attended with the usual rumbling noise, without thunder, the weather being serene and pleasant. The appearances, however, usually indicating earthquakes, such as fiery meteors, the uncommon brilliancy of the aurora borealis, etc., had been frequent the winter preceding."" In the journal of Azor Hoyt (manuscript in the possession of Rev. W.O. Raymond, St. John), 1813-1855 (of Lower Norton, Kings Co., N.B., the following entry occurs: ""May 22nd (1817) a shock of an earthquake."" This shock was felt all through the Maritime Provinces."""

May 28, 1817 (in Morning News - Feb. 9, 1855) Shock of an Earthquake. - ... This is not the first earthquake that has visited this City. In 1817 there was one, but not so great as the present. Dr. Boyd, of St. John, writing to his son (the present Dr. Boyd) then studying in London, under the date St. John, May 28th, 1817, says, - ""The shock of an Earthquake was felt here on Thursday morning last at 31 minutes past 3 o'clock - the earth shook violently, and there was a rumbling as if some heavy carriage was passing - the trembling continued about 15 seconds - it was also felt at Fredericton and St.

City Gazette - May 28, 1817 The shock of an Earthquake was felt here on Thursday morning last at 31 minutes past 3 o'clock. It was preceeded a few seconds by a noise, as if a gale of wind had suddenly sprung up, after which the earth began to shake violently, and there was a rumbling as if some heavy carriages were passing. The trembling continued about 15 seconds - The air was perfectly clear, and there was not a breath of wind - On about a minute after the shock, deep moanings were heard for a short time, which apparently came from the Southward. We have heard that the Earthquake was felt at Fredericton about the same time, which was fully as violent as at this place. By accounts from St. Andrews, we are informed the Earthquake was very severely felt at that place - The alarm was so great as to occasion the soldiers to leave their Barracks, and many inhabitants their dwellings. - Courier."

Eastport Sentenil - Dec. 11, 1824 Earthquake. - A severe shock of an Earthquake was felt in this place on Thursday evening last."

Jul. 9, 1824 (from List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898) Severe Shock felt all over the Province. - (Can.Nat., October, 1860)."

Codes: EART / IDX_Names: Earthquakes;
City Gazette - Dec. 12, 1827 Earthquake. - On Saturday night, shortly after ten o'clock, an unusual noise, supposed to be an earthquake, was heard by a number of persons in this City, and its vicinity. To some persons, the sound resembled the hollow roar of a very foul chimney on fire; to others it seemed like the noise of a heavy carriage going hastily over pavement. In about 10 seconds after it commenced, the noise had attained its greatest pitch, and then gradually subsided. The time of its continuance was about one minute. One Family in Portland were so alarmed, as to run out into the street. It is probable we shall hear more of this from other quarters."

2 Novascotian - Dec. 3, 1829 The St. Andrews Herald of the 24th says:- Two slight shocks of an Earthquake were felt here on Tuesday evening last at a little before ten o'clock. They were of very short duration, and appeared to come from the Westward, and passed to the southward."

Weekly Observer - Aug. 28, 1832 A shock of an Earthquake was felt in several parts of Nova Scotia on the morning of Sunday the 12th instant, - at Windsor, Liverpool, Annapolis, Digby, Yarmouth, Shelburne, &c. The plastering of the College at Windsor, it is stated, was cracked; and at Shelburne, the plastering of some of the houses was shaken down. At Brier Island, a writer in the Nova Scotian describes the shock as having been very severe; - he says, ""it lasted the best part of a minute and was so violent that I could not stand still on my feet in the bedroom, but had to seize the bed-post for support. Many rocks on the cliffs of the Island were shaken down."" - A similar shock was experienced in various parts of

Miramichi Gleaner - Dec. 8, 1835 We have been informed by a gentleman who has just arrived from Fredericton, that a smart shock of an Earthquake was felt in the morning of the 30th ult., about fifteen miles up the Renous River."

N.B. Courier - Jul. 23, 1836 and Royal Gazette - Jul. 27, 1836 and Novascotian - Jul. 27, 1836 and Miramichi Gleaner - Aug. 2, 1836 and Novascotian - Aug. 3, 1836Earthquake. - On Wednesday the 6th inst. the shock of an earthquake was experienced in this Province. We have been informed that it was very sensibly felt at Wickham, in Queen's County, – At St. Stephen's, County of Charlotte, it occasioned a heavy rumbling sound, not unlike the distant discharge of artillery. It was also observed at Milltown, in the same county; two gentlemen who were sitting in a house engaged in conversation at about 3 o'clock on that day, had their attention suddenly arrested by a violent concussion resembling the fall of a very heavy substance upon the building in which they were. The raftsmen on the river near the last mentioned place, saw the water much agitated, although it was perfectly calm at the time. The cattle were seen to turn into the woods as if afflicted. We have not learned if this phenomenon has arrested attention in other parts of the Province; if it has, we shall be gratified by having it in our power to lay any additional particulars before the public.–City Gazette."

Weekly Observer - Jul. 26, 1836 Earthquake. - On Wednesday the 6th inst., the shock of an earthequake was experienced in this province. We have been informed that it was very sensibly felt at Wickham, in Queen's county. - At Saint Stephen's, County of Charlotte, it occasioned a heavy rumbling sound, not unlike the distant discharge or artillery. It was also observed at Milltown, in the same county; two gentlemen who were sitting in a house engaged in conversation at about 3 o'clock on that day, had their attention suddenly arrested by a violent concussion resembling the fall of a very heavy substance upon the building in which they were. The raftsmen on the river near the last mentioned place, saw the water much agitated, although it was perfectly calm at the time. The cattle were seen to run into the woods as if afrighted. - We have not learned if this phenomenon has arrested attention in other parts of the Province. - Gazette."

N.B. Courier - Dec. 22, 1838 Earthquake. - We are informed that a small shock of an earthquake was felt on Wednesday evening the 11th instant, about 9 o'clock, in the parishes of Westfield and Greenwich in Kings County."

N.B. Courier - Jan. 5, 1839 Last week we briefly announced the destruction byfire, of the church at Greenwich, King's County, which took place on Monday morning, the 24th December. It appeared, on investigation, that the late earthquake had shaken the building greatly and caused it to spread, thereby affecting the chimney in the roof, from which some sparks had escaped, ignited, and broke out abut ten hours after the fires had been extinguished in the stoves."

Weekly Observer - Feb. 16, 1847 The shock of an earthquake was very sensibly felt at Antigonish, N.S., and its vicinity, at half past 9 o'clock on the evening of the 29th January. Some of the houses shook violently - A few minutes after the shock a splendid Meteor appeared in the Westward, and passed from North to South, exploding about midway between the zenith and the horizon."

Headquarters - Nov. 6, 1850 Earthquake. - On Saturday last, at 11 o'clock p.m., a slight shock of an Earthquake was felt in this City and its neighborhood. The fact of this unusual occurrence in this part of the country rests on the concurrent testimony of so many individuals not likely to be deceived, that we have no difficulty in giving it to the public."

N.B. Reporter - Nov. 8, 1850 A smart Earthquake Shock was felt in Fredericton and its vicinity on the morning of Monday

Morning News - Nov. 11, 1850 and N.B. Courier - Nov. 9, 1850 and Miramichi Gleaner - Nov. 11, 1850 Earthquake.- On Saturday last, at eleven o'clock, p.m., a slight shock of an Earthquake was felt in Fredericton and its neighborhood. The fact of this unusual occurrence in this part of the country rests on the concurrent testimony of so many individuals not likely to be deceived, that we have no difficulty in giving it to the public. - Head Quarters"

St. Andrews Standard - Feb. 5, 1851Earthquake. - On Tuesday last, the 30th ult., the shock of an Earthquake was experienced in this vicinity about half past five o'clock p.m., accompanied by a low, rumbling noise. The shock was so sharp that several persons in and around this neighborhood as far as Chamcook, ran out of their houses, thinking their chimneys were falling. In some dwellings every article moved, and the inmates were alarmed at the rare occurrence. - A friend at Campo Bello, informs us, that the shock was distinctly felt on that Island and in the vicinity of Friar's Head, an opening in the earth an inch in width and extending about half a mile in length was caused by this convulsion of nature. The

Carleton Sentinel - Aug. 14, 1852 Earthquake in Gloucester. - We are indebted to a Correspondent for the following intelligence: ""On Monday night, the 2nd Instant, about 11 o'clock, P.M., a smart shock of an earthquake was felt at this place. The motion of the earth seemed at first a rocking one, and then followed several (perhaps eight or ten) liftings or vibrations of the ground. It was accompanied by a heavy rolling sound, something like distant thunder, but not so sharp, nearly resembling what a heavy waggon with muffled wheels would probably make going over a newly macadamised road. The whole lasted at least five or six minutes. ""Our houses being chiefly low, suffered no damage beyond the loss of a pane or two of glass in a few instances. The Court House being the only brick or very heavy building in the vicinity, shows the greatest marks of suffering. - It had several panes of glass broken, the plaster cracked in many places, and at the southwest corner the main walls were separated nearly half an inch in the upper story."" Our correspondent adds: ""I have traced as yet only 23 miles up the Bay, where the noise was heard, but the disturbance not felt."" We understand that the rumbling noise was distinctly heard in Newcastle, and the vibration on the North-West. We have not heard that the effects of the shock was heard or felt in any other part of this County. - Miramichi Gleaner."

N.B. Courier - Aug. 14, 1852 and Morning News - Aug. 25, 1852Earthquake at the North. - We learn from the Miramichi Gleaner, that the shock of an earthquake, which lasted five or six minutes, was felt in the County of 6 Gloucester about eleven o'clock on the night of the 2d inst. The houses being chiefly low, suffered no damage beyond the loss of a pane or two of glass in a few instances. The court house being the only brick or very heavy building in the vicinity, suffered most. It had several panes of glass broken, the plaster cracked in many places, and at the South-west corner the main walls were separated nearly half an inch in the upper story. The noise was heard upwards of twenty miles further up the Bay than Bathurst, but the disturbance was not felt. The rumbling noise was also heard in Newcastle and the vibration felt on the North-West branch of the Miramichi."

Carleton Sentinel - Aug. 28, 1852 The Recent Earthquake at Bathurst, N.B. - The weather correspondent of the New York Courier & Enquirer, in noticing the fall in the temperature on the day succeeding the earthquake at Bathurst, N.B., on the 2d. inst., and referring to a rise in the temperature noticed by the Grennell Arctic Expedition, which was then north of the magnetic pole on the day succeeding the earthquake which was felt at Fredericton, N.B. on the 9th of November, 1850, comes to the following conclusion:- ""It seems evident from the numerous records of earthquakes and of sudden changes in the temperature of the atmosphere, which we have made for several years, that all earthquakes that take place between latitude 44 and the magnetic pole, heat so much of the atmosphere as may be within the Arctic circle, and refrigerate that which is at the time moving between the convulsed or disturbed districts and the equator. The numerous facts that are met with in our records of natural phenomena, conclusively show that all great and sudden changes of the temperature of the atmosphere are produced by and result from the convulsions of our own planet.""

Carleton Sentinel - Jul. 2, 1853 We were visited yesterday afternoon with a slight shock of an earthquake, which was very sensibly felt here and also on the opposite side of the harbour. The glass was broken out of the houses, and the earth was felt to shake. It appeared to commence at the westward and passing off to the eastward, with a rumbling noise lasting five or seven minutes. - Eastport Medway, June 3."

Weekly Observer - Jun. 14, 1853 Earthquake at Annapolis. - Extract of a letter dated 4th June. - ""We were visited by two or three shocks of an earthquake during yesterday and last night. The first shock, which took place about four o'clock in the afternoon, was so severe as to cause the houses to shake, and the crockeryware on our shelves to rattle. During the night a shock was felt and was accompanied by thunder and lightning and rain."" - B.N. Am. We are informed that equally severe shocks were felt at the same time in Windsor and Liverpool. - Wesleyan."

Novascotian - Feb. 7, 1854 A very perceptible shock of an Earthquake wasfelt by thousands in this city, on Thursday last at 1/4 to 7 A.M. The oscillation was from East to West, attended with a dull rumbling noise like heavy carriages rolling past. The same was felt in Windsor, Pictou, St. John, and even as far as East Boston."

Morning News - Feb. 5, 1855 Earthquakes. - Yesterday the shock of two earthquakes was distinctly perceived in this city - one at about 11 o'clock in the morning, the other about 8 1/2 o'clock in the evening. The shocks were accompanied by quite a loud noise, which was by many mistaken for an avalanche of snow from the roofs of buildings. From various parts of the State we hear of similar shocks within the last few days. - Portland State of Maine, 20th."

Codes: EART / IDX_Names: Earthquakes;
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Feb. 8, 1855 - 6.30 a.m. Felt all over the Province; also in Nova Scotia and in parts of the State of Maine. Moderate. Dr. P.R. Inches has placed in my hands the following note made by him at the time: ""Saint John, February 8th, 1855. This morning at half past six o'clock several shocks of an earthquake were felt here. I was lying in bed at the time, not quite awake, when I was startled by hearing a roaring and rumbling noise as of a chimney on fire, but much louder, followed by a violent shaking of the house and bed. I at once started out of bed to see what was the matter, but could find no cause for the noise. I could not imagine what was causing it unless it was an earthquake. I got into bed and shortly after, I think in about five or six minutes, felt another shock, but so very slight as to be just perceptible and no more. Again a few seconds after this second shock I thought I felt another, but I was not positive. The first shock lasted forty or fifty seconds, the second about the same time. It has, I believe, been felt at Chatham, Fredericton, Dorchester, and in the State of Maine. It appears to have been felt at Dorchester more than anywhere else. Some windows in the house of the Hon. E.B. Chandler of that place were broken."" Speaking of this shock in Acadian Geology, pp. 39-40, Sir Wm. Dawson says: ""Its point of greatest 3 intensity appears to have been at the bend in the Petitcodiac (Moncton). At this place there were several shocks, one of them sufficiently severe to damage a brick building."" In the journal of Azor Hoyt, the following entry occurs: ""February 8th (1855). Three shocks of an earthquake - felt all through the Province."" This is the last entry in the Journal."

Morning News - Feb. 9, 1855 Shock of an Earthquake. - We were visited yesterday morning by what might be termed an earthquake in the real sense of the word, if such a phenomenon can be judged of by the state of our feelings. It happened about a quarter to 7 o'clock, a.m., accompanied by a rumbling noise which lasted for some seconds. The houses shook, some more and some less, according to locality - the vibration may be compared to that which we experience from the blasting of a rock, without hearing a loud report - or to that which we feel when on board of a steamer, from the working of the engine. The general impression among those who heard the noise was that a number of heavy waggons on wheels were passing over a hard road, divested of snow; the windows, stoves, tins, and other metal substances, were all in violent agitation for some seconds. Some thought that their chimneys were on fire from the rumbling noise, and run into the street much alarmed to ascertain if such were the case. Most people were asleep in their beds, and were suddenly awoke, as if they had received a galvanic shock. The sensation was more perceptible and alarming in stone and brick buildings, which shook as if they would fall to pieces. In the Portland Valley, in the vicinity of the Church, the shock was perhaps the greatest. We are informed that children lying in their beds were aroused and jumped up with fright. It was not a local affair, as is generally the case with earthquakes, but was felt in various parts, perhaps all parts of the province, at the same time - also in the neighboring state - as we learn by Telegraph to Reading Room. At Fredericton it was very perceptible - the same at the Bend. At Dorchester it was so severe that windows were broken, and ""a large stone building shook like a leaf."" It was also very severe at Sackville, and at Calais. The shock was very distinctly felt at Halifax, Dartmouth, and Windsor. In Chatham, it was felt severely. In Sussex Vale it lasted two minutes. People walking the streets were brought to a dead halt - they felt the ground quaking under them, and could scarcely stand. This is not the first earthquake that has visited this City. In 1817 there was one, but not so great as the present. Dr. Boyd, of St. John, writing to his son (the present Dr. Boyd) then studying in London, under the date St. John, May 28th, 1817, says, - ""The shock of an Earthquake was felt here on Thursday morning last at 31 minutes past 3 o'clock - the earth shook violently, and there was a rumbling as if some heavy carriage was passing - the trembling continued about 15 seconds - it was also felt at Fredericton and St. Andrews."" So that 38 years ago we had an earthquake; although it was not of such long continuance. That of yesterday morning lasted about 25 seconds, and the shock was universally felt in the City, unless by persons who slept very soundly. An earthquake is thus explained by Webster - ""A shaking, trembling, or concussion of the earth; sometimes a slight tremor; at other times a violent shaking or convulsion; at other times a rocking or heaving of the earth. Earthquakes are usually preceded by a rattling sound in the air, or by a subterranean rumbling noise. Hence the name earthdin, formerly given to an earthquake."""

Carleton Sentinel - Feb. 10, 1855 We are indebted to the politeness of Mr. Nash of the Telegraph Office in this place, for the following telegram - (By Telegraph from St. John). Shock of an Earthquake generally felt throughout the City this morning, at 6 45. Thermometer at 7 o'clock stood 10ø below zero. At Dorchester and the Bend the shock was very sensibly felt. 8th February, 1855. The same was very sensibly felt in this place by a number of individuals of undoubted veracity.

Mr. Henry Dow, formerly a resident in California, where he had frequently experienced shocks of a similar nature, at once pronounced the shock felt on Thursday morning, to be that of an earthquake."

Novascotian - Feb. 14, 1855 A very perceptible shock of an Earthquake was felt by thousands in this city, on Thursday last at 1/4 to 7 A.M. The oscillation was from East to West, attended with a dull rumbling noise like heavy carriages rolling past. The same was felt in Windsor, Pictou, St. John, and even as far as East Boston."

Morning News - Feb. 14, 1855 The Earthquake. - We learn from a private letter from the Bend, that there was a succession of earthquakes experienced there since the 8th. At daylight on the 10th, two days after the great earthquake, there was one ""of sufficient force to awaken a person from a sound sleep."""

Miramichi Gleaner - Feb. 17, 1855 The Earthquake. - The shock was severely felt in Halifax, and Charlottetown, P.E. Island, not in Woodstock. Our Restigouche correspondents make no mention of it."

Codes: EART / IDX_Names: Earthquakes;
Novascotian - Feb. 19, 1855 The Earthquake. - On the 8th inst., was felt simultaneously in New Brunswick, the Northern States, and our own Province. At St. John, says the Courier: ""On Thursday morning at about twenty minutes before seven o'clock, two shocks of Earthquake were felt in this City. The first, which was most distinct, was felt very sensibly; in some houses the noise resembled that made by a large quantity of soot burning violently in a chimney, while the shaking of the buildings caused the tins, stoves and crockery ware to rattle, and in some instances the door bells to ring. The vibration and noise lasted for some seconds, and awoke many who were asleep at the time."" The Fredericton Reporter of the 9th inst. says: ""Yesterday morning at about 20 minutes to seven o'clock, we had a shock, or rather two shocks of Earthquake at Fredericton. As we distinctly heard and felt the whole, we may state, that the noise in the first place, can scarcely bear description, embracing the different varieties of sensation which would be occasioned by heavy grinding, thumping, and rumbling sounds in connection, and then falling off into a series of quicker but fainter repetitions. Each of these shocks or successions might have occupied about three seconds. The vibrations were violent; the movements being all horizontal, and almost lively enough to throw one out of bed. We cannot describe them better than by a comparison with the sudden joltings of a rickety house, from the garret of which a large heavy cask would be precipitated down two or three flights of stairs."" The following communications - one from Truro and the other from Wilmot, will give our readers some idea of the sensations produced in eastern and western sections of our own province. Sir, - A sharp shock of an earthquake was felt in this Village and the neighborhood about a quarter before 7 o'clock this morning. It was first observed by a low rumbling noise about ten seconds. The motion was gradual, closing with a sudden jar - my children who were sleeping up stairs ran down trembling and terror stricken. I have not yet heard how far it has extended but it was felt by persons residing 5 miles from the Village. Communicated. Truro, Feby. 8, 1855 On the morning of Thursday the 8th, inst., a smart shock of an Earthquake was felt in several parts of 6 Annapolis county. The full extent of this subterranean phenomenon has not yet been fully ascertained; but there is no doubt of its having extended from Annapolis town and easterly, through the valley towards Wilmot, along Netaux Plains and Mountain, &c. This is the second shock of the kind which has been felt within these two years, both of which had a striking resemblance in sound, duration and intensity. In certain localities however, that of the 8th, has been more severe, occasioning the shaking of several buildings to such an extent as to cause the breakage of crockery and other materials of a brittle nature. It is sincerely hoped that such visitations, if repeated, will not prove more dangerous in their consequences."

Morning News - Feb. 26, 1855 At Bangor and Waterville, Maine, on Monday morning last, severe shocks of earthquake were experienced."

Miramichi Gleaner - Mar. 3, 1855 Earthquake. - The St. John papers report that another shock of an earthquake was felt at the Bend on Thursday week. On the morning of this day, we were awoke by a loud explosion, which was followed by another at a short time after. Those reports were heard by a number of persons in the town."

Copied back from Daily Telegraph - Oct. 23, 1869 The Earthquake of Feb. 1855. - The only serious shock of an earthquake which St. John has experienced was on the date above mentioned. The weather was intensely cold, on the 6th the thermometer was 20ø below zero; on the 7th, 18ø. The earthquake occurred on Tuesday, Feb. 8, at twenty minutes to seven o'clock a.m. There were two distinct shocks which were felt in all parts of the city, the Courier of the 10th of the month says: ""The first, which was most distinct, was felt very sensibly; in some houses the noise resembled that made by a large quantity of soot burning violently in the chimney, while the shaking of the building caused the tins, stove and crockery ware to rattle, and in some instances the doorbells to ring. The vibration and noise lasted for some seconds, and awoke many who were asleep at the time. We have not heard that any damage was done at the city or neighborhood, although it is said some loose bricks were thrown down the flue from the top of a chimney. In the neighborhood of the Valley church, and in the lower parts of the city and Carleton, the shock is stated to have been more violent than on the higher ground on the 2 eastern side of the harbor. The shock was felt throughout the province, as well as in Nova Scotia and the State of Maine, with more or less violence at some places. It is stated to have lasted two minutes at Sussex Vale, in this Province. At the Bend it was very violent, and at Dorchester it caused a large stone building to ""shake like a leaf.""

It is, perhaps, worthy of remark, that this unusual visitation in this quarter should have followed immediately after the coldest snap of weather, that has been experienced here for the last thirty years, the thermometer on Wednesday morning down to 26ø below zero, and at Miramichi to 35ø.""""

Morning News - Mar. 10, 1858 Earthquakes. - Our citizens were startled on Wednesday by two distinct shocks of an earthquake - one occurring about 1 P.M., and the other, and much the heavier, a few minutes before 2. The shock was so severe as to shake buildings. It was the most sensibly felt in the heart of the city. Even the massive granite building, the custom house, trembled from the shock as the inmates of the building at the time declared. - Portland Advertiser."

S.J. Morning Freeman - Oct. 27, 1859 A shock of an earthquake was felt by many persons a few minutes after 2 o'clock on Wednesday morning. Some thought the noise resembled that of a chimney on fire; others thought it like the noise of many waggons or of a great wind. We have not heard that any damage was done."

Morning News - Oct. 28, 1859 A shock of an earthquake was experienced in St. John on Wednesday morning at an early hour. About 30 miles in the interior it is said the shock was much greater than in the city."

Codes: EART / IDX_Names: Earthquakes;
N.B. Courier - Oct. 29, 1859 On Wednesday morning, about half-past two o'clock a slight shock of an earthquake was felt in this city and neighborhood. A noise, as if a gigantic vehicle heavily laden was driven rapidly along a paved street, startled numbers of our citizens from their slumbers, and induced them to rush to their windows to ascertain the cause of the turmoil. The shock appeared to surge from South to North. The morning was excessively cold, the Thermometer ranging about 20. Ice formed to the thickness of 3/4 of an inch. The atmosphere was still, and the stars shone out brightly From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - October 17, 1860 - 6.25 a.m. - Felt over a large area of Eastern Canada and the New England States. Also felt in this Province. Moderate in New Brunswick, but severe in Quebec and Ontario. The Morning News says: ... [See Morning News of Oct. 19]"

Morning News - Oct. 19, 1860 An Earthquake. - A vibration of the earth, from twenty to thirty seconds in duration, occurred about twenty-five minutes past six o'clock on Wednesday morning, along the line of the Western side of the harbour, causing houses to shake quite perceptibly, and in several instances awakening people from their slumbers. We do not know what distance it extended or whether it was perceived in St. John or not; but parties residing in the vicinity of Negro Town felt it very distinctly, as did persons living near the Asylum, so that it certainly extended some distance."

Morning Freeman - Oct. 20, 1860 An Earthquake. - a vibration of the earth, from twenty to thirty seconds in duration, occurred about twenty five minutes past six o'clock on Wednesday morning, along the line of the Western side of the harbour, causing houses to shake quite perceptibly, and in several instances awakening people from their slumbers. We do not know what distance it extended or whether it was perceived in St. John or not; but parties residing in the vicinity of Negro Town Point felt it very distinctly, as did persons living near the Asylum, so that it certainly extended some distance. - News. The earthquake was felt at Fredericton, Montreal, many places in Canada, and New England."

Miramichi Gleaner - Oct. 20, 1860 A number of persons inform us that a pretty smartshock of an Earthquake was felt in Chatham about half-past six on the morning of Wednesday last. A correspondent in Dalhousie states that a similar phenomenon occurred at that place on Friday week. We understand it was also felt at Bathurst."

Morning News - Oct. 24, 1860 The earthquake was felt at Dalhousie, Bathurst, Chatham, etc."

Carleton Sentinel - Nov. 9, 1861 Calais earthquake ....."

Morning News - Oct. 28, 1861 Earthquake. - A despatch to the Boston papers state that a shock of earthquake was felt at Calais, Me., at 8 a.m., on Wednesday."

S.J. Globe - Jul. 16, 1862 The Empire says that on the morning of Sunday the 29th ult., two slight shocks of an Earthquake were felt in the vicinity of New Castle Creek, Canning, Grand Lake, over a tract a mile in diameter. The first shock was felt at 7 o'clock A.M. and the second at 8 a.m. The shocks were severe enough to shake houses, causing a rattle and noise, as if stoves and chimnies were falling. They were felt distinctly by persons out of doors. They were preceded by a loud report like that of a cannon, which was heard over a tract of country 16 miles in diameter. The Earthquake wave appeared to come from the N.W. It created quite a commotion in the lake, raising a heavy sea."

New Brunswicker - Jul. 17, 1862 and Miramichi Gleaner - Jul. 19, 1862 Earthquake. - On the morning of Sunday the 29th ult., two slight shocks of an Earthquake were felt in the vicinity of Newcastle Creek, Canning, Grand Lake, over a tract a mile in diameter. The first shock was felt at 7 o'clock, a.m., and the second at 8 a.m. The shocks were severe enough to shake houses, causing a rattle and noise, as if stoves or chimnies were falling. They were felt distinctly by persons out of doors. They were preceded by a sharp report like that of a cannon, which was heard over a tract of country 16 miles in diameter. The Earthquake wave appeared to come from the N.W. It created quite a commotion in the lake, raising a heavy

Morning News - Jul. 18, 1862 The shock of an earthquake is said to have been felt at Newcastle Creek, Canning, Grand Lake, Queens County, on Sunday the 29th ult."

Evening Despatch - Apr. 1, 1863 The shock of the earthquake which occurred on the North Shore a few days ago was very distinctly felt in Richibucto. A correspondent of the Gleaner says that he was roused from sleep by the shock about 4 1/2 o'clock, and that ""the house was shaking and the stove in the room made quite a clatter. I thought for a moment that there was a heavy gale of wind blowing, for it sounded like that a short time, and then all was still."""

Codes: EART / IDX_Names: Earthquakes;
Eastport Sentenil - Feb. 25, 1863 Earthquake. - A slight shock of an earthquake was noticed by many of our citizens on Friday night last. The noise resembled that of a heavy wagon moving rapidly over frozen ground. The night was warm and

S.J. Daily News - Jan. 16, 1863 Earthquake in Lower Canada. - A correspondent at St. Andrews, Canada East, informs the Toronto Globe, that a very severe shock of an earthquake was felt there on the night of the 1st. inst., at 12 o'clock. It shook the house terribly, so much so that it was thought some of the bricks were thrown down from the chimney, and the inmates ran down stairs to see if any damage was done. It was from 12 to 15 degrees below zero at the time."

S.J. Daily News - Mar. 3, 1863 Earthquake. - The Eastport Sentinel says that a slight shock of an earthquake was noticed by many of the citizens of that town on the night of Friday, the 20th ult. The noise resembled that a heavy wagon moving rapidly over frozen ground. The night was warm and damp."

Miramichi Gleaner - Mar. 21, 1863 and Philanthropist - Mar. 26, 1863 Earthquake. - A very severe shock of an Earthquake was felt in this quarter about half past four o'clock on the morning of Monday last. We did not feel it ourselves, but during the week we have conversed with a number of persons who did. The shock was preceded by a low, rumbling noise, rapidly increased in volume, terminating with a sound resembling that of rapid discharges of musketry, or of the sharp report of near thunder. A person on the road coming down from the Northwest, informed us that he sensibly felt the shock, and heard distinctly the noise, which he represented was very loud, and that it continued some time, rapidly increasing, and growing louder until the shock came, when it suddenly ceased. We are informed also that the shock was felt in Bathurst. About seven years ago, a similar shock was felt here in the month of February, and during a long period of sharp, frosty weather, similar to that we have experienced ever since the present month set in. - Gleaner."

S.J. Daily News - May. 6, 1863 Earthquake. - another shock of an Earthquake was felt in Richibucto and neighborhood on Monday morning of last week. The Gleaner says, it was quite severe."

Daily Telegraph - May 7, 1863 Earthquake. - A Richibucto correspondent writes us that on Monday last about 8 o'clock, a.m., that town ""was visited by an earthquake which shook everything - even the ice off the trees and houses - and frightened many of our good people who are in no hurry to leave this terrestrial sphere."" This is the second or third shock that has lately been felt in that part of the country."

S. J. Morning Freeman - May 7, 1863 A correspondent of the Gleaner states that there was another earthquake at Richibucto on the morning of April 27th. This was the second shock felt at the same place this year."

St. Croix Courier - Oct. 14, 1865 The shock of an earthquake was experienced here on Saturday afternoon last, between 4 and 5 o'clock."

Daily Morning Telegraph - Aug. 13, 1867 Shock of Earthquake. - Yesterday evening we received the following telegram from Hillsboro: - ""A slight shock of an earthquake was felt here last evening, Sunday, shortly after eleven o'clock, not very unlike the one of 1853."

Halifax Morning Chronicle, Page 2 - Thursday, August 15, 1867 LOCAL & OTHER MATTERS - A slight shock of an earthquake was felt at Hillsborough, Albert County, on Sunday evening last."

St. Croix Courier - Aug. 16, 1867 We understand that an earthquake shock - on a small scale - was felt at Moncton on Sunday. A correspondent of the Telegraph states that a shock was also felt at Sackville. - News."

Daily Telegraph - Dec. 6, 1869 The bottom knocked out of two wells by the late earthquake. - At Rouse Settlement, a short distance from Petitcodiac, two wells have become so leaky that the water has altogether disappeared from them. The leak first began after the quake."

Codes: EART / IDX_Names: Earthquakes;
Morning Freeman - Jan. 19, 1869 Earthquake. - According to the Journal we have had an earthquake in St. John. It says: ""At a quarter past two o'clock on Saturday morning the shock of an earthquake was perceptibly felt by a number of persons in this city who were either awake at the time or aroused by the noise. As these persons live at different points, such as Orange street, Wellington Row, Jaffrey's Hill, the Valley, &c., no local disturbance of any kind could possibly have been mistaken for the sensation described as resembling, to some extent, distant thunder. The noise, which lasted probably three quarters of a minute, was loudest at first, and though it diminished gradually in intensity, it ended (as it began) abruptly. The motion produced was not great, though sufficient at one time to cause a loose-fitting lamp chimney to shake and rattle. It is said by some who heard it that in every respect except intensity it was similar to that which was experienced in the Maritime Provinces about 14 years ago. To some the noise appeared like the falling of great quantities of lumber and the swift passage of a loaded cart over frozen ground. On the nerves of some of the gentle sex it produced

St. Croix Courier - Jan. 21, 1869 An earthquake is reported in the St. John Morning Journal, which must have been very severe, as it caused a loose chimney and a lamp to shake, and stopped a clock belonging to the editor of the Morning News. What a fearful sensation it must have caused!"

Morning Freeman - Jan. 30, 1869 Grand Lake claims the honour and glory of having had an earthquake."
Carleton Sentenil - Nov. 6, 1869 The Earthquake. - The Eastport Sentenil says a small seam, a few feet in length, was opened in the Earth by the earthquake last Friday morning at Waldboro, Maine, causing great alarm to the inhabitants of

Daily Telegraph - Nov. 10, 1869 Time of the Earthquake at St. Andrews. - A correspondent in St. Andrews, in answer to a Fredericton correspondent, writes that he was awake when the earthquake occurred. He rose, lit a match and looked at the clock, and found it was just twenty minutes to six. The shock, according to estimate, lasted fifteen seconds. He states further that ""the motion appeared as if there was an upheaving of the earth, like the motion of the waves of the sea, for the house settled back with a jerk; the direction of the motion was apparently from the North West to the South East."

Morning Freeman - Nov. 11, 1869 The Eastport Sentinel says a small seam a few feet in length, was opened in the earth by the recent earthquake at Waldboro, Maine, causing great alarm to the inhabitants of the village."

N.B. Reporter - Oct. 22, 1869 The Earthquake. - It would be superfluous, probably, to advise our readers of the Earthquake simply as an item of news; the whole province has felt it, and its memory will be preserved as long as the records of New Brunswick, and possibly of the whole American Continent endure. At present it is impossible to judge of its extent, or imagine its consequences at or near the centre of disturbance; we can only speak of it locally. The shock occurred at precisely a quarter to six o'clock this morning, lasting a full half minute. During its continuance it was truly terrifying, the stoutest hearts quailing with sudden terror and alarm; and well they might in the presence of a commotion which they were impotent to stay; and scarcely to comprehend. The shock was preceded by the inevitable rumbling, seeming as though a thousand wagons were hurrying to and from, and then came the quaking, the earth literally trembling to its very centre, while the houses rocked and swayed as though they would every moment tumble into ruins. In their first alarm many persons hurried into the streets, and there the solid ground seemed rending beneath their feet, while the falling of chimnies, and the apparent inevitable devastation of all things, completed the general terror and alarm. The motion was not undulating, it was quick, sharp, vibratory, and was felt vertically as well as laterally, the vibrations occurring about twice every second. To a person waking from sleep it seemed as though the tempest, a thousand fold intensified, were upon us, determined to complete the ruin which its predecessor had undertaken. Again the sensation is described as resembling that which one experiences on board a rail car, when being jolted over a very rough road, and the noise resembling the rush of the locomotive along the rails. The River, we are told, was not visibly affected. Those on board steamers and other crafts imagined they had collided, or come in contact with drifting logs, but the disturbance was not nearly so great as on land. The direction of the earthquake is a matter of dispute. We are strongly of the opinion, however, that it proceeded from the Southwest, passing over in an opposite direction. We have heard of several chimnies having been knocked down, and almost every house has its experience of the shaking. - Some two or three buildings have been slightly cracked, the Cathedral windows have been slightly damaged, and we saw in Mr. Babbitt's Jewelry store that several vases had been thrown down and broken, but it is a strange thing that while the commotion was a hundred fold greater than during the recent storm the damage is comparatively little or nothing. In Woodstock the shock was equally as severe as in Fredericton, but in St. John it appears to have been lighter. Strange to say it is just a year to the day since the great earthquake in California, and now we are told of earthquakes yet to come, in fulfillment of philosophical predictions, as witness the following:- South American Earthquakes..."

Codes: EART / IDX_Names: Earthquakes;
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - October 22, 1869 - 5.48 a.m. - This earthquake was of considerable violence, and was felt all through the Maritime Provinces, St. Lawrence Valley and the New England States. The reports published in our city papers describe it as the most violent shock ever felt here. It was preceded by a rumbling rushing noise like the noise of distant thunder, and then came the vibrations, or series of them, which seemed to pass away in the distance as though a wave

like motion had been imparted to the crust of the earth. These vibrations appeared to be travelling nearly east and wet. Houses were shaken, dishes rattled, and bells rang, and in some cases flower pots, etc., were rolled over. The shock lasted about 15 seconds. The papers of that date (October 25th, 1869) state that the waters of lakes and streams were discoloured by the shock, and it is noticed in particular that the water of the stream at Penobsquis, which supplied the paper mill at that place, turned chalky and had not regained its clearness on the following day. It is worthy of remark that at Fredericton, in Mr, Babbit's shop, the clocks facing northwest were stopped, while those at right angles to that direction were not affected. W. Watson Allen has given me the following note about this shock; ""At Derby (Miramichi), at the Mill Pond, known as Wilson's Mills, a spring on the west bank of the pond, before the earthquake, boiled out of the ground, rising to a height of about a foot. After the earthquake, the foundation part of the spring disappeared, although the spring itself is still there, but diminished. Mr. William Wilson, who had lived there many years, always claimed that the pond had increased in volume of water to a large extent. ""At the forks (the confluence of Cain's River and S.W. Miramichi), Mr. Jacob Layton, who had resided there continuously for a number of years, states that in the bed of the main Miramichi River, near the shore where the water was quite shallow, and on a spot of ground that he knew very well, after the earthquake there appeared a spring of boiling water, sufficient to make a commotion upon the surface. There never had been any indications of it before the earthquake.""""

Morning Freeman - Oct. 23, 1869 An Earthquake. - We hoped that we were done with great sensations in New Brunswick, for the present season at least, but we have just experienced another, not the least shocking or alarming. About ten minutes before six o'clock on Friday morning an Earthquake shook St. John in the most violent and alarming way for several seconds. First a loud rumbling noise was heard, which many supposed to be thunder, and then the land and all thereon shook and quaked in the most dreadful manner for at least some twenty or thirty seconds. It was not an upheaving or vibration, and not exactly an oscillation. It was rather a very violent, rapid shaking, which rang all the bells in some of the hotels and houses, threw down in some instances flower pots, ornaments, &c., moved some bedsteads from their positions, and almost threw down some of the few persons then out of bed. Those who felt the shaking and watched its effects expected to see chimnies and even brick houses toppling over and falling to ruins, and at first could hardly conceive why they did not. Perhaps it was that the shaking was so rapid that erections were not at any time moved far from the perpendicular. The violence of the shock was quite sufficient to throw down any building. We heard that the foundation of at least one frame house sank considerably. - It is said that the motion was scarcely felt in vessels floating in the harbour. No unusual commotion of the sea was observed, nor was there any such great wave as followed the earthquakes in St. Thomas and on the coast of South America. Those who remember the earthquake of 1855 all agree that this was very much more violent. The accounts we have heard from several persons who were awake before the shock was first felt agree that the motion seemed to begin in the Northwest and pass to the Southeast. Several persons say that one or more lighter shocks were felt during the night. Some say they felt a shock at one o'clock; others say there was a perceptible shaking about four o'clock. The following telegrams were published by last evening's Globe:- Fredericton, Oct. 22. - Violent shock here. It was felt by everyone. Nothing like it ever felt up this way. In some places bricks were started and fell to the sidewalks. Woodstock, Oct. 22. - Shock very severe here. It knocked down a chimney, broke glass, etc. St. George, Oct. 22. - Severe shock of earthquake felt here early this morning. One minute's duration. No damage done. Halifax, Oct. 22. - Slight earthquake felt here this morning about 20 minutes to 6. Vibrations felt for about twenty seconds. No damage done. Reports from Kentville, Wolfville and Annapolis corresponds with above. The shock was slight at Portland, Me., and at Boston, it does not seem to have been observed at all."

Codes: EART / IDX_Names: Earthquakes;

S.J. Daily News - Oct. 23, 1869 The Earthquake. - Although of late our people have received so many shocks, by reason of the exciting occurrences which have transpired in our midst, yet they had not become sufficiently inured to them as to be unmoved by that which visited us yesterday morning. Indeed the shaking up of things generally by the earthquake was sufficient to make timid people, at least, quake also. The shock in St. John was first noticed at 15 minutes to six o'clock, when a low, heavy rumbling noise was heard, like thunder muttering in the distance. This noise increased in power till the shock itself was experienced, which was of a sufficiently severe nature to impress one with the very insubstantial character of everything on the surface. The vibrations were felt for something like 15 seconds,- magnified in the minds of the fearful to two or three minutes - and the sounds died away again in the distance with the same dismal rumbling. From the first distinguished sound till it had passed away, was about 20 seconds. The course of the shock appeared by the sound to come from the west and pass away toward the east. It was felt over an extensive surface, no part of the Lower Provinces, so far as we can learn, having escaped. In some positions the vibration was felt to be much more severe than in others, but no material damage was sustained that we have heard of. Some people who had risen early, on hearing the noise and finding their houses shaking, rushed forth into the streets, fearing that they might be buried in the ruins. People who sleep late, but lightly, leaped from their beds and rushed to windows to see if there were any buildings falling. Others, who are accustomed to prolong their slumber, and whose nerves are not affected very easily, although conscious that there was some kind of a commotion going on, only gave a vicious grunt and an ejaculatory left handed blessing upon that waggon, which by its jolting along the street, had for the moment disturbed the current of their dreams. Some people were much affected, the sudden motion of their houses causing a sickening sensation much resembling the premonitory symptoms of sea sickness. Some persons say that they noticed a slight shock at about one o'clock, a.m., yesterday morning. We do not know how the statement may be sustained by actual fact. The old horse pistols and cutlasses hanging on the walls of the Post Office swayed and clattered against each other and the wall, giving anyone in the passage way the idea that a lively contest was going on. A gentleman who was coming down King street declares that he saw the buildings in motion and for a moment expected to see them totter and fall. A policeman who was on duty describes the noise as more nearly resembling the fall of a large quantity of snow from the roofs of the houses than any thing else. ABOUT LOWER COVE the shaking was much felt, and the noise was so loud that some individuals thought for a moment that a vessel with powder on board had been blown up, whilst others thought it proceeded from some explosion at the gas house, and were not satisfied until they had gone to see that the gasometers, &c., were still in their usual places. One gentleman in that part of the city assured us that his house rocked to such an extent that he thought the walls must certainly fall in upon him, and his little girl was compelled to lay hold of the head of the bed to save herself from falling out upon the floor. There was no perceptible change IN THE HARBOR, no tidal wave coming in, or receding of waters being observed. The tide was low at the time, and only upon vessels aground was the shock very strongly marked. The people residing in the HIGHER PARTS OF THE CITY, such as the vicinity of the Centenary Church, on the ridge from the Institute to the Hospital, and upon the hills beyond, were considerably shaken up. We have heard of dishes upon dressers being overthrown, of bedroom sink covers left standing open falling, although set back at a considerable angle, of fire irons standing by fire places tumbling over, of stove covers falling off, of bells ringing, of flower pots being overthrown, and doors and windows rattling as though they would come down. In one or two places we believe bricks fell from chimneys, but we presume they must have been shaken loose considerably by the wind during the great storm early in the month, or they would have held firm. The EFFECT UPON ANIMALS was noted in some instances as indicating that they suffered an equal fear of danger to that which such an occurrence is apt to produce in man. Dogs at the first rumbling sound rose defiantly, but finding the earth tottering beneath their feet sank back cowed and frightened, uttering a low, mournful wail. Cows that were being milked knelt down and exhibited marked symptoms of fear. Horses hauling loads upon the streets in some cases stopped and stretched out their feet as though bracing themselves to withstand the shock. THE ATMOSPHERIC PHENOMENA was not extraordinary when the character of the shock is considered. The sun had not risen, but there was a lurid glare in the East such as is not uncommon early in the mornings of hot sultry days in summer. Over head the clouds hung in dark masses threatening momentarily to discharge their contents, and shortly after the shock drops began to fall. There appeared to be very little wind, and for a few moments even that was hushed, a perfect calm and stillness in nature being perceptible the moment the noise ceased. Neither the barometer nor the thermometer exhibited any change. On ALONG THE LINE OF RAILWAY the earthquake was distinctly felt, the sounds appearing to roll along the hills of Norton like the dying wave of a volley of artillery. Many people at Hampton, Sussex, Salisbury, Moncton and Shediac sought safety in the open air to find on getting out doors that the danger had passed. THE MANAWAGONISH ROAD the shock was very marked, the movement of the earth and buildings being quite distinguishable. Loose articles were shaken and light moveables changed their position. A family named McKenzie residing on the NEREPIS 10 ROAD became so frightened at the excessive swaying of the walls of their house that they all left their beds and sought safety out doors. AT FREDERICTON the shock was severe, probably every grown person who was up, rushed out into the streets, where they momentarily looked for the tumbling of houses to follow the bricks of chimneys which came rattling down from the roofs. And people who had not risen sprang from their beds in the utmost alarm. The ground is declared by some to have had an undulating movement of at least a foot, which was not only felt but clearly to be seen. The vibration was almost as great on the steamboats as upon the land. Our special telegram received last evening says:- ""The earthquake here was very severe, it commenced at 5.45 a.m., and lasted thirty seconds. The whole city was aroused and alarmed. Houses rocked in a fearful manner, and every one thought the city would be laid in ruins. Some chimnies were blown down, but the damage was very trifling."" The further North we go the heavier the shocks appear to have been. FROM GAGETOWN (????) the .....????.... was exacted as at Fredericton and other places, people .?.. from their .?... in alarm, and some sustaining a great ..?.. and physical shaking, fearing the ..?.. had arrived. Chimnies fell, and inside ..?.. articles were moved considerably. FROM ST. GEORGE we learn that the shock lasted nearly a minute and was accompanied with similar vibration and shaking to that which was felt in St. John. A special telegram to this paper from ST. ANDREWS says:- "" About 20 minutes to 6 o'clock this morning a heavy rumbling sound was heard, which was immediately followed by a violent vibration of the earth, causing the houses to shake, rattling dishes, &c., and frightening many people. The shock lasted twenty seconds. The undulating motion was from North-west to South-east. The shock was very heavy up the river St. Croix. At Calais stoves were overthrown and furniture upset. It is said the shock was still more violent further North."" Our special telegram from HALIFAX says:- ""A slight shock of earthquake was felt in this city this morning at 6 o'clock. There was no damage done, although the shock at Mount Hope Asylum, in Dartmouth, was most severe, causing a good deal of uneasy feeling."" Similar reports came over the wires yesterday from various parts of Nova Scotia, showing that the shock was generally felt from Yarmouth to Pictou. Passengers ON THE AMERICAN BOAT report that the shock was not felt by them at all, yet it was quite as severe AT EASTPORT, in this city, some chimnies falling down and the people being somewhat alarmed. AT PORTLAND the rumbling sound was quite faint and the shock, although distinct and positive was not sufficiently so as to cause alarm. Indeed many persons were not aware that an earthquake shock had been felt, until they were compelled to believe the accumulated testimony forced upon them. AN EXACT STATEMENT. A gentleman, who is thoroughly acquainted with earthquakes and their accompanying phenomena, states that the sound wave reached St. John at 5.43 a.m., followed at 5.46 1-2 by a moderate vibrating of the earth, which lasted nearly four seconds; a lapse then occurred of three seconds, which was immediately succeeded by a much more positive and sharply defined shock, lasting six and a quarter seconds, the earth wave travelling due S.S.E., and the vibrations following each other about each second. The whole period over which the earthquake was felt in this city was therefore 18 1-4 seconds. The length of the period of vibration was, however, considerably affected by the position, for whilst persons whose houses are built on rock were not conscious of the shock lasting over twelve or fifteen seconds, others whose residences are situated in low lands, on earth or clay soil felt the undulations much longer, some even being confident, from the distances over which they moved, that they felt the vibrations for nearly a minute. It was, indeed, in the low-lying portions of the city that the shock was most severely felt. Probably the most remarkable feature of this, the

Colonial Farmer. - Oct. 23, 1869 The earthquake of yesterday appears to have been felt throughout the Maritime Provinces; but we cannot learn where the great centre of agitation was. At Boston the shock was not felt at all; at Portland it was very slight; at St. John it was severe; at Fredericton quite violent, and the same at Woodstock. Throughout Nova Scotia the shock was but slight. The direction in which the disturbing force moved is a matter of dispute, and in connection with the subject it is worthy of remark that, in Mr. Babbit's establishment the clocks facing north-west were stopped; while those at right angles to that direction were unaffected. The motion of the earth appears to have been perpendicular without any lateral displacement, which accounts for the damage done. One of the employees on the railway, who was engaged at the time in oiling the locomotive, states that the ground raised about six inches, and the locomotive moved forward upon the rails. A gentlemen from Keswick who was driving on the highway road at the time, says he could distinctly observe the motion of the earth, and estimates it to have raised about six inches also. Both of these estimations may be beyond the reality; but they show that the shock was more violent than any ever experienced before. The duration of the shock was probably no more than fifteen seconds, although some put it as high as a minute and a half. The damage done was very slight. The accidents connected with the earthquake that have reached us are as follows:- In St. John, flower-pots were over-turned, dishes and lamps broken, and the door-bells rang. In this city every house was shaken from the roof to the foundation; chimneys were thrown off the residence of John Pickard and S. Estey, Esqrs.; several houses were slightly cracked; the windows of the Cathedral slightly injured; a number of vases in Babbit's Jewellry Store, broken; clocks in various parts of the city stopped, and the fire alarm in the Methodist Church sounded. In Woodstock some little damage was done, a chimney being thrown down and several windows broken. Upon the water the shock could be distinctly felt."

Carleton Sentinel - Oct 23, 1869 Earthquake ..."

Carleton Sentenil - Oct. 23, 1869 A very heavy shock of earthquake was felt here about quarter before six o'clock this Friday morning. Its power was very sensibly felt in the straining and shaking of buildings. The weather previous to the shock was cold, but immediately afterward it moderated and a warm rain fell."

Codes: EART / IDX_Names: Earthquakes;
Daily Telegraph - Oct. 23, 1869 The Earthquake. - In subjoined notices of this startling occurrence, are derived from our reporters' note-books and from despatches and correspondents, which embrace quite a number of different points. It will be seen that there are discrepancies as to the length of the shock, the moment when it commenced, the course of the vibration and other matters. It is natural that it should be so under the circumstances, the observations being hastily made, and the observers, just aroused out of their sleep, not particularly calm or collected. Further information may enable us to harmonize the different statements. The City. - ""Did you hear the earthquake?"" was the salutation heard on every street and at every corner yesterday morning. The answer was almost invariably in the affirmative. Then followed the comparison of notes, comparisons of the shock with that of 1855 and other kindred topics. First Impressions. - Various persons in the city were differently impressed. Near the gas works people first thought the chimney had fallen or that an explosion of gas had taken place. Near Reid's Point it was supposed that the powder removed from the fortification in Carleton and placed on board a vessel lying in the harbor, had exploded. One man in the Park Hotel, the upper sash of the window of whose room fell as far as the pulleys would admit of, thought the end of the building was going down. A very general first impression was that the chimney of the house falling or that it was a violent crash of thunder. Park Hotel. - The sensation produced at the Park Hotel was very lively, especially in the uppermost stories of the house. The wave or tremor seemed to proceed from a southeasterly direction and pushed on towards the northwest. It was of sufficient intensity there to start most of the inmates, not from their sleep only, but from their beds as well. Some ran frantic from their rooms into the hall and thence into the rooms of others, loudly calling out to know what was the matter. One, who found himself standing in the middle of the floor, wished to know where it struck, thinking it was a violent peal of thunder. Another, after his first sensation had passed away (which was that an explosion of some kind had taken place in the store beneath) lit the gas, looked hastily at his watch, and then with as little delay as possible went to consult the barometer, thermometer, etc. A third ran wildly about from room to room to find out what had produced such a frightful noise and motion; but a well known Western Extension Railway contractor, being possessed of a quiet peaceful conscience, slept calmly through it all. The Proprietor made haste to the street to examine the outside walls of the building, and soon found they were not injured. All, at length, agreed that though they had experienced an unpleasant shock, they were not materially hurt, and that only their imagination, suddenly aroused from peaceful slumber, had supplied them such accompaniments as showers of falling bricks and a shapeless mass of ruins where but moment before stood the noble ""Park"". Near the Gas Works numbers of people looked out in expectation of seeing that the Gas Chimney had fallen. The horse driven by Mr. Gilmour, (who hauls away the coke), an instant before the shock became marked, stopped suddenly in the street and though three times bidden to go on, as often refused to move. Mr. Brittain describes the motion as violent at his place, and chiefly vertical. His first sensation was that the Fenians had come, but he soon felt convinced that it was

an earthquake. He went hastily to the window, and there at the very close of the vibrations saw, distinctly, two flashes of light - similar to sheet lightning but unaccompanied with any report like thunder. He asserts also that between two and three o'clock he heard a rustling noise accompanied by the gentle tolling of a bell. This he supposed was an alarm made to test the Volunteers - whether they would really turn out or not in case of danger. Mr. Seth R. Foster's residence, on Union St., near Charlotte, (the building is the property of Dr. Piddler) was considerably injured. The front is built of wood and rests on an earth foundation; the rear is of brick and on a rock foundation. It seems that the rock support of the wall of the rear extension was greatly disturbed by the shock and has sunk about a foot, leaving the wall hanging, unsupported, for a distance of five or six feet. The movement here was so violent as to throw down a quantity of masonry, break stones several inches thick, and crack a brick wall. The damage is so serious that Mr. Foster has called on his landlord to repair. In Mr. D.S. Kerr's House, several windows had panes of glass broken. In fact, in the bed-room of one young gentleman of the house, five windows had their glass more or less injured. A gentleman who lives further down, - in Lower Cove, - states that when he was awakened by the shock he fancied he was in a railway train ""crossing the Hammond River Bridge, near Alden's!"" In Mr. Hilyard's Saw Mill, Portland, which was working during the night, Mr. Hilyard, Jr., who was in charge, felt that the effect of the shock on the machine was such as to justify them in stopping operations. A ship on the blocks in Mr. Hilyard's Dry Dock trembled like a leaf under the influence of the movement. It was felt, too, at Mr. Hilyard's residence on Douglas road, where the sound resembled that made by a very heavy waggon on the street. At the Waverley House. - The building trembled, and there appeared to be a noise like that made by carts on the street in the day time. Almost all the guests were awakened, and Bull's Run was quite lively in appearance with the ""Regulars"" flitting about in undress uniform, headed by Col. Shives, who wore a turban. Mr. Henry Jack's house, on the south side of Queen Square, was so violently shaken that the wall and the cornice in the upper hall were cracked, producing a report like that of the firing of a pistol. At Stubb's Hotel, a bell, hanging in the upper hall, was observed ringing for some seconds. The shock there did not seem so terrifying as in some other parts of the City. In a house on Charlotte street, a pitcher standing in a wash basin was upset, and in some other places dishes and flower pots fell to the floor. At the Provincial Penitentiary the effect was about the same as elsewhere. Prisoners felt it throughout the cells, more especially in the upper stories; the stoves and windows rattled as if in a gale of wind. At the General Public Hospital. - Patients were all alarmed, and the shock was felt all over the building. Some of the patients were quite frightened. Women on the Streets. - On Brittain street a number of women rushed out upon the street, fearing the houses would fall down upon them. In Carleton, Portland and Indiantown, the sensations were similar to those experienced on the East side of the city and other parts of the suburbs. A portion of the chimney of Mr. Henry Hassen's house, near the battery, was thrown down. In at the Lunatic Asylum. - The shock was felt by Dr. Waddell, the Keepers, and most of the inmates, about 15 minutes to six o'clock. The whole building vibrated, the movement lasting less than half a minute. No damage whatever was done. Dr. Waddell was of opinion that the wave was from east to west, but another intelligent gentleman thought it was from south to north. The shipping in port the shock was very sensibly felt. One of the crew of the Lampedo jumped out of his berth, thinking the vessel was adrift. On a small American schooner the Captain concluded he had struck Navy Island, took soundings forthwith, and found ""all right"". At Rothesay. - A gentleman from Rothesay informs us that he was standing at a window of his residence looking out towards the railway station about ten minutes to six, when he felt the whole building rocked and shaken; and outside everything, to his view, appeared to be in motion. At Anagance. - A correspondent of the Daily Telegraph and Journal, writing from Anagance yesterday morning, says:- ""A little before six this morning I was roused from slumber by shocks of an earthquake which must have been felt throughout a considerable extent of country. The oscillations were in equal times and in rapid succession, at the rate of, perhaps, three per second, and lasting about half a minute, causing the whole building to shake violently and the windows to rattle. The French name tremblement de terre, gives the precise idea of my impressions of the occasion."" At Squire Dennison's, Passakeag, Kings County, the vibration was so great that it threw the doors of the house open. Shediac. - A gentleman from Shediac, who called on us yesterday, corroborates the general tenor of our Sackville despatch. The shocks, following each other rapidly, produced considerable consternation there. At St. Andrews the shock took place about 5.20. The motion was a trembling one, shaking windows, crockery, stores, &c., and moving many articles of household furniture. At Eastport the shock was of the same nature, and at St. Stephen the motion was about the same in its nature as at St. John. Everything that could rattle went at it with a will. In Calais there was the same shaking, but no damage has been done on either side of the river, so far as we can learn. Woodstock. - The correspondent of the Telegraph and Journal at Woodstock yesterday sent us the following over the wires:- The shock of the earthquake commenced at 5.45 a.m. Some say there were two shocks; the first one 5 brief, the other succeeding it after a moment's pause. The shock was severe, much more so than any heretofore felt here. It shook buildings, rattling windows savagely, waking almost every sleeper and rocking the remainder in their beds. We hear that several chimneys were dislodged. It lasted fully a minute, and was accompanied by a low, rumbling sound, like the roar of a cataract or of a number of heavily laden waggons. No damage done that we have heard of. The air was very black and thick. Fredericton. - A Special to the Daily Telegraph and Journal telegraphs and writes as follows: ""At 5.45 this (Friday) morning a violent shock of earthquake, preceeded by a rumbling sound, was felt here. It lasted about 35 seconds, causing general consternation among our population, most of whom were in bed at the time. The wall of Edgecomb's large brick building, on Queen street, cracked open, and in several houses throughout town articles were thrown down, but no serious damage was done. There was a dead calm at the time of the shock."" A Frederictonian who came down yesterday reports that the shock was very severe. It threw down the top bricks from the chimney of Mr. John Hodge's house near Scott's mill, and, in a puncheon, sitting on the ground, and partly filled with water, waves were observed to rise a few inches up the sides. The shock was distinctly felt on board the David Weston and other steamers lying at the wharf. Several women and others were so terrified that they ran hastily out into the street, some crying and others wringing their hands and praying. Additional from Fredericton. - A special correspondent writes: There was a severe earthquake here this morning at 5.45. Its duration was from 50 to 60 seconds, and commencing with a a rumbling sound it developed itself in a succession of severe shocks of which the first appeared to be the worst. Its effect was startling enough to the unaccustomed ears of the people here. Houses shook as if grasped by some giant hand and violently rocked and tossed with a quick, nervous motion. For some seconds I came to the conclusion that mine was about to leave its foundation altogether and expected to see it going into the street. While it lasted it was sufficiently startling to make most people cry ""hold, enough"", and declines any further experience of earthquakes. - As most of the population were asleep when it began, the fright was proportionally greater. The great gale at St. Thomas two years ago was followed by an earthquake, and we, it seems, have been partakers of the same experience. Is there any natural connexion between them? As to its effects, I have not heard of any more serious than the bringing down of a good deal of plaster and bricks, but people's nerves suffered a good deal while it lasted, and you may depend there were a good many scared people in Fredericton for about a minute this morning. 6 Along the river the earthquake was generally felt, as stated by parties who came down yesterday. A special correspondent of the Daily Telegraph and Journal says: ""There was a heavy shock of Earthquake here at 5.45 this morning. It lasted one minute, accompanied by heavy rumbling."" Felt in all the northern towns - not felt at Quebec or Montreal. The Sackville Telegraph office furnishes, at our request the following interesting information:- ""Very severe shock felt here at 5.45 this morning. Houses trembled, dishes, stoves, and doors rattled. There was no shock felt in Quebec or Montreal as far as we can learn. Every North Shore town between here and Campbellton seems to have felt it about the same time and as severe. The duration was from thirty to forty seconds. In Nova Scotia it was about same as above. Cannot hear from P.E. Island."" Newcastle. - Our correspondent telegraphs:- Severe shock of an earthquake occurred about 6 a.m.; the heaviest felt here, greatly startling the inhabitants. The earth rolled considerably, which shook and swayed buildings, effusing timbers to crack. The shock lasted about a minute; apparently from south to southeasterly direction. The river was visibly disturbed. No damage beyond capsizing a chimney. - Some parties say strange noises were heard in the air before shock commenced; the weather calm and mild. From Dalhousie. - A special telegram to the Daily Telegraph and Journal states that the shock was felt there, also, the time occupied and other details agreeing with those experienced here. Pembroke, Me., there was quite a severe oscillating motion of the earth, more especially on the higher ground. One chimney is reported to have fallen. On board the Steamer New England, which arrived last evening, the shock was not perceived at all. [From our weather reporter]. - This Weeks Weather. - There have been no unusual meteorologic phenomenon, either in temperature, moisture or atmospheric disturbance within the past few days, as will be seen by the following notes:- ""During the heavy rain of Sunday the barometer was nearly 6/10 of an inch below, the mean. It rose rapidly until Monday night, and since then has stood near the average. Wednesday was the coldest of the season, and Thursday morning promised similarly to its predecessor, but the mercury kept rising until 10 p.m., when it stood 14ø higher than in the morning. The mean heat of the day, however, was 2ø below the average for the month of October. At 5.45 on Friday morning the barometer stood a few hundreds of an inch below the average and the thermometer was the same as on the previous night - 3ø above the mean. A low rumbling noise was first heard, apparently toward the eastward. It increased in volume, until the ground shook, and houses rocked violently, lasting probably about half a minute. The wind was south, in long gusty swells; and the sky was covered with dark wavy rain clouds. It commenced to rain at a quarter past eight. The Earthquake of Feb. 1855. - The only serious shock of an earthquake which St. John has experienced was on the date above mentioned. The weather was intensely cold, on the 6th the thermometer was 20ø below zero; on the 7th, 18ø. The earthquake occurred on Tuesday, Feb. 8, at twenty minutes to seven o'clock a.m. There were two distinct shocks which were felt in all parts of the city, the Courier of the 10th of the month says: ""The first, which was most distinct, was felt very sensibly; in some houses the noise resembled that made by a large quantity of soot burning violently in the chimney, while the shaking of the building caused the tins, stove and crockery ware to rattle, and in some instances the doorbells to ring. The vibration and noise lasted for some seconds, and awoke many who were asleep at the time. We have not heard that any damage was done at the city or neighborhood, although it is said some loose bricks were thrown down the flue from the top of a chimney. In the neighborhood of the Valley church, and in the lower parts of the city and Carleton, the shock is stated to have been more violent than on the higher ground on the eastern side of the harbor. The Daily Telegraph - Oct. 23, 1869 The Earthquake. - We need scarcely inform any of our readers in town or country that a very smart shock of an earthquake was experienced in this city, and throughout the Province and elsewhere yesterday morning. It occurred at about 16 minutes to six o'clock, and lasted fifteen or twenty seconds. First a rumbling noise was heard as of distant thunder; to some it appeared like the sound of a heavy waggon passing over a bridge. Then followed the vibration, the direction of which is very differently stated by different persons, and the effect of which was to shake very sensibly all houses and buildings of wood, brick or stone, causing a general rattling of light and moveable articles of various kinds, bringing down pictures from mantel pieces, breaking a few panes of glass here and there, ringing hotel and other bells, and upsetting some old chimnies and other loose materials. Most persons, young and old, experienced a very decided sensation, more decided than agreeable in some cases. In the first place it awoke nearly all the citizens of St. John almost at the same identical second. In the next place it produced a very lively impression on every mind, the predominating feeling being that of fear, mingled with astonishment, or a slight degree of bewilderment in some cases, and a very earnest hope that what was only the work of less than half a minute might soon pass away, never to return. The effect was decidedly solemnizing. It suggested ... general ..."

Daily Telegraph - Oct. 25, 1869 The Earthquake. - At Amherst and Vicinity. - The Gazette of Monday has the following: We delay going to press to report in reference to the Earthquake which visited us this morning, and whose effects have doubtless been calamitous in South America. At five minutes before six there were seven or eight violent vibrations of the earth, in the course of which there was a moment's suspension. It was preceded and accompanied by a slight rumbling sound. Many who were lying in bed awake sprang up and rushed into neighboring rooms, while those asleep were suddenly awakened. In one case it caused a doorbell to ring, in another, a looking glass leaning against a wall was prostrated; a whole window pane thirty inches long was cracked throughout its length; and, in a house three miles up Amherst, a door which had been latched with a thumb-latch was opened. Similar accounts reach us from various sections within a few miles from here. ... Advices from Wolfville this morning state that it was felt very sharply at that place; books in the college library, and apparatus, were shaken, and people in the street were scarcely able to keep their feet. A Gagetown correspondent, writing on Friday, says: ""The Inhabitants of our village were most of them aroused this morning from their beds at a few minutes before 6 o'clock, by one of the heaviest shocks of an earthquake that this part of our Province has, I think, ever been visited with. The noise was very great, and for a time I was quite puzzled to know what was really the cause, until the house began to rock, as though it were leaving the foundation. - When I first awoke, I thought a heavy lumber wagon was passing through the yard, but when the windows and doors of the house began to rattle, you would almost think you had been by some mysterious way put upon a railcar in motion and a down hill grade at that. Surely Oct. '69 will not soon be forgotten by the inhabitants of this part of the Dominion."" A friend writing to the Daily Telegraph and Journal from Markhamville, King's County, on Friday, says - ""At 5.45 this morning we were visited by a decided shock of earthquake; the atmosphere was peculiarly calm and heavy; a loud rumbling noise was distinctly heard for 30 sec. previous to the shock being felt, the violence of which may be estimated by the fact of water in a large tub, leaving its imprint one and three-quarters inches above its own level; dishes and stove covers were particularly lively. The noise appeared to pass N.W. to S.E., and it would be a satisfaction to know at what rate it travelled; this spasm of old Mother Earth was in all probability felt and noted in various parts of the province, and by comparing the time stated by your various correspondents this result may be arrived at - or perhaps the shock was simultaneous all through the country. A.M. 2 The Earthquake produced a singular effect at the Penobsquis Paper Mills. The power employed, as our readers are aware, is water, which is singularly clear, flowing out from the base of a mountain. Immediately after the shock the water assumed a whitish appearance, and so continued to flow for some time, the coloring matter, however, gradually becoming less, so that by this time, we presume, the original appearance and purity of the stream have been restored. The Globe says a similar phenomenon occurred at Spruce Lake."

Codes: EART / IDX_Names: Earthquakes;
S.J. Daily News - Oct. 25, 1869 THE EARTHQUAKE.- One strange phenomena accompanying the earthquake on Friday was the discoloring of the water in the lakes and streams. We have heard of several cases where this was the fact, and they are supported by Mr. Francis who says the stream at Penobsquis which supplies the water for the Paper Mill turned chalky, and had not regained its usual clearness on Saturday. The Amherst Gazette gives the following account of the shock of earthquake experience on Friday morning last:- ""At five minutes before six there were seven or eight violent vibrations of the earth, in the course of which there was a moment's suspension. It was preceded and accompanied by a slight rumbling sound. Many who were lying in bed awake sprang up, and rushed into the neighbor's rooms; while those asleep were suddenly awakened. In one case it caused a door bell to ring; in another, a looking glass leaning against a wall was prostrated; a window pane thirty inches long was cracked throughout its length; and, in a house three miles from Amherst, a door, which had been latched with a thumb latch was opened. Similar accounts reach us from various sections within a few miles from here."" Advices from Wolfville state that it was felt very sharply at that place; books in the college library, and apparatus were shaken, and people in the street were scarcely able to keep their feet. The Charlottetown, P.E.I. Islander says: ""A faint but very distinctive shock of an Earthquake was felt in this city this morning about 6 o'clock. For the last two or three weeks, the extraordinary mildness - at times amounting to positive sultriness - of the weather has been the subject of frequent and general remark. Last night, the full Moon shone forth in an unclouded sky with unwonted brilliancy. For several hours scarcely a breath of wind was perceptible, and the temperature was more like that of a night in the middle of June than that usually experienced here toward the close of October. This morning, about six o'clock, many of our citizens were awakened by a rushing sound, somewhat resembling that occasioned by a sudden gust of wind, accompanied by an undulating motion of the beds upon which they were lying, the jarring of doors, rattling of furniture, and other noises - the vibrations proceeding apparently from north to south, and lasting from 15 to 20 seconds. Providentially no damage to either life or property has been sustained here. Indeed so gentle were the undulations, that those who were pursuing their usual avocations do not appear to have noticed the shock at all. The sun rose brilliantly, but was soon afterwards obscured by clouds, and our citizens went about their business as usual, the Earthquake being the general theme of conversation everywhere.""""

Morning Freeman - Oct. 26, 1869 The Windsor Mail says:-""This morning, just after daylight, a heavy shock of an earthquake was distinctly felt by nearly all the inhabitants. It lasted about three minutes and increased apparently in force as it passed off. Houses shook, dishes rattled, women screeched in abject terror, and in the course of that wonderful short space of time, scenes were enacted which were of the most ludicrous character. This was said to have been a much heavier shock than that which 'rattled the panes' in this vicinity some fifteen years ago.""""

S.J. Daily News - Oct. 26, 1869 THE EARTHQUAKE.- The Fredericton Farmer says:- ""The direction in which the disturbing force moved is amatter of dispute, and in connection with the subject it is worthy of remark that, in Mr. Babbit's establishment the clocks facing northwest were stopped; while those at right angles to that direction were unaffected. The motion of the earth appears to have been perpendicular without any lateral displacement, which accounts for the slight damage done. One of the employees on the railway, who was engaged at the time in oiling the locomotive, states that the ground raised about six inches, and the locomotive moved forward upon the rails. A gentleman from Keswick, who was driving on the highway road at the time, says he could distinctly observe the motion of the earth, and estimates it to have raised about six inches also. In this city every house was shaken from the roof to the foundation; chimneys were thrown off the residence of John Pickard and S. Estey, Esqrs.; several houses were slightly cracked; the windows of the Cathedral slightly injured; a number of vases in Babbit's Jewelry Store, broken; clocks in various parts of the city stopped,

Daily Telegraph - Oct. 26, 1869 Letters From The People. - The Earthquake at Blaney Ridge. - Blaney Ridge, Prince Wm., York Co., Oct. 22. - Mr. Editor. - We felt a slight shock of an earthquake in this neighborhood at about fifteen minutes to six this morning. The rumbling and trembling lasted, I think, about three minutes. - There was another distant rumble about the same time before twelve, but no sensible trembling. The Earthquake at Grand Falls... - Grand Falls, Oct. 22. - Dear Telegraph and Journal:- The inhabitants of this town were turned out this morning at 10 minutes to six by an earthquake which lasted about a minute - the greatest ever experienced here. Dishes tumbled about in the closets, and one man's stove fell down. No wind, but clear and freezing hard at the time. ... The Earthquake at Houlton. - (Extract from a letter to a City friend). - Houlton, October 22nd, 1869. - This morning at about 10 min. to 6 o'clock, we were visited with a sharp shock of an earthquake. It suddenly awoke those who were asleep, and startled those who were awake. The report at first was like the rumbling of distant thunder, or, the rattling of a loaded wagon on a hard road. This lasted about 5 seconds and after a stillness of about 10 seconds the sound seemed to come again with redoubled power, while the whole earth shook and trembled with a violence that made many stout hearts quail with fear. Knots of people are to be seen here and there discussing the effects of the shock, some telling of lamps toppled over, of stoves shaken down, of terrified ladies dropping to the floor with fear. The prisoners in our jail were wonderfully terrified. Their first impressions were that the brick building was tumbling in about them; their worst fears were not, however, realized. A gentleman is just in from 8 miles distant and the effects were the same there as in Houlton. The course of the rumbling seemed to be from north to south, and grew louder and louder as it passed along. The Earthquake at Hopewell.- Hopewell, A.C., Oct. 22. - We have recently had tides several feet higher than ever before known, hurricanes unequalled in the annals of our country, wars and rumors of war, and last, but not least, an earthquake. This morning, a few minutes to six o'clock, the denizens of this locality were astonished at hearing a sharp, rattling noise, somewhat like inconceivably, rapid file-firing of rifles, or a herd of cattle rushing furiously over a wooden bridge, attended by a sudden violent vibration of the buildings, as if produced by a tremendous concussion of something, more than that felt by an upheaving or undulatory motion. Houses and their contents shook, quivered and rattled, as though they were seized upon by some terrible power in a violent fit of passion, potent enough to shake them into atoms in a moment. They really appeared to quiver as though in sheer afright - crockery rattled and tumbled about in some confusion; the steeples of the Churches shook and cracked as if they were going to be hurled from their summits; and, curious to relate, a neighbor who had a number of large chickens roosting on a tree near his dwelling, happening some half hour or so after to be near the place, found two of his young cocks dead under the tree and quite warm - evidently showing that in some inconceivable way the shock was the cause of their death. I was in bed at the time, about half awake, and being a bit of a sailor, in my semi-conscious state I imagined I was on board of a Sound steamer - one of those long shoal things, and that she had violently collided with something, producing that peculiar kind of sharp, quivering motion, but before it was through with I was wide enough awake and felt we had a real Earthquake. It appeared to me to last five or six seconds, but I am no ways certain as to the time. Pray ask Lieut. Saxby, what next! A. The Earthquake in Windsor... Windsor, Oct. 23. - Dear Editor. - Yesterday morning a shock of an earthquake was felt all through the valley from Annapolis upwards. At the latter place it was sufficient to topple over pitchers and set the bell ringing in one of the churches. At Horton, where the writer happened to be, there was a violent action, very much as a passenger feels when a steamer under full pressure of her engines quivers on top of a high wave. It lasted about six seconds. The Windsor Mail declares it lasted three minutes! That period would have been sufficient to lay many buildings in ruin. The movement seemed to pass from East to West. Dishes rattled and beds perceptibly rose and struck the floors, each leg beating time for itself. The time was about six o'clock in the morning..."

St. Andrews Standard - Oct. 27, 1869 The Earthquake. - On Friday morning last, at 20 minutes of 6 o'clock a low rumbling sound was heard with a slight trembling of the earth, which in a few seconds was followed by a heavy shock lasting about ten or fifteen seconds, which shook houses, stove covers and crockeryware and caused persons to leap from their beds in alarm. The earth wave was northwest to southeast and was the most severe felt in this neighborhood for many years. An old resident informed us that nearly sixty years ago, a more violent shock was felt here, which terrified the people at that time. The shock of Friday was experienced as far west as Portland, in Nova Scotia, and all over this Province; in some places more violent than others. A friend writing from Miramichi says that some were much alarmed and left their houses, fearing they would fall on them. Truly the times are eventful; with a heavy storm, tidal wave, and earthquake - what next?"
S.J. Daily News - Oct. 27, 1869 Letter to the Editor: ... THE EARTHQUAKE.- While on the subject of the marvellous, I may as well relate that on Friday morning, about daylight, I was awakened by a good shaking and was about an athematising the disturber of my rest, for calling me at such an unseemly hour, when I became conscious that the bed was playing some kind of antics and the house was imitating the drollery by going through some extraordinary gymnastic

performances. Doors began to creak, window sashes to rattle, the stove pipe to oscillate, and a general uneasiness to pervade the whole upholstery, while the voice of the landlady might be heard in concert with the geese and other ""domestics"", which set up a plaintive cackle outside the domicile. ""What's that, Viator?"" called my chum in the midst of the melee, who had been routed by the uproar. ""Only an earthquake,"" I replied, and after vainly listening for a repetition of the shock, I rolled over to enjoy blessed forgetfulness of earthquakes and all other plagues which human flesh is heir to. And at breakfast time there was a unanimous vote that the vagaries of the domicile resembled the rocking of a Railway car going at 7 greatest speed, only the motion was much more rapid, and that Mrs. S... was fully justified in calling her little flock around her with the motherly wish to have them with her in the grand catastrophe. Yours VIATOR."

St. Croix Courier - Oct. 28, 1869 Earthquake in St. Stephen ..."

Codes: EART / IDX_Names: Earthquakes;
Morning Freeman - Oct. 28, 1869 The Earthquake. - The Farmer says that in Fredericton- ""Every house was shaken from the roof to the foundation; chimneys were thrown off the residence of John Pickard and S. Estey, Esqrs.; several houses were slightly injured, a number of vases in Babbitt's Jewellery Store broken; clocks in various parts of the city stopped, and the fire-alarm in the Methodist Church sounded."""

Morning Freeman - Oct. 28, 1869 Quebec, Oct. 22. - Severe shock of earthquake, at 6.30 this morning here. At Beauport, Charlesbourg and Lorette it was very severe, cracking walls of several houses and creating a general stampede. The horse of a market woman was thrown down by the shock and occupant pitched out of the cart. No other damage to property or casualties are yet reported though it is surmised that the Saguenay district must have had a terrible shaking."

St. Croix Courier - Oct. 28, 1969 The Earthquake. - This locality was visited by an earthquake on Friday morning last about a quarter before six o'clock. The shock was more severe than any that has ever been experienced here. It awoke people from their beds and was severe enough in some cases to shake dishes from the kitchen walls to the floor. This was particularly the case in Scotch Ridge. Some persons who were out of their homes observed the ground surging like the waves of the sea, and schooners lying at the wharves were considerably rocked. Houses, in several cases, were much shaken, and great alarm was felt in many localities. We observe that the shock has been generally felt in New Brunswick, Nova Scotia, and in the New England States."

Sackville Borderer - Oct. 28, 1869 The Earthquake. - The earthquake with which we were visited last Friday morning has given rise to lengthened descriptions of its force and duration, and the effects produced by it; but nothing we have seen at all corresponds with the impression it left on our minds. The noise occurred a few minutes before six; it came from the southwest, and was similar to that would be produced by a very heavy wagon passing along the street. For two or three seconds the motion was very slight; then it was suspended for a like period, when the loudest noise was heard and the most violent shock was experienced, which continued certainly as long as both the first shock and the time until the second shock commenced. As to the intensity of the shock here, we can only say the noise was nothing to be compared with that made by the earthquake a few years since. The motion was not great, and was of a slightly, tremulous character. It may be we were more favoured than other sections of the Province, or did not require so violent a shaking up; but we cannot help believing if the motion were as great as has been represented by some of our contemporaries, they would have had at the same time to report serious destruction."

Daily Telegraph - Dec. 9, 1870 The Eclipse, Tidal Wave, and Earthquake of the 22nd of December. - We judge by the tenor of our correspondence, and by what we hear from some of our citizens that great anxiety exists in many quarters in regard to what will take place on the 22nd of December, instant. We should say that some of our friends are disposed to be frightened, and that some others have been inclined to frighten them. The farmers, at least, imagine that Captain Saxby's storms and tidal waves will be mere child's play in comparison with the approaching celestial and terrestrial commotions. They have read in Stewart's Quarterly that Professor Delissier has said:- The sun will be centrally and totally eclipsed at noon in 36ø 38 north, long. 5ø 1 west, a little to the northeast of Gibraltar, and near the Lisbon coast, creating tidal waves and earthquakes there of great severity, agitating the waters of the Atlantic Ocean, the Bay of Fundy and the Gulf of St. Lawrence. Even if this paragraph, which is considered by some so startling, be carefully examined, it will not be found to predict any great peril to us. Let us, however, advert to the actual facts of the case, so far as they are
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of

New Brunswick, 1898. - March 17, 1870 - 6 to 8 a.m. - Felt at St. John and Fredericton. Light. It was at this time that a landslide occurred at Sand Point, carrying the end of the Point out into the deeper waterof the harbour. Sand Point is a gravel deposit formed by the meeting of the harbour tides and the river, and is underlaid by clay. This clay had probably been eroded by the action of water, and a heavy storm the day before had hastened a condition of in stability which, even without a slight earth movement, would soon have caused the landslide."

Daily Telegraph - Mar. 18, 1870 and Colonial Farmer - Mar. 19, 1870 and Carleton Sentenil - Mar. 26, 1870 A Strange

Phenomenon. - A Portion of the Bottom of St. John Harbor Sunk from 5 to 10 fathoms. - Yesterday morning, just before the commencement of the snow storm, and as the wind was rising so as to be heard within doors, a strange noise, similar to that accompanying the earthquake, on the morning of the 22nd October last, was heard by the residents of the lower end of Protection street, Carleton. The storms of last fall, and those of the winter, have mad great havoc in that vicinity, and, not only has the breakwater been carried away and buildings removed from their foundations, but the sea has washed away land and encroached so much upon property as to make the residents of the neighborhood display more than usual interest in each approaching gale. The noise referred to, as its rumbling ceased, roused many from their beds, who, on going down to the harbor, found that a startling change had taken place in the appearance of the land and wharves. The tide was nearly down and, though it was quite dark, it could be seen that the old ferry landing, which should be several feet above water, had vanished. Messrs. Littlehale & Coram's wharf - had nearly disappeared. It had been piled with deals, which belonged to Messrs. Scammell Brothers, and that part of the wharf on which the deals were did not break down as though the bottom on which it rested had been washed out, as at first supposed, but a piece about 40x70 feet broke off and settled squarely down into the water and the whole mass, with the top of the wharf beneath and the deals remaining upon it floated away into the harbor, where it was picked up yesterday by Mr. James Stackhouse and his men. A frontage several hundred feet in extent, running the line of the demolished wharf towards the breakwater has gone down, leaving a steep embankment sloping toward the harbor. About midway along this new embankment and less than one hundred feet from it, into the harbor, is the place where the old ferry landing was. On this spot soundings were made by Mr. Joseph O'Brien, Mr. Clark and others last evening, and, where the old ballast or reef was the day before, rising above the water eight feet, they found six fathoms of water, showing that, even so near the shore as that, the bottom had settled just thirty-two feet. Near where the portion of the wharf settled away, or where a moderately sized vessel used to ground at low water, there is now between six and seven fathoms at low tide. One of Messrs. Adams' buoys, moored about four or five hundred feet from the shore, had disappeared, and last evening when the tide was at its lowest level the current was just showing a ripple over the top of it. As the tides rise and fall about thirty feet in St. John harbor, and the chain of the buoy had several fathoms of scope, it may be inferred that the bottom sank as much as nine or ten fathoms at this point. Area affected so far as could be ascertained yesterday, after the blinding snowstorm subsided, it was thought that at the surface of the harbor bed a portion extending over an area of, perhaps, three acres had been affected. It would not be surprising if, with the swift current of the harbor, the Breakwater on the east side would become affected in time. There will also be a falling away of additional portions of Sand Point for some time to come. It was thought, before soundings were made that the ""slide"" was caused by the shifting of sand which had washed over the bar, but that theory is now exploded and the fact fully established that the phenomenon was caused by some subterranean action beneath the spot so

Daily Telegraph - Mar. 19, 1870 and Carleton Sentenil - Mar. 26, 1870 Shocks of Earthquake. - In connexion with the sinking of a portion of the harbor, on Thursday morning, as reported to us yesterday, it would appear that several shocks of earthquake were experienced in this city, Portland, and Fredericton. Two ladies, sisters of Mr. George Philips, broker, who live on Prospect street, Portland Parish, heard a rumbling noise and felt a motion of the house on Thursday morning, before daylight - similar to that experienced on 22nd Oct. last. Mr. John Sears, who lives on Saint James street, was taking his breakfast at 8 o'clock in the morning, and heard a similar noise, as did also his son, Mr. Wm. M. Sears who was in his room in the house. The sensation produced on both was similar to that experienced on the occasion of the earthquake above referred to. Mr. James J. Anslow, of the Newcastle Advocate, was in Fredericton on the same morning, and when lying in bed, at 6 o'clock felt a series of vibrations, as from an earthquake, which shook the room and the bed. All of these parties, we understand, related their several experiences to others before they heard or read of the Sand Point affair. -

St. Croix Courier - May 12, 1870 A slight shock of an earthquake was felt this morning between one and two o'clock."

Miramichi Gleaner - May 21, 1870 New Brunswick. - The St. John News says the shock of an earthquake was felt on Thursday morning during the thunder storm; and the St. Croix Courier says the same. On Thursday a friend living in Carleton called at the office of this paper and informed us that on Monday evening, about ten o'clock, he distinctly felt the shock of an earthquake, and that another gentleman informed him that he also experienced it. - Globe."
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of

New Brunswick, 1898. - October 20, 1870 - 11.40 a.m. - Felt all over the Province. In the lower part of the St. Lawrence Valley it was much more violent than in New Brunswick. Dr. Jack, of the Provincial University, at Fredericton, in a despatch to the St. John Daily Telegraph (October 21st, 1870), thus describes it: ""It was at 17 minutes before noon that the shock was first felt here. This lasted perhaps two seconds and was shortly followed by another, of about the same severity, which may have been the return stroke, as the interval between was not over half a minute. The motion was vibratory and seemed to be from South to North. It was not so strong as the earthquake of last year. There was violent wind all of Tuesday afternoon and night; and this afternoon we have a heavy rain and lowering darkness."" The time at St. John was accurately noted to be 11.40; at Fredericton it was 11.43."

Codes: EART / IDX_Names: Earthquakes;
N.B. Reporter - Oct. 21, 1870 Another Earthquake. - Yesterday while almost in the very act of handing to a compositor the extract containing Prof. Delissier's theory of Earthquakes, our city was visited by a heavy shock of the dread visitor

himself. The shock occurred at precisely thirteen minutes before 12 o'clock, noon, lasting probably 10 seconds, although the vibratory motion could be perceived in some places for almost five seconds longer. Suddenly, without a sound of warning, without that rumbling thunder tone which usually accompanies or precedes the earthquake, the buildings began to tremble, and then to sway backwards and forwards violently as though all nature was convulsed in its death throes. Men and women rushed bareheaded into the streets, dumb with a nameless terror, and for a few seconds the scene was one of indescribable alarm, for the stoutest heart will quail, and the boldest cheek turn pale in presence of such awful visitations. The panic of course subsided with the shock, and in a few minutes the city was restored to its usual quiet, no injury, beyond the breaking of a few panes of glass, being sustained by any part of it. Although not nearly so heavy as the shock just twelve months ago, we can assure our readers who may not themselves have felt it, that it was sufficiently alarming for the moment. The buildings seemed swaying violently to and fro, as though they must fall into ruins, while the sensation experienced was as when crossing the Suspension Bridge at St. John during a heavy gale. A whistling sound prevailed all the while, like gusts of wind let loose, although not a breath of air stirred during its continuance. This same phenomenon was observed during the earthquake of last fall. Strange to say very few persons who were on the street or out in the open air felt the shock, and wondered to see the frightened inmates rushing from their dwellings, until the swaying to and fro of the buildings advised them of the awful presence of the earthquake; neither was the shock perceivable by persons out on the river or in steamboats, and indeed in some localities even in the city it seemed to have been much lighter than in others. The motion on this occasion was from southwest to northeast as near as we are able to judge. As regards the causes which have produced the result we refer our readers in the theory propounded by Prof. Delissier, and which is now being accepted by leading scientific men of the age. Although partially understanding this theory it would be vain on our part to attempt a definition to our readers. We may simply observe that it destroys the theory of subterranean gasses and explosions as producing the earthquake shocks experienced in these latitudes, attributing them entirely to solar and planetary influences, and to a disturbance of the earth's equilibrium. This disturbance affects the atmosphere, the liquids, and the solid matter of our planet; the air, being the lightest, is first affected, thus we have the wind-storm or hurricane; the liquids are next affected, their disturbance in turn occasioning the thin crust of our earth to undulate as the thin skimming of ice in a basin is affected when the bowl is shaken. This disturbance is declared to be greatest nearest the earth's centre of gravity for the time being. The occurrence of the shocks at precisely the same season of the year, they will probably attribute to the fact that the earth in its annual orbit has now attained the same position to be disturbed by planetary influences as when the shock was experienced last year. Whatever may be true or false in this theory it is satisfactory to know that science, almost with that unerring accuracy which it foretells an eclipse or a tidal wave, now forewarns us of the coming earthquake, so that while we are brought to see our littleness as an atom of creation, we are at the same time warned and prepared for this mighty convulsion of nature, which however terrible and seemingly unnatural to us, is after all but the harmony of disorder. The shock was felt more or less all over New Brunswick and over a greater part of the New England States, but from accounts received Fredericton seems to have had a full

Codes: EART / IDX_Names: Earthquakes;

S.J. Daily Telegraph - Oct. 21, 1870 Another Earthquake! - Advices From All Parts of the Province! - The Effect in the City! - Yesterday, at about a quarter before noon, this city received a shock of earthquake, which at first seemed scarcely to merit notice; but when those who had experienced the subterranean movement had fully compared notes, they came to the conclusion that the quake was pretty general and was really deserving of serious consideration. It appears to have affected nearly all parts of the city, and, in all, to have produced similar sensations. On Prince William Street, Bayard's brick building felt the motion, and the book case in the Attorney General's office shook responsively. It was felt in the office of Troop & Son, Merritt's building, Water street, where the desk on which Mr. Irvine was writing at the time appeared to move from him. It was also felt on the North Wharf, where the inkstands and furniture of several businesses were observed to move and settle. Mr. J.W. Cudlip, Robertson Place, was writing at the time in his office, and felt a shock; he declared it to be an earthquake and said he would note the time, - exactly 11.40. The shipping in the harbour were subjected to the same mysterious influence, and the captain of the George Covert, experiencing the motion, went on deck to see ""what was up"". In Dr. Hatheway's office, on Germain st., it was seen to move some apparatus used in connection with dentistry, and a motion just at that time was so unexpected that Dr. Canby Hatheway rose to see who was causing the disturbance. At Miss Ansley's boarding house, also on Germain st., the effect of the shock was clearly experienced. Col. Robert Shives states that he did not feel any distinct motion of the earth; but at the hour indicated he was reading, and suddenly it seemed as if his senses were playing him false, the book appearing to be ""all in a tremble."" The earthquake was experienced in Market Square, especially in the London House, where it was noticed by nearly everyone in the establishment. It was also felt in Exmouth street; here a lady felt the chair on which she was sitting move from side to side, as if rudely wrenched; and we learn that the sensation experienced by persons living on Brussells Street was nearly similar. A lady on Pitt street states that the motion was if the house trembled from the effect of a sudden gust of wind; it was decidedly peculiar, however, and the ladies of the house instantly pronounced it an earthquake. In the National School, on Duke Street, the sensation was quite marked. When it occurred, the teacher of the boys called on them to keep quiet, and he proceeded to examine the posts which supported the ceiling of the room. We are informed also that in Lower Cove, at the foot of Germain street, the shock was felt, 7 but it does not appear to have extended to the Marine Hospital. Doubtless, scores, if not hundreds of other instances might be cited, but we have enumerated sufficiently in all the principal sections of the city. As far as we have heard, parties speak of only one shock. It will be seen from the reports which follow that, both in Fredericton and St. George, two shocks were experienced; or else a continuous shock which was more violent at the beginning and ending at other times. AT FAIRVILLE the earthquake was felt as violently as any other point in the vicinity of the city. An employee of Western Extension was ""packing"" a locomotive which was moved a distance of about nine inches by the shock. Mr. Tilton of the post office, and Mr. R. Fair report similar movements of the earth. As observed by Mr. Tilton, it appears to have been of longer duration than reported by others, as it continued to agitate the tin ware in his store for some minutes. The shock was also very sensibly felt at Mr. Shaw's boarding house, Fairville, where it rattled the dishes and considerably startled some of the inmates of the house. The shock was distinctly felt at the Lunatic Asylum by several young ladies, though not with sufficient severity to cause much alarm. In the Superior School taught by Mr. M.A. Wall, on the Manawagonish Road, the pupils present were thrown into a state of fear and excitement, as the building trembled, causing the windows, slates, etc., to rattle. THE EARTHQUAKE AT WESTFIELD. - At this point the shock was felt in the vicinity of the Station House at exactly 11.40, - the same moment as at Welsford, and lasted, according to our informant, about six seconds, or nearly the same length of time that is reported from that point. The Station buildings were considerably affected. In the Station Master's office, things generally vibrated so that a wooden ruler was knocked off the window and went rolling along the floor; whereupon the Station Master immediately went outside to ascertain what was the matter. Looking in the direction of the river he saw a large wave rolling in to shore, demonstrating that a considerable influence had been exerted upon the water, as well as on land. Several men at work in the ballast pit at Buchanan's, say they felt the ground shaken under them considerably. Other parties heard a noise which they supposed to be the train coming in the siding. EARTHQUAKE AT WELSFORD. - At Welsford Station, on the Nerepis, the shock of the earthquake was decidedly heavy, being distinctly perceptible, as we are informed, at 11.40 a.m. It caused a number of buildings to shake, and was so ""pronounced"" that females ran out of their houses, into the road, for fear of their tenements falling about their heads. At this place two men were working on a barn when the shock came; one of them was shaken off a bench in the loft, on which he was standing, and fell to the floor, but was not severely injured. Here the shock, according to the most accurate calculation, lasted about seven seconds. THE EARTHQUAKE IN FREDERICTON. - Our information from the Capital is quite exact. President Jack, of the University, telegraphs us that at a quarter before twelve two distinct shocks of Earthquake were experienced at the University, within an interval of one minute. Neither of the shocks lasted longer than a second or two. But, however, brief the visitation may have been, it produced a considerable amount of damage to property. A correspondent in the town states that the shock passed from North East to South West; that it lasted twenty-five seconds, resulted in smashed glass and plaster, shaking bricks off of a number of chimney tops, and cracking badly a brick store on Queen St. It produced consternation throughout the city. The Supreme Court was sitting at the time, and here the effect was most marked, the Judges leaving the Bench and business being for the time suspended. At the same time, persons walking on the street were not aware of any serious motion of the earth. Another correspondent in the Capital sends as follows:- ""In the City it seemed to be a continuous shaking for about twenty-five seconds, the first and last seven or eight seconds being the most severe. I could not determine its course, but thought it was from North to South. I am told that the walls of three or four brick buildings are cracked."" We conclude our reference to the earthquake in Fredericton, with the following second telegram from the President of the University who, in this despatch, supplies some particulars additional to those embraced in the first despatch:- ""It was at 17 minutes before noon that the shock was first felt here. This lasted perhaps two seconds and was shortly followed by another, of about the same severity, which may have been the return stroke, as the interval between was not over half a minute. The motion was vibratory and seemed to be from South to North. It was not so strong as the earthquake of last year. There was violent wind all of Tuesday afternoon and night; and this afternoon we have a heavy rain and lowering darkness."" AT MCADAM JUNCTION. - Conductor Miles reports a movement of the ground at this Station, which was very sensibly felt, shaking the windows of the cars and producing a trembling motion resembling that made by a passing train. THE EARTHQUAKE AT ST. GEORGE. - Our Special Telegram from St. George states that two heavy shocks were felt at 11.45. ""An interval of about ten seconds intervened bewteen the shocks. So visibly were the houses shaken that many persons ran out, being quite alarmed. It is now 7.45 p.m., and a severe gale is blowing from the South, accompanied by heavy rain."" This statement is quite minute, and agrees remarkably with the late telegrams from Fredericton. EARTHQUAKE AT ST. STEPHEN. - Our advices from this point are briefer than we could have wished. The shock appears, however, to have been less severe than at St. George. Our Special Telegram says: ""A slight shock of an earthquake was felt here about 11.40 a.m.; windows, buildings, etc., were shaken, but no damage of any consequence is known to have resulted."" ON THE E. & N.A. RAILWAY. - The shock appears to have been felt along nearly the whole extent of the railway. It was quite distinct at Sussex, buildings trembled, etc. It was also felt at Salisbury, and inspired not a little terror at Moncton. Here a quiet gentleman was sitting at King's Hotel, reading a newspaper - doubtless the Daily Telegraph and Journal. Suddenly he felt the building tremble, and could not understand the matter for a moment, but presently he came to the conclusion that ""this Hotel must be pretty weak, when a man walking on the verandah makes it shake like that."" From these several points we have heard by telegraph, as well as by individual report; and the same from Point de Chene, where the earthquake produced a motion and sensation similar to what we have already described, a repetition of which would be useless. At Sackville, says our Special Telegram ""the earthquake was most distinctly felt. The vibrations lasted about half a minute. The noise resembled that of a heavy railway train in motion."" ON THE NORTH SHORE. - At Richibucto and Buctouche, as we learn by special telegram, the shock was felt, but it was slight. At Newcastle and Chatham, the shock was slight also; it lasted about a minute, and buildings swayed to and fro. The quake was slight at Bathurst, and was characterized by no special features distinct from those already stated. Dalhousie did not hear any rumbling; the vibration

Miramichi Gleaner - Oct. 22, 1870 A slight shock of an earthquake was felt in Chatham, Newcastle, and Bathurst about noon on Thursday, and we learn by Telegraph that the shock was also felt throughout the southern portion of the Province."

S.J. Daily Telegraph - Oct. 22, 1870 The Earthquake. - A correspondent at St. Martins, writing on Thursday says: - ""A severe shock of earthquake was experienced here today at 11:45 a.m.; it seemed to run in veins from North to South, and was much heavier in some places than others. No damage was done except the moving of a small shop about six inches from the foundation."

S.J. Daily Telegraph - Oct. 24, 1870 Houlton (Oct. 20). - .... At noon today we were visited by a sharp shock of an earthquake, lasting about 40 seconds. Many reports are current of broken glasses, split chimnies, rocking houses, and terrified women. It was followed by a heavy gust of wind, blowing S.E....."

Colonial Farmer. - Oct. 24, 1870 Earthquake. - About quarter before twelve o'clock on Thursday, a shock of an earthquake was felt in this city. The motion was vibratory, and appeared to be from north to south, and lasted some four or five seconds. The shock was quite severe, although not as strong as the one last year. Several buildings were injured throughout the city, though no very serious damage to property resulted. At Saint John we learn from the Telegraph the shock was quite generally felt, although it was in noways severe. At Saint George, we quote from the same paper:- ""Two heavy shocks were felt at 11.45. An intervale of about ten seconds intervened between the shocks. So visibly were the houses shaken that many persons ran out, being quite alarmed."" 12 At Fairville and all along Western Extension, the earthquake was felt quite violently. Along the European and North American Railway, it was also quite severe. At Richibucto, Chatham, Dalhousie, and along the North Shore the shock was quite slight."

St. Andrews Standard - Oct. 26, 1870 Two shocks of Earthquake were felt here on Thursday last, at half past 11 a.m. - So violent were the undulations that the cases in our office were shaken, and on the Barrack Hill, windows and dishes rattled. The shocks lasted but a few seconds."

Union Advocate - Oct. 27, 1870 Earthquake at Bathurst. - A correspondent at Bathurst, writing on the 24th says: - ""We have had here two earthquakes within a few days, the first on the 14th instant, at two o'clock. A.M., the last on the 20th instant, about noon. The latter, which was the heaviest, was very sensibly felt, and made things rattle in the houses pretty loudly for a second or two. This makes the fourteenth event of the nature recorded in Bathurst and vicinity within the last

Union Advocate - Oct. 27, 1870 Earthquake. - The Shock of Earthquake which was felt here a little before noon on Thursday last appears to have been pretty general throughout the Province. In town, it lasted about a minute and appeared to confine itself to within a short distance of the river's bank, as it was most severely felt all along Water Street. Buildings swayed rather more then was enjoyed by the inmates, many of whom speedily made their exit to the street, to see ""what was up"", or rather what was down, as something was expected to fall. In some buildings, bottles and other articles were overturned. It was not so much felt at Chatham. A gentleman who was at the North West Falls (about forty miles up river) at the time, said that he heard a rumbling sound for some minutes, which resembled the noise made by the arrival of a train, but did not feel any motion of the earth. Persons who were sitting in their carriages on Water Street at the time, did not feel the shock at all. The motion appeared to be from North-east to South-west, and was not so violent as that of last

S.J. Daily News - Oct. 29, 1870 Earthquake at Bathurst. - A correspondent at Bathurst, writing on the 24th says:- ""We have had here two earthquakes within a few days, the first on the 14th instant, at two o'clock, a.m., the last on the 20th instant, about noon. The latter which was the heaviest, was very sensibly felt, and made things rattle in the houses pretty loudly for a second or two. This makes the fourteenth event of the nature recorded in Bathurst and vicinity within the last

Codes: EART / IDX_Names: Earthquakes;
S.J. Daily News - Feb. 14, 1871 Earthquake. - On Sunday morning about 5 o'clock a distinct shock of earthquake was felt in several parts of the city. It was, however, most noticeable at Lower Cove, where the noise and vibrations were sufficient to wake persons from sound slumber. The impressions left upon the minds of those who were disturbed were varied in their character. One thought that some one was shaking the windows, another that some passerby was striking the clapboards with a stick, another that furniture was being thrown about in some other room, and others that they had heard a succession of frost snaps, in one house ..?.. was located from the ...?... the crockery rattled. ...?... that the city had been visited by a sharp, quick shock of earthquake."

Daily Telegraph - Feb. 28, 1871 Reported Earthquake. - A slight shock of an earthquake is said to have been felt yesterday morning about 1 o'clock in several parts of the city. One gentleman, living in the vicinity of Lower Cove, reports that at five minutes past one he heard a rumbling noise as of distant cannon. At the same time everything in the house shook. Another party asserts that at the same time, in the New Dominion House, corner of Princess and Germain Streets, sounds were heard as of thunder overhead, and the house, with all its furniture, seemed to tremble."

Colonial Farmer - Sep. 25, 1871 A slight shock of an earthquake was felt in this City on Wednesday about half-past two

Colonial Farmer - Jan. 15, 1872 There was a slight shock of an earthquake felt in this City Tuesday evening a little before 8 o'clock."

S.J. Daily Tribune - Jan. 22, 1872 A sharp shock of an earthquake was felt in Moncton about 6 o'clock on Monday morning last. About the same time a shock was experienced at Fredericton; and the previous Thursday at Quebec, River du Loup and other points in that locality."

Daily Tribune - Feb. 28, 1873 Earthquake. - Advices from St. George state that a shock of an earthquake was experienced there on Saturday morning about half-past seven o'clock. A slight shock was also felt by some persons in St. Stephen, St. David, Waweig."

S.J. Daily News - Feb. 28, 1873 Advices from St. George state that a shock of an earthquake was experienced there on Saturday morning about half past seven o'clock. A slight shock was also felt by some persons in St. Stephen, St. David and Waweig."

Colonial Farmer. - Mar. 3, 1873 Earthquake at St. George. - A correspondent at St. George, writes:- The snow in this section of the country is deeper than known for forty winters. We had a sharp shock of an earthquake last Saturday morning, accompanied by a rumbling sound like the noise of cannon firing in the distance. The shock only lasted a few seconds, but was not repeated. Some of our people were very much frightened, and several gave themselves up for lost, exclaiming ""it is the end of the world"", while others, not much renowned for their piety, poured forth as heart-felt prayers as ever proceeded from the lips of frightened sinners."

St. Andrews Standard - Mar. 4, 1874 Earthquake. - A smart shock of an earthquake was felt here on Friday night about 10 o'clock."

St. Croix Courier - Mar. 5, 1874 Earthquake. - There was a very perceptible shock of an earthquake here on Friday evening last at a quarter to eleven o'clock. It seemed to proceed from southeast to northwest. It awoke many persons from their sleep, and, as Artemus Ward said about Niagara Falls, it was ""quite a success."""

S.J. Daily News - Mar. 21, 1874 A slight shock of an earthquake was felt in Fredericton on Thursday afternoon."

Daily Telegraph - Mar. 29, 1878 St. Andrews. - Sharp Shock of Earthquake. - St. Andrews, March 28. - A sharp shock of an earthquake was felt here about 4.30 o'clock this afternoon. At the Court House a rumbling sound was heard as though boys were running to and from on the platform. The sheriff went out to ascertain the cause of the noise, no boys were, nor had they been there, and two men who were standing there said they had felt the shock of an earthquake, and distinctly saw the ridge pole on the jail rise up and subside again. The noise was heard and vibration felt all over town. Houses were sensibly shaken and windows rattled."

Codes: EART / IDX_Names: Earthquakes;
S.J. Daily Telegraph - Dec. 17, 1879 Sussex, Dec. 15. - Earthquake. - A shock of earthquake was perceptably felt yesterday morning at Mill Stream, in the Parish of Studholme, in this county."

Daily Telegraph - Jun. 22, 1880 An Explanation Wanted. - Sir, - Our local geologists or scientific gentlemen may be interested in the following, experienced by me and others in the locality in which I reside: Several times during each day the house in which I live vibrates or shakes to such an extent as to excite alarm among the inmates. The vibration is not noticed so much during the day on account of the traffic outside and the bustle in the house, but late at night, when everything is perfectly still both in and out of doors, it feels like a slight shock of earthquake. Every one seems to be at a loss how to account for it. The rattle of dishes, the moving of doors that may be ajar, and other indications of a shock of earthquake are plainly felt. Each shock lasts from two to five minutes. The house is situated on the low land near St. Paul's Church, Portland. It may be that these shocks are only felt on low ground, as I experiened similar shocks while living in a house on St. Andrews street during the years 1874-5-6. Can any of our citizens explain or explode the
S.J. Globe - Sep. 14, 1881 Slight Earthquake Shock. - A.M. Mabee, Esq., of Greenwich, K.C., who arrived in the city today, reports that a slight earthquake shock was experienced in that parish this morning. It was of sufficient strength to rock the houses slightly and make the windows rattle, and lasted about a minute. No damage was done, though many of the inhabitants were a trifle scared. It is said the shock was also felt on the Marsh, near St. John."

S.J. Daily Telegraph - Sep. 15, 1881 An Earthquake Shock. - Mr. A.M. Mabee, of Greenwich, Kings County, told a reporter, yesterday, that a slight earthquake shock was experienced in that parish yesterday morning. The houses were rocked to and fro and the windows and crockery rattled considerably. The shock lasted about a minute and appeared to travel from north to south. Mr. Mabee says he has experienced several slight shocks during his life - the heaviest of which was just before the Saxby gale. He has noticed that they generally precede or follow a heavy storm."

St. Croix Courier - Sep. 15, 1881 Quite a heavy shock of earthquake was felt at St. George on Wednesday morning. It lasted about a minute, shaking the houses quite violently. In St. Stephen, also on Wednesday, about 10.45 a.m., a severe shock occurred, and although doing no damage, it created quite an excitement among the scholars of the Marks Street

S.J. Daily Sun - Sep. 15, 1881 Shaken Up by an Earthquake. - A smart shock of an earthquake was felt at Greenwich, Long Reach, at 11.30 a.m. yesterday. The motion apparently was from south to north, and was accompanied by a low rumbling noise like distant thunder. The shock was sufficiently powerful to rattle the glass in the windows and doors, and the disturbance was noticed by several residents of the place. Our McAdam correspondent telegraphed last night:- At 11.30 this a.m. a noise something like the arrival of a train was heard; immediately followed by a trembling of the buildings, the stoves and furniture perceptibly moving in the houses. The section men on the railroad were also very much startled by the rushing noise followed by the iron rails moving in their places and the earth trembling under their feet. We understand that the shock was felt down the line of the St. John & Maine as far as Hoyt Station."

S.J. Daily Telegraph - Sep. 16, 1881 The Earthquake has been more general than supposed. The St. Croix Courier says:- Quite a heavy shock of an earthquake was felt at St. George on Wednesday morning. It lasted about a minute, shaking the houses quite violently. In St. Stephen, also, on Wednesday, about 10.45 a.m., a severe shock occurred, and although doing no damage, it created quite an excitement among the scholars of the Marks street schools."

S.J. Daily Telegraph - Sep. 16, 1881 The Earthquake Shock. - The slight shock of earthquake, spoken of yesterday, was felt in several places near the city. At Sutton's mills some piles of lumber were affected by it, settling down to some extent, and it was felt in Fairville and other parts of Lancaster."

S.J. Daily Sun - Sep. 16, 1881 That Little Earthquake. - Hon. W.E. Perley informs us that at his home, Hoyt Station, the shock of earthquake on Wednesday was felt severely - in fact much more than at any point that has been heard from. Mr. Perley was sitting in his house near a stove, the front of which dropped out from the jar. The sound, he says, resembled thunder and caused the house to tremble for a moment violently. A man who was mowing on the premises dropped his scythe and ran for the woods in great alarm. On the Nerepis road, near Eagle Rock, a man engaged repairing the telegraph wires observed the gravel on an embankment start and run for some distance. Mr. Perley believes it was the severest shock that has been felt in the Province within the memory of the oldest living person, the only one approaching it being that which occurred a short time before the Saxby gale. A gentleman from South Bay states that the shock was also

S.J. Daily Telegraph - Sep. 19, 1881 St. Stephen, Sep. 16. - Earthquake. - A slight shock of earthquake was felt here at 11 o'clock Wednesday morning."

Bay Pilot - Sep. 22, 1881 A few persons in town felt the shock of an earthquake on Wednesday of last week, it took place about 11.20 o'clock, A.M., and is described by those who heard it to have sounded like a rumbling sound caused by a train of cars. The shock was felt at Chamcook, in the Parish of St. Croix and other sections of the County."

Codes: EART / IDX_Names: Earthquakes;
S.J. Globe - Nov. 15, 1882 A shock of earthquake of brief duration, was feltin the settlements of Glassville, Johnsville, Beaufort and neighborhood one day last week,"

Fredericton Capital - Jan. 2, 1883 Earthquake. - On Sunday night, about 10 o'clock. the citizens were startled by a shock of earthquake, which shook the houses considerably. The shock was preceded by a bright sheet of lightning of a bluish color which lighted up the whole western heavens, and about fifteen minutes afterwards the shock took place, and was generally felt all over the city. In Halifax the shock was very severe, and the people were very much alarmed lest the buildings would topple over on them."

S. J. Daily Sun - Jan. 2, 1883 An Earthquake Shock. - At four minutes to ten o'clock, Sunday night, just as the religiously inclined portion of the community was preparing to attend the watch-night services, the town was startled by a shock of a slight earthquake, accompanied, some affirm, by a rumbling noise and two flashes of lightning, while others as stoutly declare that the flashing light was caused by the explosion of two brilliant meteors. Of the earthquake itself there is no doubt, as it made its presence disagreeably felt in some households. in one residence on Charlotte street a vase was thrown from its stand on to the floor and dashed to pieces; in another house in an opposite part of the city, all the ornaments on a Christmas tree were set swinging vigorously. The shock was also distinctly felt in Indiantown and on the other side of the harbor. Our Sussex correspondent telegraphs:- Sussex, N.B., Jan. 1 - The shock of an earthquake was experienced here last night between 9 and 10 o'clock. It was noticed by a number of people in the village as well as myself. Our Fredericton correspondent says: A slight shock of earthquake was felt here shortly before ten o'clock last night, but it was so slight that very few persons realized what created the low rumble and trembling of the houses till it had passed away. Advices from Sunbury and from the upper end of the county are also to that affect. It was very marked at Rothesay and also at Halifax."

Moncton Daily Times - Jan. 3, 1883 Earthquake Shock. - The dying throes of the Old Year were accompanied by some remarkable phenomena. Shortly before ten o'clock on Sunday night the shock of a slight earthquake was distinctly felt by numerous residents of St. John, and similar experiences are reported at Rothesay, Sussex, Fredericton and Halifax. Coincident with the earthquake were two flashes of lightning of, as some aver, bright lights proceeding from meteors, or other unusual and fantastic celestial luminaries. Reports from Chatham, Newcastle and other points both say that no one at these places noticed any shock. Moncton appears to have been passed over with the others."

S. J. Daily Sun - Jan. 3, 1883 Earthquake at Rockland Maine....."

Daily Sun - Jan. 3, 1883 Shock of an Earthquake. - Rockland, Me., Jan. 1 - An earthquake shock was felt throughout the city and vicinity about 10 o'clock last night, followed two hours later by a tempest of thunder and lightning."

Chignecto Post - Jan. 4, 1883 The Earthquake. - Slight Shocks Felt in St. John - Halifax Church-Goers Alarmed. - About ten o'clock on Sunday evening a slight shock of an earthquake was felt in all parts of St. John. It made mantle ornaments jingle, dishes on shelves rattle, but beyond this did no damage. Persons in bed felt the shock much more than those who were astir, though many who were on the streets noticed that something unusual had occurred. After the first shock there was an interval of several seconds and then another shock of slightly longer duration was felt. One peculiarity of the earthquake was that, coincident with the shocks, two bright flashes of lightening were observed in the northern sky. Halifax, Jan. 1st. - Shortly before twelve o'clock while watch night services were going on in many of the Halifax churches, a slight shock of an earthquake was felt in the southern portion of the city. It lasted between a third and a half of a minute, shaking houses and moving their contents, throwing light ornaments on mantels and tables and breaking some, but was not sufficiently severe to cause serious damage. The earthquake has also been felt in Sackville and

Bay Pilot - Jan. 4, 1883 A slight shock of an earthquake was felt at St.John, Halifax and other places about 10 o'clock Sunday night last. We are not aware that the shock of earthquake was felt in this town or vicinity but several persons on Sunday night saw a brilliant star or meteor about across the heavens."

Moncton Daily Times - Jan. 5, 1883 Albert Corner. - Earthquake. - A slight earthquake shock was felt at this place and the Hill, last Sunday night about 11 o'clock, accompanied by a bright flash of lightning"

Daily Telegraph - Jan. 9, 1883 Boiestown. - Earthquake. - About 9:30 on New Year's Eve, the shock of an earthquake was felt very sensibly in this vicinity. So far as we have learned no rumbling was heard but only a gentle swaying motion felt."

Codes: EART / IDX_Names: Earthquakes;
Weekly Transcript - Jan. 10, 1883 Earthquakes. - Mr. Wm. Martin, of Moncton, spent New Year's in Halifax. He says that about 10 o'clock on New Year's eve an earthquake was felt in the house in which he stopped. He described the unusual experience by likening it to the noise or roar of a chimney burning out, and a convulsive trembling. A despatch, dated Rockland, Me., Jan. 1, says: An earthquake shock was felt throughout the city and vicinity about 10 o'clock last night, followed two hours later by a tempest of thunder and lightning. The shock has been felt in various other sections within and

S.J. Globe - Nov. 28, 1883 A shock of an earthquake is reported to have been felt at Lepreaux yesterday morning."

S.J. Daily Sun - Nov. 29, 1883 An Earthquake. - Capt, Fitzgerald, of the schooner Wawbeek, which arrived in this port yesterday, reports that a slight earthquake shock was felt at Point Lepreaux about two o'clock on Tuesday morning. He was driven up close against the point in the gale of Monday night, which was one of the worst he had experienced for a

St. Croix Courier - Dec. 11, 1884 Calais. - An earthquake shock of a most decided character, was experienced throughout this city on Sunday morning last at about three o'clock. The sensations produced are as varied as one can imagine. Some thought the chimneys of their houses were falling to pieces, others that shingles were coming off, while others imagined their residences were crumbling to the ground. The rain poured in torrents, giving the streets the appearance of rivers. Portions of sidewalks and streets were washed away in many instances."
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Jan. 26, 1884; -At Rothesay. Three light shocks. Reported in Daily Telegraph of January 29th. S.J. Globe - Jan. 28, 1884 Earthquakes at Rothesay. - The peaceful little village of Rothesay, situated on the Intercolonial Railway, a few miles from St. John, was invaded last night by two or three distinct shocks of earthquake, which not only disturbed the equanimity of the inhabitants but also shook several of their dwellings. A Globe reporter interviewed Mr. James F. Robertson on the subject this morning. Yes, said that gentleman, in response to the reporter's query; we did experience a shock of earthquake last night at Rothesay. It was exactly seven minutes past ten o'clock when I felt it. My house, which is built on what I might call a quicksand, is peculiarly sensitive to anything like this. A train passing will cause all the windows to rattle, but the shock we experienced last night was a trifle heavier than that caused by a train. It did not upset anything in my house, but Mr. Clinch's folks telephoned us that it had knocked down a box in their dwelling. Mr. John McMillan, who resides a short distance from Rothesay, did not feel the shock at his place. Mr. R.T. Clinch was questioned

regarding the matter. About half past ten, said Mr. Clinch, we felt the first shock. Our house was shaken so violently as to make everything rattle in it. Our beds shook, and a large box, which was on a mantel in one of the children's rooms upstairs was thrown to the floor. About half an hour after that we felt another vibration, although not so heavy as the first. My servant man, whose house is a short distance from mine, felt it keenly. The house shook so violently as to damage the works of a clock on the mantel. He told me that there was another shock about 4 o'clock this morning. Mr. S.S. Hall, on whom the reporter called, stated that he also experienced a slight shock, but it was about 9.30. It was not at all heavy, his house vibrating just a little. The theory is advanced that as the land on which the houses of Messrs. Clinch, Hall and Robertson are built is of sandy formation the shocks may have been the result of the action of frost."

Moncton Daily Times - Jan. 29, 1884 Earthquakes at Rothesay. - The peaceful little village of Rothesay, situated on the Intercolonial Railway, a few miles from St. John was invaded last night by two or three distinct shocks of earthquake, which not only disturbed the equanimity of the inhabitants but also shook several of their dwellings. - Globe"

Moncton Daily Transcript - Jan. 29, 1884 and Weekly Transcript - Jan. 30, 1884 Earthquake Shock. - On Sunday night several shocks of earthquake were felt by residents of Rothesay. Mr. R.T. Clinch, a resident, thus described it to a Globe reporter: About half past ten, said Mr. Clinch, we felt the first shock. Our house was shaken so violently as to make everything rattle in it. Our beds shook, and a large box, which was on a mantel in one of the children's rooms upstairs was thrown to the floor. About half an hour after that we felt another vibration, although not so heavy as the first. My servant man, whose house is a short distance from mine, felt it keenly. The house shook so violently as to damage the works of a clock on the mantel. He told me that there was another shock about 4 o'clock this morning."

S.J. Globe - Feb. 6, 1885 Earthquakes - general..."

S.J. Daily Sun - Jul. 27, 1885 Earthquake in Carleton. - Several residents of Carleton state that shortly before the thunder storm on Sunday they felt the shock of an earthquake. One man, who was reading at the time, says he felt the house shake, and another declares that several ornaments were knocked off the brackets on which they were standing."
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Jun., 1885; 10 a.m.-Rothesay, Seal Cove and Southern Head, Grand Manan. Light at Rothesay, but severe at Southern Head, where several tons of rock fell from the cliffs near the lighthouse."

Codes: EART / IDX_Names: Earthquakes;
St. Croix Courier - Mar. 26, 1885 Our St. George correspondent writes:- .... A slight shock of earthquake was felt here last week. People are beginning to put some confidence in Wiggins predictions."

Moncton Daily Transcript - Oct. 16, 1886 Earthquake at Sydney...."

S.J. Daily Sun - May 11, 1887 Earthquake Shock. - a slight shock of earthquake was felt at Knowlesville, Florenceville and Centreville, Sunday morning, May 1st. No one, as far as known, felt the shock here.- Woodstock Press."

Moncton Daily Transcript - Aug. 18, 1888 Maine earthquake......"

Carleton Sentinel - Aug. 25, 1888 Maine earthquakes.."

Fredericton Capital - Mar. 31, 1888 Earthquakes. - An earthquake shock, which seemed to be especially severe in the northern part of the city, was felt at about 6.30 yesterday morning. A Hazen street lady who was awakened by it thought that the lower wall of the house had fallen, and, starting to inquire about it, was met by the residents of the first floor, who were on their way to inquire what was the trouble on her flat. Old residents said, yesterday, that the shock was almost equal in violence and duration to that of 1857. - Telegraph, March 27th. A shock of earthquake was experienced on Saturday night about nine o'clock at Point Des Monts and also at English Bay and West Point, Anticosti."

Daily Times - Jan. 7, 1893 An Earthquake Shock. - Said to Have Been Felt Above Fredericton, No Damage Done. - Fredericton, Jan. 6 - A slight shock of earthquake is reported as having been felt up the river the other night. Houses for several miles along the river were quite severely shaken and the inmates all awakened, and ice in the river extending some distance and of nearly a foot's thickness was broken up so as to make it impassable for teams. No serious damage, however, other than this was caused."

S.J. Gazette - Jan. 23, 1894 Was It An Earthquake? - Earthquakes in St. John are few and far between. This morning between three or four o'clock several persons residing in the vicinity of the Haymarket square were awoke from their slumbers by a rumbling noise. One gentleman believing something was wrong with his hall stove went down stairs to investigate but nothing was disturbed. He went out on the street to ascertain if possible the cause for the noise, but everything appeared all right except that the rumbling continued. He believes it was the shock of an earthquake and is backed up in his opinion by people residing in the same locality."

Weekly Record - Fri., Jan. 31, 1894 Midland. - The earthquake was very distinctly felt about Midland. Mrs. Benjamin Gray, who was walking up from the shore road, heard it and felt a slight sensation of trembling pass by. It was preceded by a deathly calm for a few moments. The rumbling lasted quite a few seconds and was followed by a rush of wind, shaking the trees in the dense woods, like we often hear before a thunderstorm."

Moncton Transcript - Sep. 20, 1894 Was It an Earthquake? - About 9 o'clock Fridaymorning, a number of people in town heard a noise resembling the boom of a very heavy cannon, followed by a heavy roll. The same noise was heard at Trenton, River John, Stellarton, Pictou and Westville. It was heard at New Glasgow also at the same time. As the sky was clear at the time it was not thunder. What the noise was or where it came from remains a mystery up to date. The earthquake shock was distinctly felt at Hopewell. Several people heard a low rumbling noise accompanied by a slight trembling of the ground. At White Hill the dishes rattled on the shelves and in several other places the shock was equally

St. Croix Courier - Apr. 2, 1896 St. Andrews was aroused the other night by an earthquake shock. Nothing less than that would wake it up. The Beacon, which probably has half a dozen hands, says it is the largest employing industry in the town. Think of that for a town so well situated as St. Andrews. It is no wonder that Mr. Gilmore is the choice of a county with such a shiretown. They harmonize perfectly."

Codes: EART / IDX_Names: Earthquakes;
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Mar. 22, 1896; 7.56 p.m.-This shock was felt in Charlotte and York counties, New Brunswick, and in Washington county, Maine. The area has a diameter of about 100 miles, and lies adjacent to the shores of the Bay of Fundy and the gulf of Maine. By correspondence with observers at different points, I have been able to secure some notes on this disturbance. Eastport, Maine. - The shock took place here March 22nd, at 7.56 (75th meridian time), and lasted four of five seconds. This office is located in the new government building, built of granite, and on a solid ledge. Still the tremor was distinctly felt throughout the building, and more so by those living in wooden houses. The shock had no perceptible effect on our barograph. It had been rising steadily since noon, and I failed to see the least deviation in the trace. D.C. Murphy, U.S. Meteorological Observer. Beaver Harbor, N.B. - Shock slightly felt here on 22nd March at 8.45 p.m. Jar enough in some buildings to make glass rattle. Flagg's Cove, Grand Manan, N.B. - A slight earthquake shock was felt here on Sunday, March 22nd. The noise was very distinct, but only lasted a few moments. It was felt all over the island at the same time as at this station. Clara C. Seely, Dominion Meteorological Observer. St. Andrews, N.B. - The shock was markedly felt at St. Andrews. A well known gentleman resident there wrote me as follows: The noise at first was very sharp and was succeeded by a gradually lessening sound, and was all over in three seconds. It occurred at 8.45 p.m. In addition to the above places the shock was felt in all the West Isles, on the mainland northward to McAdam, some distance along the line between McAdam and Woodstock, and at St. Stephen and Pennfield. The shock was not felt at St. John, Fredericton, or Yarmouth, N.S."

St. Andrews Beacon - Mar. 26, 1896 Was It An Earthquake?- People in This Vicinity got a Bad Scare on Sunday Night.- Not since the time ofthe Fenian invasion, when the British gunboat, under cover of darkness, ran into Passamaquoddy Bay and began firing her big cannon have the people of St. Andrews received such a scare as they did on Sunday night last. It was just fifteen minutes to nine o'clock when householders were alarmed by a short, sharp and terrible noise in their dwellings. To some it sounded as if a heavy body had been projected through the roof of their habitation; others that their stoves has exploded, others that some invisible force had caught up their furniture and smashed into atoms. When they had hurried through their houses and found that nothing was out of place, they rushed on to the street and with anxious voices enquired from each other what it all meant. Was it a forerunner of the final destruction of mundane things? Was it an earthquake? Was it the comet that did it? All these and many more questions were asked, but no one could furnish an answer for them, and after waiting and watching around for an hour or two without anything else occurring they settled themselves down again within their dwellings. It is a little singular that people on the street heard very little of the noise of the concussion. Those who did hear it say that it resembled the rush of a mighty wind and that it was followed by a tremor of the earth. Boatmen from the islands on Monday say they heard the noise. They put it down as an earthquake. The telegraph operator at Watt Junction says it was felt in that neighborhood, while a message from St. John on Monday says that nothing unusual had been experienced there. Reports from Letete state that the earthquake was felt quite severely in that neighborhood. It was felt all along the line of the northern division of the C.P.R."

S.J. Daily Sun - Mar. 27, 1896 Earthquake at Deer Island. - A Deer Island, Charlotte Co., correspondent writes under date of March 25th: An earthquake shock was felt through the island on Sunday evening about a quarter to nine. It caused a noise like the rolling of thunder and rattled the crockeryware in some houses."

From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - May 15, 1896; 11.00 p.m.-A light shock was felt on this date at Fredericton, along the Nashwaak Valley, at Andover, and up the Tobique Valley as far as Three Brooks. A gentleman at Fredericton, in a letter to me, described it as one momentary concussion. Dr. Welling, writing from Andover, says: Two shocks of an earthquake were felt here on the night of the 15th of May about 11 o'clock. One gentleman was about retiring when he heard what he thought were horses running around the house, but when he reached the door the noise was repeated and he saw at once that it was the shock of an earthquake. It was heard at Three Brooks on the Tobique River some twenty miles distant about the Carleton Sentenil - May 23, 1896 Foreston, May 18. - A slight shock of an earthquake was felt in this and surrounding neighborhood on Thursday night."

St. Andrews Beacon - Feb. 4, 1897 The people of Deer Island experienced a shock of earthquake on the 26th. It caused a heavy rumbling in some of the houses. The shock was also felt in parts of Maine."

From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Feb. 14, 1897; 9 p.m.:Mr. McLaughlan goes on to say: On the evening of the 14th inst., about the same hour, we felt another sharp shock, boy not so violently as that of January 28th. I am of the opinion that those shocks are of frequent occurrence in the Bay of Fundy, and are generally thought to be reports of cannon. I recollect that about twelve years ago the middle of next June, at 10 o'clock a.m., we felt a violent shock at this station and at Seal Cove, but the only place on the mainland that I noticed it reported was at Rothesay, Kings Co. That shock was so violent that several tons of rock fell from the cliff near the lighthouse."

Codes: EART / IDX_Names: Earthquakes;
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Jan. 28, 1897; 9 p.m.:A sharp shock felt at Southern Head, Grand Manan. Duration about two seconds. Mr. W.B. McLaughlan, the light-keeper, in writing, says: It shook us up so violently that it set my dogs barking and the horse and cattle in the stable tried to break loose. I made a record of it in my journal."

St. Andrews Beacon - Jun. 30, 1897 Earthquakes in New Brunswick. - A bulletin has been issued by the Natural History Society containing a list of recorded earthquakes in New Brunswick. The list was compiled by S.W. Kain, and covers a period from 1663 to 1897. Several of these earthquake shocks were felt in Charlotte County, and particularly on Grand Manan. The bulletin remarks:- The greater frequency of earthquakes at Grand Manan than at any other place in the Province is worthy of note, and it is possible that further observation may show some connection between the so-called 'gun reports' and these light earth movements. In the discussion which followed, Dr. Geo. F. Matthew said: 'This part of the Bay of Fundy is remarkable for its great depth and precipitous shores. Off Brier Island the bottom descends to a depth of 100 fathoms in a distance of three miles from the outermost ledge; it is almost equally abrupt on the Grand Manan slope; the trough between is deeper than the bottom of the Gulf of Maine outside adjoining. This is the only part of the Bay of Fundy where there have been heavy outflows of trap of Triassic age on both sides of the bay, and the abyss between may be complementary to these ejections of lava. The weakness of the earth's crust here in Triassic times, as shown by the volcanic eruptions of that age, may not even yet be altogether removed; but the greater tendency to earthquake movements in this district may be the dying throes of the old Triassic disturbances.'"

Daily Sun - Mar. 3, 1897 Dr. Geo. F. Matthew gave an address on peat bogs, with special reference to Lily Lake peat bog, in which have been discovered specimens of wood gnawed by beavers. This bog has been dug into to the depth of eight feet, and it is said that soundings have been made to a depth of seven feet more. Sir. Wm. Dawson says that it takes one hundred years to make one inch of coal. Working on this basis we find - allowing for six inches of bog material to form one inch of coal - that some three thousand years have elapsed since this hollow began to fill up. Dr. Matthew spoke of the advisability of studying bogs in the vicinity of St. John, by which we could get a good idea of the changes of physical conditions which have taken place since the land about St. John emerged from the sea. ... S.W. Kain read a paper on the earthquakes that have been felt in New Brunswick. In brief introduction the causes of these movements were explained. It was shown that in remote geological ages that volcanic action had been very pronounced in southern New Brunswick, and that the Carleton heights, the Quaco hills and Chamcook mountain were reminders of that age. Coming to the historic period, a catalogue was given of the earthquakes felt in the province from February 5th, 1663 (the first recorded shock) to February 14th, 1897, when a slight shock was felt in Grand Manan. Interesting details were given of some of these movements, and it was shown that the Pacific coast of America is much more liable to earthquakes than lands bordering on the Atlantic. The comparative frequency of very slight shocks near the mouth of the Bay of Fundy was spoken of, and it was suggested that further observation might show some connection between the so-called gun reports and these shocks."

Carleton Sentenil - Mar. 27, 1897 Montreal earthquake..."

From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Oct. 12, 1897; 10.35 p.m.:South West Head, Grand Manan. Light. Duration about five seconds. Wind due south, strong gale and heavy weather, about two hours to high tide. Shock from southeast with a roar like a waggon over a frozen road. It shook the buildings sufficiently to alarm my watch dog. (Letter from W.B. McLaughlan.)"

S.J. Daily Sun - Oct. 12, 1897 Grand Manan, Oct. 7. - It is reported that a shock of an earthquake was felt at Seal Cove on Saturday at 12 m."

From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of New Brunswick, 1898. - Sep. 25, 1897; 1.30 p.m.:Parts of charlotte and York counties in this Province, and in some parts of Eastern Maine. Light. Felt distinctly at Canterbury, McAdam and St. Stephen. At St. Stephen it rattled dishes, etc., and at McAdam the earth trembled as from the passing of a heavy railway train. It lasted fifteen seconds. Not felt at St. Andrews, Eastport or Woodstock."

St. Croix Courier - Sep. 30, 1897 A slight shock of earthquake, lasting several seconds, was observed here at 1 o'clock on Saturday."

S.J. Globe - Aug. 15, 1898 Earthquake Shock. - A slight earthquake shock was felt early yesterday morning at several points on the river. It was distinctly felt at Hampstead, Westfield, River Bank, Ingleside and Rothesay. At Ingleside it woke some of the residents at 3.45 a.m. and three movements were noted. At the residence of O.H. Warwick, Westfield, dishes were thrown from the shelves. At Rothesay a number of people heard the rumbling. One gentleman said it seemed like a train approaching, followed by a shaking of the house. From a paper published in the recent bulletin of the Natural History Society it appears that earthquake shocks were felt at Rothesay in January, 1884, and June, 1885. One or two people in the city report having been awakened by the shock."

Codes: EART / IDX_Names: Earthquakes;
S.J. Globe - Aug. 15, 1898 Residents of Hampstead experienced two distinct earthquake shocks Sunday morning."

S.J. Daily Sun - Aug. 18, 1898 The Earthquake. - A young lady who was at Belyea's Cove on Sunday, describes the earthquake shock which occurred about 4 o'clock that morning, as causing a general shake up for a few seconds. The houses rocked violently and the sky was lurid and a loud rumbling was heard. No damage was done."

Kings County News - Aug. 25, 1898 A slight earthquake shock was felt early Sunday morning at several points on the river. It was distinctly felt at Hampstead, Westfield, River Rank, Ingleside and Rothesay. At Ingleside it woke some of the residents at 3:45 a.m. and three movements were noted. At the residence of O.H. Warwick at Westfield, dishes were thrown from the shelves. At Rothesay a number of people heard the rumbling. One gentleman said it seemed like a train approaching followed by a shaking of the house. From a paper published in the recent bulletin of the Natural History Society it appears that earthquakes shocks were felt at Rothesay in January 1884, and June 1885."
From List of Recorded Earthquakes in New Brunswick, by Samuel W. Kain, Bulletin XVI of the Natural History Society of

New Brunswick, 1898. - Jan. 11, 1898; 2 a.m.-At South West Head, Grand Manan. We felt a sharp shock of earthquake at this place on Tuesday, the 11th inst., at 2 a.m. It sounded like a heavy explosion. Wind northeast, light, high water, clear cold weather. (Letter from W.B. McLaughlan."

Semi-Weekly Telegraph - Nov. 11, 1899 Maine earthquake...."

Daily Sun - Feb. 4, 1902 Earthquakes in N.B. - Shocks Felt in Edmundston and Hartland; Also in Quebec. - Edmundston, N.B., Feb. 3. - At a quarter past eight o'clock this morning there was a distinct shock of earthquake felt here. The trembling lasted a full minute, and articles were knocked down in some houses, but no damage is reported. Saturday last being the 67th anniversary of the birth of the Honorable John Costigan .... Hartland, N.B., Feb. 3. - A distinct shock of earthquake was felt here at 8.23 a.m. The duration was about 40 seconds, and the tremor seemed to pass from SW to NE. Richmond, Que., Feb. 3. - At sixteen minutes to eight o'clock this morning a distinct shock of earthquake was felt here and in Melbourne. The rocking motion, which was accompanied by a rumbling sound, lasted about ten seconds. Morning services were being held in the Roman Catholic church at the time, and the altar candles swayed perceptibly. The seismic wave appeared to travel from north to south. Little Metis, Que., Feb. 3. - An earthquake shock lasting several seconds was felt here at 7.25 this morning. Montreal, Feb. 3. - A very slight earthquake shock was felt here about eight o'clock this morning. It was also felt at several points in the eastern townships. Quebec, Feb 3. - About 8 o'clock this morning the entire city, and, as it was learned later, the country as far east as Rimouski, was severely shaken by an earthquake. The shock was an alternating one and lasted about fifteen seconds. Many people in St. Roch's, where it is said to have been more severe, distinctly perceived trembling, and ran out on the street greatly alarmed. No damage, however, is reported."

Weekly Record - Fri., Feb. 7, 1902 A distant shock of earthquake was felt in Edmundston, and Hartland, N.B., on Monday morning last, and lasted for fully a minute. Quebec City, and the country east as far as Rimouski, also had a severe

N.B. Reporter - Feb. 5, 1902 Earthquakes in N.B. - Edmundston, N.B., Feb. 3. - At a quarter past eight o'clock this morning there was a distinct shock of earthquake felt here. The trembling lasted a full minute, and articles were knocked down in some homes, but no damage is reported. Hartland, N.B., Feb. 3. - A distinct shock of earthquake was felt here at 8.23 a.m. The duration was about 40 seconds, and the tremor seemed to pass from SW to NE. Thermometer, 32."

N.B. Reporter - Feb. 11, 1902 A Moncton historian referring to the recent shock of earthquake in Quebec recalls the fact that February 8th was the anniversary of the great earthquake shock of 1855. Mr. G.W. McReady, C.E., remembers the shock quite well. He was a student at Fredericton, and was in bed at the time, the shock occurred about daylight in the morning. There was also a heavy shock in 1869, the year of the great Saxby tide."

Richibucto Review - Jan. 16, 1902 Yarmouth earthquake....."

Codes: EART / IDX_Names: Earthquakes;
S.J. Star - Nov. 22, 1902 Earthquakes at Welsford. - Six Distinct and Separate Shocks Felt at That Place Yesterday and Today. - It took some time for the extra vibrations from St. Pierre to arrive in this province, but they reached here yesterday somewhat weakened, yet still doing business. There were no casualties. About eleven o'clock yesterday morning a number of the residents of Welsford, who were taking their morning siestas, felt a faint yet distinct shock. People who happened to be on their feet at the time did not notice the disturbance. The first was followed by two others at intervals of about five minutes, a little more distinct. No one thought much of these miniature earthquakes, although they afforded a subject for some talk at Welsford yesterday. This morning between five and six o'clock the people were wakened up by a heavier shock than any of those felt yesterday. A few minutes later the second of these disturbances arrived on the scene, shook the houses, overturned some of the furniture and generally made its presence decidely felt. About five minutes past six the last shock was noticed. It was the heaviest of all. William Hawker, the Prince William street druggist, who had a cottage at Welsford, felt these shocks and six other people in his noticed them. Six years ago on a Sunday in August a shock was felt at Welsford, accompanied by a rolling noise."

St. Andrews Beacon - Aug. 18, 1904 Old Time Earthquake. - A writer of reminiscences for the St. John Globe says that on the 22nd May, 1817, a severe shock of earthquake was felt. 'By accounts from St. Andrews we are informed the earthquake was very severely felt at that place, the alarm was so great as to occasion the soldiers to leave their barracks, and many inhabitants their dwellings. It was felt all over the Island of Grand Manan.'"

St. Croix Courier - Mar. 3, 1904 30 Years Ago. - There was a very perceptible shock of earthquake here on Friday evening

Woodstock Dispatch - Mar. 23, 1904 A severe earthquake shock was felt throughout the Maritime Provinces and the New England States on Monday morning. At Woodstock at two o'clock in the morning the shock came, accompanied by a rumbling noise. It shook the houses severely, waking people out of their slumber and frightening some of them badly. No damage is reported in this vicinity."

Woodstock Dispatch - Mar. 23, 1904 Bristol. - A shock of earthquake was felt here Sunday night."

Codes: EART / IDX_Names: Earthquakes;
St. Croix Courier - Mar. 24, 1904 One Night's Terrifying Experience! - A Very Lively Earthquake That Made People Think of Several Things - Its Effects Were Wide But Its Damage Slight - A Record of Other Earthquakes That Have Passed Our Way. - We were terribly shocked at an early hour on Monday morning. So was nearly everybody in this vicinity. An earthquake did it and did it well. There are those who say that there was a slight shock at about 1.30, but the one that generally awakened the people came at 2.05, followed by a slighter one four minutes later, while a few people report a very slight one at about 6.00 o'clock. It was the 2.05 shock that most of the people had their experiences with and it did not tend to make anyone long for a residence in southern climes where such experiences are common. It was preceded by a rumbling noise as of a railway train. Then came a swaying of the earth's crust that caused houses to rock, windows to rattle and dishes to do some lively balancing to retain their positions on pantry shelves. Wall pictures and bric-a-brac came down and there was many a hasty exit from beneath the bed clothes, though they were probably all voluntary and made to see what it was all about. It is currently reported that it even awakened from his slumbers the young man in charge of telephone central. There was great diversity of opinion as to the direction in which it travelled. Some had it going from east to west, others from west to east, others from north to south and still others from south to north. Down in the C.P.R. round house Oscar Riley, who has charge there at night, was sitting in the cab of locomotive No. 174 when he heard a rumbling coming down the river, though he could not account for it. Soon the earth commenced to tremble violently and the engine started to roll towards the door. Instantly he reversed the lever and stopped any further progress, but had he not been there it is difficult to tell whether the engine would have brought up or what damage it would have done. At the residences of Collector Graham, Mrs. E.B. Kierstead and Folensbee Libby, in St. Stephen, and of Dr. S.E. Webber, in Calais, chimney tops were thrown to the ground with great force. In one case the bricks were thrown across the roof a distance of twenty feet. At Sedge Webber's house a clock was stopped and at Chipman Memorial hospital a number of lights of window glass were broken. Some bricks were loosened from the walls of the Methodist church. Throughout the towns children were terrified and older people were very much alarmed. There were probably more fervent prayers uttered in a few moments than were said in all the churches during Sunday. One young man, out King street way, whose home is near the railway track, was aroused from his sleep and at once proceeded to awaken his mother with the cry 'Wake up, mother, there's an engine off the track and it's run into the house somewhere.' Humorous experiences were numerous but not many want to

pass through like anxious moments again. One prominent member of Father Lavery's congregation says it was 'nothing but the tail end of the celebration of St. Patrick's day.' Coming as it did just when the sun was getting back across the line, it would seem to be the last departing kick of a most remarkable winter, that had done about everything else that it could to us and was determined to leave a departing token that would be long remembered. It was an uncanny experience, to be awakened in the darkness of the night and to realize that, come what would, one was powerless to prevent it. Those who happened to be abroad at the time state that it was intensely dark just before the shock but that almost immediately afterwards the stars were all visible and it was quite light. Reports received next day indicate that the shock was general throughout the maritime provinces and the New England states but that, fortunately, no serious damage resulted in any place. Apparently it started north of us and travelled towards the south. Previous Earthquakes. - On March 1, 1898, S.W. Kain read a paper on earthquakes before the natural history society at St. John and from it is made up the following list of earthquakes recorded in this province, with two added that have been reported since the paper was compiled. [SEE KAIN'S REPORT for 1663-1898] 1898 - August 14, 3 a.m.: Shock on St. John river, between Torryburn and Oak Point; felt most severely in the vicinity of Oak Point. 1904 - Feb. 21, 8.34 a.m.. Light shock felt at Bathurst."

St. Andrews Beacon - Mar. 24, 1904 An Earthquake. - The St. Croix Valley is Shaken by a Violent Tremor of the Earth. - A violent shock of earthquake, followed a minute or two afterward by a slight tremor of the earth, occurred at 2 o'clock on Monday morning. There was scarcely a person in the town or neighborhood who was not awakened by the shock. The houses shook violently, causing windows to rattle, dishes to clatter and beds to shake as if their occupants had had an attack of fever and ague. It is needless to say the shock caused great alarm. Some thought the end of all things had come; others that the noise and tremors had been produced by a violent gale; still others that burglars and dynamite were at work, or that the foundations of their houses had suddenly given way. Not for many years has there been such a violent disturbance as this one in this locality. Mr. Chas. H. Norris, chef for Kennedy's hotel, who made the acquaintance of earthquakes while he was in the south, said that this was the most violent one he had ever experienced. He was awake at the time. A roar as if from a mighty wind first attracted his attention. Then came the earthquake shock, which made the house shake as if it was a leaf on a tree; after that there was another faint tremble of the earth. The night was perfectly calm and scarce a breath of wind was blowing. Martin, the titled Englishman, whose alleged connection with the Bank of Nova Scotia robbery gained for him a refuge beneath the roof of the St. Andrews alms house, said he heard the noise of the approaching earthquake. He had heard similar noises in Valparaiso and other parts of South America and knew what was coming. He likened the noise to that caused by a number of heavy freight trains passing over swampy land. It was his belief that a serious earthquake had occurred in the West Indies or in South America. He said that in England, a number of years ago, an earthquake shock caused the tower of the cathedral in Colchester, Essex county, to fall. The disturbance was severely felt at St. John, and as far south as Boston. No serious damage is reported. Some queer incidents are recorded of the doings of the earthquake. In one household it started a clock that had not been going for eight years; in another it stopped a clock at ten minutes past two; in another it knocked a clock off the mantlepiece. One man says that it threw down a bottle that was on a dressing case in his room. Another man declares that it made the water in his well muddy. He pumped all the next day to get it clear but without avail. At St. Stephen, the tops of the chimneys on Collector Graham's, Mrs. Kierstead's and F. Libby's houses toppled over altogether."

St. Croix Courier - Mar. 24, 1904 Milltown. - The shock of the earthquake about 2.00 o'clock on Monday morning frightened the larger portion of the residents in town, though no real damage was done. Upper Little Ridgeton. - On Monday morning at about two hours after midnight, a heavy shock of earthquake was noticed here. The vibration was quite severe and lasted several seconds. Lynnfield. - Quite a severe earthquake shock was felt in this district on Monday morning."

Codes: EART / IDX_Names: Earthquakes;
Weekly Record - Fri., Mar. 25, 1904 Albert, Mar. 22. - Albert experienced an earthquake shock on Monday morning about two o'clock. The shock was sufficient to rattle doors and windows, and to awaken many of the people of the village. It was followed by a second and much less severe shock, two or three minutes later."

Semi-Weekly Sun - Sep. 13, 1906 Bald Mountain's Strange Behavior Causing Alarm. - Party of American Sportsmen Terrified at Its Rumblings and the Simultaneous Quaking of the Earth - Other Manifestations Reported Showing Its Volcanic Nature. - From out of the thickest of the northern New Brunswick forests, the high mountainous table land where rivers flowing north, east and south take their source, there comes an astonishing story of a volcanic disturbance, in this province, always thought to be immune from such dangers. According to word which has reached the city the action of Bald Mountain, on the border of Restigouche and Northumberland counties, not far from the border of Victoria county has caused great interest in the district around and has been even the cause of anxiety among those living near and of fear in sportsmen who have seen its strange behavior. Henry McKenzie, who has been in the city during the exhibition and who has spent a considerable time in the Tobique district but who is now residing in Maine says in sympathy with the seismic disturbances in other parts of the world, Bald Mountain has suddenly arisen into life and shakes intermittently with its internal fires. According to this gentleman, about two weeks ago, a number of Americans were on a hunting trip from the Forks on the Tobique, where there is a private club house belonging to the Americans who have the fishing rights on the Tobique. These gentlemen were trying their luck with the rod in Nictor Lake, and contrary to the usual luck at this season on this lake were meeting with great success. As some of the gentlemen in the party had never ascended Bald Mtn., which is near the lake, the party decided to do so with the idea of carving their names in the pine tree which crowns the summit. When the ascent has been half completed the party were suddenly terrified by a roar beneath them as of cart wheels, and according to their story the earth quaked about them. The party lost no time in returning to the base, and the pine tree is still minus their names. They say further that just as dusk was coming on a vapor seemed to be rising from one side of the mountain. This is the remarkable story which is told, and as the place is far from civilization confirmation of it is difficult. Although the story of any such disturbance as is mentioned here is entirely new, the general opinion among the guides and lumbermen who have occasion to visit the spot is that the mountain is a volcano which will one day burst into flames. Others who have visited the spot at different times tell the same story about the rumbling sounds. None, however, ever speak of the earth shaking. Several people say that in winter time on spots of the mountain the snow will not lay, but the vegetation is more or less green all winter. John McDonald, who is in the city as a representative of Quebec contractors, is very familiar with the locality, being one of the best guides on the Tobique. Speaking to a representative of the Sun, he said that he had been on the mountain about forty times and that on many of his visits he has heard this sound, both in the day time and at night. Dr. Geo. F. Matthew, who is one of the most prominent geologists in Canada, when asked about the likelihood of such disturbances, was not disposed to put much faith in it, and said the sounds heard probably were exaggerated. Bald Mt., he said is 2,575 feet above the level of the sea, and was for a time regarded as the highest peak in the province. A short distance away, however, is Mt. Carleton, which it has been found is 2,892 feet above the sea level. Dr. Matthew thought that the sounds heard might have been from landslides, although they would be rather unusual at this time of year. He also thought that a sound might be caused by vibration if there was a hollow in the rock. If, he said, there has been an earthquake, it would probably have been felt in the district around, as has been the experience of Vesuvius and other places while the vibrations would have been recorded in the observatories of Harvard and McGill. Dr. Matthew has never visited Bald Mountain, but says that Dr. Bailey and Prof. Ganong are familiar with the mountain and its formations. The doctor said that the rock in the mountain was felsite, of volcanic origin, but that ages and ages have passed since lava flowed down the sides, centuries in which the surface had cooled and great forests had

North Shore Leader - Sep. 14, 1906 Earthquake at Bald Mountain? - Fearsome Tale of Rumblings and Rocking of Earth. - According to Henry McKenzie, a gentleman now residing in Maine, but who is said to be familiar with the Bald Mountain District, a party of Americans who recently visited that district allege that Bald Mountain trembled beneath their feet from subterranean disturbances. He told the story to a St. John paper, and said that when the Americans were about half way up the mountain they were suddenly terrified by a roar and a grating noise and the ground quaked. The party got thoroughly scared and lost no time in returning to the base of the mountain. They also allege that a vapor seemed to arise from the side of the mountain. It is said that this is not the first time that subterranean rumblings have been heard in Bald Mountain, and some think that this latest alleged occurrence may have some connection with seismic disturbances in other parts of the world. Dr. Geo. F. Matthews, a prominent Canadian geologist, did not put much faith in these stories, but said that the rock in the mountain is of volcanic origin. He thought the rumblings, if heard, might be caused by landslides. An interesting article throwing some light on the connection of earthquakes and seismic disturbances in different parts of the world, will be found on page 9 of The Leader. Bald Mountain is about 60 miles from Newcastle, and is 2575 feet above sea level. It doth not yet appear where the party of Americans got their bait for the fishing excursion. Probably in a Scott Act town!"

St. Croix Courier - Feb. 21, 1907 A slight shock of earthquake is reported to have been felt in this vicinity one night last

North Shore Leader - Feb. 22, 1907 Earthquake Shocks St. George, N.B. - St. George, N.B., Feb. 19. - Quite a severe earthquake shock was felt here at 5.30 this afternoon. It lasted two minutes and was plainly felt. About twenty minutes later a second shock was felt. The trembling was felt at places five miles away from St. George although nothing was felt at St. Stephen."

Codes: EART / IDX_Names: Earthquakes;
North Shore Leader - Aug. 14, 1908 Earthquake Shock Was Severe at Hartland. - Saturday morning there were three distinct shocks of earthquake of sufficient force to awaken most of the inhabitants of the country round about Hartland, N.B. The first shock at one was during a heavy rain, just after an electrical storm had passed. There was another at four, while that of the greatest severity occurred at seven. In Taylor's brick block plaster fell from the ceiling and from reports in different sections it was quite the most severe shock recorded here, exceeding that of thirty-nine years ago."

St. Andrews Beacon - Feb. 18, 1909 Earthquake shocks. - Two distant earthquake shocks are reported to have been felt at St. George, N.B., and at the neighboring island of Campobello on Saturday of last week between the hours of 6 and 8 a.m. At St. George the first shock is said to have been more severe than in recent years. Light shocks were noticed by several in this city. - Eastport Sentinel. [Nothing of a similarly 'shocking' nature has been experienced in St. Andrews."

St. Andrews Beacon - Oct. 21, 1909 Yarmouth earthquake......"

St. Andrews Beacon - Dec. 7, 1911 A shock of earthquake was felt in St. Andrews at 10:45 on Monday night. It was accompanied by a rumbling sound and quite a severe vibration. It lasted only a few seconds."

St. Andrews Beacon - Dec. 15, 1911 Deer Island Felt It. - The shock of earthquake which disturbed St. Andrews last week, also caused considerable disturbance on Deer Island. It sounded like an explosion and was accompanied with earth

St. Croix Courier - Mar. 23, 1911 An earthquake of sufficient force to rattle dishes, and lasting several seconds, was felt here at about eight o'clock Monday morning. The quake was not generally noticed by those abroad, but some who were still in their homes felt it quite distinctly."

Campbellton Graphic - Mar. 24, 1911 Earthquake at Provincial Capital. - Dishes Rattle and Were Knocked Down at Doaktown. - Fredericton, March 20. - An earthquake shock was distinctly felt here about 8 a.m. today during a snow storm. Reports from Doaktown indicate that the quake was felt worse there than before. In some of the houses the shock was felt so much that dishes rattled and in some cases were knocked down and broken. Several residents in the vicinity of Queen and Pitt streets, St. John, assert that they felt a tremor like a slight earthquake this morning about eight o'clock."

S.J. Globe - Aug. 19, 1912 Slight Earthquake Shock at St. Stephen. - A slight shock was felt here about half past two o'clock this morning."

S.J. Globe - Jan. 5, 1912 Yarmouth earthquake....."

St. Andrews Beacon - May 6, 1913 A slight earthquake shock was felt in this section on Sunday at noon."
Kings County Record - Oct. 3, 1924 Earthquake Felt in Sussex By Citizens Early Tuesday Morning. - An earthquake shock was distinctly felt in the Town of Sussex early on Tuesday morning. No serious damage was done as far as can be learned but the shock, which lasted about a minute, made the furniture in the houses clatter and knocked down articles from mantles and shelves. The disturbance, which occurred shortly after five o'clock, caused many to jump from their beds to determine the cause. At first, it was supposed by people living in the vicinity of the railroad, that the shock was caused by a freight train rolling by, but on investigation, no train was in evidence and it at once dawned on the early risers that they had been treated to an earthquake shock. The shock appeared to be more noticeable in some parts of the town than others, residents in the portion below the C.N.R. railway crossing feeling the tremor more than the upper districts. The shock, according to press despatches, was also felt in Quebec and the New England States. Several places in New Brunswick report the happening and all characterize it as general throughout their districts."
Kings County Record - Mar. 6, 1925 Alma. - About 10.25 Saturday evening an earthquake shock was plainly felt here by many and about the same time it was announced by radio that the shock was very heavy in the United States."

Codes: EART / IDX_Names: Earthquakes;
Kings County Record - Mar. 6, 1925 Earthquake Shock Very Severe. - Worst in History of Sussex. - Houses Trembled and Inmates Rushed to Streets in Alarm. - Plate Glass Window in W.B. McKay's Store Smashed. - Citizens in all parts of the town felt the earthquake, which took place at 10.20 o'clock on Saturday evening last. The earth tremor was without a doubt the worst in the history of the town, and was the cause of considerable excitement. Houses trembled with the vibration and dishes and furniture rattled in a manner that more than alarmed many people. In the business sections, clerks and customers rushed to the streets, and the Imperial Theatre was soon emptied of its patrons, after the big building began to tremble. In most instances the first warning of the quake came to those who were at their homes, when things on the sideboard began to rattle, and then the whole house shook as it were from the vibration of a heavy freight train passing close to the door. The tremor lasted about two minutes. The damage resulted from the shake-up, otherwise than the breaking of two plate glass windows, might possibly be traced to that source. On Sunday evening about 9 o'clock, a large pane of of plate glass in the window facing the vestibule of the dry goods store, fell out and crashed through the big pane on the opposite side, both being demolished to atoms. It is thought that the shaking of the building, caused by the earth tremor of Saturday night, to be responsible for the plate glass catastrophe. According to information received from different points affected by the earthquake, millions of people were terrified by the severe earthquake, which extended across the northern portion of the United States and Canada, Saturday night about 10.20. Moncton was one of the centres of the Maritimes where the shock was most pronounced, but there was no material damage. The quake was felt more severely in Quebec, the deep rumblings of the earth being the most terrifying feature. Churches and other buildings were damaged. People in that section thought the end of the world had come. Small shacks on the outskirts of the city were thrown down, and the roof of the Union Station was damaged. The centre of the disturbance in the United States was near Washington, and New York and other cities experienced severe shock. Experts state that there is no fear of a repetition of the quake in Canada."

Carleton Sentinel - Mar. 6, 1925 Severe Earth Tremor. - At 10.20 Saturday night, an earthquake of a very severe type was felt in this section. Some people claim that another, lighter shock was felt a little later. Buildings of all kinds vibrated and much alarm was felt during the tremor. The wood shed at the pumping station, solidly built, was moved from its foundation posts and will require substantial repairs. No serious damage was experienced generally in this district. It will be remembered, however, as an earth tremor of great severity."

Kings County Record - Mar. 13, 1925 Earth Tremors in Canada. - general ..."

Kings County Record - Mar. 13, 1925 Former Sussex Girl Heroine of Earthquake. - Roxie Carrie's Coolness Averts Panic in Ottawa Theatre. - Roxie Carrier, sixteen year old pupil of the L. Lisgar Street Collegiate School, Ottawa, who her parents say, saved many lives from panic results during the earthquake of February 28th. Roxie Carrier is a daughter of Mrs. M.W. Carrier, who prior to her marriage was Miss Blanche Worden of Sussex, daughter of the late George Worden, of Sussex, and sister of Miss Bertha LeB. Worden, who for many years occupied a prominent place in musical circles in this town. The Collegiate scholars were having their annual entertainment, which included a musical comedy entitled 'El Bandito'. The earthquake struck about 9.20, when Miss Carrier in the role of Donna Cyrilla held the stage alone. A spotlight was toppled by the tremor and the rocking of the building in which 1,000 people were seated, caused an excited person to shout 'fire!' Stopped the Show. - The orchestra of 30 Collegiate girls stopped playing, the audience rose en masse and a moan of fearful outcry swept through the old fashioned auditorium furnished with two small exits. The floor swayed and people were teetered almost off their feet. Reports say the shock was very severe in the Ottawa district. Quoting an eye-witness writer in the Ottawa Citizen, Miss Carrier's coolness and common sense is thus described: 'In the meantime, Miss Carrier had stayed her position on the stage. She had stopped singing, and the orchestra had also ceased, but the effect of that young girl standing, a picture of loveliness in herself, unconcerned and waiting for the people tp settle down and let her continue her singing, was magnetic, for the people did quiet down and settled once again into their seats.' 'Only an Earthquake' - Some of the girls in the orchestra began to cry, and Miss Carrier called out to them that it was only an earthquake and nothing to cry about. She then called to the conductor to tell her where to start her song again. He told her and she continued her singing as if nothing had happened. In the meantime many of the girls behind the scenes were crying, and one fainted but the boys of the Cadet corps soon restored their confidence and convinced them that all danger had passed. When the time had arrived for the chorus to enter the stage there was no trace of fear or distress on any of the singers. A Narrow Escape. - The sensation during the swaying of the building was most alarming, the Ottawa paper states, and at the height of the quake the movement was quite severe, so much so that there was no doubt in the mind of everyone as to what was happening. The experience of last Saturday will probably never fade from the memory of those present and the feature that will remain uppermost is the bravery of Miss Roxie Carrier, of the boys who reassured the panic stricken crowd, and the pluck of all those taking part in the evening's entertainment in such splendid form after such a startling and trying experience."

Codes: EART / IDX_Names: Earthquakes;
St. Croix Courier - Nov. 21, 1929 Charlotte Co. Feels Monday's Quake. - Reports of Disturbance Come From Many Points. - Shook Things Up Around St. Stephen. - Monday's earthquake was distinctly felt throughout Charlotte County, reports from the outlying sections indicated, but it was not as severe as in other parts of the Maritimes. Only one shock was felt here, at about 4.35 p.m., which shook buildings and rattled dishes on the shelves of many homes. The tremor was light in the business district but towards the outskirts it was sever enough to cause alarm and in a few cases houses were slightly damaged. Dr. J.H.L. Johnstone, of Dalhousie, and Prof. K.F. Mather, of Harvard, agree that the quake probably had its source along the Fundian fault, which runs southwestward from the Bay of Fundy off Cape Ann under the Atlantic Ocean. The Cunard liner Caledonia reported severe shocks at 4.30 p.m. Monday but no surface disturbances. Her position at the time was estimated to be south of the Grand Banks. Another shock within a few days to be followed by a tidal wave is predicted by geologists of Harvard University from disturbances of the earth's crust along the Fundian fault."

Kings County Record - Nov. 22, 1929 While the earthquake passing over Sussex and vicinity about 4.30 on Monday afternoon was very visibly felt and in some of the brick buildings was severe enough to send people scurrying into the streets to ascertain the cause of the disturbance, no damage is reported in this vicinity. The tremor lasted about four minutes and there appeared to be three distinct shocks. At first there was a heavy rumble, as though caused by a grain, and buildings trembled, but the disturbance grew in intensity and buildings swayed slightly and dishes in houses rattled and furniture moved as by an unseen hand. The shock was undoubtedly by far the most severe felt in Sussex in the memory

Codes: EART / EART / IDX_Names: Earthquakes; Earthquakes;
Union Advocate - Oct. 28, 1869 Earthquake. - The present season is evidently a sensational one. Hardly had the excitement of the great Storm died away, when we were startled by an Earthquake. The shock visited us on Friday morning, about five or ten minutes to six o'clock, and was the most severe ever felt here. As near as we could reckon it lasted about three-quarters of a minute. Concerning the point from whence it came there are so many accounts that it is hard to determine. To us, it appeared to come from South or Southeast. It was preceded by a rumbling noise like that of a heavy waggon on the road. In and around our towns there was considerable shaking done - parties were attacked with a notion similar to that of the fever and ague - buildings were shaken to their very foundations, and swayed to and fro in such a manner as to cause the timbers to crack - and persons acutely sensitive were greatly shocked at the proceedings. There was not much damage done, but had the shock been of longer duration, it would have been otherwise. One chimney in town was partly thrown down. Dame Rumor (who is very fickle at times and not to be depended on) has it, that in some cases parties were thrown from their beds - stoves capsized - and articles of furniture set to dancing merrily. A report is going the rounds that at the time of the shock a man was travelling up the river, and the earth rolled to such an extent that the horse could not 8 proceed for stumbling, and he pulled up and waited until all was over. One of our settlers, with a very decided Highland accent, in describing the motions in his dwelling, said among other things ""that the saw on the wall she

dance"", which was no doubt the case. One man, from up river, tells us that his building moved an inch from its former position. - Some parties say that the river was also visibly disturbed, but we cannot vouch for mere rumor. These are only small matters, but it should be (and no doubt is) a source of thankfulness on the part of all that we were so providentially spared from any serious calamity. The moments of the earthquake were no doubt solemn ones to many - it was surely a time to feel solemn, when Nature was convulsed, and the earth beneath our feet heaving in convulsive throes. The man who could feel thoughtless and indifferent at such a time must be hardened indeed. The shock was felt through New Brunswick, Nova Scotia, and P.E. Island; all through the New England States; but as far as we can learn, not in Quebec or Montreal. Some parties expressed themselves pleased at experiencing what an earthquake really is, but owned that their curiosity was fully, if not more than satisfied in the recent one. Such a visitor is certainly not a welcome one, and its appearance can only be hailed with feelings of awe, and by many perhaps with terror. Sackville Borderer - Oct. 28, 1869 Earthquake previous Friday ..."

Codes: EART / GEOL / IDX_Names: Earthquakes; Geology - General;
N.B. Courier - Mar. 19, 1842 Geology Of New Brunswick. - We have already noticed Dr. Gesner's Fourth Report on the Geology of the Province, which, after a careful perusal, we find a highly interesting and valuable publication, and wetherefore recur to it again. This Report will not only add to the Doctor's well-earned fame, but will tend materially to render better known the extensive and valuable mineral resources of New Brunswick; it well deserves the most attentive consideration. A number of notices of this Report have already appeared in the Colonial papers, all speaking of it in terms of warm commendation, and we find that it is also attracting notice abroad. The following extract is from the New York Albion of the 5th instant:- ""Geological Survey of New Brunswick. - Fourth Report. - The indefatiguable and learned Dr. A. Gesner, has just published his Fourth Report on this highly interesting subject, made under authority. To an extraordinary share of zeal, and of laudable desire to develop the riches and capabilities of Nova Scotia and New Brunswick, Dr. Gesner brings a scientific and discerning mind, high attainments, much experience, and a happy detection of analogies, where minute proofs are not at hand. His main purpose in the present part, has been the exploration of the mineral resources of New Brunswick, but he has by no means been either negligent or scanty in his observations as to the soils, and modes of cultivating them, the rivers and even the aboriginal inhabitants, of whom many remain. The most minute part of his labours, however, has been that of investigating the great coal fields in the Province, and this is a matter of very serious enquiry. The introduction of steam, both for manufacturing and nautical purposes, has given a strong impetus to such enquiries, and at this time of day, any country will have additional claims to general attention, which can present a plentiful and easy supply of so valuable a commodity. The pamphlet of Dr. Gesner, which contains about one hundred pages, is brief and terse in description, but exceedingly lucid in its style, and the author well deserves the thanks, both of the Province and of the public."" The investigation of the great coal field of this Province, which is noticed in the above extract, has had Dr. Gesner's most earnest attention for some years past, and although it is by no means certain that he has fully ascertained the whole of its vast extent, yet enough has been done to render it quite evident that New Brunswick possesses within her limits the largest coal field in the world. In our former notice we copied the Doctor's account of this vast and valuable mineral deposit. A very interesting portion of the Report under 4 consideration, is the chapter which relates to the ""Terraces"" on the River Saint John, and other rivers in the Province. These terraces are found on many of our rivers, and consist of several parallel steps rising abruptly from one level surface to another; they are most frequently composed of diluvial matter, and in all places where those steps or terraces appear, the bed of the stream has been lowered, or the surface, formerly covered with water, has been drained. A number of most sections of these terraces are given in the report, particularly of one near the lower ferry at Woodstock, one on the Keswick, and a third on the Nashwaak. It appears that the beds of the St. John and other rivers in this Province, have been lowered by some causes, from twenty to one hundred feet, and Dr. Gesner enters into a consideration of the causes which have enacted these changes of level; he is of the opinion that the terrace below Woodstock has been formed by the agency of an ""ice-jam""; but some of the others have been caused by means which are not so obvious, and about which considerable doubt exists. As tending perhaps to throw some light on this question, and explain not a few of the peculiarities of the rocks of this Province which have yet been accounted for, a literary friend, well versed in the history ofthis continent, has requested us to bring under Dr. Gesner's notice, an account of the great earthquake, or rather series of earthquakes, which visited this part of North America in 1663, as that great event does not seem, as yet to have attracted his attention. Many notices of this earthquake appear in the works of the early French writers on America, some of which are, no doubt, very much exaggerated; but not very long since, a manuscript was discovered in the library of the Jesuit's College at Quebec, giving a singular and striking description of an event, which appears to have effected very extensive and wonderful changes in the physical features of this part of America. This manuscript is admitted to be of undoubtful authenticity, and from it the following account of the great earthquake is condensed. On the 5th of February, 1663, about half past five o'clock in the evening, a great rushing noise was heard throughout the whole extent of Canada. This noise caused the people to run out of their houses into the streets as if their habitations had been on fire; but instead of flames or smoke, they were surprised to see the walls reeling backwards and forwards, and the stones moving, as if they were detached from each other. The bells sounded by the repeated shocks; the roofs of the buildings bent down, first on one side and then on the other, while the timbers, rafters and planks cracked. Animals fled in every direction, and children ran crying and screaming in the streets; men and women, seized with affright, stood horrorstruck with the dreadful scene before them, unable to move, and not knowing where to fly for refuge from the tottering walls and trembling earth, which threatened every instant to crush them to death, or sink them into a profound and immeasurable abyss. Some threw themselves on their knees in the snow,

crossing themselves, and calling on their Saints to relieve them from the dangers with which they were surrounded. Others past the rest of the dreadful night in prayer; for the earthquake ceased not, but continued at short intervals, with a certain undulating motion, resembling the waves of the ocean; and the same qualmish sensations, or sickness at the stomach, was felt during the shocks, as is experienced in a vessel at sea. The violence of the earthquake is described as greatest in the forests, where it appeared as if there was a battle raging between the trees; for not only were their branches destroyed, but even their trunks are said to have been detached from their places, and dashed against each other with inconceivable violence and confusion - so much so that the Indians in their figurative manner of speaking, declared that all the forests were drunk. The war also seemed to be carried on between the mountains, some of which are described as being torn from their beds and thrown upon others, leaving immense chasms in the place from whence they had issued. During this general wreck of nature, the ice, upwards of six feet thick, was rent and thrown up in large pieces, and from the openings in the earth, in many parts, there issued thick clouds of smoke, with fountains of dirt or sand, which spouted up to a considerable height. The springs were either choked up or impregnated with sulphur, while several rivers are alleged to have been totally lost; others were diverted from their course, and their waters were, for a time, totally corrupted. Some of the rivers became yellow, others red, and the great River St. Lawrence appeared entirely white as far down as Tadoussac on the Saguenay. This extraordinary phenomena will astonish those who know the size of that river, and the immense body of water it contains, which must have required an abundance of matter to whiten it. Montreal, at that period, was surrounded by picketing or palisades, and an account is given, from that place, of the manner in which the pickets jumped up, as if they had been dancing; the rolling and heaving of the earth at Montreal is described minutely and forcibly by a person who visited there. An account from Three Rivers state[illegible]t the first shock there was the most violent, and commenced with a noise resembling thunder. The first shock is said to have lasted half an hour or more, but its greatest force was not more than a quarter of an hour. At Tadoussac, (about one hundred and fifty miles below Quebec) the effect of the earthquake was not less violent than in other places; and such a heavy 6 shower of volcanic ashes fell in the neighborhood, particularly in the River St. Lawrence, that the waters were as violently agitated as during a tempest. Near St. Paul's Bay, (about fifty miles below Quebec) a mountain about a quarter of a league in circumference, situated on the shore of the Saint Lawrence, was precipitated into the river, and became a small island. Lower down the river towards Point Alouettes, an entire forest of remarkable extent, was loosened from the main bank and also slid into the St. Lawrence. But the circumstance which renders this earthquake particularly remarkable, is its duration, it having continued from February to August, almost without intermission! It is true, the shocks were not always equally violent, and the first appears to have been by far the most severe. In the mountains behind Quebec, the thundering noise and trembling motion continued successively for a considerable time. At Tadoussac, the shocks are described as continuing for two or three days at a time, with considerable violence. Sometimes the motion was felt like the pitching of a large vessel and it was this which caused many to have a giddiness in their heads, and qualmishness at their stomachs. At other times the motion was hurried and irregular, with sudden jerks which were extremely violent; but the most common was a slight tremulous motion, with but little noise. A number of French inhabitants and Indians, who were eye-witnesses of the scene, stated that up the river called Trois-Rivieres, the hills which bordered the river on either side, and which were of a great height, were torn from their foundations and plunged into the river, causing it to change its course, and to spread itself over a large tract of land, then recently cleared. With respect to the extent of this earthquake the manuscript states that it was universal throughout the whole of New France, including Acadia or Nova Scotia, and what is now New Brunswick, and that it reached into New England. Its effects at L'Ile Perce and in Gaspe are particularly mentioned, and it is stated that as far as could be ascertained, the earthquake extended more than six hundred miles in length and three hundred in breadth; and that one hundred and eighty thousand square miles of land were convulsed on the same day, and at the same moment. In the course of this violent and extensive convulsion of nature, lakes appeared where none had ever existed before; mountains were overthrown, leaving on their places frightful chasms or level plains; falls and rapids were changed into gentle streams, and gentle streams into falls and rapids; the features of the country were, in many places, so completely altered as scarcely to be recognized by those who had previously seen them. As this part of America is distinctly mentioned as having felt the effects of this violent earthquake,7 may it not be possible that some of the peculiar features of the country, and particularly on our rivers, may be traced back to this event? May it not be possible that the Grand Falls of this river, date no further back than this period - that the rending asunder of the rocks of the Meductic, which have evidently once been joined, occurred at this time - and that one of the most wild yet picturesque scenes in New Brunswick, at the Falls of the Nepisiguit, was created at the same epoch? We leave the further consideration of this matter to Dr. Gesner, and shall hope to hear of it hereafter. Whatever serves innocently to employ the mind, is in itself a benefit, as it keeps the rational powers in healthy action, and may afford occasional relief from the severer pursuits of business or labour; but when researches like those of Geology, which discover so many evidences of the wisdom and goodness of the Almighty, occupy the leisure of any considerable portion of the community, greater advantages still may be expected of the faculties. A laudable curiosity is gratified, a scientific pursuit is encouraged, useful knowledge increased, a habit of observation and arrangement prompted, the social principle exercised, and fresh motives presented to admire the Creator in all his works. Such will be the beneficial effect's of Dr. Gesner's labours at the present day, without looking to the pecuniary or other advantages which have already been derived from them. Although the Provincial Geologist is doing much for the present generation, he is doing yet more for posterity; he is laying up rich materials ready for instant use, whenever the state of society in this Province shall be such as to seek for facilities in acquiring more advanced knowledge than is now sought after, and when the country will possess a greater amount of labour and capital than at present, which may be profitably employed in developing and rendering valuable the vast amount of mineral wealth which has been

S.J. Daily Sun - Apr. 8, 1896 Natural History Society. - ...... A biographical sketch of Dr. Gesner, prepared by his two sons, was then read. Abraham Gesner was born May 2nd, 1797, at Cornwallis, Nova Scotia. His father was a Loyalist, who owned a farm at Tappantown, about twenty miles above New York, on the Hudson River. Owing to the reverse of theBritish arms he came to Nova Scotia. Gesner received a medical education in London, where he was a student with Sir Astley Cooper. On receiving his degree, he returnedto Nova Scotia to practice. In 1824 he married the daughter of Dr. Webster of Kentville. Two of Dr. Gesner's sons are still alive and reside in New York. Dr. Gesner died in 1864, and was buried in the Camp Hill cemetery, Halifax. Dr. Gesner founded the Gesner Museum, now the property of the Natural History Society, and was a pioneer geologist. .....Matthew .... Tantramar marsh ... S.W. Kain read a short note on the

Kings County Record - Aug. 17, 1961 Would Interest Youth In Minerals. - Hon. H. Graham Crocker, minister of lands and mines, announced at Fredericton a new motion picture that will include sequences in mines from the American border to the Yukon Territories and from Newfoundland to the Pacific Ocean is now being filmed. The picture has been commissioned bythe mining departments of New Brunswick and eight other provinces in co-operation with the federal department of mines and technical surveys. The picture, which has tentatively been titled 'The Nation Builders', is designed primarily to acquaint senior high school students with the desirability of following a career in the mineral industry, and particularly it is hoped that it will serve to interest them in pursuing courses in the mineral sciences at any one of a large number of Canadian Universities. It follows the career of one student and his classmates through each of the four years in geology and geophysics, mining, electrical and mechanical engineering, and metallurgy. The students are shown at summer work at various mining properties and engaged in a wide variety of jobs, all designed to give them experience and training for more responsible poet- graduate work. The film, which is being produced by Jack Chisholm Film Productions Limited of Toronto, is believed to be unique as a project in education for a specific industry. It has been under discussion for nearly four years and the script has been carefully scrutinized by all the government agencies concerned. The picture is to be in full color with dialogue and narration in both French and English. Underground and surface photography at mining operations is to be carried out during the next few months. It is expected that the completed production will be ready for release before the end of the year."

Halifax Gazette - Jun. 2 , 1795 A gentleman being appointed to examine and inspect into Mines and Minerals throughout the British Province in North America, it is presumed his Majesty's gracious intentions, evidently directed to the benefit of these Countries by the increase of population, and of the Articles of export which it must occasion, will be zealously promoted by all Ranks of the Inhabitants: the Scientific and Incenious scrutinizing into the Mineral Products of the Earth; the Country Gentleman (who will reap most advantage from the prosecution of Mine-Work, as well by the opportunity he will have of forming a partnership to his own mind for working them; as the additional number of Tenantry of a very industrious class of People, and consequent consumption of the Produce, which it will create on his Estate) encouraging searches throughout his Lands; and the Poor-Man attending to every uncommon subject he meets within the course of his labour, whether of Stone or Earth, as by the discovering of some valuable kind he may open for himself a more profitable Species of industry than at present occupies him, affording work as well in the Night as the Day, in Winter as in Summer. To encourage gentlemen to turn their thoughts to Mining, the most lucrative of all the several Species of Speculations the Inspector is ready to give every assistance in his power, and can venture to promise to direct almost all the Operations attendant upon or consequential to it, from the breaking of the ground to the production and refinement of the Metal or other Production in quantity; and the construction of the Buildings, Furnaces, Machinery and Implements necessary for every Process. The Subjects of Mining are first (because these are reserved to the Crown) Coal, and the Ores of Gold, Silver, Copper and Lead; and the next those of Tin, Iron, Mercury and several others of considerable value; and All Stones or Earths of unusual weight may be concluded to contain some of the Metals. Besides These Stones of uncommon figure or appearance, Earths of peculiar properties, and even Water of unnatural flavour, smell or colour, are worthy of attention; whether on account of their own qualities, or as tending to lead to the discovery of valuable Substances.Two Specimens of any Substances, accompanied with part of the Matrices of Beds in which they were found, together clear descriptions of their natural positions and other circumstances, will be carefully examined and analyzed, and all Letters (postage free) relating to the Subject answered in due time, being sent or directed to James Miller, Inspector General of Mines, &c. Halifax"

Novascotian - Nov. 8, 1827 In the Fredericton Gleaner there appears a long list of the Minerals and Mineral Springs discovered in King and Westmorland Counties, N.B. - These include Iron,Coal, Copper, Gypsum, Limestone, Plumbago, Amethyst, Carnelian, &c., &c. and it is stated ""that no less than three Hepatic (sulphurous) Springs, of the same nature and medicinal properties of the Harrowgate waters, have been found, and analyzed."""

Miramichi Gleaner - Sep. 25, 1838 and Royal Gazette - Oct. 10, 1838 The County of Gloucester Mining Association, New Brunswick. - This Association possessing a Crown Grant of the Mines and Minerals in the entire Counties of Gloucester and Restigouche, New Brunswick, (containing very rich and extensive Beds of Copper Ore, Coal, Iron, Lead, &c.), announces to the Capitalists, Men of Science, and Miners of America, and elsewhere, that they are ready to treat on highly advantageous terms, with Adventurers for the Lease of spots of ground for Mining purposes, to be selected by the Adventurers themselves; for periods not exceeding 50 years; and the Association will treat with the first discoverers of a

Mine in preference to any other person, whenever the Directors are in possession of the facts. For further particulars, and for Terms, apply to Wm. Stevens, Esq., Bathurst, N.B., or to Frederick Bankert, Esq., 34, Clement's Lane, Lombard Street, London, Solicitor to the Association, where specimens of the Ores discovered may be seen and examined. N.B. All communications by letter to be post paid. Wm. Stevens. Bathurst, Sept. 17, 1838."

Miramichi Gleaner - Jul. 21, 1840 2We are indebted to the St. John Courier for the following gratifying piece of intelligence. The gentle manalluded to passed through Miramichi on his way to Bathurst last week:- (See N.B. Courier of Jul. 11)"

Miramichi Gleaner - Oct. 13, 1843 County of Gloucester, Province of New Brunswick, in British North America, S.S. In the matter of William Stevens, a bankrupt. Whereas under the provisions of the Acts of the G. Assembly of this Province, entitled 'an Act relating to Bankruptcy in this Province,' and an act in addition to and amendment of the same, William Stevens, of Bathurst, in the said county of Gloucester, Mining Agent, hath beendeclared a bankrupt, and hath accordingly surrendered himself to me; Now therefore, I do hereby give Public Notice, that by virtue of the power and authority to me given in and by the said acts, I have appointed Joseph Read, of Bathurst aforesaid, Esquire, Provisional Assignee, of the Estate and Effects of the said Bankrupt; Thereby require all persons indebted to the said Bankrupt, to pay to the said Assignee, on or before the tenth day of November next, all such sum and sums of money, debts or duties as they may owe to the said Bankrupt; and deliver up all other property and effects of the said Bankrupt in their possession, power or custody, to the said Assignee; and I do hereby require all the creditors of the said Bankrupt, resident in the said Province, or in any other of Her Majesty's North American colonies, or in the West Indies, or in the United States of America, within three months from the date thereof, to deliver in to the said assignee, and prove to my satisfaction, their respective claims and demands whether the same be actually due or to become due, against the said Bankrupt; And I do hereby further require all the creditors of the said bankrupt residing in any part of the United Kingdom of Great Britain and Ireland, to appoint an Agent or Agents in this Province to act in their behalf in this matter, and to deliver in to said Assignee, and to prove to my satisfaction their respective claims and demands whether the same be actually due or to be become due, within three months from the publication of notice in the London Gazette. Given under my hand at Chatham, in the county of Northumberland, in the Province aforesaid, the fourth day of October, A.D. 1843. W. Carman, Jun., Commissioner of the Estate and Effects of Bankrupts in the County of Gloucester. [First published in the Gleaner of October 6.]"

Codes: EXPL / IDX_Names: Exploration - General;
Miramichi Gleaner - Apr. 10, 1844 Sale of the Estate of William Stevens, a Bankrupt. By Order of William Carman, Junior, Esquire, Commissioner of the Estate and Effects of Bankrupt for the county of Gloucester, will be sold on Monday, the twenty third day of June next, between the hours of twelve and two o'clock, at my office, in Bathurst. All the Right, Title, and Interest, which the said William Stevens had on the twenty-fifth day of September last, of, in and to the following Lots or Tracts of Land and Premises hereinafter mentioned, to wit: All that parcel of land situate in Bathurst, known as Lot number fifty five, together with the Dwelling House, Barn, Blacksmith shop, and Out-houses erected thereon, and at present in the occupation of the said William Stevens; also, the Water Lot in front of the said lot number fifty-five. Also - Lots number eight five and 126, situate in the town of Bathurst aforesaid. Also - parts of lots number ten, eleven, and twelve, and the whole of Lot number thirteen, situate on the south side of the Tatagouche River, containing about one hundred and eighty two acres, on which the buildings of the Gloucester Mining Association are erected; also - Lots number twenty two and twenty three, situate in New Bandon, containing five hundred acres, more or less, together with the dwelling house, barn, and improvements thereon; also seven hundred Shares in the Gloucester Mining Association, with all the right, title, andinterest which the said William Stevens had in the said Gloucester Mining Association on the aforesaid twenty fifth day of September last. Further particulars will be made known on application to Joseph Read, Provisional Assignee. Bathurst, 29th March, 1844"

A printed Circular, giving full explanations, will be sent in answer to any post-paid letter. J.R. Barbour 7 co."

N.B. Courier - Mar. 18, 1854 ADVERTISEMENT: Miners' Shovels.5 Cases Miners' shovels; 20 dozen Ballast shovels - for sale by March 4 Wm. & Geo. Carvill"

Morning News - Jul. 24, 1857 The Drilling Machine. - We are informed that the steam drilling machine is doing its work very effectively on the rock at Lawlor's Lake. A number of holes will be drilled some four or five feet deep, perhaps five or six feet apart - these will be filled with powder, and exploded all together by the one discharge. We like this wholesale smashing way of doing business. Had not the Liberals got in power very likely the old process of blasting would have been continued. So much for the Smashers. What has the Freeman to say to that?"

Headquarters - Sep. 9, 1857 Mines and minerals. - The public will be gratified to learn that the existing difficulties between this Province and the General Mining Association have been placed on a basis for satisfactory settlement, if the terms and conditions agreed upon meet with the approval of the Legislature. Our Commissioners have had frequent interviews with the association; and before their arrival the anticipation of advantage to the Company raised the shares and they were actually quoted at £22; but as interviews took place, an intimation of how matters stood, found its way to the stock Exchange, and the shares immediately receded to £16 5. It is said the commissioners have been most successful in securing for us a reasonable bargain, the company conceded 500,000 square miles of carboniferous surface, and all other minerals of every description - the Company reserving only a certain extent of miles around the coal district that they are now working or have hither to worked - with a small reduction of the Royalty and certain other matters not understood by the public. Without enquiring into the details of this settlement; but looking to the concessions made by the Company, we have every reason to believe that the proposed terms will prove most satisfactory. It is well, however, not express too strong an opinion on the subject until we learn further details. In the meantime let us entertain the hope that there will be no more necessity for agitating this question again, and that politicians on both sides of the House will lose at least one fruitful topic of agitation. - Acadian Recorder."

Morning News - Aug. 28, 1861 ADVERTISEMENT: Gold! Gold! The subscriber having no use at present for his steamdrill, which is capable of sinking a six inch diameter hole to the depth of 25 feet and capable of being converted into a Quartz Crusher at a very few pounds outlay, offers the same for sale on reasonable terms. This machine would be well adapted for the Gold Diggings, as the same power might be used for crushing and drilling at the same time. For particulars apply to Thos. R. Jones, Esq., Dock street, St. John, or to the Subscriber at Norton. (Aug 28) D.P. Myers."

Codes: EXPL / IDX_Names: Exploration - General;
Morning News - Oct. 16, 1861 Mining Leases. - A short time ago we made some remarks upon the subject of Mining Leases in this Province, and said that the restrictions of the law operated prejudicially, we thought, to enterprise and the development of our mineral resources. We said that gold, coal, or anything else taken from the earth, should be considered as inherent to the soil, the property of its owner, as it was labor, aside from the intrinsic values that made such things merchantable, and therefore minerals were like potatoes or turnips, depending altogether for their development, as far as man is concerned, upon the capital and industry bestowed upon them. We said that the chief objection to the law was that it did not allow the Government to extend the leases for a period longer than three years, and that the ""royalty"" or tax amounted to five per cent. Shortly after our article appeared we received a communication from head quarters giving a little more light upon the subject than we formerly had. The first section of the amended rules and regulations says - that ""every Mining License to be exempted from payment of Royalty for three years from its date."" So that if a man finds gold upon his own property, after so reporting it, we suppose, to the Government, he may operate for three years, take out all he can, without paying any tax. No one else can step in and obtain from the Government a license over his head - he is exclusively master of all that he can find upon his own premises for three years - after that time has expired, a more permanent arrangement may be made between him and the Government. - It will depend upon the productiveness of the mines as to the amount of royalty to be exacted - if large, like at the Lunenberg Ovens, the Government may tax largely - if small their discretion will no doubt run the other way. - Now, although there is some improvement in the amended regulations over the view we took of them, still there is room for further legislative interference. Instead of the privilege extending for three years it ought to be - forever; for the objection still stands -- viz.; that persons will not expend large sums of money in obtaining machinery for quartz-crushing, &c.; or at all events they will not go at it with that spirit, while there is an uncertainty as to what they will have to pay the Government after they have got fully under way. The Government have the discretion to exact five per cent on all gold and silver (after three years are up) - that is to say, for every one hundred dollars a man takes out of the earth he must pay five of it to the Government, should that amount be demanded; and we cannot doubt but that where it is supposed mines are productive, the higher price will be the sum asked. The three years untaxed privilege, therefore, is something, but far from meeting the case in its more enlarged character. We stated, from reliable information, that the Government of Australia placed an excise duty upon gold - they dealt with it only, as we deal with some of our native productions, when it is to be shipped from the country. In California we also stated that no tax whatever was imposed upon the gold hunters. The influx of population, caused by the getting of the precious metal, built up the country, and brought more taxable property into the market, which was the primary consideration. We may be told that the Government will be liberal in their dealings with individuals. But this would be an unsafe proposition to stand upon. Governments, like individuals, sometimes take strange crotchets into their heads - of course we do not refer to the present any more than to previous governments, or to their successors, whether Whig or Tory, or by whatever name they may be designated. If a Government thought a company were doing well, they would not, for the sake of making up a deficient revenue in other respects, hesitate about exercising their discretion for their own popularity and what they might consider would be for the public interests. We think that there should be no tax whatever - no interference or ""royalty"" - no ""discretion""; but that gold like any other article should be obtained without Government

Codes: EXPL / IDX_Names: Exploration - General;
Morning News - Oct. 23, 1861 Mining Leases. - To the Editor of the Morning News. - Sir, - In a recent issue of the ""Morning News"" I was gratified to notice your remarks relative to the existing Mining Regulations made by the Government of this Province, and believing as I do that they are detrimental to our best interests, I take the liberty of adding a few remarks on the subject - embodying my reasons for this opinion. You say in your remarks - ""that minerals are like potatoes or turnips, depending altogether for their development, as far as man is concerned, upon the capital and industry bestowed on them."" There is, however, this wide difference in the comparisons - that with on ordinary expenditure of industry and capital we may calculate upon a reasonable return for labor; but in mining the case is widely different - large expenditure is necessary and the results extremely uncertain; the mineral wealth lies hidden deeply in the bowels of the earth, generally with very uncertain indications to guide in the search for them; and in very many cases our labour is expended without producing the expected results. The uncertainty of mining investments are proverbial. Any person wishing information on this subject by consulting the Mining Returns would be surprised to find how large a proportion are total failures; and, of those that may be considered successful, very few yield more than 8 or 10 per cent profit beyond working expenses. If this is so, who would be inclined to invest money in such an undertaking, with its great uncertainties; and if successful the Government step in and claim a large share of the profits - the risks being 9 entirely with the parties who invest their money in the undertaking? That we may see this as it is, let us suppose a prospectus is offered to the public to-morrow of a mining property offering very encouraging prospects for copper, how many of our capitalists do you suppose would be inclined to take shares? I doubt if any. You find those that possessed the most ability, the first to button up their pockets and decline the investment. And why should we be surprised at this when we know the great risks and uncertainties which attend such investments. In proof of this see the number of companies which have become incorporated for mining purposes during the past few years and their present position and prospects; - with one or two exceptions they may be considered failures and the investment sunk. With these facts before us, is it judicious in the Government to levy a tax upon our supposed mineral resources? I should certainly say not. And as we have to go from home to seek persons able and willing to embark capital in these speculative undertakings, it is necessary that we should be prepared to hold out reasonable encouragement to them as inducements to embark in these hazardous enterprises. In a young country like this,

the great object is to induce an industrious population and capital to come among us, to aid in developing the natural resources of the country. If we are not prepared to sink into the bowels of the earth for the mineral wealth which we suppose to be deposited there, why not hold out inducements to others to come among us for the purpose? One successful mine established would be of infinitely greater advantage to the public than all that will be collected by direct tax upon our minerals. The indirect advantages would, in my opinion, be a thousand fold greater and have enduring effect in promoting the prosperity and settlement of the country. I quite concur in your views that the Government will be consulting the best interests of the people by removing all direct tax upon our undeveloped minerals - which may or may not exist - leaving them in the possession of the owner of the soil, who would then be in a position to arrange untrammelled with persons possessing the ability and will to aid in searching for and making them productive. These remarks might be materially extended, but your own are so much to the purpose that it renders it unnecessary."

Morning News - Apr. 4, 1862 Exploring for Gold. - We learn from the Miramichi Gleaner that several young men of Dalhousie have set out on a Gold exploring journey to the Cascapedia Mountains, in Canada, which it has been reported for years, are rich in Gold. The party is simply an exploring one. If they succeed in finding the precious metal, a company will be formed to prosecute the enterprise. The Gleaner adds that a company has been formed in New Richmond to go to work at the mine referred to."

Morning News - Apr. 30, 1862 Carleton. - ..... The ""Union Iron Works"", which is centrally situated on Rodney street, and are owned by Messrs. Thomas and Robert Allen. .... At present, this establishment is engaged in manufacturing a ""Crusher"",intended to be sent to and operated at the ""gold diggings"", in the vicinity of Sherbrooke, N.S. This is quite a novel article of manufacture in this Province, it being the first - but we trust not the last - Crusher that will emanate from the ingenuity and industry of our skilled artisans. The working parts of this gold producer are operated by a neat high pressure engine, equal to twelve horsepower. It would be impossible, without drawings, to describe the modus operandi, or even the machinery itself; we hope, however, that the object of it - even if it is to obtain a copious supply of the root of all evil - may be amply realized. It is being made under contract for Mr. G.E. Mowry, Machinist, of Machias, Maine."

Morning News - Jul. 9, 1862 Additional Particulars From The London Exhibition. - The London correspondent of the Scottish American Journal gives the following additional particulars.... New Brunswick exhibits some excellent manufactures ... Of the geological and mineralogical specimens the writer says: I cannot note all the specimens in this case, I see coals in several varieties including cannel and anthracite. I see specimens of the curious and valuable albertite, and of bitumen and bituminous shale. There are graphites of several kinds, and sulphates of barytes also in variety. Gypsum is there, too, of which, as I said before, a conspicuous block should have been sent, because it is already an important article of Provincial trade, and it abounds in the Province. There are marbles of many kinds and much beauty - red, white, white and blue, and green and white; there are many limestones. There is aluminous clay, and there are specimens of alum extracted. There are agates and others of the less precious but still valuable ornamental stones. There are perhaps a score or more building stones, including several granites of fine texture, and some useful qualities of flagging. There is iron, and there is copper, and more metals than may be here mentioned. ..."

N.B. Courier - Mar. 15, 1862 ADVERTISEMENT: To Gold Miners.The undersigned has a quartz crusher, which is the only perfect machine in the world, and is indispensable for the successful prosecution of Gold Mining. It will reduce a ton of Quartz to an impalpable powder in one hour. Also, Amalgamators, and all other machines and fixtures used in Gold Mining and separating. For sale by the proprietor and only manufacturer. W.D. Richards, 87 & 89 State Street, Boston, Mass."

Morning Journal - Mar. 20, 1867 Campobello. - The report of the sale of this island is renewed. The Boston Herald says: Campobello, the scene of the first Fenian raid, has been sold to a Mr. Seymour, of New York, for $8,000. Mr. Seymour has been engaged mining or rather investigating the mineral resources of the island for several years. The deposits of peat existing there are immense, and of many times the value paid by the purchaser for the entire property."

S.J. Daily News - Sep. 16, 1867 SAVING GOLD FROM QUARTZ.- A Californian paper says, according to the Mining Journal, that Mr. E.R. Chapin, of Stockton, has succeeded in inventing a very ingenious contrivance for saving gold lost from quartz. It is entirely different from any concentrator or separator that has been used by miners hitherto. It consists of a shallow pan called the separator, elevated an inch above the concentrator, which first receives the water sentiment, quicksilver and gold escaping from the mill above. The bottom of the separator being deeper than the sides or mouth where the water flows over, the quicksilver and gold naturally settle down, while the light gold and sulphurets flow over with the water into the concentrator, which looks somewhat in shape like a soup tureen. Small holes are perforated in the bottom of this concentrator, through which the sulphurets pass into small pans fastened beneath, while everything else flows over the top into the conductors, which carry it away. The machine is fastened on four stout wires, each fastened in a strong framework. Dimunitive cog wheels attached to a cylinder, which, kept in motion by the action of the mill above, set the
Morning Journal - Dec. 14, 1868 Mineral Discoveries of considerable value are reported in Maine, in fact of some importance to New Brunswick as the geological formation of the adjacent parts of the State and the Province is similar. Of a mine, situate between Lubec and Machias we are told that: ""A shaft is being sunk upon it immediately beside the highway and from a slight depth of only 25 feet, over 50 tons of rich ore is already obtained, yielding by assay $70 to the ton of gold and silver - besides being rich in copper. This vein, from nine feet in width at surface, soon widens out to 15, showing unmistakeable evidences of yielding immense returns in depth. It runs about East and West nearly parallel with the highway for three quarters mile - then crossing beneath a high range of hills."" It is also stated that: ""Many years ago, a large nugget of gold was found in the waters of this cove, and sold for $2000. The house and farm purchased with this treasure is pointed out, and the finder is still living near the spot. Where this nugget came from is still matter of

Codes: EXPL / IDX_Names: Exploration - General;
St. Andrews Standard - May 20, 1868 Remarkable Discovery. - The greatest trouble has been experienced by scientific men in extracting all the gold from the ores in which it has been found; the methods adopted being expensive and attended with considerable loss, owing to much of the auriferous deposit being mixed with the quartz. Several experiments have been made, and various systems of extraction adopted, but with very little improvement. It remained with Col. Stevens, of New York, to discover a method by which all the gold would be extracted.- A recent experiment was made only with a quantity of gold bearing quartz by the common process, which yielded $300 per ton; Col. Stevens' chemical substance called ""flux"" was tried and yielded $1400 to the ton; the assayer was so surprised that he tried again with a like result. It is probable that the ""Colonel"" will dispose of his newly discovered chemical agent, to those who require it for assaying gold, silver, and other precious ores, and that large quantities of the valuable metals will be redeemed, which otherwise would have remained in their 7 native deposits, and that the flinty substances will be utilized for other purposes.- Col. Stevens name will be heralded throughout those countries where valuable mineral are known to exist."

S.J. Daily News - Mar. 25, 1869 UNKNOWN WEALTH AT OUR DOORS. - The mineral wealth of these Lower Provinces has often been the theme of scientific men as well as politicians, and no one can be found who for a moment doubts that if the capital and enterprise were forthcoming to develop it fully, New Brunswick and Nova Scotia would speedily become the scene of operations whose tendency would be to make our people prosperous and contented. But few are aware of the fact that precious stones of immense value and fine quality have been at times discovered in these Provinces, evidencing the fact that Nature has bestowed some of her richest gifts upon us, and scattered her treasures around us with a most liberal hand. The latest item of intelligence we glean in this line is the discovery of Diamonds in Nova Scotia. Not those ""black diamonds"", which in themselves are a source of wealth and comfort - the immense coal fields of our sister province, but real, tangible, veritable diamonds of the purest water. Hear the facts. Last fall a Nova Scotia gentleman removing to Chicago came round the road to St. John. Near Truro, in Colchester County, he was struck by the bright glintings of light which were struck from a stone, which some boys were showing to each other, and moving about so that they might admire the scintillating rays flashing from its inmost depths. He stopped, examined the stone, which was rough and unprepossessing in appearance save where it had been broken from a larger stone, he diligently searched for a whole day till he found the other portion. On reaching St. John he showed the specimens to a gentleman in this city, who applied such chemical tests as he at the time could command, and found the stone answered in every respect, save in the magnetic test, to that of diamond. He advised the stranger to get the advice of a lapidary in Boston or New York, as to the value of his ""find"", and up to within a few weeks heard no more of the matter. Being in Boston a few weeks ago, he had occasion to visit one of the chief jeweller's establishments there, and was surprised to find himself questioned as to the existence of diamonds in this direction, and on further enquiry learned that the Nova Scotian had disposed of the smaller specimen to a gentleman who sold it for $6,000 and that it passed from hand to hand, making a thousand dollar leap each time, till it is now held at $10,000. The largest piece of stone is said to be sufficient to cut out a diamond larger than the world-known Koh-i-noor, and this is still held by the original finder. Doubtless the attention of geologists will be directed more closely than ever to these provinces to see what gems are to be found here, and to what extent they may be expected to be obtained. In this connection we may also say that almost every stream of the St. John and Kennebecasis Rivers abounds with the fresh water mussel, a species of crustacea that yields pearls of a fine quality and of high marketable value. We believe that Mr. James I. Fellows of this city, has done a good deal in the pearl business, and that he is prepared to pay high prices for those of a fair size and good color. During the summer months almost any one would find it advantageous to search for these precious trifles, as if a more than ordinary pearl was found but occasionally the great price it would bring would make it amply remunerative."

St. Andrews Standard - Mar. 31, 1869 We learn from St. John papers that precious stones and valuable gold deposits have recently been discovered in this Province.- That New Brunswick is rich in minerals resources is well known; it only requires capital to develope them. The County of Charlotte it is admitted has splendid copper deposits, a large and beautiful specimen may be seen in the Post Office window; and Dr. Gesner while here several years ago, picked up a good specimen of emerald at Bay Side, which we believe is still in St. John where it was taken by a former resident of this town. Coal it is said has also been picked up, but whether it abounded in sufficient quantities to warrant opening a mine, was not

S.J. Telegraph - Jul. 21, 1870 [For the Telegraph and Journal] Gold in New Brunswick. - Mr. Editor:- I met a friend of mine recently who had been prospecting to a considerable extent in New Brunswick, and he informs me that he discovered gold in several lodes, in different localities, but on enquiry, he was very much disappointed to learn that few or no inducements were held out by the local Government to any person who would make any discoveries or develope theresources of New Brunswick. As a New Brunswicker this information caused me to feel both glad and sad, for although absent, I yet rejoice in the prosperity of my native province, and her adversity tends to sadness. The Local Government of New Brunswick ought to profit by the experience of California and Nova Scotia, particularly the latter. The laws governing our Mining Operations, in this province, are far from being perfect, and, as a consequence, are open to improvement. Yet our ""Local"" is slow to move in this matter aright thereby causing a vast amount of trouble, anxiety and loss, - both to the operator and the Government, and loss to the revenue. My object in writing was not to point out the defects of our Mining Laws, but to suggest to the Local Government of New Brunswick, that they put themselves in possession of every information possible to obtain, not merely from our ""Local"", but from the various parties engaged in gold mining, who will be pleased to afford every information in their power, with such suggestions of improvement as they might deem proper. I feel - I might say I am - sure that New Brunswick is rich in mineral resources, having travelled over the greater portion of that Province, and my knowledge of Nova Scotia, leads me to this conclusion, and it remains for her government and people to see to it at once, that no impediments be thrown in the way of developing her rich treasures and vast resources. Yours, very truly, W.L. Prince. Renfrew Gold Mines, N.S., July 14th, 1870"

Codes: EXPL / IDX_Names: Exploration - General;
Morning Freeman - Apr. 13, 1871 St. Martins (Montreal Gazette) .... Coal and other minerals abound in the region....."

S.J. Daily News - Jun. 5, 1873 The Copper Interest. - As copper is now an important article in the mining industries and operations in this province, allusion to a few facts may not be out of place. The latest quotation of price in London, ascertained from the very best sources, is ""Tile"" £5 stg. per cwt. The falling off in the product of the mines from which the principal supplies are obtained, and the extensive use of copper in connection with military operations may have something to do with enhancing the value of the metal. The product of the Chili mines in 1868, 36,500 tons; in 1871, 42,400 tons. The product of the United Kingdom was in 1868, 11,153 tons; in 1871 6,500 tons. The stock of copper on hand in England in 1872 was 11,300 ingots, in 1871, 24,000 ingots; and in 1870, 16,900 ingots. The stock on hand at Havre in 1872 was 4,890 ingots; in 1871 8,670 ingots. The demand in Europe recently results largely from substituting the breech loading musket, and when it is considered that armies of 200,000 to 500,000 men have to be provided with these it will readily be understood that the quantity consumed is very large indeed. The London Morning Journal estimates the consumption of cartridges alone at 7,500 tons in 1871. The demand for copper, and the prices realized by its producers should be encouraging to the copper mining interest of this province."

S.J. Daily Telegraph - Jan. 2, 1874 ADVERTISEMENT: Mining and Metallurgical Engineer Arthur F. Wendt, E.M., Graduate of the School of Mines, Columbia College, New York, may be consulted on the quality of ores, value of mines and construction of mining works. Address care I. Botsford, Allan McLean, Silv. Z. Earle, Thos. R. Jones, M.L.C. G. Fisher, R.C. Scovil, John C. Ferguson, W.F. Starr, John Stewart, T.W. Anglin, St. John, N.B., Oct. 14, 1876. To The Hon. G.E. King, Attorney General, &c. Sir, - The petitioners are warranted in believing that the services of a gentleman, having the special qualifications referred to in their petition, can be obtained on the definite terms of a provision of five hundred dollars. A letter from Professor Ricketts of the School of Mines, New York, a copy of which is below, furnishes information and a testimonial. Exact terms were stated to me recently, in New York, by the Professor. He said the gentleman referred to will come to New Brunswick provided he can have $500 assured, trusting, beyond that, to build up a business by his work for those who may require his services. I have the honor to be, Sir, your obd't servant, W.S. Harding. [Copy] School of Mines, Columbia College, New York, Aug. 5, 1876. Wm. S. Harding, M.D., Dear Sir, - In your favors of June 30, you mention the need of a mineral expert in your section. I am acquainted with a gentleman eminently qualified to fill the want you indicate, and who might be induced to locate in New Brunswick, trusting to his own capabilities for building up a business as a chemist and mineralogist, provided he can have some assurance from the government or citizens that the position will prove remunerative. Will you kindly advise me as to the chances such a man would have, and to what extent the Government would be likely to aid him. Would they pay such a person a salary to start with, even if it be small at first. Very truly yours, (Signed) P.D.P. Ricketts."

Daily Telegraph - Feb. 20, 1878 ADVERTISEMENT: Gold Mining! -- How Fortunes Are Made. Many men on the Pacific coast are made rich every year by small investments in mines. Here is a chance to invest a few dollars in the Seminole Gold and Silver MiningCompany without a risk and realize a fortune as the Directors desire to sell a part of the shares in order to enable them to build a mill on the mine, and pay dividends the coming summer. There are only 100,000 shares at $1 each. The Consolidated Virginia Mining Company paid in dividends to its shareholders in two years over Twenty-six Millions of Dollars. We see no reason why the Seminole Mining Company will not pay equally as well. This would be $10 per month per share on our entire stock. Send for circular with full particulars. Address Brown & Bro., Bankers, Calais, Maine."
Daily Telegraph - Mar. 18, 1878 St. Stephen. - A Mining Swindle. - Calais is now the seat of an immense swindle, similar to the one just concluded in St. Stephen. It is in the shape of a company selling bogus mining stock. They advertise all over the United States, and use fictitious names as references. It is to be hoped that their operations are done in St. Stephen."

Bay Pilot - Sep. 2, 1880 Correspondence. - To The Editor of the Bay Pilot: Sir:- I again have to request space in your valuable paper to extricate myself from the very humble and disreputable position into which your correspondent J.B.K. has endeavored to place me in the public mind by his low and twitting mode of address in your paper of the 19th instant. (NOTE- this issue missing) Since he hasdeclined any further waste of time, and been found in the ranks of cowards, who strike and run, we will see if he is man enough to hold that position, and allow me to address the public in reference to the meanness of his last letters to your paper. I do not pour out venom for dollars, but work honestly for all the dollars I receive and do not receive a high salary for sporting and whiskey drinking, as was the case with the manager of the Wheal Louisiana Mine. If my father said (which I don't think he did) that we have 3 per cent of silver on our ores, it was rather a mistake than an error, as he is well acquainted with the value of a per cent of silver. But in the summer of 1867 J.B.K. told me that my father gave him galena that yielded 7 per cent of silver, and he urged me to show him where it was found, and in your paper of July 29th he boldly stated that he had not found in any samples from any part of the Province sufficient silver to pay for extracting. Your correspondent claims to have long experience in my knowledge of lodes and minerals, although I have not been in this company longer than a few minutes since 1867, which interval would give sufficient time to accumulate considerable knowledge. It would seem that some of the managers of the old mines in this section had only seen a mine, or a parcel of ore prepared for market, and had very little knowledge of the true nature of mineral veins. Your correspondent has accused me of a lie, but I rest content on that score, and only refer to those by whom I am known, also consider the reputation of the accuser. There has never been a mine in this part of the County known as the Dick and Woodward Mine, nor has my father ever managed any mine further than prospecting veins on surface, therefore he could not have caused any lethargy by his management. The Wheal Louisiana mine was leased from my father and J.G. Woodward and managed by J.B.K. I admit that J.B.K. was to a small extent acquainted with me during 2 or 3 years, and he knew me as a mail carrier between Letete, St. George and Deer Island twice per week, which business I performed from the age of 16 to 25 in the meantime, was accumulating a knowledge of minerals and would only appeal to the common sense of the public to judge of the dishonor of said business. I challenge any person to say I did not perform my duty justly during all the time I carried the mail, much less, to say I was found under the horse's feet in the mud and had to be held into my carriage and assisted to my home four miles distant, as was frequently the case with J.B.K. I also admit I can perform on the violin to some extent, but when a man brings up such things against one's character, it shows well he knows nothing worse, also shows a childish ignorance. I deem I have as much to lose as your correspondent J.B.K. and to explain the cause of his ignorant out-break, will briefly state that he tried hard to purchase the property of the Dick & Williamson mine before I purchased it, and in getting defeated crawled away to bottle venom he so aptly harped upon in his last letter to your paper. T.W.D. N.B. Sackville, N.B., Sept. 14th, 1878 T. Dick, Esq. The money value of the silver in the ore sent me is $33.50 per ton of rock N.B. currency. Besides this there would be the lead which would very materially add to this. Yours very truly, John Burwash, Prov. Assayer"

Chignecto Post - Sep. 23, 1880 The Maine Mining Journal, published at Bangor, Maine, gives special attention to the metals and minerals of New Brunswick and Nova Scotia and contains a valuable digest of mining news the world over. Published by Mr. E.H. Dakin, price $2.00 per annum."

Moncton Daily Times - Oct. 12, 1881 Mining Exchange. - A number of gentlemen interested in mining met at the office of Dr. A.H.Chandler, in this town, yesterday afternoon, to consider the propriety of establishing a Mining Exchange. No immediate action was taken."

Moncton Daily Times - Jul. 28, 1884 ADVERTISEMENT: Wanted. - A copper mine 5 to 10 per cent copper, near tide water. Full particulars of location, development and price required and fair average samples must be sent.Address Capital, care William Young, 21 Park Row, New York."

Daily Telegraph - Apr. 17, 1885 ADVERTISEMENT: Mining Stock For Sale. -- There will be sold at Auction, at Chubb's Corner, on Prince William street, in the city of St. John, on Wednesday, the 22nd inst., at 11 o'clock, a.m., 500 shares, par value $2 per share, of the Waterford Mining Company. T. B. Hanington, C.N. Skinner, Auctioneer. President. Dated

S.J. Daily Sun - Sep. 14, 1885 Visiting Mining Engineers. - A meeting of the citizens was held in the Mayor's office on Saturday to make arrangements for the reception of the members of the Institute of Mining Engineers, of the United States, who will be in St. John tomorrow on their way to Halifax, where the annual meeting opens on Wednesday. His Worship Mayor Deveber presided, and their was a fair attendance of citizens. W.E. Vroom explained that he had received a telegram from the manager of the Springhill Mines, stating that Mr. Raymond, the Secretary of the Institute, would reach the city this afternoon, and that the delegates, two hundred and fifty in number, would arrive on Tuesday afternoon. Mr. Vroom explained that the manager of the N.B. Railway had kindly promised to place three new passenger cars at the disposal of the delegates, which would be taken to Fairville to bring them across the railway bridge. W.H. Thorne said he had called on Mr. Hogan's representatives in St. John, and he would transport the party across the Falls and to the I.C.R. depot. On motion of John McMillan it was decided to appoint a committee to meet Mr. Raymond to arrange for the reception of the delegates. The Mayor appointed the following such committee: John McMillan, W.E. Vroom, Geo. Robertson, W.W. Turnbull, and J. DeWolfe Spurr with the Mayor. It was explained that many of the delegates would remain in New Brunswick for some days after the adjournment of the Convention in Halifax. There a number of capitalists in the party who are desirous of investing in mines if any are offered on favorable terms."

S.J. Daily Sun - Dec. 3, 1887 ADVERTISEMENT: EDWARD JACK Examines and Reports on Timber and Mineral Lands And determines disputed lines any where in New Brunswick Fredericton, Sept. 27th, 1887"
S.J. Daily Sun - Apr. 4, 1888 Mines and Minerals. - To the Editor of the Sun. - Sir: We who have spent our time and money for the purpose of developing the minerals of New Brunswick feel that the present government has done nothing to advance or aid the mining interests of the province. The last act will deter all supposed owners of land from applying for a mining licence from the fact if after five years and nothing has been done the government claims the right to take the land. According to the grants the government reserves gold, silver, copper and coal and other mines and minerals. Minerals are the materials of which the earth is composed. Such being the case grantee owns nothing available unless he has the exclusive right to all minerals except gold, silver, copper and coal. Other mines and minerals must mean such as gold, silver, copper and coal, and the government should define definitely what it means, so that capitalists will know they are not investing in a law suit. Why they exempt plaster from royalty looks strange, and exact it on minerals that require a large amount of capital for their development. If the government is sincere in its wish to see mining prosperous, let it do away with all royalty for 15 years and give 50 acres of government land to persons who discover minerals on the same, the discoverer to have the right to locate his claim on any part of the mineral deposit. There is gold in paying quantities in the province and may remain for some time undeveloped, at least so long as the present unfair law is in existence that puts a man's discovery up to competition. (It takes time and money to make such discovery, also for exploring purposes.) W. Goodfellow Sussex, K.C., N.B."

Daily Telegraph - Apr. 26, 1888 Sussex. - From present indications, Sussex will enjoy a mining boom this summer. Several prospectors are in town at present."

Weekly Record - Fri. Feb. 17, 1888 Editorial on mining laws: For instance presuming A goes out prospecting on Crown Lands and after spending considerable time and money he discovers a valuable deposit of iron, copper, coal or silver and lead. He makes application to the government for a mining license. Instead of the government granting him the same on the payment of a reasonable sum, the located district is put up at public auction and A has then to stand the blunt of bids from B C D who has done nothing towards making the discovery and in order to obtain his license, pay an exorbitant price for the same, and afterwards forced to pay a heavy royalty as well to the Crown in case the property be developed or worked. In Nova Scotia the royalty on gold and silver is only 2 per cent. Our N.B. mining laws demand 5 per cent."

Daily Telegraph - May 17, 1888 Sussex. - The mining boom still continues. A property supposed to contain a valuable deposit of copper changed hands this week."

S.J. Daily Sun - Nov. 5, 1888 ADVERTISEMENT: Timber and Mineral Lands Explored and Marketed. Edward Jack, Dominion Land Surveyor and Mineralogist, is prepared to explore, examine and report on any timber and mineral lands in Canada and to market the same at their value. Mr. J. is about establishing connections in London, G.B., for the disposal there of mineral properties in Canada. Fredericton, 29th August, 1888"

Weekly Record - Fri. Oct. 26, 1888 No new development in mining circles have as yet been made. Rumors of new investments in the gold fields of Nova Scotia by some of our well-to-do citizens are in circulation."

S.J. Daily Sun - Sep. 7, 1888 Sussex. - Fred. W. Stockton, who had been on a visit to several localities where minerals abound, has brought specimens of his find, which are said to be of great value."

Codes: EXPL / IDX_Names: Exploration - General;

Weekly Record - Fri. Feb. 22, 1889 For many years past endeavours have been made by people interested in mining matters in N.B., to get the local government to revise the mining laws of the province, and in some way simplify the same so that this most important industry might be more readily worked up and capital interested from outside in opening and developing our mines. The matter is one that ourlegislature might look into carefully and make changes that would be beneficial to this industry. As the matter stands now there is a marked reluctance on the part of capitalists from outside to invest in mining properties in N.B., as the question of royalties is one that materially affects the ideas and opinion of those who may think of going into any mining ventures. The laws of the province provide that royalties on coal shall be twenty cents per chaldron. On gold and silver five per cent, and other metals and minerals two and a half per cent. At the same time the clauses in which these royalties are secured provide that no royalties shall be collected on any minerals or metals for the space of ten years after the granting of a mining license, save and except for gold and silver. Now we contend right here, that this is unfair. It takes as much time, money and machinery to develop and open up a gold or silver mine, as any of the others, and it seems unjust that the same clause cannot be made to apply to gold and silver as to other minerals viz exemption from royalty for ten years. If this could not be arranged, then why not have the bases of royalty made the same as in Nova Scotia, which is only two per cent. Again why tax coal with a royalty of twenty cents per chaldron, when in N.S. the government is content with a royalty of seven and nine tenths of a cent per ton, and mine owners grumble constantly at that. We also cannot approve of the method of granting mining licenses or leases, to persons applying for the same on ungranted or Crown lands. In Nova Scotia, application is made to the Department, for what is known as a prospecting license say for coal, iron, copper, lead, etc. On payment of $20 right of search or prospecting license on an area of five square miles is granted, giving the applicant the right within twelve months, to locate one square mile out of the five, and apply for a license to work, which costs in the vicinity of $50.00. In the case of silver and gold claims, they are taken up by areas, each area two hundred and fifty by one hundred and fifty at rate of fifty cents for each area for first ten areas, and twenty five cents for each additional area up to one hundred in number, or at a cost of $27.50 for each hundred areas. This prospecting license is good for six months and with chance of renewal for six months longer at one half the original cost. In event of working areas $2.00 per acre is paid and a mining lease for twenty-one years granted to applicant. Now, in New Brunswick, a person wishing to take up a mining license, applies to the government, and has perhaps spent as much time and money in advance, looking up the locality on which he proposes to locate. The government instead of granting him such right of search at once, as should be done, advertises the locality, and it is put up to public competition, thus leaving the applicant to fight against all comers who may see fit to run the price of the privilege up to points beyond his reach. This we submit is manifestly unfair to the man who has spent perhaps months of toil and money in prospecting, and then finds himself, at the last, unable to secure his territory, simply, because his pocket is not as well filled as that of some outsider who, practically speaking, jumps his claim. We could enlarge upon the matter to a much greater length, but trust that the forgoing will enable some of our legislators to see if an attempt cannot be made, during the coming session, to change our laws, somewhat, so that they may be more favourable to the miner and the investor, and in like manner the results will certainly be of much benefit to the province. Every day we hear of new discoveries of copper, silver and lead, iron, and other metals and minerals which if properly developed, must, in the near future, be of great importance to the province, and there can be no doubt that a judicious re-arrangement of the laws in the matter would, in a short time, result in the province having a fair revenue from mining licenses, right of search etc. We invite the attention particularly of our M.P.P.'s for Kings County, to this matter, believing that they will bear us out in the foregoing views; and as it is now beginning to be known that in Kings County exists a large amount of mineral wealth, only waiting the work of the miner and the wealth of the capitalist, to develop it and place it on a legitimate and

Weekly Record - Fri. Jan. 25, 1889 Considerable agitation in mining circles has been noticed during the past week, the result of which will be that an application will be made to the local parliament for a review of the mining laws. There is no question butthat a revision is needed and if properly made it will have the effect of developing the mining interests of this

Kings County Record - Mar. 29, 1889 Dominion Mint and Assay Office. - We notice by the Halifax Critic that petitions are being circulated and signed to present to both Dominion and the local government of Nova Scotia, asking for a grant toestablish a mint and assay office, probably at Halifax. The movement is a good one, and while the matter is in motion we would suggest that our New Brunswick government, at its present session, also consider the matter and provide a small grant in aid of the scheme so that New Brunswick mine owners and prospectors can have a little say in the matter also. It is a well known fact that the mineral resources of Nova Scotia and New Brunswick are attracting the attention of capitalists freely, and it would be a grand thing for the encouragement of all who may feel inclined, to forward our mineral interests if they could be assured that there was some central point where they could get full and bona fide tests or assays made and information of a character fitted to entole them to determine whether they would be justified in following up more freely any mining property they may have made a venture in. Such an establishment would do much to stimulate our mining industries and with a skilled corps of analysis whose duty it would be to provide full and honest assays at a moderate cost, and have the poor prospector as equally good a chance with the man of means to determine the value of his property, we believe that a good result would follow and we trust that the local government will have its attention directed towards this matter by some of our mining friends in the Province. Why, would it not be a good idea to petition the government to put in the estimates for the coming year a small sum towards this object. We are convinced it would meet with general approbation, and in the end be money well spent."

Kings County Record - Mar. 29, 1889 … left for Boston on Monday night on a pleasure trip. Mr. Edwin A. Charters also left by the same train for Boston, to attend some business in regard to mining matters. Mr. Charters has recently sold a silver mine in Nova Scotia."

Codes: EXPL / IDX_Names: Exploration - General;
Weekly Record - Fri. Apr. 18, 1890 Our miners and others interested are looking and waiting with much patience for some action to be taken by the government in reference to the mining laws. We trust that some needful change will be made and the law be made a more equitable one."

Evening Gazette - Dec. 19, 1890 The Occurrence of Gold In New Brunswick. - In returning to this subject we wish to direct the attention of the provincial government, now that they are again firmly in power, to the necessity for an alteration in the laws, rules and regulations regarding mining andmining leases. The attention of the public has already been called to the subject of such needed change by the last annual report of the surveyor general, and we feel confident that this reminder will have the more effect. We have had so many proofs of the existence of gold in New Brunswick, having in fact within a month or two received positive evidence of the occurrence in at least one mineral vein to the extent of more than 2 oz to the ton, that we hope by the means of increased knowledge, the result of more extensive prospecting in our forest covered lands, our own province may take its place beside Nova Scotia, as a gold producing country. We have here quartzites and slates similar to, and occurring in similar portions, with those which are found in the gold producing districts of Nova Scotia. We have also thequartz veins in similar localities. Added to this the finding of arsenical iron in numerous places in New Brunswick as well as in Nova Scotia and we think that even without having the gold itself present to the eye in any considerable quantity we have a fair right to infer that the day of its being worked in paying quantities is not far distant. It would not be a very expensive matter to form a local gold prospecting company, which might engage the services of some well known prospectors from our sister province, who under directions from Dr. Bailey of the university might be employed to prospect for the precious metal in such districts as he might suggest."

Weekly Record - Fri. Dec. 26, 1890 The Gazette has a timely article on the Occurrence of Gold in New Brunswick but with all due deference to the Gazette we see no necessity of sending to the sister provinces for prospectors as if a local prospecting company could not be formed, we can provide our own prospectors very readily. We believe such a prospecting company should be formed and further that its efforts should be aided by a liberal grant from the Provincial funds. It would be money well spent by the Government."

Evening Gazette - Nov. 7, 1890 Gold, etc., In New Brunswick. - To The Editor of the Gazette:- Sir, - I have read with much pleasure your editorial of some days ago on the question of gold in the province of New Brunswick and think the article well timed and pertinent. There can be no question as to the probability of gold existing in New Brunswick, but there is as yet a question as to its existence in paying quantities. This is where the perplexing difficulty comes in and so long as our people exhibit the general apathy they do in matters of this kind, just so long will the problem remain an unsolved one, or some fine day we will see outside speculators and capitalists stepping in and acquiring these fields of wealth which it seem pretty surely exist. This should not be so. It unfortunately seems to be the case now with our people to look upon men who talk of mines and mining as visionaries, enthusiasts, knaves or fools. The sooner this illogical idea is dropped the better. For once I have made in a brief and perhaps imperfect way for some years past a study of the mineral resources of Nova Scotia and New Brunswick. The more I look into it and the more I consider it the more deeply am I convinced that gold will be found in paying quantities in New Brunswick. One reason for my believing this to be so is that to my positive knowledge on certain galena or silver and lead belts in New Brunswick, in which the course of the veins, the characteristics of the wall rock, the gangue of the vein being quartz which is all favorable for gold, resembling in a marked degree the gold veins of Nova Scotia, gold is found in fairly good quantities. In cases to my positive knowledge assays have shown from 12 dwt.to 22 dwt. of gold per ton in addition to the silver, etc. In later tests in another part of the province silver ores have been tested by competent assayers and gold found therein running as high as 1 oz and up to 1 oz and 10 or more dwts per ton. Again on certain branches of the southwest Miramichi, the Tobique, and branches of the St. John river, gold has been and can be found in the gravel beds of these streams in fair quantity. I have been most creditably informed by a gentleman who has given years of study to this matter that on a certain branch of the St. John river, he and some other friends many years ago became possessed of the idea that gold existed on the same. They built a dam, constructed a flume after the California mode of procedure in those days, and made a test. The result was about $3.00 in value in gold to the cubic yard of sand and gravel washed. Here they let the matter drop - why I cannot say. Now it is a well known fact that at many points in the Province, in geological reports, gold is laid down as occurring, but in these localities no thorough or systematic research has ever been made. It therefore will remain problematical as long as our people take no interest in looking into these matters or encourage others to do so. If gold can be found in the galena ores as freely as I have stated, if it exists in the sands and gravels of certain streams, which cannot be successfully contradicted, it is evident that the matter is worthy some careful research by practical men, and the expenditure of a certain amount of capital either public or private warranted. The local government could not, I fancy, do a more satisfactory thing, than to vote a few thousand dollars for this purpose; have some competent men engaged with a proper prospecting fit out, and let them make a systematic and thorough research over these various localities. The discovery of gold in New Brunswick would mean a largely increased revenue to the province, and the stimulating of mining enterprise on a legitimate scale, that would at no distant day produce good results. In conclusion I might say from knowledge I have gleaned in various ways, that if the same showings and conditions existed out west in Colorado, Montana, or in our own Northwest, and even in Nova Scotia, thousands of dollars would quickly be invested in opening up and testing the same, not only for chances of gold but galena, copper, iron, manganese, antimony, &c. It is time the people of our province were waking up over the matter and giving it careful and serious consideration. While I admit that the question is fraught with much that makes it risky, and so much kite flying and deception is practised, yet with the doings of manipulators of this class in the past before them, to warn them of its dangers, our capitalists might well afford to invest a certain amount of their means with a fair degree of safety in endeavoring to demonstrate if possible the existence of not only gold but other deposits in the province that would at an early day beyond doubt add much to its progress and prosperity. Yours &c., Nov. 3rd, 1890 C."

Codes: EXPL / IDX_Names: Exploration - General;
Weekly Record - Fri. Sept. 5, 1890 Considerable activity is being displayed in various parts of the province in the mining industry. In Albert and Kings County manganese is being sought forvigorously and new discoveries are reported. It is also said that a valuable vein of albertite has been found in Albert County again and expectation is high in that quarter. What is needed, as we have time and again argued, is a thorough revision of the mining laws of the province."

Daily Times - Sep. 15, 1890 New Brunswick Mining Items. - (Halifax Critic). - It is so long since I have contributed any items to your columns that you will think I have deserted you, but not so. Moving about considerably and pressure of other matters has prevented. (see below for rest) ..."

S.J. Daily Sun - Sep. 30, 1890 W.F. Best, who has been in New York on Mining business, returned home on Saturday."

Daily Times - Aug. 8, 1891 ADVERTISEMENT: Miners, Attention! – I have just received a very fine quality of Mineral Testing Glasses, Pocket Compasses, hunting and open face, Magnifying Glasses. Prices Reasonable. – K. Bezanson. 260 Main street, Moncton."

Chignecto Post - Aug. 13, 1891 Under the new mining law, mining in New Brunswick has taken a rapid advance. According to the law parties wishing to search for, or mine minerals either on theirown or other property are required to file application at the Crown Land office, Fredericton, together with the description of the land and the mineral expected. The late issue of the Royal Gazette, in which these applications are gazetted, contains a notice from 48 persons for mining claims."

Kings County Record - Dec. 11, 1891 Mining Matters. - Whatever differences of opinion may exist in the minds of some of our people it would seem as if the mining act passed last session has had a very good effect in causing many mineral deposits in the province to be brought into notice, and we understand that the crown land department has had a decided boom in revenue from applications in prospecting and mining licences. Where objections have been made to any suchlicences by owners of lands, the surveyor general has promptly instituted courts of inquiry and so far as possible arranged the existing differences between the parties concerned. We are pleased to know that considerable capital both local and foreign has been and is being expended in the prospecting and development of mining properties, and with the advantages of a provincial assay office in St. John it would seem as if New Brunswick is destined to become quite a field for mining operations. It is barely possible some needed changes may be made in the mining act at the next session, and one thing we would suggest would be, that the question of royalties be reduced to the lowest possible limit, in fact we feel that if the matter of royalties were waived totally for a term of years it would be more beneficial to the province in the future, and would give a decided impetus to the investment of capital in mining enterprises throughout the province."

St. Andrews Beacon - Feb. 12, 1891 A Reciprocity Exposition .- ... Parties interested are invited to send specimens of the products of gold mines, copper mines, coal mines, iron, gypsum, marble, granite, freestone, and other mineral

S.J. Daily Sun - Jan. 1, 1891 Our Mineral Resources. - John McGuire of Halifax, and W.I. Smart of Boston, have been in the city for several days past endeavoring to work up a scheme for the development of the mineral resources of the province. The first named gentleman has been very successful in NovaScotia, and he has been prospecting in Kings county. He is satisfied from what he has seen that the mineral resources of New Brunswick are equal, if not superior, to those of Nova Scotia, although they are in a different formation. While in St. John Messrs. McGuire and Smart saw a number of prominent business men with a view of inducing them to take an interest in the scheme. If they are given the assistance they expect to receive, they say they are prepared to go on with the scheme. Messrs. McGuire and Smart left last night for Boston, but will return to St. John very soon."

Weekly Record - Fri. Jan. 9, 1891 By a paragraph in the Sun of recent date we observed that some gentlemen from Nova

Scotia have been making propositions to St. John capitalists in the direction of a scheme leading to the development of the mining interests of the province. Just what these propositions are we are not able to state, but if they are based on an honest, equitable and legitimate platform it would be well to adopt them, otherwise they should be left severely alone."

Weekly Record - Fri. Jun. 20, 1891 Dr. Goodfellow resumes work as a dentist ....gives up prospecting....."

Codes: EXPL / IDX_Names: Exploration - General;
Weekly Record - Fri. Nov. 6, 1891 TO THE EDITOR OF THE RECORD Knowing your desire to do anything in fairness that will assist the farmer and land owner and more especially that the farmer should have and maintain his just and vested rights, I feel that you will give me space in your equitable paper, the Record. The farmers will find it to their particular benefit and the preservation of their homes and their dignity as men, to show Her Majesty Queen Victoria that they will defend the rights vested in them by the act relating to mines and minerals, specially confirmed, ratified and finally enacted by an order of Her Majesty in council dated the 24th day of September 1855, andpublished and declared in the province of New Brunswick the 31st day of Oct., 1855. This is what her majesty in council has conferred and conveyed upon the farmer and land owner in the province of New Brunswick, Canada. Whereas it is only just and proper that all mines and minerals of every description should pass with the soil to the grantee of the crown, and be vested in him; the exclusive right of digging and raising coal or other minerals shall be vested in the owner of the land wherein such coal or mineral is found to exist. Mark the words, how definite, there is no uncertain meaning in them. Just, proper, all, every description of mines and minerals should pass with the soil to the grantee of the crown and be vested in him. Exclusive right vested in the owner. Her Majesty knowing the farmer above all others should be free and above the power of certain, ambitious, would-be King Johns, and compel the aforesaid individuals, like the true Britons of old did when they forced from the said John the Magna Charter, to grant the exclusive right to mine vested in the owners of the soil and their assignees and not in the M.P.P.'s. Certain individuals ask the farmers to look at their grants and they will find the mines and minerals reserved to the crown, if so all the better for the farmers. This shows to a certainty that the crown had the power to convey to the farmers the mines and minerals of the said province with the exclusive right for the said farmers or their assignees to mine the aforesaid minerals, the said crown reserving a royalty as a consideration for such conveyance. The farmers will do well not to be hoodwinked, but remember that her majesty in council will not go back on what they convey to their subjects. I am informed the act of 1891 will be repealed. One of the horny handed sons of toil says the act relating to mines and minerals should be called the millenium act. Farmers have their remedy at the next election of M.P.P.s. Hoping there will be no hard feelings all round. I am Yours, etc., Wm. Goodfellow. Sussex, N.B."

Weekly Record - Fri. Nov. 13, 1891 In various parts of the province work of exploration is going on quietly for different minerals..."

Daily Telegraph - Nov. 21, 1891 Mines and Minerals. - Mr. W.F. Best has returned from Nova Scotia, where he has been examining some mining properties. He has brought back samples of gold bearing quartz from a new locality and the samples look promising. He has also samples of manganese, iron ore and ore which is supposed to contain silver and which is not yet analyzed. It is understood that New Brunswick parties will develop some of these properties while an American syndicate is looking after the iron, which is suitable for the manufacture of Bessemer steel. Mr. Best has obtained samples of oil bearing shale, identical with the Albert shale, from a district east of Truro. This kind of shale has not been found heretofore outside of the province of New Brunswick. The gold mine which is being worked in the vicinity of the same belt which he visited, Mr. Best says, is producing $1,500 worth of gold per month over and above paying

Weekly Record - Fri. Oct. 16, 1891 Whether the new mining law is universally acceptable or not large numbers of prospecting licenses and rights of search are being filed in the mines office and quite a boom is observable in mining circles. The province will receive a decided addition to the revenue heretofore not available. It is said material changes in the act will take place next session."

Weekly Record - Fri. Oct. 23, 1891 Now that the mining act seems to be attracting the attention of investors, prospectors and speculators, would it not be well for the government at the approaching session to vote an appropriation for the establishment of a mineralogical collection in some central part of the province, say St. John, and in conjunction with it have a provincial assay office where those engaged in prospecting and developing the mineral resources of the province could have their samples tested and assayed at moderate cost. We believe it would be a move in the right direction and in time would become almost if not wholly self supporting."

S.J. Daily Sun - Oct. 26, 1891 A Mineralogical Collection. - Now that the mining act seems to be attracting the attention of investors, prospectors and speculators, would it not be well for the government at the approaching session to vote an appropriation for the establishment of a mineralogical collection in some central part of the province, say St. John, and in connection with it have a provincial assay office where those engaged in prospecting and developing the mineral resources of the province could have their samples tested and assayed at moderate cost. We believe it would be a move in the right direction and in time would become almost if not wholly self-supporting. - [Sussex Record."

Chignecto Post - Oct. 29, 1891 In Albert County, J.L. Pye, J.G. Pye, D.C. Cleveland and W.G. Dobson have applied for prospecting licenses."

Codes: EXPL / IDX_Names: Exploration - General;

Weekly Record - Fri. Sep. 18, 1891 To the Editor of the RECORD:- In a communication signed Wm. Goodfellow, it is intended I presume all right, but when a gentleman whoknows a good deal about medicine takes up the law he makes a mistake in either not knowing or in keeping back the true state of facts. Now, as a matter of fact, if he will turn to a book called the Consolidated Statutes of N.B. at page 984, he will find that the act to which he refers was repealed in 1876. If he also looks at page 178 of the same book, section 7, he will find that the right to the minerals does not belong to the owners of the soil where in the grant thereof the minerals are reserved. Now for 15 years the act to which he refers has been quietly lying in its grave and of course no person but a medical man would see a way to resurrect it. For 15 years the country has been satisfied with the law and because he did not know it, he, like Rip Van Winkle, has arisen from his sleep to tell the people what the law in olden times used to be. If the country wants to see all mining shut up, take the minerals out of the hands of crown and give it to the private owners. There are cases in which the owners would not let a miner dig a hole for $50,000 when they would sell the farm before hand for $500. Yours truly, LAW STUDENT"

Weekly Record - Fri. Sep. 25, 1891 TO THE EDITOR OF THE RECORD The cowardly creature who writes under the signature of LAW STUDENT and insults the land owner by his ignorant and malicious statements does not tell the people what the law has been since the repeal of the act of 1855. I will give it to you and you will find by comparing the act of 1855 with the act of 1876 to be the very same in every particular, that is as far as the vested rights are conveyed to the owner of the land giving the owner the absolute right to mine the minerals on the said owners land. Consolidated Statutes of N.B., Chapter 18, page 177. Mines and Minerals -- Salt mines. 1. The Governor in Council shall grant remuneration consistent with public interest to any person who shall first discover and make known to the government the situation of any deposit of Rock Salt within the province. 2. Such remuneration shall be continued to a portion of the revenue derived therefrom. Gold mines. 3. The Governor in Council is hereby authorized to make rules and regulations digging and mining for gold in and upon ungranted crown lands, and to authorize the granting of leases for that purpose without competition. Coal and other mines. 4. The exclusive right of digging and raising coal or other mineral, shall be vested in the owner of the land wherein such coal or mineral is found to exist; butbefore he shall dig or raise coal or mineral he shall obtain license therefor from the Governor in Council. 5. The Governor in Council may, except in cases where the owner has the right to mine without paying royalty, issue a license to the owner of any land, or his assignees for that purpose, to dig and raise coal and other minerals therefrom, upon such terms and on payment of such rent or royalty, and subject to such rules and regulations as the Governor in Council may prescribe. 6. All veins or deposits of coal on granted lands known as surface veins and not exceeding two feet in thickness may be mined and worked, and the said coal removed, shipped and disposed of, without the payment of royalty. 7. The aforegoing sections shall not affect, impair or interfere with the rights or duties of any license acquired under any license heretofore granted, nor with any grant in which the minerals are reserved. The minerals are in the hands of the owners and the sooner the institution called the government ceases its meddlesome legislation and gives an absolute right to the owners of the soil freeing their minerals from royalty, so they can make a proper transfer to the capitalist we will all find a boom in the mining business. Sharpers would be out of doors and honest men would feel safe in their investments. It is hoped Messrs. Pugsley and White will prevent the land owners from being annoyed and forced into unnecessary litigation and stop the granting of license on private lands, and prevent the attempted outrage to take from the land owners their vested rights. If the land owners do not protect themselves from the present crab-like movement at the next session they may make a general division of the entire province amongst themselves and reduce us all to the condition of serfs. Wm. Goodfellow."

Moncton Daily Times - Apr. 1, 1892 and Moncton Daily Times - Apr. 1, 1892 Albert Co. - Dr. Chandler has removed from Demoiselle Creek to Edgett's Landing. Report is ripe that with the opening of spring, mining in that quarter will be pushed with diligence."

St. Andrews Beacon - Apr. 21, 1892 St. Stephen.- Interest in mining circles isreviving. Mr. A.C. Jones, proprietor of the Windsor, is trying to bond the mining property for a syndicate of capitalists which he represents. Besides Mr. Jones' Company there is another that is negotiating for some of the property and it is expected that in the course of a few weeks the work of developing the mines will commence."

Daily Telegraph - Feb. 8, 1892 ADVERTISEMENT: I. & E.R. Burpee, – manufacturers of -- Common and Refined Bar Iron, Iron and Steel Nail Plate, Iron and Steel cut Nails,Mining, Railway and Ship Spikes, Mining Rails, Bridge Bolts, &c. Importers and dealers in Iron, Steel, Metals and Heavy Hardware. -- Rolling Mills Coldbrook Offices and Warehouses: Nos. 5, 7, 9 & 11 Dock Street."

Moncton Daily Times - Jan. 15, 1892 Albert Co. - Capt. John Pye of the Cape continues the search on lands taken up for mining purposes, and as yet with no flattering success. Many seem to have a trace of gold or silver in them but not in quantities that would warrant working. It is to be hoped that success of the richest kind will yet reward his persistent

Codes: EXPL / IDX_Names: Exploration - General;
Moncton Daily Times - Jan. 16, 1892 Minerals in New Brunswick. - Editor Times: The notice in the Times a few days ago calling attention to the discoveries of minerals and mineral paints, and the act passed in the last session of our local parliament, induces me to put your readers in possession of information in connection with increased important duties now secured to the public, by the new bill passed at Ottawa in session of 1890, principally through the promptattention of our worthy member, Josiah Wood, M.P. I was some years ago impressed with the feeling that our mineral resources were being neglected, and in order to inform myself intelligently on the subject, made enquiries of a number of local M.P.P.'s and also searched Sir William Logan's printed declaration thereto. In all those avenues of enquiry I found only two tangible facts, viz: that Sir William Logan had put it on record that there were minerals in certain localities, and that the local government had a standing offer on the statute book of $2,500, which would be given to any person who would develop any valuable mineral in paying quantities. I was not satisfied with these facts and believed that something more was needed. I therefore wrote to Mr. Josiah Wood, early in the session of 1890, stating the great need there was for more active and searching measures, and after rehearsing past researches, etc. I called Mr. Wood's attention to the comparative uselessness of the government survey, inasmuch as the public were not put in possession of the results. In order to get such, I suggested that the geological surveyors should take maps of mineral areas , charts of mineral finds , and profiles of mineral outcrops , all of which would be printed and placed in the hands of the Minister of the Interior. The public could then get any information wanted at a small cost by applying there. Mr. Wood with his usual alacrity took the matter in hand. A private committee was appointed. The whole geological staff from the chief down were called to tell how the work of the staff was done, with the result that a new bill was introduced into the Senate and passed by both chambers, which enacted that maps, charts and profiles were in future to be made. Copies of the bill were printed and circulated. It is now possible for New Brunswick citizens to secure valuable information and secure possession of valuable areas by learning where the survey staff is at work in New Brunswick, and at the end of the season applying at the office of the Interior for a copy of results. I was the more anxious to make above facts public, so that those of our own province who may be interested would be on the alert, and also to give Mr. Wood credit for his ready and courteous attention in this matter, I am, Sir, Yours, etc. A. Smith"

Moncton Daily Transcript - Jan. 23, 1892 Dorchester Jottings.- A movement is mooted having for its aim the formation of a company to establishmarble and monumental works here. Such a manufacturing industry would, we think, pay and our citizens will, it is hoped, enter into the prospect with zeal."

Chignecto Post Nov. 17, 1892 A large mining convention will be held in Montreal during the third week of February next. Invitations have been sent to the different mining associations of Canada, the Canadian Association of Mining Engineers. The different mines of Canada will be visited by the members of the convention, which is expected to be a very important one. The Quebec government is to be asked to grant a sum of money towards entertaining the convention."

Daily Telegraph - Sep. 23, 1892 and Evening Gazette - Sep. 23, 1892 Application has been made for the incorporation of the Hinolta Mining Co., for gold and silver mining in Mexico by Messrs. J. Herbert Wright, H.J. Olive, W.D.Baskin, C.B. Lockhart, and F.R. Butcher of St. John, and Clinton Kenney, Fred W. Wright and Benjamin F. Bivias of Guanjuate, Mexico. The head office will be in Lancaster, and the capital stock $1,000,000, divided into shares of $10 each. The five St. John applicants are to be the provisional directors of the company."

Moncton Daily Times - Feb. 21, 1893 International Mining Convention. - A special party of delegates to attend a meeting of the International Mining Convention passed through here last night bound for Montreal via Levis. They occupied the special sleeping car, St. John, and were accompanied by Mr. W.H. Price, travelling passenger agent, I.C.R."

Codes: EXPL / IDX_Names: Exploration - General;
S.J. Daily Sun - Jan. 24, 1893 The Mining Laws of New Brunswick. - To the Editor of the Sun: Sir - I wish to direct the attention of the people of New Brunswick, and especially the members of the legislature, to certain matters of great importance to the whole province. In the year 1891 an attempt was made to improve the laws relating to mines in New Brunswick. Previous tothat time the regulations of 1872 were in force, under which the owner of the soil could, on payment of $10, receive a license to open mines on his own land and work the same for a term of 25 years. When crown lands were required for mining purpose, the areas selected were sold at public auction to the highest bidder. The act of 1891, which should have been formulated and carefully revised by persons interested in mines, was copied almost verbatim from the very unsatisfactory laws of Nova Scotia. The old law of 1872 had at least one virtue - viz., its brevity - it being all contained in two or three pages, while the new law of 1891 forms a volume of 50 pages, and is in many respects both obscure and contradictory. Now the fact is that both the old and new law are based on wrong principles, and until a radical change is made we need not hope to see our mineral resources developed to any extent. Some sections of New Brunswick undoubtedly contain deposits of valuable ore, but under the present mining law very little will be done in the way of systematic prospecting or development. It is of vital importance that the prospector shall be encouraged to the utmost, but under our existing law the prospector without ample capital is handicapped. In the first place the prospector, who is usually a poor man, must pay the sum of $20 into the provincial treasury before he can locate a mine, and there is a further fee of $50 before he can get a license to work. These two sums, $20 and $50, may appear small to the men who made the law,

but they are not small to a poor farmer or Lumberman who may wish to open a mine. In countries where mining has been most extensively carried on and where millions upon millions of dollars are drawn each year from the hidden treasures of the earth every opportunity is given to the prospector and practical miner. The general mining laws of the United States are most satisfactory in this respect, and the special laws of the various states always leave the prospector free from large fees and cash outlay. In the United States any one may locate and secure an area 15,000 feet long and 600 feet wide, on paying the nominal fee of $1.50 for registration of his claim at the nearest record office. No location of a mining claim can be made until the actual discovery of a vein or metallic lode within the limits of the claim. In New Brunswick, under the existing law, vast tracts of country can be taken up and held for mining purposes by any one who pays the fees. For instance, one tract of 40 square miles is now held by a few persons, on account of a supposed deposit of ore somewhere within this district the exact position of the deposit being at present unknown. It will be seen from this that all other persons are shut out from prospecting within this district for at least one year. The fact is that no individual or company should be allowed to hold more than a very small tract of land for mining purposes, and the actual vein or deposit of mineral bearing rock should be definitely located before any mining license is granted. The fee for securing mining areas should be $1 and the claim should be recorded in the county record office nearest the mine, while duplicate records could be kept at Fredericton. Yours Truly, Galena St. John, Jan. 21, 1893"

Weekly Record - Fri. Mar. 3, 1893 The Mining Interests of America. We are pleased to note that our fellow townsman Mr. E. A. Charters, was one of the invited guests at the sessions of the American Mining Institute of Engineers and the Mining Societies of Canada, held at Montreal from Tuesday, Feb. 21st, till Saturday, 25th. The headquarters of the association was at the Windsor Hotel, and the sessions were held in the college of Physics Building, McGill University grounds. The attendance was very large, delegates being present from nearly all over America. The visitors from across the line were delighted with their reception, and it is likely great benefits to the mining interests of Canada will result from this gathering. Some important resolutions were passed and the delegates enjoyed themselves, while not in session, by sleigh drivers around the city, as well as by visiting by rail the Victoria and Lachine bridges. One of the delegates from the lower provinces was Premier Fielding of Nova Scotia, who made some very pleasant and effective addresses. The office of secretary of the convention was well filled by Mr. B.T.A. Bell, of Ottawa, editor of the Mining Review."

S.J. Daily Sun - Mar. 21, 1893 Our Mineral Exhibit. - It appears that despite the apathy of the local government New Brunswick will not be wholly unrepresented by exhibits at the World's Fair. A list of Canadian exhibitors shows the names of several of our enterprising business firms, while the dominion geological department will make an exhibit of New Brunswick as follows: Lime, granite and building stone, coal, iron, lead, nickel, graphite, manganese, gypsum and mineral waters. In connection with the mineral exhibit some adequate arrangement should be made to have it looked after by persons qualified to give the public the fullest information. The other provinces, it is understood, will have their own representatives on the spot. This province cannot afford to be left altogether in the background, though its exhibit is not sufficiently extensive to warrant the appointment of a special agent. Doubtless if the matter were brought to their attention the dominion government would undertake to take this exhibit under the special care of the mining division of the geological survey, which it is presumed will be represented at the fair, since its officers are familiar with the mineral deposits of the country, their value and extent. The officers of the mining engineers' branch of the geological survey are practical men, who in the discharge of their duties have visited every mineral deposit in New Brunswick, and doubtless no better arrangement could be made than to place this exhibit under their special charge."

St. Croix Courier - Oct. 26, 1893 and St. Andrews Beacon - Nov. 2, 1893 The mining fever is very largely prevalent throughout the provinces, if one is to judge from the number of searching and prospecting licences being received at the crown land office. On Thursday over 300 areas were applied for. Among the applications lately received are some for licences to search and prospect for asbestos in the Magaguadavic district in York. The greatest run of applications has been from Westmorland county, where the applicants are all after gold. From Albert county there has been a number of applications for licences to search and prospect for plaster."

Codes: EXPL / IDX_Names: Exploration - General;
Weekly Record - Fri. Oct. 27, 1893 The Fredericton Gleaner says there is a great rush for mining applications. In one day over 390 areas were applied for, the greater number of them being from Westmorland."

S.J. Daily Sun - Dec. 7, 1894 ADVERTISEMENT: To Prospectors and Mine Managers. Assays and Analysis of Minerals, Trailings, Concentrates,Coals, mineral Oils, Waters. F.H. Mason, F.C.S., M.A.I.M.E. The Assay Office, Arlington Place, Truro, N.S."

Woodstock Dispatch - Dec. 15, 1897 Enterprise only Needed. - E.A. Charters of Sussex, an authority in mining speaking to a Sackville Post reporter, regarding New Brunswick as a mining centre said this province has a great future once the people realize that it will pay to invest their money. He declared it could point out fully half a dozen places in this province where gold could be secured in paying quantities if the properties were developed. This, he said, would necessitate an outlaying of about $15,000 or $20,000. Nobody here could be got to invest in them, but there were New Brunswickers who had put capital in mines in far away Rossland and were not getting as big returns as they would in this province. One lead he knew of would yield copper, gold and silver, each of paying quantities, and if it was in Rossland could easily be sold, undeveloped as it is, for $100,000."

Weekly Record - Fri., Feb. 19, 1897 Prospectors and mine owners will be glad to learn that the government of this province has purchased a diamond drill in Chicago and that it is now on its way here and will doubtless prove a valuable factor in developing our natural resources."

St. Andrews Beacon - Feb. 25, 1897 Prospectors and mine owners will be glad to learn that the government of this province has purchased a diamond drill in Chicago and that it is now on its way here."

Gazette - May 5?, 1897 Diamond Drill. - The attention of the Government having been frequently called to the importance of aiding in developing the Mineral resources of the Province, they have it in contemplation to purchase a Diamond Drill early in the year 1897, for the use of persons who may wish to carry on prospecting operations."

Dorchester Spectator Mar. 9, 1898 E.A. Charters of Sussex, who has been chosen by the local legislature, as a representative from New Brunswick to the Exposition in Boston, left for that city several days ago. He also has a large mining deal on hand and will probably visit New York, Philadelphia, and Washington before returning."

Weekly Record - Fri., Jan. 13, 1899 We are glad to learn that the mining expert who has been making Sussex his headquarters for the past ten days or so expresses himself as well pleased with the mineral products he has been looking into recently incompany with E.A. Charters, of this place. A number of localities have been visited in Albert and Charlotte Counties and preliminaries arranged with a view to developing and opening up three or four mining claims in the early spring. Mr. Swinney expressed considerable surprise that the Government and our own people have not been more zealous in making the mineral resources of the Province more widely known; and hopes in the near future to prove the possibilities of a number of properties therein. Copper is the chief product he has in view. He also expressed a decided opinion that New Brunswick has in certain sections strong possibilities for the existence of gold paying belts. Mr. Swinney leaves for England shortly returning to this province in February or March."

N.B. Reporter - Mar. 29, 1899 A New Quartz Crusher. - Now that the gold craze has struck New Brunswick it may be interesting to know that a new cradle crusher designed to crush gold quartz and other mineral stone on the rolling principle has been invented. It is claimed that the new machine is superior to the stamping process, is much cheaper, amalgamates the gold on copper plates behind each roller and crushes the stone more uniform in size than is done by the stamps. The new machine has heavy rollers, which are allowed to sway freely, and in their rolling crush the quartz. It takes care of half

S.J. Daily Sun - Dec. 20, 1901 Hopewell Hill, Dec. 18. - James Robertson, who has been a resident of Albert Mines for many years, is selling off his belongings, and intends moving to the states. Mr. Robertson is an expert and experienced miner, and a good citizen, and the residents of the mines section will be sorry to lose him and his family."

St. Andrews Beacon - Oct. 22, 1903 Mr. R.A. Johnston, of the geological survey, has returned from Charlotte county, New Brunswick, where with Dr. Ells he has been making a survey with a view to preparing a complete up-to-date geological map of the county. Charlotte county contains large deposits of copper ore, but all that has been found up to the present is of very low grade and is not worked. Such workings as have been carried on in the past have been superficial and the geologists report that there is a possibility, though not a very strong one, of higher grade ores being found at greater depths. The only mining industry of the country at present carried on is granite, of which there are large quarries at St. George, and the products are shipped all over the continent. From the data they have procured Dr. Ells and Mr. Johnston will prepare a map in which there will be several changes in the geological outlines. - Ottawa Citizen."

Codes: EXPL / IDX_Names: Exploration - General;
Kings County Record - Jan. 28, 1910 There may be no limit to the possibilities of mineral wealth in Sussex. A well known resident had decapitated a pair of chickens recently and on openingthem up some grains of gold were found in the crops of the birds. The owner naturally feels elated that he has a hidden mine of golden wealth on his farm and has been the recipient of many warm congratulations."

Kings County Record - May 28, 1915 It is said that a new find in the mineral line in Kings County may be announced at no distant day. Kings County has much mineral wealth but the difficulty seems to be to get capital interested. Probably when the war is over a 'boom' may spring up."

Kings County Record - Jan. 22, 1926 Lead and Zinc. - G.S.C. ... Lead and zinc minerals are known to occur at a number of places in New Brunswick, but at present no property is under development...."

Kings County Record - Jun. 15, 1928 and Kings County Record - Jun. 22, 1928 Mineral Exploration Of Northern New Brunswick. - A survey of the mineral resources of the interior of northern New Brunswick is being undertaken by the

Canadian National Railways under the personal direction of Cyril T. Young, F.R.G.S., Superintendent ofDevelopment, who left Fredericton by track motor car accompanied by Mr. R.T. Goudie and others following conferences extending over the past several days with Hon. Charles D. Richards and officials of the Provincial Department of Lands and Mines. 'The development of rich mineral resources is being shared by every province in the Dominion and Newfoundland,' said Mr. Young, explaining his mission, 'and is bringing added wealth and prosperity to to Canada. You have a great unexplored region unmapped geologically in the northern interior section of New Brunswick which I know has possibilities. If I find it to have real merit we propose to aid its development through wide publicity to mining men and prospectors the same as we are doing elsewhere across Canada.' 'In creating new business,' he added, 'we also create traffic and the optimism at present so evident in New Brunswick will attract to you the future you will merit in these provinces.'"

Evening Times Globe - May. 19, 1928 Plan Study of Mining Possibilities. - N.B. Areas Involved in Plans. - Huronian Belt Co. Announces Exploration Plans. - Work is Started. - Venture Is Said To Have Passed The Preliminary Stage. - Toronto, May 19. - The Toronto Globe says today: 'An exploration of the mining possibilities of Nova Scotia and New Brunswick is to be carried out by the Huronian Belt Company and allied interests, according to R.S. Dening, managing director, who has just returned from a visit to the Maritimes. 'In conversation with the Globe representative yesterday he stated that steps had been taken for the exploration of the mineral areas in the two provinces in conjunction with business interests in the centres concerned. 'The venture is already said to have passed the preliminary stage and three or four prospects in both provinces are now being explored under the direction of W.M. Goodwin, a Huronian Belt engineer.'"

Kings County Record - Oct. 19, 1928 Map of mineral occurrences in N.B. - CAPTION: New Brunswick would appear to be rich in minerals. Some very remarkable finds have been made recently, particularly of antimony and copper. Above is a Natural Resources map prepared by the Natural Resources Department of the Canadian National Railways, showing the location of some of the more important deposits of minerals. The Canadian National Railways have had a mineralogist engaged in New Brunswick for some time past making surveys and some remarkable results have been achieved. The antimony and copper deposits are among the outstanding features of these surveys. Antimony is a valuable metal, used in coloring glass and china. the making of ammunition, Britannia metal, babbit metal for bearings, and type metal. The greater part of the world's supply of antimony came from China, but New Brunswick may rank first in its production should Telegraph Journal - Oct. 25, 1929 Opportunity For Mining Offers In New Brunswick. - Evidence of Minerals Everywhere is Opinion of Western Expert. - Mining conditions in New Brunswick are perfect, with every facility for production awaiting utilization, and still the deposits are remaining unappreciated, as it were. What the province needs for the production of its metals is organization, said Frederick Reid, mining authority, stationed in the Hudson Bay district, who was in the city last night. 'The ore should be there and awaits development. Nova Scotia has a substantial copper and zinc deposit, which will be heard from within a year,and likewise Newfoundland. This province is ideally situated with regard to production,' he continued. 'You can get dynamite cheap, timber is plentiful, transportation within the province id reduced to a minimum, water transportation lies at your door - why, you have everything.' The mining engineer smiled 'It's there,' he said, 'why not get it?' 'Is it a lack of interest, lack of initiative, or lack of finance that is holding back the development of the mining possibilities of our province?' he was asked. 'What you need is organization. The need of publicity following the launching of practical production is, of course, self evident. New Brunswick should be heard from with regard to its resources, especially its mines. Why ignore Nature's gifts?'"

Kings County Record - May 2, 1930 Mineral development in New Brunswick should receive a decided impetus this summer, according to the provincial mineralogist, Dr. William J. Wright. Three full-time prospectors will be engaged throughout thesummer in search of mineral deposits capable of commercial development. These are being backed by three development companies of good financial standing."

Codes: EXPL / IDX_Names: Exploration - General;
Kings County Record - Nov. 21, 1930 New Brunswick Minerals Attracting Attention. - The manganese deposits of New Brunswick are attracting attention, particularly in view of the possibilities that exist for development, present indications being that the mineral will be found in considerable quantities. At the present time, a representative of one of the prominent Wall Street financial houses is looking over the ground along with a representative of the Natural Resources Department of the Canadian National Railways. Antimony is another of the minerals of New Brunswick which has come in for a great deal of attention, indications being that there are extensive deposits. Copper has also been located and explorations are going on with a view to ascertaining the nature and extent."

Kings County Record - Feb. 12, 1948 Province Takes Part in Geological Work. - Geologic research and exploration in the province of New Brunswick during the year 1947 were reviewed recently by Lands and Mines Minister Gill. The minister described the year as one of considerable activity, with emphasis on steady production of basic minerals and continued effort to uncover new minerals and new deposits. In summary Mr. Gill said the department of lands and mines operated four field parties during the summer months, and two diamond drills were kept busy. Investigations of anhydrite, gypsum, limestone and salt were carried out. The federal government had furnished three field parties for work intimately connected with the mining industry. Four companies from outside the province carried on geological work and diamond drilling, with local men active on smaller projects. Considerable mapping, prospecting and exploration of mineral deposits was done in

Albert County. Formation of two companies known as the Atlantic Chemicals Company, Ltd., and Seaboard Chemical Company was a highlight of the season. The former proposes to make sulphuric acid and Portland Cement from anhydrite and shale, and to use the acid secured in the process inmanufacture of superphosphate fertilizer. The latter is producing manganese chemicals from bog manganese. Exploration of many mineral deposits including copper, gold and silver, lead and zinc and salt was carried out by the provincial field parties; and private projects for various minerals also were investigated. Additional coal reserves were investigated at several points in the province. During the year 114 specimens of rocks and minerals were examined and catalogued. Approximately 235 samples were analyzed and assayed; these were obtained by provincial field parties from drill cores and prospecting pits."

Kings County Record - Oct. 13, 1949 Aerial Ore Hunting Being Developed. - Soon the flying prospector may take a whole laboratory with him into the air. Delicate instruments, probing from several hundred or several thousand feet up, will render the solid surface of the earth virtually semitransparent. Geologists and geophysicists may 'see' the forms of masses lying below the soil. They may be able to tell enough about these masses to declare whether they should be more closely explored as possible sources of oil, metals, or other valuable minerals. Progress of the science of exploring from the air was outlined at the 75th anniversary of the Colorado school of mines at Golden, Colo., by Hans Lundberg, president of Lundberg Explorations, Toronto. Pioneer air-borne instrument is the flying magnetometer. It was developed during the war to detect the metallic masses of submarines lurking deep in the sea. Quickly it was adapted to detect large masses of magnetic ore that might be deep beneath the earth. The skilled geophysicist reads general meaning into four types of undersurface data obtained from the surface. Differences in gravity, in electrical conductivity, in magnetism and in plasticity. Facts about the latter are obtained by setting off explosives in, on or above the surface, and then measuring how the shock waves travel through underground rocks. This is the only method that is not being taken to the air. Air-borne instruments are already measuring differences in magnetism and electrical conductivity in rock strata below, which are recorded in the plane on paper for complete study later. Very soon, Mr. Lundberg said, instruments to measure and record gravity differences from high in the air, will be up there, too. Such instruments are even now so sensitive that, when used on the ground, their readings change on being lifted from ground level to a table top. These are being adapted to use from high in the air. When he has landed, the flying geologist may obtain a complete, if general, subsurface picture of the terrain he has flown across, by putting together the data obtained from his various types of instruments. These are often easier to interpret than similar data obtained on the ground. By criss-crossing an area in a selected flight pattern the flying prospector may make a complete and permanent map of the major rock masses below the surface, over large areas. 'In the very near future,' Mr. Lundberg added, 'we will also have electrical methods for interpreting rock types and formations, by using alternating currents and specially shaped waves.' He pointed ut that the one flight would do for all, hence it would be as cheap to take a complete record as an incomplete one. Such methods give a general picture of a selected subsurface terrain from 100 to 500 times faster, and from 100 to 500 times cheaper than on foot, he said. They are especially adapted to preliminary exploration of large relatively unknown areas. Instead of sending in the plodding 'foot' geologists, virtually blind, a rapid aerial survey may show him where to go. Closer explorations may be possible even from the air by using the helicopter, which can hover and land, and will permit placing markers to guide ground parties, etc. The new methods are most hampered, not by natural conditions, but by social and economic ones, he said. That is, mine owners' holdings are often too small to make aerial prospecting worthwhile. Further, they are often secretive and do not desire to share with their neighbours the cost - and also the knowledge of a complete air survey."

Codes: EXPL / IDX_Names: Exploration - General;

North Shore Leader - Oct. 16, 1952 Bathurst Mining To Start Early Spring. - Mining of the Bathurst base metal deposits will start this winter or early spring at the rate of 6,000 tons a day. This was announced Monday at a combined luncheon meeting of the Saint John Rotary club, the Kiwanis Club of Saint John and the Maritime Provinces Board of Trade, by Dr. Graham MacKenzie, head of the department of geology, University of New Brunswick. Dr. MacKenzie was referring to information he had gathered in the Bathurst area. He said the development work would have a far- reaching beneficial effect on the economy of the Maritimes. Nearly 40,000 claims had already been staked in the Bathurst area, Dr. MacKenzie stated. This had brought a tremendous flow of capital and mining experts into that part of New Brunswick. Prospecting by the conventional methods could not be carried on adequately in most parts of the province, he added. More highly scientific types of research were necessary. Geophysical surveys had been carried on at a cost of about $2,000 per square mile. and about 500 square miles had been surveyed in this manner during the past summer. Airborne electromagnetic and geochemical surveys had also been conducted, all at a very great cost, and results had been 'very gratifying, if not amazing.' The first base metal mill in the province is being constructed in the Bathurst area, Dr. MacKenzie said. It will have an additional output of 200 tons per day. The cost of mining would be about $20 a ton. Dr. MacKenzie stressed the importance of sulphur discoveries among the base metal deposits, as sulphur markets and values were developing rapidly. There was a possibility, too, of development of a chemical industry in the Bathurst area, arising from the manufacture of sulphuric acid."

Kings County Record - Jan. 22, 1953 ADVERTISEMENT: Big Mining Discoveries in New Brunswick. - Important basemetal developments promise that this province will acquire a prominent position among the leading mining provinces of Canada. Details are published completely and exclusively in The Northern Miner, the long recognized national authority. Maps and pictures help interpret a news story that has aroused tremendous interest among Canadian mining men. Every business man in New Brunswick should read this very important report in the current issue and follow all subsequent reports. The Northern Miner Sold by leading Dealers. 20c a Copy Published at Toronto."

St. Croix Courier - Dec. 30, 1954 The Lieutenant-Governor's Greetings. - Says Province's Mines To Play Important Role. - Fredericton. - Mineral discoveries highlighted the economic picture inNew Brunswick during 1954 and appear destined to play an important part in future development of the province, Lieutenant-Governor D.L. MacLaren, PC, said this week. ...... Beginning of production at two of New Brunswick's newly discovered mineral fields and the continued construction at Camp Gagetown were two factors contributing to an upturn in the provincial economy during the past year and will play an important part in the economic life of our province. More Discoveries? - 'In addition to the mineral discoveries in the Bathurst area, significant finds have also been uncovered in the Newcastle district which may prove as important as the earlier Bathurst discoveries. It is predicted by those, well qualified to speak, that other discoveries may also be found so that the resultant economic improvement may be shared by a larger proportion of our people. 'To encourage industry and assist in mining development, additional electric power within our province will be necessary. The construction of the Beechwood plant ..... This along with our mineral development is hoped will encourage additional industries to locate within our province."

Kings County Record - Feb. 25, 1954 Large Scale Mining Activity Forecast. - Indication that 'a mining industry of large proportions will soon be operating in the province' was given in the Speech from the Throne read by Lieutenant-Governor D.L. McLaren, at the opening at Fredericton Thursday afternoon of the second session of the 42nd legislature. 'Such a prospect,' said the speech, 'underwrites the future of New Brunswick with elements of certainty and confidence.'"

North Shore Leader - Jan. 1, 1954 4 photos of Bathurst Mining (same as in the Kings County Record) ......"

Kings County Record - May 27, 1954 To Spend $3,250,000 On Bathurst Operation. - Brunswick Mining and Smelting Co. Ltd., is spending $3,250,000 on its Bathurst area base metal properties before the end of the current calendar year. In Bathurst for the company's first annual meeting, President M.J. Boylen told the shareholders that$2,000,000 would be spent on the Brunswick and Anacon- Leadbridge properties, another $750,000 on New Larder 2 'U' and $500,000 at Keymet. He also disclosed that apilot mill would be erected on the Brunswick property and that drilling at the Anacon-Leadbridge operation would continue to a depth of 400 feet. Situated 5« miles north of the original Brunswick discovery, surveys on the Anacon-Leadbridge claims showed a 30,000,000 ton body of good ore all above the 1,000 foot horizon, and at the 1,475 foot level the drills cut a true width of 225 feet, which gave the following assays: 10.24 zinc; 4.04 lead; .60 copper; and approximately three ounces of silver below 1,000 feet. He estimated Anacon-Leadbridge had another three months sinking before getting into the ore which will be shipped to the Brunswick pilot mill for testing. Mr. Boylen claimed that surveys and drilling on the properties had proved up at least 100,000,000 tons of ore, and predicted that eventually the Bathurst area would have a larger chemical industry than British Columbia Consolidated Mining and Smelting operation. Meanwhile at Keymet Mines, reconstruction of its 200 ton mill, wiped out in a fire on April 26, is being rushed to completion, and Mines Manager Holland Smith was confident that the target date six months after the blaze would be met. Plans are also on foot, Mr. Smith said, to deepen the main shaft an additional 300 feet, adding two more levels to the original six. Besides re-electing President Boylen and last year's slate of officers, a prominent Saint John business man, Clarence V. Emmerson, was elected New Brunswick's only director of Keymet Mines, Ltd."

St. Croix Courier - Nov. 18, 1954 Come South Mining Man. - ...... Lands and Mines Minister Norman Buchanan said; 'We (the provincial government) are impressing the mining people (currently making tremendous base metal discoveries in the north shore area) that there is a southern part of New Brunswick. We hope something may be done to encourage a similar development down here."

Codes: EXPL / IDX_Names: Exploration - General;
St. Croix Courier - Apr. 14, 1955 Aerial Survey. - St. Andrews - If you see a helicopter flying over this area about 150 feet above the earth and going back and forth in parallel runs approximately a quarter of a mile apart, don't be too alarmed as it will only be the survey crew of the Sparton Air Services of Ottawa and American Metal Company carrying out routine work on an aerial survey of the southwestern part of the province. The helicopter should appear in the St. Andrews area sometime in the next two or three months. Fully equipped with geiger counters, magnetometer and scintillometers and towing a recording device, known as a 'bird' which is about twenty feet long, the helicopter passes over the earth close enough for base metal deposits of any variety to be recorded on the various sensitive instruments on the plane. Sparton is making the survey for American Metal, the company which uncovered valuable deposits in the Newcastle area last fall. The copter is stationed at Dumbarton; the American Metal crew in St. Stephen."

Kings County Record - Apr. 28, 1955 Province To Help Build Mine Road. - Early construction of a mill near the American Metal Company's sensational Little River base metal strikes is seen inPremier Flemming's announcement that the cost of an $800,000 standard gravel highway from Newcastle to the mine site. Under a government agreement with Heath Steel Mines Ltd., the provincial public works department is constructing two large bridges and 15 miles of gravel highway between Chaplain Island Road, near Newcastle, and the company's proposed mill site near North Little River this year. Mr.

Flemming explained the $100,000 first bridge and $700,000 highway and second bridge construction will be financed by the company, an American Metal subsidiary by Nov. 1. The province is assuming half the cost of the first bridge within one year after its completion, plus half the highway and second bridge costs within one year after the company goes into full production. Tentative plans of the company, he said, call for the construction of a 1,500 ton mill and facilities at an estimated cost of several million dollars, with production expected in 1957. The departmental bridge and highway undertaking is in keeping with the government's policy of giving all possible assistance to companies opening up the province's newly found mineral resources, he added. It is similar in scope with a highway project undertaken for Brunswick Mining and Smelting Company at Bathurst last year."

Kings County Record - Jul. 21, 1955 Suggest Survey of Southern New Brunswick. - A federal survey of the mineral potential of southern New Brunswick will be urged by Saint John municipality. Counties of the southern half of the province, which never has been surveyed by airborne magnetometer, will be solicited for their support of the Saint John Municipal Council request to Ottawa. It will be urged that the survey get under way as soon as possible. The decision to take action toward developing the possible mining industry in this part of New Brunswick was taken on the motion of Councillor W.K. Craig, chairman of the municipal smelter committee, at Tuesday's council meeting. F.C. Mortimer, representing the Saint John Board of Trade, earlier in the meeting requested that the Municipal Council ask for the survey. Councillor Craig suggested that the three committees in the city on mining hold a joint meeting with the federal labor minister, Hon. Milton F. Gregg, and the Provincial minister of labor, Hon. A.E. Skaling during the time they are scheduled to meet the mayor's committee on unemployment. No date has been set for this meeting yet but Mr. Gregg is expected to visit Saint John about Aug. 15. Action toward the development of a mining industry in southern New Brunswick, in view of finds in the northern part of the province, was suggested by Dr. H.J. Rowley, chairman of the provincial resources development board. The preliminary cost of aerial magnetometer survey has been estimated at $50,000 to $100,000."

St. Croix Courier - Jul. 21, 1955 Road to Riches. - PHOTO - Caption. - A DevonConstruction Co. Ltd. crew begins construction of a new standard highway into American Metal Company's several- months-old base metal strike north of Newcastle. The Fredericton Company was awarded the contract to grade andgravel the first half of the new 15-mile highway linking Chaplin Island road, near Newcastle, with Heath Steele Mines, Ltd's proposed mill site at North Little River. The $800,000 cost of the highway and two bridges to be built by the provincial public works department is being shared by the government and the American Metal subsidiary. - (New Brunswick Government Photo)."

St. Croix Courier - Mar. 24, 1955 Second Firm Here in Recent Months. - American Metal Survey Group to Explore Area. - An exploration crew of American Metal Co., Ltd., - the firm which discovered rich base metals ore at Little River in northern New Brunswick late last fall - has established headquarters in St. Stephen and plans to survey this area for a period of several months. The mining concern is the second known company to interest itself in Charlotte county and district in recent months. The other - Selco Exploration Co. Ltd. - is understood to have already staked several mineral claims in eastern sections of the county. Rent Home. - The American Metal group of 11 men, which rented the home of Mrs. Elwell DeWolfe, 4 Watson Street, is headed by Wentworth Good, of Bathurst, a geophysics technician. Spokesmen for the group said this week their stay here was 'entirely contingent upon results' but that it would probably last 'several months.' Members are actually employees of Nucom Limited, an American Metal affiliate which performs geophysical survey work for the mining concern. A third firm represented here is Spartan Air Services of Ottawa, Ont., which has stationed a helicopter at Dumbarton which will be used in the survey. Helicopter. - The crew here is under the direction of the Boiestown office of American Metal under Manager Edward Eisenbrey. Members are geophysics technicians, mechanics and a pilot whose helicopter will be used for geophysical surveys of the area from the air. The second firm, Selco Exploration, which is a subsidiary of Selection Trust Limited of London, has been represented in St. Stephen since last fall by Dr. A.R. Barringer who has taken up residence with his family at 47 Duke Street. It is understood this firm has staked several claims in the eastern section of the county but that heavy snowfall has prevented further on-the-spot work at the moment. Canadian headquarters of Dr. Barringer's firm are located at Toronto.American Metal's Little River find has been described by Lands and Mine's Minister, N.B. Buchanan as the 'major discovery' of lead-zinc-silver-copper ore in 1954. It is high grade and preliminary estimates at the time said 5,000,000 tons of ore were located there. Greater tonnage was expected as work progressed."

Codes: EXPL / IDX_Names: Exploration - General;
St. Croix Courier - Apr. 12, 1956 Plan Investigations of Quoddy, Minerals, River. - Three Surveys for County. - .... Mineral Search. -In other survey news, federal mines minister George Prudham announced an aero-magnetic survey of the possibilities in Saint John, Kings, Charlotte and Albert counties would begin May 15 ...."

St. Croix Courier - Dec. 6, 1956 Charlotte Minerals Maps Next Spring. - St.Andrews. - Prospectors may be able to have a 'go' at Charlotte county minerals searching by next spring while armed with new maps containing all the latest dope. Dr. Harry J. Rowley of Fredericton told the Charlotte county Board of Trade here Wednesday evening of last week the first of a series of maps containing results of a 4,000 square mile federal government aerial survey of southern New Brunswick this summer will be issued. 'All of Charlotte county, it seems, was included, save Deer, Campobello and Grand Manan Islands. Probably in the early spring of 1957 maps will begin to issue and active prospecting begin,' he said. Dr. Rowley is a top official of the province's department of industry and development."

St. Croix Courier - Dec. 13, 1956 Heads Prospectors Group At Bathurst. - Charles McAllister of Bathurst, son of Mr. and Mrs. Lewis McAllister of Milltown, has been elected president of the newly formed Prospectors and Developers Association of New Brunswick. The association was formed at Bathurst recently. Mr. McAllister, a graduate of the University of New Brunswick, is president of the Lucky Lake Mining Co., of Bathurst, a surveying and prospecting firm. The association was formed 'to provide an efficient channel for discussion and sharing of ideas common to prospectors and mining developers.'"

St. Croix Courier - Feb. 23, 1956 Discuss County's Natural Resources and Prospects. - .... Mr. Atkinson said during a discussion on general industry prospects in Charlotte there were 'good prospects' for minerals in southern New Brunswick. 'The geology is as good or better than northern New Brunswick for minerals.' he said. One thing that might hold development back, however, was that orebodies appeared to be 'very narrow'. Five or six possible sites of base metals ore near St. George appeared to be that way although a good survey might discover major finds. Would Help. - 'It is obvious one or two good mines in Charlotte county would change the picture here very rapidly.' Mr. Atkinson also commented on the fact the federal government would undertake an aerial minerals survey of southern New Brunswick including Charlotte beginning in the spring. ......"

Codes: EXPL / IDX_Names: Exploration - General;

St. Croix Courier - Jan. 26, 1956 Paper Suggests From Half To One million Horsepower. - Power Seen Great Mineral Development Need. - [The following editorial is reprinted from The Northern Miner, a Toronto weekly devoted to mining. - Ed.] From what would be considered any normal mining standpoint the province of New Brunswick has been maintaining an impossible batting average. Just three years ago it arrived, totally unheralded, on the miningscene with a major ore discovery. And each year since it has come up with another important deposit. Although they vary greatly in size none of them is small and, in toto, they add up to scores of millions of tons. Back in 1953 when we announced Mr. M.J. Boylen's discovery of New Brunswick's first major base metal deposit we ventured the prediction that time, and work would reveal other orebodies but we must confess we hardly expected to see our prophecy so bountifully and so quickly. Mr. Boylen's Brunswick Mining and Smelting Co. has no difficulty in sighting 50 million tons. More millions are added by American Metal, Texas Gulf and other finds. The ore, it is plain to see, is there in quantity to support large scale operations for many, many years. And it is there in the huge quantities that must be available in order to justify the tremendous capital expenditures that would be required to supply a battery of ancilliary plants for the production of fertilizers, chemicals and other byproducts. We think of New Brunswick in terms of an East Coast Consolidated Smelters. We do not expect it to blossom forth overnight as a full-fledged metallurgical enterprise with a series of integrated plants but we anticipate that the planning will be done with that end in view and we should expect to see the growth progress steadily toward the ultimate goal. Like all good and great things the New Brunswick mines have problems to be solved. Generally, the lead, zinc and copper values are finely divided and getting a respectable recovery of all the valuable metals is not come by easily. But in that respect the ore is like that from Hudson Bay's Flin Flon mine or the great Sullivan mine of Consolidated Smelters. Both of these had a similar problem to be licked before they could be put into profitable production. but satisfactory answers were found - and that was several decades ago. Of course, one of the big advantages of the New Brunswick operators is that they have at their command all the technological advances of an age that has brought many startling new developments. Their plants will be built employing the most modern labor-and-cost-saving devices. The processes used, benefitting from all the accumulated knowledge of the metallurgist's art, can be expected to extract the last squeal and grunt that there is to be had in the ore. In a word, by their very newness, the plants will be without peer anywhere and, competitively, they should have tremendous advantage over their older brethren both on this continent and abroad. However, location probably constitutes the greatest natural advantage of the New Brunswick mines. Sitting right on the Atlantic seaboard, they are right next door to the greatest concentration of industry in all the world and they lie astride the trade routes that put them within economical reach of all the world's great markets. Production of sulphuric acid and fertilizers are the two natural byproducts of a smelting industry and markets for both would be right at hand; not much farther off is the great and practically undeveloped fertilizer market of the South American countries. Let it be remembered that Consolidated Smelters developed Trail to its present pre-eminent position located though it was behind a 400-mile mountain barrier. Despite that tremendous handicap Smelters' products are able to wend their way to the coast and thence to markets overseas. Whereas New Brunswick can count on location to give it that needed edge in finding a foothold, the availability of hydro power was the big ace in the hole that helped Consolidated Smelters become established. Within only a few miles of its home base it has plants developing 600,000 horsepower and another 200,000 horsepower are available for harnessing. It was cheap power that played a major part in enabling the company to perfect its refining processes and develop its chemical and fertilizer industries. Power, of course is the big question mark in the New Brunswick picture. To develop on the Trail scale, it's going to need anywhere from one-half to one million horsepower. Hydroelectric sites within the province won't come anywhere near that requirement but provincial authorities are anxious to take the necessary steps so that adequate power will be available for industrial demand. There are several avenues to be investigated - one of the most intriguing being the possibility of using tides to develop electricity. A tidal plant would undoubtedly cost a huge sum but at least it would developpower in the big quantities that are needed. Feasibility studies should be undertaken at once. Mining in New Brunswick has a wonderful future and it would be disastrous to see that future go by default simply because courage was lacking to secure an adequate power supply. And, of course, we cannot overlook atomic energy. There may be no simple solution to the power deficiency but it is by no means an insurmountable obstacle. Tougher problems have been beaten before and we see no reason why New Brunswick should not shortly come up with a satisfactory answer."

St. Croix Courier - Jan. 26, 1956 Following 1955 Aerial Survey. - American Metal Taking Charlotte Soil Samples. - American Metal Co. is following up last year's aerial survey of Charlotte with ground tests designed to determine whether or not basemetals in sufficient quantity and quality exist in the county. A four-man company crew from Newcastle this week concludes a 16-day job of collecting soil samples in selected areas for geochemical analysis by scientists at the company's Newcastle office. Members of the crew said this week they had taken samples from a 'large' claim staked by the company in the Pleasant Ridge area plus samples from unstaked lands in other parts of the county. Arthur Taylor of Newcastle, leader of the crew, said the soil sample method of investigation is relatively new. First used in New Brunswick by American Metal, the method helped pave the way for discovery of the company's rich Little River deposits near Newcastle. Soil samples were being taken in areas which the company's aerial electromagnetometer survey indicated ore existed, he said. If tests revealed more minerals than usually found in normal soil, they indicated the presence of ore below the soil surface. Next step, if tests prove promising, would be ground electromagnetometer investigations and/or drilling for actual orebodies, he added. With Mr. Taylor are Wilmot Dunnett, Merlin Stewart and his father Theodore Stewart, all of Newcastle. The men, forming American Metal's only soil sample crew on the job in the province at the moment, planned to return to Newcastle at midweek. They stayed at the Queen Hotel in St. Stephen while here. The Pleasant ridge site is the only claim staked by the company in the county so far. Selco Exploration Co., a U.K. firm, staked land in the same general area last year and performed some drilling operations there last summer, it is reported."

Codes: EXPL / IDX_Names: Exploration - General;
St. Croix Courier - Jun. 7, 1956 Conservative Platform. - .... Mining. - 7. We shall continue the policy of the government as expressed by our leader in these words: 'We are determined that our mineral wealth shallnot be dug up and carted away from this province to be processed elsewhere.' We shall continue our policy for mining development under new mining legislation which has been carefully based upon the study and experience of other provinces in the same field. In the years ahead we shall give even more attention to the development and research under our mines branch."

St. Croix Courier - May 3, 1956 Big Minerals Search. - Ore-rich northern New Brunswick will be honeycombed once again this month according to the Financial Post of Toronto. Last weekend's edition reports the following: 'Fifteen of Canada's biggest, fastest-moving mine exploration companies are preparing this week for a staking rush that promises to be one of the most intense in history. 'Day of the rush is set tentatively for May 15. 'The cause: a $60,000 geologic structure map of a 5,500 square mile Northern New Brunswick area is being prepared for the exclusive use of the 15 participants. Each company will get its map at exactly the same minute - and seconds later the rush will be on. Aircraft, helicopters, jeeps and other equipment are already reserved or being marshalled. 'Aeromagnetic Surveys Ltd., which is making the map, has already flown EM and magnetometer surveys throughout the area and its high level aerial photographs already have revealed structural faults 'tremendously interesting'. The faults, says Aeromagnetic Geologist John McClusky, control the

Kings County Record - May 24, 1956 Liberal Advertisement: Premier Announces Manganese Refining Plant Start in '56. - Woodstock (Special) - Construction of a new $20,000,000 manganese refining plant within three miles of thiscentral New Brunswick town will go ahead; it was announced by Premier Hugh John Flemming Tuesday night to the crowded Progressive Conservative nominating convention of his home Carleton County constituency. Confirming earlier reports of the plant, the premier quoted J.C. Udd, president of Stratmat, Ltd., as saying construction of the 1,800 ton refinery would start this fall and that it would be ready to go into operation in late 1957 or early 1958. Emphasizing that electric power development is the key issue of ingot iron, Mr. Flemming stated. As a result of Beechwood, a $20,000,000 industry comes to New Brunswick - more work and wages for New Brunswick!"

St. Croix Courier - May 31, 1956 Liberal Ad. ......9. Forestry and Mining - Our objective will be to promote new industries and expand existing ones to utilize more fully our Forest Resources, thus creating more employment and increased revenues. Sound Forest management will be encouraged. Full encouragement will be given the Mining and Processing of base metal ores Within The Province.Markets for Coal will be protected and broadened."

St. Croix Courier - Oct. 3, 1957 Indirect Boon. - Hails Mine Program Sees County Helped As More Share Load. - Charlotte County can look ahead to indirect benefits stemming from the $24,000,000 expansion program blueprinted for the Bathurst miningfields, says Lands and Mines Minister Norman B. Buchanan. The St. Stephen cabinet minister said in a weekend interview that the 'tremendous developments' charted for that section of the province would be an economic boon to New Brunswick in general. An increased population and labor force coinciding with the vast mining program could result in a lightening of the provincial tax load on the individual, Mr. Buchanan said. Moreover, greater revenues flowing into provincial coffers would ease the government's heavy burden in the fields of education, social services and public works, the minister said. Projected developments announced last week for the Bathurst region were 'just the beginning' of the mining industry's march forward in N.B., Mr. Buchanan believed. 'It seems that in industrial development the greatest difficulty lies in getting over the initial hurdle,' he said. 'That seems to be the history of most developments. The first big step is the hardest one to get people to take.' Closer to home, Mr. Buchanan said he had no knowledge of incorporation of a company under the name of St. Stephen Nickel Mines Ltd., disclosed last week. He added, 'We hope that mining exploration will continue to work its way southward.' Concentrator, Smelter. - Looking toward the future of N.B. as a base metals producer, Mr. Buchanan noted that the province's geographical position actually is favorable, rather than otherwise, for 'we are the springboard to European markets and those all along the Atlantic seaboard.' In Ottawa last week Prime Minister Diefenbaker said his government would carry out a $3,500,000 harbor development program at Bathurst if New Brunswick Mining and Smelting Corporation would go ahead with a planned $30,000,000 expansion program. On the heels of this announcement, the president of the mining firm, M.J. Boylen, said the company was prepared to proceed and had set the end of 1959 as a target date for completing a zinc concentrator, lead smelter and other major facilities. Mr. Buchanan, reviewing a 10,000 mile aerial trip he recently completed in connection with the Canadian tour of the Commonwealth Congress of Mining and Metallurgy, said it was evident that members of the delegation recognized the base metal discoveries in this province were of major importance."

St. Croix Courier - Oct. 10, 1957 Great Future. - Mine Experts Cheer N.B. Metal Treasure - Delegates to the Commonwealth Mining and Metallurgical Congress were convinced over the weekend that New Brunswick has a spectacular mining future, Lands and Mines Minister Norman B. Buchanan said in St. Stephen Monday. He was commenting on a tour of the Bathurst and Newcastle fields by mining company officials and industry experts from 35 countries who have been criss-crossing Canada in recent weeks. 'Every expression I heard indicated belief that we have a great mining future ahead of us in this province,' Mr. Buchanan said. He added the delegates were 'extremely well pleased' at the opportunity to see at first hand the developments which have taken place in northern N.B. since base metals strikes were first reported. They were surprised too at the extent of operations already in progress and planned for the future, Mr. Buchanan said. Only last week a $24,000,000 expansion for the Bathurst area was announced, involving participation by the federal government in harbor improvements. Mr. Buchanan, who accompanied the visitors on the tour, said they were almost equally fascinated by a provincial product other than metals; the blaze of color in the forests as autumn flaunted its pennants."

Codes: EXPL / IDX_Names: Exploration - General;
St. Croix Courier - Oct. 31, 1957 N.B. Mine Story Program Subject. - Since the discovery of rich mineral deposits in northern New Brunswick in 1953, geologists, prospectors and mining crews have been swarming into the area, creating a boomof major importance. The story of the boom will be told on radio Nov. 4, when Keith Barry presents a half-hour documentary in the 'Canadian Scene' series. This program will be heard at five p.m. AST on the CBC's trans-Canada network. Much of the program has been recorded in the field with residents of the area and mining officials to learn the extent of the operations and find out what effect the influx of mining crews, prospectors and geologists has had on the people of the area. Attention will also be paid to prospecting methods and problems that face the mining concerns in this

Kings County Record - Jan. 2, 1958PHOTOS. Railroad building and mining development form a hand-in- hand partnership across Canada as great new mineral fields continue to be discovered and new rail lines fanout to bring the valuable metals or their concentrates to market. In nine years Canadian National Railways has opened eight new branch lines from British Columbia to the Maritime Provinces to meet increasing consumer demand, two of them within a recent two-week period. One of these extends 161 miles between Chibougamau and Beattyville in northern Quebec, and the other joined the Heath Steele Mines in New Brunswick across 22 miles to the CNR network at Bartibog. When he officially opened the line at Chibougamau, CNR President Donald Gordon received a key to the town from the mayor. Indians of the Montanee Tribe in full regalia also showed up to welcome the visitors. At Heath Steele, N.B., Mr. Gordon paused to read the inscription on the last spike before driving it into the tie to officially mark the completion of the line."

St. Croix Courier - Oct. 1, 1959 Mining Activity Resumes in Northern Region. - PHOTO of exploration site. - Caption. - Exploration and operational work are accelerating in the Bathurst- Newcastle area of the Province as 15 Canadian and American firms probe for more base metal deposits. Here, Consolidated Mining and Smelting Co. Ltd. puts down thefirst shaft on its Wedge property, on which a substationhas been built by the power commission. Spending More Than Million ---- ---- Sink Shafts, Pressing Hunt For Minerals. Base metal mining operations in the Bathurst- Newcastle camp are running at a rate of 50 per cent greater than this time in 1958, it was said in Fredericton last week in a release from the department of lands and mines. A St. Stephen MLA, Hon. Norman B. Buchanan, heads the department. This year 15 local, Canadian and United States companies are adding an estimated $1.5 million to the province's economy through their exploration, geophysical, diamond drilling and operational activities. Consolidated Mining and Smelting Co. Ltd. is sinking a shaft and erecting a headframe on its Wedge property, 32 miles southwest of Bathurst. The company is also diamond drilling on its California Lake holdings and has staked 46 claims in one block in the Popelogan district on the Upsalquitch River. Cooperating with this firm, the New Brunswick Electric Power Commission has completed construction of a sub-station on the company's Wedge property. It is also erecting poles and stringing conductors on its eight and a half mile 69,000 volt transmission line linking the sub-station with another at the Heath-Steele mine. Anaconda Co. (Canada) Ltd. is drilling in the Armstrong Brook area. The company is also driving an adit on its Caribou property. The adit is already down upwards of 170 feet and plans call for going in another 230 feet before the end of this year. Anthonian Mining Corp. Ltd. is drilling on its property southwest of Heath Steele mine and Clearwater Mines Ltd. on its Burchill Road holdings. New Jersey Zinc is drilling on its holdings in the Portage Lake area, where, it is unofficially reported, the company has turned up one of the richest finds so far in the seven-year-old camp. Noranda Mines Ltd. has finished drilling in the Belledune area, and is prospecting and conducting geophysical work in the Nine Mile Brook and Northwest Miramichi districts. McIntyre Porcupine Mines Ltd. is line cutting, diamond drilling and doing geophysical work on its Belledune properties. The company is also said to be interested in the Popelogan area. Madsen Red Lake Gold Mines Ltd. is prospecting in the Belledune area, while N.L. Doucet Co. has completed drilling and geophysical work on the South Nigadoo River Doucet is reported to have a showing on its Tetagouche River property. Texas Gulf Sulphur has staked 100 new claims in the Charlo and Bald Mountain areas, Silurian Syndicate, Area Mines Ltd., Doucet, T. Porter with Bellechase Mines, and Charles McAllister have staked 153 claims in the Popelogan district. Southwest, McIntyre is also conducting general prospecting in the Millville area of York and Carleton counties."

St. Croix Courier - Feb. 25, 1960 Speech From The Throne .... Renewed Mining Activity. - .... More Claims Staked. - Mining activity in New Brunswick, while still retarded by international conditions in the base-metal industry, showed steady improvement over that experienced in 1958. Prospects indicate resumption of activity in exploration and processing at an early date. Over 25 mining companies conducted exploration and development in the province. Claims staked showed a 70 per cent increase over the previous year. The coal industry in 1959, reached a production of some one million tons providing one of the best years in its history. The Provincial Royal Commission on Coal will shortly report its findings. The Commissioner of Mines will also present a final report in connection with his investigations. ...."

St. Croix Courier - Jun. 9, 1960 Propose Road Linking Mining Fields. - PHOTO. - Caption - G.N. Moore, right, of the Consolidated Mining and Smelting Co. Ltd., shows the Public Works Minister J. Stewart Brooks the approximate position of the company's new shaft operation in the Bathurst- Newcastle base metal camp. It was suggested the most urgent requirement was a connecting link between the Newcastle-Heath Steele road and those already linking the Bathurst base metal mines with Bathurst. Earlier in the spring Mr. Brooks discussed the federal-provincial roads-to-resources program with the representatives of the forest products industries, prospectors and developers, and farm groups from Restigouche and Gloucester Counties. Officials and representatives of the various groups stressed the great mineral potential of northern New Brunswick and outlined their individual problems and requirements. Mining officials attending the meeting were G.N. Moore, Consolidated Mining and Smelting Co. Ltd., W.T. Swensen, Anaconda Company (Canada) Ltd., C.C. Kamm, Kennco Explorations (Canada) Ltd., R.D. Mollison, Texas Gulf Sulphur Co. Ltd., H.C.N. Fraser, Chesterville Mines Ltd., K. Newman, New Jersey Zinc Explorations Ltd. Others included R. Palmer, deputy public works minister, C.S. Clements, mines branch director, and department officials."

Codes: EXPL / IDX_Names: Exploration - General;
St. Croix Courier - Mar. 31, 1960 Prospecting, Exploration Stepped Up. - Mineral Production Rises, Coal Makes Comeback. - New Brunswick's mineral production showed a remarkable recovery over 1958 with a close to the national average increase of 13 per cent. Total value for 1959 was $18,391,000 compared to $16,276,000 the previous year, it was disclosed in Fredericton last week. This increase was recorded in spite of the non-production of metallic minerals. Coal was the major surprise with a solid gain in output of 20 per cent. Production of about one million tons gives the province's coal industry one of its best years in history. Base metal mining activity was not spectacular during the year, but showed a steady improvement over 1958. General prospecting and exploration was stepped-up over 50 per cent, with over 25 N.B., Canadian and United States companies adding an estimated $1.5 million to the province's economy. Underground development was also encouraging, with three projects getting underway. During the year, 4500 claims were staked representing a 70 per cent jump over the previous year. A total of 11,000 claims and claim equivalents were in good standing at the end of 1959. And 26 mining licences totalling an area of 15,000 acres were applied for and issued. Industrial minerals and structural materials also showed a rise over the previous year's level. Prospecting and exploration activity reflected an increase of interest in base metals. In addition to geological, geophysical and drilling programs conducted by the various companies, the most noteworthy developments have been those of New Jersey Zinc Exploration Co. (Canada) Ltd. and Chesterville Mines Ltd. New Jersey has been carrying on an extensive drill program over a year on its property east of Portage Lakes. A significant tonnage of massive sulphides has been outlined, and although no official grade has been released, it is reported that higher than camp grade lead-zinc-silver mineralization is present. The geological setting is similar to that at Kennco Explorations (Canada) Ltd.'s massive sulphide body at Murray Brook, some six miles to the east. Recent geological mapping suggest that the Anaconda Caribou, Kennco Murray Brook and New Jersey Zinc Portage Lakes minerals deposits occur within the same band of favorable rocks that outline the Bathurst-Newcastle complex. In the southern part of the area on the Sevogle River near Clearwater Brook, Chesterville Mines Ltd. has acquired a sulphide body from Kennco Explorations Ltd. About two million tons of sulphides grading two per cent copper has been outlined and a broad drill program is now underway with the hope of enlarging the ore picture. A prospect in the Popelogan Lake area of Restigouche County received considerable interest during the past summer with more than 100 claims being staked. C.G. Cheriton recognized significant copper mineralization in what appears to be a copper-rich skarn zone in calcareous slates and siltstones surrounding a siliceous intrusion. This prospect is of importance as no systematic prospecting has been done in the vast area of post-Ordovician rocks north and west of the Bathurst- Newcastle complex. In addition to the recognition of skarn type mineralization, many small but high grade base metal vein types have been located in this region. Consolidated Mining and Smelting Co. Ltd. began sinking a three compartment shaft on its Wedge property at the mouth of Forty Mile Brook. Shaft sinking had progressed to a depth of 500 feet at the end of the year with the initial completion depth of 1500 feet to be reached by March 1960. Permanent bunk houses, staff houses and maintenance buildings have

been erected and an improved road completed to the property. Ore reserves have not been made public, but higher than camp grade copper values have been reported. Power Supplied. - Co-operating with CMS, the New Brunswick Electric Power Commission has completed construction of a sub-station on the company's property, also an 8 1/2 mile 69,000 volt transmission line linking the substation with the commission's sub-station at the Heath Steele mine. Anaconda began driving an adit on its Caribou sulphide body last July. Work continued until September to a length of 500 feet which completed the first phase of the operation. Additional footage will be driven this year. Production from the Stoney Creek field amountedto 117 million cubic feet of natural gas and close to 15,000 barrels of oil. During the year Imperial Oil Ltd. drilled six holes on a sublease from Brunswick Oil Fields Ltd. These holes were Imperial N.B.O., St. Joseph No. 1, Gautreau No. 1, Berryton No. 1, Hillsboro No. 1, Pollett River No. 1, and Port Elgin No. 1, and totalled 26,310 feet. Canada Cement Co. Ltd. at Havelock was in steadyproduction through the year and the Canadian Gypsum plantat Hillsboro continued production of gypsum for the manufacture of wall board, plasters and other products. Also in the non-metallic field, York Marble Ltd. more than doubled production at its Temperance Vale plant and quarries, some 60 miles north of Fredericton. The increase included marble terrazzo chips, agricultural lime and chicken grit. New Coal Markets. - The increased coal productionfrom the Grand Lake district reflected the vigor with which the companies procured new markets during a time of national depression in the industry. In addition, a provincial royal commission recommendation that a new type of mechanization be introduced into the field has been approved and plans are now underway to implement the report. The long range future for the coal industry appears to be excellent. Both the provincial and federal governments conducted various surveys during the year. The Geological Survey of Canada placed four parties in the field covering general geological mapping, geological investigations and paleontological studies. The N.B. mines branch had four field crews conducting detailed geological mapping in the Bathurst District and general mapping of the McAdam area. A special study on coal with accompanying field work was continued from 1958. Also during the summer, an International Botanical Congress tour spent several days studying and collecting paleobotanical specimens from many localities in the province."
Kings County Record - Aug. 10, 1961 PHOTO. - Caption - Scheduled to reach the production stage by the end of the current year, two members of Consolidated Mining and Smelting underground crews operate a drag at the 500-foot level of the company's Wedge property mine at Forty-Mile Brook in the Bathurst-Newcastle base metal camp."
Kings County Record - Dec. 6, 1962MAP. - Caption - Proposed Route. - Canadian National Railways has invited tenders for preliminary work on a proposed 15-mile line to serve the Brunswick Mining and Smelting Company's mine near Bathurst. Legislation authorizing CN to build the line is still before Parliament. Canadian National is making a conditional call for tenders so that work may begin almost immediately if the project is approved. This map shows the location of the route which has been surveyed by CN engineers. The route joins the main Halifax- Montreal line near Bathurst. Cost of the proposed new line has been estimated at $1,480,000."

Codes: EXPL / IDX_Names: Exploration - General;
Kings County Record - Jun. 7, 1962 Plan Extensive Field Program. - A $2,600,000 field program designed to uncover fresh clues to Canada's mineral potentialities and further her scientific knowledge will be undertaken this year by the Geological Survey of Canada, it was announced today by Mines and Technical Surveys Minister Jacques Flynn. All 10 provinces ..... The New Brunswick surveys are: In the Moncton-Shediac Area a party headed by Peter A. Carr is conducting a groundwater survey and investigating salt water intrusion with a view of determining methods of coping with problems arising from this cause. Bedrock is the chief source in the 400- square-mile area involved in this project. Mr. Carr and his party are based at Shediac. In the Bathurst-Newcastle area, a party headed by Dr. R.W. Boyle is applying geochemical methods to determine the distribution of mineral deposits and trace elements in rocks and stream sediments. A member of the party, Professor William M. Tupper of Carleton University, Ottawa, is studying sulphur isotopes in the area's lead-zinc-copper deposits to determine the origin of sulphide deposits. Colombo Plan students are working with the eight-man party which is based at the Brunswick Mining and Smelting Co. property at Bathurst. In the Upsalquitch area, approximately 25 miles south of Campbellton, a party of five headed by Richard Potter is gathering basic geological data doing geological mapping at a scale of one inch to one mile in a 250-square mile area. The Portage Lake Copper deposit presently being explored by the Nova Scotia Zinc. Co. is in this region."

Codes: EXPL / IDX_Names: Exploration - General;
Kings County Record - Oct. 29, 1964 To Build Steel Mill In Province As Part Of $117,000,000 Project. - Premier Louis J. Robichaud announced on Monday evening that Brunswick Mining and Smelting Corporation plans to invest a massive $117,000,000 in new capital in the province. Involved are a $64,000,000 steel plant; two new base metal mines and concentrators costing $15,000,000; an $18,000,000 chemical and fertilizer plant and construction of shipping facilities and a new ore carrier at a cost of $20,000,000. The premier also said plans are being made to develop a year-round port on the North Shore. The new steel-chemical complex is in addition to money invested by Brunswick in building a $26,000,000 mine-mill operations near Bathurst, already in production, and the $29,000,000 allocated for a smelter, now under construction at Belledune Point. The $117,000,000 development is the biggest single project ever undertaken in the Atlantic Provinces by private or public capital. The two new mines and two concentrators are to be located near the present Brunswick operations in Gloucester County. No sites were disclosed for the steel plant or chemical and fertilizer complex. Opposition leader C.B. Sherwood issued the following statement Monday night: 'All citizens of New Brunswick should be just as delighted as I sincerely am with the announcement of the impending $117 million mining, smelting and steel complex expansion by Brunswick Mining And Smelting Corporation. The project should give a very great economic boost to the

province generally, but especially to the North Shore, which such enterprise is sorely needed. Mr. K.C. Irving and Mr. M,J. Boylen and their associates have once again displayed their great faith in New Brunswick's resources, both human and natural. To them I extend hearty congratulations for their initiative and best wishes for success in their announced plans.' Work is to start immediately on construction of the mines with field work beginning in the spring. First phases of the project are to be finished in 1966. The steel plant is scheduled to go into production in 1968. Appearing on the television program Monday night with Premier Robichaud was John D. Park, jr., president of Engineering Consultants, Saint John, which has co- ordinated plans for the project. The major part of the complex is the steel mill, which will produce 250,000 tons of finished steel products annually when it begins full operations in 1968. 'The construction of a steel mill is the heart and sinew of any industrial economy,' said the premier. 'Because in Canada the purchase price of steel is based on the price at the mill, New Brunswick fabricators of secondary steel products must pay as much as $20 more a ton than their counterparts in Ontario.' 'A Major Step' - Premier Robichaud called Brunswick's plans 'a major step' towards his government's objective of developing the province's human and material resources 'to the point where employment opportunities will be available to all New Brunswickers. 'It is the proof,' said the premier, 'that with the continued and determined effort of all our people, New Brunswick can become one of the most dynamic and prosperous areas of our nation.' Premier Robichaud said construction of the new facilities will require 12,000,000 man hours of direct labor and create another 29,000,000 man hours of labor indirectly. On completion, jobs will be opened to more than 1,100 men in the steel - chemical - fertilizer complex, in addition to the 450 the lead-zinc smelter will employ. Sale Value: $80 Million. - Production of finished steel products; lead, zinc and pyrite concentrates; sulphuric and phosphoric acid and granulated fertilizers have a gross sale value at current market prices that will mean a $90,000,000 injection into the New Brunswick economy every year. The premier emphasized three factors involved in the development; Virtually all raw materials to be used by the complex will be produced in New Brunswick. The Mactaquac hydro-electric project will begin generating power about the same time the steel plant comes into production, making it possible to provide the power-hungry industry with the large blocks of energy required - 100,000 kilowatts. The complex will be privately owned by Canadian Corporations. 'Our respect and admiration,' said the premier, 'are due the principals of these corporations for their courage, resourcefulness and, most of all, for the great faith they have displayed in the future of our province and our people.' The Brunswick investment, more than twice the amount of the biggest industrial project ever undertaken in New Brunswick's history, is so big it is difficult for the mind to grasp all the implications, said the premier. 'It is the most gigantic single project ever undertaken in New Brunswick,' he added. The premier gave this rundown of the planned development: Two new mines will be opened almost immediately in Gloucester County - on on Brunswick property six miles south of the present mine and concentrator and the other on the Larder U property of Key Anacon Ltd., 15 miles away. The one on Brunswick property will produce 1,000 tons of ore a day and the other 500 tons. A 1,500 ton-a-day concentrator will be built to handle the production of the two mines and can be designed so that it can be expanded quickly as other new mines develop. The second concentrator will be designed to recover 500,000 tons of flotation pyrite concentrates a year from operations of the three mines. Design work is being done on a slurry pipeline from the mining area to Belledune Point. It will carry 200,000 tons of lead, zinc and pyrite concentrates a year to Belledune Point where they will be dewatered and dried. The steel plant will utilize the iron pyrite concentrates which will be roasted to drive off sulphur gases, then pelletized and purified and refined by electric furnaces into finished steel. The steel will then be cast into billets and rolled to make finished steel products ready to be shipped to consumers. Approximately 800,000 tons a year of sulphuric acid will be manufactured from sulphur dioxide, a by- product from the roasting of iron pyrites in the steel plant. Brunswick proposes construction of one of the largest phosphoric acid plants in the world to utilize the sulphuric acid, a basic chemical for hundreds of industrial products. Also planned is one of the world's greatest fertilizer making plants scheduled to have an annual production of 640,000 tons of high-grade complex fertilizer. Plans are being drafted for an all-year around harbor on the north shore of New Brunswick at Belledune Point capable of handling ships with up to 40-foot drafts. Brunswick has chartered from Engineering Consultants a 30,000 ton dead weight ore carrier which is to be constructed at Saint John Shipbuilding and Dry Dock Co. Ltd., at a cost of $12,000,000. Early in his remarks, Premier Robichaud pointed out that his government's approach to New Brunswick's problems has been to 'facilitate the industrial base' and improve education and training facilities. He cited the 'many signs of the growing tempo of industrial and commercial activity' in the province and made specific mention of Brunswick developments in Gloucester County; Heath Steel and Cominco mines in Northumberland; the $30,000,000 Rothesay Paper Corporation mill at Saint John; a $24,000,000 expansion of the Fraser pulp mill at Newcastle; a Canadian Industries Ltd., chemical mill at Dalhousie; initial work on a Dorchester chemical park and the South Nelson Forest Products Ltd., pulp mill. 'This is only the beginning of what we confidently expect to be a major surge in the industrial growth of our province in the years immediately ahead,' he said. MAP. - Caption. - Map shows the location of existing facilities and others under construction, as described by New Brunswick Premier Louis J. Robichaud in his address to the province Monday evening. FLOW CHART DIAGRAM.- Above chart shows how New Brunswick ore bodies will be processed, as described by Premier Louis J. Robichaud in his address to the province Monday evening. This will be a

Codes: EXPL / IDX_Names: Exploration - General;

Kings County Record - Aug. 26, 1965 Will Evaluate Mineral Resources. - A complete evaluation of New Brunswick's mineral resources will be carried out by the province's mines branch, Lands and Mines Minister Riley has announced. The initial phase of the program takes place overthe next five years and invoices detailed geological field work and laboratory research on all aspects of mineral and groundwater resources. Mr. Riley said the program's main purpose is to provide the government with an up-to-date assessment of New Brunswick's mineral and groundwater resources. Collected information will then be published and made available for use by prospectors, mining companies and the public. 'There are still many areas of the province which have not yet received the attention of the mining industry. Data collected during the Mines Branch evaluation program will pinpoint areas of interest and encourage further work,' Mr. Riley said. To carry out the program substantial additions will be made to the mines branch geological staff. Chief Geologist John C. Smith, who is heading up the program, said that a recruitment program to obtain qualified scientific staff is already underway. More than 250 replies have been received to advertisements placed in mining trade journals and applications have been received from qualified geologists as far away as Pakistan. To date, two staff appointments have been made. Both new staff members have degrees in geology from the University of New Brunswick. Technically, the survey will involve the most up- to-date geological, geophysical and geochemical techniques and result in a completely integrated study of the province's mineral and groundwater resources. Specialized staff will work on selected problems in metallic and industrial minerals, groundwater resources and detailed geological mapping. This system of operation will allow large areas to be surveyed and evaluations made known in the shortest possible time. Industrial minerals are the basic raw materials of industry. Limestone, gypsum, salt, silica, clay and similar materials are known to exist in the province but these deposits have never been fully assessed. The study and search for groundwater is becoming increasingly important as the province's growth continues. As well as locating sources of water for potential industrial sites, and making a basic groundwater resources inventory, Mines Branch groundwater geologists will provide assistance to water-well drillers, municipalities and the public. Detailed work will be carried out on metallic occurrences and deposits. Purpose of the work is to provide information on the formation of deposits, give a standard of comparison for isolated occurrences and indicate areas for potential exploration and development. Geological mapping will be carried out to give thorough coverage of all areas of the province and to provide accurate base maps showing the distribution of rock types and associated mineral deposits. When work is completed, a new geological map of New Brunswick will be published. 'The province's initial five year program is ambitious, but the tremendous potential of New Brunswick's mineral resources warrants aggressive and immediate action,' Mr. Riley said. 'The development of large scale mining, smelting and industrial complexes in Gloucester and Northumberland Counties and other areas of the Province has provided a firm basis for an expansion program. 'The gross value of the province's mineral production has increased from $28,000,000 in 1963 to over $50,000,000 last year. We expect our mineral resources to net the province close to $80,000,000 this year.' During the past 12 years most exploration has been carried out in northern New Brunswick, with other parts of the province being relatively neglected. 'Concern over this situation has strengthened our resolve to carry out a comprehensive, long-term resource evaluation

Kings County Record - Dec. 16, 1965 Three Geologists Appointed To Staff. - Lands and Mines Minister Daniel A. Riley has announced the appointment of three geologists to supplement the staff of the provincial department's geological division. Appointed are Eugene Vernon Jackson, Havelock; Peter William Hay, formerly of Winnipeg, and William John Wolfe, formerly of Ottawa. Latest appointments bring to eight the number of geologists presently employed by the department's geological division, which this summer commenced a comprehensive survey of the province's mineral resources. According to Mr. Riley the survey is the firstphase of a major program designed to explore and develop the province's prolific mineral potential. The initial phase of the program is ambitious. During the next five years, the geological division of the New Brunswick Department of Lands and Mines will spend a little over one million dollars preparing a complete inventory of the province's mineral and groundwater potential. To carry out the mechanics of it, the geological division has boosted from three to eight the number of qualified geologists on its staff. The number of technicians and field workers will be increased in proportion. The survey has been needed for a long time, experts say. Since the end of last century, sporadic evaluations have been made, but these are not now considered suitable or complete enough to do justice to New Brunswick's tremendous industrial upsurge. Technically, the survey will involve the use of the most up-to-date geological and geochemical techniques. Specialized staffs will work on specific problems and the while operation will be co-ordinated in a way that will allow large areas to be surveyed and evaluations made known in the shortest possible time."

Kings County Record - Oct. 17, 1968 Milton Gregg ..... Between the wars ... was secretary of a mining company ....."

Kings County Record - Apr. 9, 1970 Feel Mining Potential Good. - At a meeting of the Southern New Brunswick Prospectors Association in Saint John, guest speaker was Dr. A.A. Ruitenberg, Natural Resources Department, Mineral Resources Branch, St. George. Dr. Ruitenberg used mineral samples and maps to illustrate his talk, dealing with mining and prospecting in the southern New Brunswick area. Douglas Cormier, president of the association, said following the meeting that there was great interest in the prospects of the mining potential in the southern part of the province. Evidence of large quantities of many minerals throughout the district in an area stretching from the Maine border to beyond Sussex he said. Prospectors andrepresentatives of mining interests in Canada, the United States and abroad have been active in the area for some time. Mr. Cormier said that many of these investigations have been carried out with a minimum of publicity. During discussion at the meeting, it was noted that many localities were showing promise, including Mount Pleasant, near St. Stephen, Acamac, Eagle Lake, Prince of Wales and Sussex. Prominently mentioned were such ores as uranium, tin, copper, zinc and tungsten, which could be found in possibly commercial quantities in the mineral belt. Dr. Ruitenberg said the nature of deposits already found serve as a guide to prospectors in uncovering good deposits."

Codes: EXPL / IDX_Names: Exploration - General;
Kings County Record - Apr. 15, 1971 Hunt For Minerals By Aerial Survey. - A contract for aerial geophysical surveys in

southeastern New Brunswick has been signed by Hon. W.G. Bishop, minister of natural resources, and R.M. Watts, of Barringer Research, Ltd., Toronto. This survey is part of a geological evaluation of the area between Saint John and Hillsborough and will cover an area of approximately 1,000 square miles. Manyoccurrences of copper, lead, zinc and silver are known, and this detailed study was initiated to encourage exploration and development by providing high-quality geological and geophysical data. The area has long been considered favorable for the occurrence of economically important base metal deposits. However, basic data was not available to help outline areas with the greatest potential. It is hoped that exploration companies and prospectors will be attracted to the area as a result of these surveys. This project is sponsored by the Canada department of regional economic expansion and approved by the department of energy, mines and resources. It will be carried out by geologists of the mineral resources branch, New Brunswick department of natural resources. Dr. A.A. Ruitenberg, regional geologist for southern New Brunswick, is in charge of the project and is being assisted by B. Jones, D. Venugopal and Dr. P. Giles. The regional mapping has been completed and surveys under way will be concentrated in areas of structural and stratigraphic complexity. All data should be available to the public in 1973. Canada has pioneered the development of airborne geophysical techniques for mineral resource surveys. Barringer Research has demonstrated its technical skill in the development of the INPUT system, responsible for the discovery of the Uchi Lake deposit in Ontario. Radiophase E.M., nuclear precession magnetometers and remote-sensing devices have also been developed by this company, which now operates throughout the world, it was stated. In southern New Brunswick, Barringer will install three geophysical sensors, namely high sensitivity magnetometer, VLF-EM, and gamma-ray spectrometer, in a Britten-Norman Islander aircraft. It will fly over this are at one-fifth mile line spacing at a low elevation. To obtain maximum response, lines will be oriented northward at right angles to the strike of the rocks and major structures. Technical specifications for this survey were prepared in cooperation with Dr. L.S. Collett, of the Geological Survey of Canada. Barringer Research will commence flying this spring and they should be finished in July. Maps will be made available to the public soon afterward. Data from these surveys will be rignitized to facilitate computer treatment."

Kings County Record - Jul. 20, 1972 Map Survey Data of Southeast N.B. - Maps indicating the results of airborne geophysical surveys undertaken over a 1,000 square mile area of southeastern New Brunswick will be available soon to prospectors,geologists and exploration companies, it has been announced today by Natural Resources Minister Wilfred G. Bishop. The survey, which received financial support from the federal department of regional economic expansion, covers the area from Saint John along the Bay of Fundy coast to Hillsboro - an area long considered favorable for the occurrence of base metals. The geophysical maps, along with preliminary geological maps, will be available after 9:30 a.m. Aug. 1 at Room 545 of the Centennial Building, Fredericton. The airborne geophysical survey was carried out by Barringer Research Ltd., Toronto, as part of a three year, million dollar program co-ordinated by Dr. R.R. Potter, chief geologist with the department of natural resources. The program includes the Bathurst-Newcastle area, where surveys are presently

N.B. Courier - Sep. 8, 1838 ....It is delightful to turn from so deplorable a picture of human depravity and suffering, to the contemplation of the natural character and capabilities of the Province. While in St. John, we spent a short time with Dr. Gesner, who had just returned from CharlotteCounty, and was about proceeding to Grand Manan; and who favored us with specimens of the copper and lead ores which he had discovered in that quarter; the former of these yielding forty-five per cent. of pure copper. We have already stated that marl had been found in abundance in that direction."
Field and Forest Rambles - by A. Leith Adams, 1873, p.273 ..... In some river valleys of the northern districts, the drift contains traces of gold, whilst onthe Tobique the precious metal is said to be met with in Silurian beds, but, as elsewhere, uncertainty isassociated with deception, and more than one enthusiastic gold finder has been grievously imposed on by designing persons. I was often entertained, whilst accompanying Mr. Charles Robb on a few of his geological reconnaisances in connection with the geological survey of the province, by observing how intensely excited many of the settlers became when his presence was made known on their lands. To examine rocks, merely for the purpose of knowing the one from the other, was utterly beyond their powers of belief, and the more Mr. Robb tried to convince them, the more they seemed impressed with a belief that he was searching for precious metals, and had taken this mode of explanation in order to deceive them. The gold-digging mania had its day in New Brunswick, as well as elsewhere on the continent, and chiefly from some ""finds"" in the neighboring province of Nova Scotia. So strong was the furor, that not a few residents in the wilderness districts forwarded large packages of rock to the United States for analysis, and also inundated the laboratory of the professor of chemistry at Fredericton with what they designated specimens of silver and gold, but which turned out to be only some worthless compounds of iron, mica, and such-like...."

Daily Telegraph - Jan. 22, 1874 Mining and Mining Schools. - The forests, the fields, the factories, the workshops, the shipyards of our unrivalled Maritime Provinces, so rich that the New England States are nowhere in comparison with them, are destined to be supplemented to an extent inconceivably great by the development of our mineral resources. Of coal we need not speak, except to say that even it awaits vast further developments, and that it is going up so rapidly in price in the markets of the world, and that the owners of the ""Black Diamonds"" are evidently the predestined millionaires of the future. Of our gold we need only say this, and we say it on the authority of Mr. Selwyn, Director of the Geological Survey of Canada, that if mining for gold were conducted in the same scientific manner, and with the same centralism of capital as in Australia, the gold mines of Nova Scotia would prove as remunerative, to say the least, as any on the face of the

earth. But in such minerals as iron, copper, lead, silver, antimony, manganese, gypsum, etc.; as well as inour building stones of various kinds, granites,sandstones, etc., we have the elements of an extent of wealth, of which our people can form no adequate conception. Some of our visitors from the United States, and not a few of our practical mining engineers, who traverse our noble country, have formed very high estimates of the future of these great industries. We refer to them now, not so much to enlarge upon a subject so often treated in these columns, as to second some suggestions made by Mr. Edward Jack in our columns to-day. We may say, in passing, that Mr. Jack is one of the best informed men in the province, not only as regards our vast resources in lumber, and the physical aspect of every corner in the province, but as respects our mineral and mining processes, nor is there a man in the province who is more ready, in a distinguished manner, to communicate information, and to talk and write up our great industries. Mr. Jack remarks on the need of a mining school, and he pays a just compliment to Mr. Wendt, a young gentleman, whose scientific attainments are only equalled by his modesty. Mr. Wendt has made some important discoveries in this province, which will, we believe, be heard of at a future day. There is no doubt whatever that our young men, who have a taste for such studies, should be taught mining and metallurgy. The simple elements of Geology should be taught in our schools, as the higher phases of that are in our Universties and Colleges. But in addition to this, our young men should be taught practical mining and assaying. This might be done in various ways. We might extend existing institutions. This is a matter in which Prof. Bailey could give some practical advice. The Government might assist in sending young men, attaining a certain degree of eminence at the University, to the excellent mining school attached to McGill College, Montreal, of which Principal Dawson, the eminent geologist and scholar - himself a maritime man - is head; or these young men might be assisted in attending the splendidly-equipped school of mines in Columbia College, New York, which is about equal to any in Germany. A still further suggestion is made by Mr. Jack, and should be duly considered. The matter is important, and should be dealt with in some way. We wish that, pending its solution, steps could be taken to secure for the province the services of Mr. Wendt, or some such man. We have a progressive Government, will its members consider the matter, and afford the Telegraph an opportunity of speaking of the enlightened interest taken by them in the development of our mines and minerals?"

S.J. Daily Sun - Jan. 14, 1882 and Daily Telegraph - Jan. 14, 1882 Death of John Steadman, Esq. - We regret to learn of the death of John Steadman, Esq., which occurred at Hopewell Cape, A.C., at 1 o'clock this morning. Mr. Steadman was well known throughout the Province, andparticularly in Albert County, where he has been employedin searching for minerals of various kinds for many years. His life was devoted to the study of mineralogy and the development of various properties that promised to be productive, and he must have acquired a great deal of knowledge of the mineral resources of the country, which is to be hoped he imparted to others when he found as he did some time ago, that his end was approaching. Mr. Steadman was a brother of the Hon. James T. Steadman, J.C.C., of Fredericton, and brother-in-law of Joseph Crandall, Esq., Postmaster here, and leaves a wide circle of relatives here and throughout the Province. - Moncton

Carleton Sentinel - Jun. 11, 1850 Report on the Agriculture Capabilities of New Brunswick (#5) by J.F.W. Johnston, F.R.S., &c. Kent. -1. A stratum of good coal is reported to have been discovered on the Cocagne River, about three miles above the bridge, by Dr. Gesner's son. ""The stratum was found 10 in the bottom of a large brook, and beneath three feet of rapid water. It was estimated to be two feet thick, but might nevertheless exceed three feet in some situations. By sinking a shaft a short distance from the brook,"" the Dr. adds, ""so as to avoid the influx of water, this coal may be opened immediately."" (IV. 86) 2. ""Coal has also been discovered on the Buctouche River, and there can be no doubt that it may be obtained in this district in great quantities."" (IV. 86) ""It is very evident that these coal strata are the most superficial, and therefore the least valuable in the series to which they belong; and from their small degree of inclination it may be justly inferred that the thickest and most extensive deposits are still concealed in the earth."" (l.c.) Although I have not had an opportunity of observing either of these last places, still, I may be excused for observing that although these coal strata are superficial, they are not necessarily the least valuable of the series; that is a point which cannot be proved until borings are actually made, or the outcrops themselves have been seen. 3. Coal was discovered nearly thirty years ago upon the Richibucto River, the best known locality is on the Coal Branch, about three miles above Mr. Ford's mills. I visited that locality in October last. The coal crops out about half way up the face or a high cliff on the west side of the brook, and is placed between layers of crumbling shale; the Coal cakes like the Grand Lake coal, and is about 15 inches thick; the dip is N.W. 10ø. One or two hundred chaldrons of this coal have been got out from time to time, by excavating under the cliff; but unless other beds are discovered, this place can never become the seat of extensive coal mining. Judging by the quality and thickness of the seam, it may yet prove to be the same as the one at the head of the Grand Lake, from which the sandstones pass continuously, but in an undulating manner towards the Gulf Shore. Dr. Gesner remarks (IV. 90) ""that it is probable that there is another stratum near the base of the cliff,"" though his labours to discover it were unsuccessful. Northumberland. -1. About five miles below Chatham there is every appearance of the existence of workable beds of coal; a small but perfect stratum appears on the cliff on the property of Mr. Willison: ""appearances,"" he adds, ""renders it almost certain that coal may be obtained here at no great depth from the surface."" (IV. 95) 2. About eleven miles from Newcastle on the southwest branch, coal appears on the south bank of the river. It is but an inconsiderable stratum belonging to one of the superficial beds already alluded to."" (IV 97) 3. Coal has been found on the Renous and Barthalomew's Rivers, but the water was too low to allow any canoes to pass at the time of my exploration in this quarter. (IV. 11 97) Gloucester. -Outcroppings of bituminous coal have been seen at New Bandon, and drift coal has been picked up near Bathurst Harbour in quantities sufficient to justify parties in boring in the neighborhood; various shafts have been sunk under the direction of Mr. Stephen, while an agent for the Gloucester Mining Company, and others; but in no case, so far as I am aware, have workable beds been attained. In Mr. Logan's elaborate section from Cranberry Cape to Point Dumai, a distance of twelve miles along the shore, only two seams were discovered, and these were respectively eight and six inches in thickness. They were both supported by an Under clay with stigmaria, and dipped with a very low angle to the N.E. Restigouche. -Coal has been spoken of on the Restigouche between Campbellton and Dalhousie. In 1839 I had an opportunity of examining that shore, and observed both at Point Anim and Point Pin Sec, a black coaly rock, which is said to have been used for fuel. It was a black shale, indurated and changed by the neighbouring igneous rocks. By Mr. Logan's report, it appears that the sandstones which line the margin of that river do contain a small but regular seam of coal and carboniferous shale, together measuring three inches: ""it is not however to be inferred,"" says he, ""that the group belongs to what is emphatically called the carboniferous era, on that there is much probability of discovering the mineral associated insufficient quantity with its strata to render it profitable to mining enterprise; though seven thousand feet of vertical thickness in continuous succession have been carefully examined,"" nothing, he adds, ""like a working seam, nor anything like a regular seam, or like a seam at all, has been met with."" Saint John. - Dr. Gesner remarks (II. 12) that he discovered two small veins of anthracite coal in a fine grained clay-slate near the Penitentiary: "" and it is probable,"" he adds, ""that a workable quantity is not very far distant from that spot."" (II. 12). The occurrence of coal and vegetable fossils in the rocks of that vicinity is very curious, and requires further investigation; I have never had an opportunity of seeing the anthracite in situ. Charlotte. - I am unaware of coal ever having been reported in this county. It is much more likely to become the seat of mining for ores of the metals. Search for coal has recently been made among the dark coloured, slate near St. Stephen, but these are far below the true coal measures. Carleton. - Coal has not been spoken of from Carleton. If the gypsiferous rocks of the Tobique belong to the carboniferous series at all, they must underlie the productive coal measures. At the Red Rapids, the 12 western edge of the red rocks, is seen to rest unconformably on the slates, and near the head of the river they are met by igneous rocks: it is just possible the red rocks of this river have been in former times connected with the red rocks of the Bay de Chaleur from which they were first separated by the upheaval of the igneous rocks just spoken of, which constitute the highest land in New Brunswick. In conclusion, it is sufficiently obvious -1. That though very many outcrops of common coal, well adapted for blacksmith's use, are known to exist in the country, yet none of them exceed eighteen or twenty inches in thickness. 2. That though the beds of cannel coal reported to exist have a very considerable thickness, they hardly come up to the average standard of purity. 3. That the importance of the beds which are known has been over-stated, while the probability of finding others of greater thickness and improved quality, has been much exaggerated. Most respectively, Sir, Your obedient humble servant. (signed) J. Robb. Prof. Chem. & Nat. History, King's College. To Professor Johnston, &c. &c. The sum of the reasoning and information contained in this chapter appears to be- 1. That in reference to the agricultural resources of the Province, and its population sustaining capability, the supposed existence of fossil fuel is of great importance. 2. That without fossil fuel, manufactories can be established and maintained only at the expense of its agricultural and future population sustaining capabilities. 3. That Dr. Gesner, whose knowledge of the Province is very extensive, has predicted the discovery of valuable beds of coal, which shall prove of great benefit to the mercantile, manufacturing and agricultural interests of New Brunswick, but 4. That Dr. Robb and others, who have had opportunities of examining many parts of the country, do not participate in this opinion. 5. That the decision of the question would be of great moment to the Colony, not only in setting a disputed matter at rest, but in diffusing throughout the community distinct and positive notions as to the real resources of the country, and the line which ought to be taken to developing them - and in pointing out to the purely agricultural settler the mode of clearing he ought to adopt, with the view of securing himself and to the future occupants of the farm, if necessary, the benefits of an abundant and economically available supply of fuel, with as little loss of available land as necessary. I venture therefore to suggest to Your Excellency, as likely to promote all the material interests of the Colony, that means should be taken to secure a survey of the coal measures of the Province - with reference especially to their positive and economical value, as available sources of fossil fuel. This survey should be made by a person who is not only familiar with the principles of geology but with the practical economy of coal mining also - and if with a knowledge of England or of the United States, he possessed some familiarity, also with those of Prince Edward Island and Nova Scotia, the prospect of advantage to the Province from his labours would be greatly increased. That the advantage to the agricultural interests, in so far as it affects the rearing of timber, is concerned, would be general also, will appear from the numerous places in which coal has been detected. An inspection of the Geological Map in which these places are distinguished by large black dots, will also show how many parts of the province would be benefitted directly by the exploration. Let it be proved that coal exists in available quantities in these localities, and clearings may proceed without regard to future provisions of fuel. Let it be established on the other hand, that no reasonable expectation of fossil supplies can be entertained, and every proprietor will see the necessity of reserving ten acres of accessible wood

Royal Gazette - Jul. 30, 1873 CAP. XCIII. An Act to incorporate the Bay of Fundy Red Granite Company, Limited.Sec. Sec. 1. Company incorporated. Liability of 2. Capital stock. shareholders. 3. Board of Directors; number 7. Damage for lands, of; vacancy, how filled. &c. taken, how 4. Office of Company, where determined. established. 8. Power of Company to 5. Calls on shares, how levied make railway, &c. and collected. 9. Property and shares to be exempt from taxation for three years. Passed 14th April, 1873. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Jacob S. Brown, Abraam Volk, Charles C. Ward, John M. Moffitt, George G.M. McGlashan, Douglas Wetmore, B.C. Kenway, and Charles W. Weldon, their associates, successors and assigns, are hereby erected into a body politic and corporate under the name of ""The Bay of Fundy Red Granite Company,"" for the purpose and with the power of purchasing, holding, leasing and selling granite land and mineral rights, and of quarrying and manufacturing red granite and all kinds of stone and minerals in the County of Charlotte, and purchasing, holding, assigning, selling and conveying real estate, machinery, vessels, vehicles and any other property required for constructing, holding and operating roads, railroads and tramways for the transportation of red granite and other substances and supplies to and from thequarries and works, and using the same for the purposes aforesaid, and all other purposes for which roads, railroads and tramways may be used, and of acquiring, purchasing, contracting, hiring or holding such wharves, water lots, docks and piers as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, for the protection and safety of shipping, and constructing and holding dwellings and other works and buildings for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes or any of them, and the said Company shall have all other powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be two hundred thousand dollars, in shares of not less than one hundred dollars each, which shall be personal property, transferable and assignable as such, by assignment recorded in the books of the Company; and the Company shall have power to increase their capital stock to any sum not exceeding five hundred thousand dollars, by the issue of new shares, on a vote of a majority in interest of the stockholders; the Company may issue stock in payment for lands, mineral rights or other property or purposes, on such terms as the Directors may deem best, and such stock shall be considered full paid up stock as if paid for in money; the Company may also issue bonds bearing interest in such form and for such amounts, and payable at such times and places, as the Directors from time to time may appoint and direct, and the same shall be signed by the President and shall have the corporate seal attached or affixed thereto; provided that such lands shall not exceed two thirds the amount of paid up capital of said Company, and the said bonds shall form a first charge on the lands, property, stock and franchises of the said Company. 3. The office for conducting the general affairs of the Company shall be at Saint George, in the County of Charlotte, or such other place in New Brunswick as may be deemed expedient by the Company; the Board of Directors shall consist of not less than five or more than seven, as may be determined by the bye laws of the Company, and they shall be chosen annually; but should the Company fail to elect Directors on the day appointed, those previously elected shall continue in office until successors are chosen and accept office in their stead; any vacancy in the Board of Directors caused by death, resignation or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The Company shall keep an office in this Province, either in the City of Saint John, or in the Parish of Saint George in the County of Charlotte, and an Agent there for the transaction of business connected with the Company, service on whom of all processes, notices and other documents, shall be deemed sufficient service upon the said Company. 5. The said Company shall have power to levy and collect calls upon the shares from time to time, of such sums of money as may be deemed necessary for carrying on the business of the said Company, in all not exceeding the nominal value of the shares; and whenever any call shall be made by the stockholders or Directors of the said Company, it shall be the duty of the Treasurer to give notice thereof in one or more newspapers printed in the City of Saint John, requiring payment of the same within thirty days; and if any stockholder shall refuse or neglect to pay the amount of such call upon his shares at the time prescribed, he may either be sued for the same in any competent Court, or the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale; and all shares upon which the call is not then paid, with interest from the time such call became due, shall be

sold to the highest bidder, and after retaining the amount of such call and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser or puchasers thereof. 6. No member or stockholder of the Company shall be liable in his person or separate estate for any debt or obligation of the Company, or for any further, greater or other sum than such as may remain unpaid on the shares taken or held by him, unless he shall have rendered himself so liable by becoming surety for any such debt or obligation; but no stockholder who may have transferred his interest in any share or shares taken or held by him, shall by such transfer cease to be liable for or upon any debt, obligation or contract incurred or made prior to the date of such transfer, to the extent of any amount remaining unpaid on such share or shares; provided that any action or suit in respect of such liability shall be taken and commenced within six months from the date of such transfer. 7. Whenever for the purposes of the said Company, lands or rights of way contiguous to the quarries or other property of the Company may be requisite for the laying, construction or erection of any road, railroad or tramway, or of any building, wharf, dock or other place for storing or shipping the stone or other minerals dug, quarried or manufactured by the Company, and no agreement for the purchase of such lands or rights of way can be made with the owner or owners thereof, said Company or the Directors thereof may apply to a Judge of the Supreme Court by petition, with a correct plan of the premises in question thereto annexed, on oath, praying a conveyance of such lands or rights of way, and such petition shall set forth by metes and bounds the nature, situation and quantity of the lands or rights of way required, the names of the owners and occupiers thereof, and any further particulars which the case may require; whereupon if the Judge be satisfied that such lands or rights of way, or any part thereof, are actually required for carrying out the purposes and operations of the said Company, he shall appoint the time and place for the consideration of such petition, and direct notice of the object of such application to be given to the owners and occupiers of such lands, either if practicable by personal service, or if not by notice in one or more newspapers published at the City of Saint John and one published in the County of Charlotte, requiring them to attend at the time and place appointed and shew cause why an order for such conveyance should not be made; and at such time and place the Judge may either proceed at once to order the parties interested to make all necessary conveyances upon such terms as he may see fit to order and direct, or if he deem it necessary to order that the lands or rights of way so required be examined and surveyed by appraisers to be by him appointed, of whom one appraiser shall be named by the petitioners, one by the respondents, and the third by the Judge; or if the respondents do not appear, two of such appraisers shall be named by the Judge, due proof being furnished to him of the due service or publication of said notice; the appraisers so appointed shall forthwith proceed to examine and value the lands or rights of way so required, to ascertain the necessity for them, and the quantity of land required, and in their valuation they shall not take into account the enhanced value of any such lands and premises by reason of the operations of the said Company or of any discovery by them upon their own lands of minerals, ores or other metallic substances, or any further works or operations by them contemplated; and the valuation of of such appraisers, or any two of them, shall be returned in writing and upon oath to such Judge as soon as may be, whereupon the said Judge shall fix a time and place for hearing such award or valuation, of which all parties shall have due notice, either by their Attorneys or as aforesaid; and at the return of such notice, and upon hearing all parties interested, the said Judge shall have power to alter, modify, approve or reject such valuation, and in case of rejecting the same shall proceed as before to the appointment of other appraisers, and so on as often as the case may happen; if the valuation be approved or modified the Judge may make such order in the premises as to the payment of costs and amends, and the mode of conveyance of such lands or rights of way, as he may deem expedient, and any conveyance made under such order shall be registered in the County in which the premises conveyed shall lie, and have the same operation and effect as if made by the owner or owners of the fee to the said Company. 8. The said Company may when required make or construct a railway or tramway over and across any roads in the line of the projected railroad or tramway, and over any brooks, streams or rivers, on public lands, subject nevertheless to regulations to be made by the Court of Sessions or Municipal Corporation of the County for the protection and safety of the inhabitants and their property, and the preservation of public and private rights; and may build, erect and make harbours, piers, breakwaters and shipping places for granite, or other productions of the said Company, upon any land owned or lawfully held by the Company or acquired under this Act, or upon the shores of the harbour or other lands of the Crown above or below low water mark, license therefor having been

Daily Tribune - Mar. 13, 1873 Legislature. - ... The House then went into further consideration of the bill to incorporate the St. George Red Granite Company, and the Attorney General moved in amendment that the bonds and debentures issued by the Company shall not exceed two-thirds of the paid up capital. Carried. The bill was then agreed to with certain amendments. ... The House then went into"

Royal Gazette - May 7, 1873 CAP. LXXXVI. An Act to incorporate the Saint George Red Granite Company Limited. Sec. Sec. 1. Company incorporated. 7. Value of lands 2. Capital Stock. required, by whom 3. Office of Company for appraised and valued. general affairs, where 8. Where Company may situate. build railways, &c., 4. Office must be ept either bject to certain at Saint John or Saint regulations of George. Sessions. 5. Calls, how levied and 9. Property of Company collected. exempt from taxation 6. Liability of shareholders; or three years. proviso. Passed 14th April 1873. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Peter Cormack, James I. Fellows, Isaac Burpee, Stephen S. Hall, Charles H. Fairweather, and JohnP.C. Burpee, their associates, successors and assigns, are hereby constituted a body politic and corporate, by the name of ""The Saint George Red Granite Company,"" for the purpose and with the power of purchasing, holding, leasing and selling Granite Lands and Mineral rights, and of quarrying and manufacturing Red Granite and all kinds of stone and minerals in the county of Charlotte, and purchasing, holding, using, selling and conveying real estate, machinery, vessels, vehicles, and any other property required for constructing, holding and operating roads, railroads and tramways for the transportation of Red granite and other substances and supplies to and from the quarries and works, and using the same for the purposes aforesaid, and all other purposes for which roads, railroads, and tramways may be used, and of acquiring, purchasing, constructing, hiring or holding such wharves, water lots, docks and piers, as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, or for the protection and safety of shipping, and constructing and holding dwellings, and other works and buildings for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes or any of them, and the said Company shall have all other the powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be sixty thousand dollars, in shares of not less than one hundred dollars, which shall be personal property, transferable and assignable as such by assignment recorded in the books of the Company, and the Company shall have power to increase their capital stock to any sum not exceeding five hundred thousand dollars by the issue of new shares, on a vote of a majority in interest of the stockholders; the Company may issue stock in payment for lands, mineral rights or other property or purposes, on such terms as the Directors may deem best, and such stock shall be considered full paid up stock, as if paid for in money; the Company may also issue bonds bearing interest in such form and for such amounts and payable at such times and places as the Directors from time to time may appoint and direct, and the same shall be signed by the President, and shall have the corporate seal attached or affixed thereto, provided that such bonds shall not exceed two thirds the amount of the paid up capital of said Company; and the said bonds shall form a first charge on the lands, property, stock and franchises of the said Company. 3. The Office for conducting the general affairs f the Company shall be at Saint John, or such other place in New Brunswick, England or the United States, as may be deemed expedient by the company; the Board of Directors shall consist of not less than five or more than seven, as may be determined by the bye laws of the Company, and they shall be chosen annually; but should the Company fail to elect Directors on the day appointed, those previously elected shall continue in office until successors are chosen and accept office in their stead; 7 any vacancy in the Board of Directors caused by death, resignation or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The Company shall keep an office in this Province, either in the city of Saint John or in the Parish of Saint George, in the County of Charlotte, and an agent there for the transaction of business connected with the Company, service on whom of all processes, notices and other documents shall be deemed sufficient service upon the said Company. 5. The said Company shall have power to levy and collect calls upon the shares from time to time of such sums of money as may be deemed necessary for carrying on the business of the said Company, in all not exceeding the nominal value of the shares, and whenever any call shall be made by the stockholders or Directors of the said Company it shall be the duty of the Treasurer to give notice thereof in one or more newspapers printed in the City of Saint John, requiring payment of the same within thirty days, and if any stockholder shall refuse or neglect to pay the amount of such call upon his shares at the time prescribed, he may either be sued for the same in any competent Court, or the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale, and all shares upon which the call is not then paid, with interest from the time such call became due, shall be sold to the highest bidder, and after retaining the amount of such call and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser or purchasers thereof. 6. No member or stockholder of the Company shall be liable in his person or separate estate for any debt or obligation of the Company, or for any further, greater or other sum than such as may remain unpaid on the shares taken or held by him, unless he shall have rendered himself so liable by becoming surety for any such debt or obligation; but no stockholder who may have transferred his interest in any share or shares taken or held by him, shall by such transfer cease to be liable for or upon any debt, obligation or contract incurred or made prior to the date of such transfer to the extent of any amount remaining unpaid on such share or shares, provided that any action or suit in respect of such liability shall be taken and commenced within six months from the date of such transfer. 7. Whenever for the purposes of the said Company, lands or rights of way contiguous to the quarries or other property of the Company may be requisite for the laying, construction or erection of any road, railroad 8 or tramway, or of any building, wharf, dock or other place for storing or shipping the stone or other minerals dug, quarried or manufactured by the Company, and no agreement for the purchase of such lands or rights of way can be made with the owner or owners thereof, the said Company or the Directors thereof may apply to a Judge of the Supreme Court by petition, with a correct plan of the premises in question thereto annexed, on oath, praying a conveyance of such lands or rights of way; and such petition shall set forth by mete and bounds the nature, situation and quantity of the lands or rights of way required, the names of the owners and occupiers thereof, and any further particulars which the case may require; whereupon, if the Judge be satisfied that such lands or rights of way, or any part thereof, are actually required for carrying out the purposes and operations of the said Company, he shall appoint a time and place for the consideration of such petition, and direct notice of the object of such application to be given to the owners and occupiers of such lands, either if practicable by personal service, or if not, by publication thereof for at least two weeks in a newspaper published at the City of Saint John, and one published in the County of Charlotte, requiring them to attend at the time and place appointed to shew just cause why an order for such conveyance should not be made; and at such time and place the judge may either proceed at once to order the parties interested to make all the necessary conveyances upon such terms as he may see fit to order and direct, or if he deem it necessary to order that the lands or rights of way so required be examined and surveyed by appraisers to be by him appointed, of whom one appraiser shall be named by the petitioners, of whom one by the respondents, and the third by the Judge, or if the respondents do not appear two of such appraisers shall be named by the Judge, due proof being furnished to him of the due service or publication of said notice; the appraisers shall forthwith proceed to examine and value the lands or rights of way so required, to ascertain the necessity for them, and the quantity of land required, and in their valuation they shall not take into account the enhanced value of any such lands and premises by reason of the operations of the said Company, or of any discovery by them upon their own lands of minerals, ores or other metallic substances, or any further works or operations by them contemplated; and the valuation of such appraisers or any two of them shall be returned in writing and upon oath to such Judge as soon as may be; whereupon the said Judge shall fix a time and place for hearing such award or valuation, of which all parties shall have due notice either by their attorneys or as aforesaid, and at the return of such notice, and upon hearing all parties interested, the said Judge shall have power to alter, modify, approve or reject such valuation, 9 and in case of rejecting the same shall proceed as before to the appointment of other appraisers, and so on as often as the case may happen; if the valuation be approved or modified, the Judge may make such order in the premises as to the payment of costs and awards, and the mode of conveyance of such lands or rights of way as he may deem expedient, and any conveyance made under such rder shall be registered in the County in which the premises conveyed shall be, and have the same operation and effect as if made by the owner or owners of the fee to the said Company. 8. The said Company may, when required, make or construct a railway or tramway over and across any roads in the line of the projected railroad or tramway, and over any brooks, streams or rivers on public lands, subject nevertheless to regulations to be made by the Court of Sessions or Municipal Corporation of the County, for the protection and safety of the inhabitants and their property, and the preservation of public and private rights; and may build, erect and make harbours, piers, breakwaters and shipping places for granite or other productions of the said Company, upon any land owned or lawfully held by the Company, or acquired under this Act, or upon the shores of the harbour, or other lands of the Crown above or below low

Company may make 5. Calls, how levied and railway across collected. Highways, &c. 9. Property of Company exempt from taxation for three years. Passed 8th April, 1874 Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Arthur Hill Gillmor, Senior, Francis Hibbard, M.P.P., Tobias S, Gillmor, Kinsman P. Gillmor, Eldorado Gillmor, Robert A. Stuart, James O'Brien, Thomas Moreland, Samuel Johnson, Charles McGee, Henry A. Smith, James E. Lynott, Edwin R. O'Brien, Daniel Gillmor, their associates, successors, and assigns, shall be and they are hereby erected into a body politic and corporate, by the name of ""The Victoria Red Granite Company of Saint George,"" and by for the purpose of quarrying and manufacturing red granite and all kinds of stone and minerals in the County of Charlotte, and purchasing, holding, using, selling and conveying real estate, machinery, vessels, vehicles, and any other property required for constructing, holding and operating roads, railroads, and tramways, for the transportation of red granite, and other substances and supplies, to and from the quarries and works, and using the same for the purpose aforesaid, and all other purposes for which roads, railroads and tramways may be used, and for acquiring, purchasing, constructing, hiring or holding such wharves, water lots, docks, and piers, as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, or for the protection and safety of shipping, and constructing and building dwellings, and other works and buildings, for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes, or any of them; and the said Company shall have all other the powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be fifty thousand dollars, in shares of not less than one hundred dollars each, which shall be personal property, transferable and assignable as such by assignment recorded in the books of the Company; and the Company shall have power to increase their capital stock to any sum not exceeding five hundred thousand dollars, by the issue of new shares, on a vote of a majority in interest of the stockholders; the company may issue stock in payment of lands, mineral rights, or other property or purposes, on such terms as the Directors may deem best, and such stock shall be considered full paid up as if paid for in money; the Company may also issue bonds, bearing interest, in such form and for such amounts, and payable at such times and places as the Directors from time to time may appoint and direct, and the same shall be signed by the President, and shall have the corporate seal attached or affixed thereto, provided that such bonds shall not exceed two thirds of the amount of the paid up capital of the Company, and the said bonds shall form a first charge on the lands, property, stock and franchises of the said Company. 3. The office for conducting the general affairs of the Company shall be at Saint George, or such other place as may be deemed expedient by the Company; the Board of Directors shall consist of not less than five nor more than seven, as may be determined by the bye laws of the Company, and they shall be chosen annually; but should the Company fail to elect Directors on the day appointed, those previously elected shall continue in office until successors are chosen, and accept office in their stead; any vacancy in the Board of Directors caused by death, resignation, or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The Company shall keep an office in this Province, in the Parish of Saint George in the County of Charlotte, and an agent there for the transaction of business connected with the Company, service on whom of all processes, notices, and other documents, shall be deemed sufficient service upon the said Company. 5. The said Company shall have power to levy and collect calls upon the shares from time to time of such sums of money as may be deemed necessary for carrying on the business of the said Company, in all not exceeding the nominal value of the shares; and whenever any call shall be made by the stockholders or Directors of the said Company, it shall be the duty of the Treasurer to give notice thereof in one or more newspapers printed in the City of Saint John or County of Charlotte, requiring payment of the same within thirty days; and if any stockholder shall refuse or neglect to pay the amount of such call upon his shares at the time prescribed, he may either be sued for the same in any competent Court, or the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale; and all shares upon which the call is not then paid, with interest from the time such call became due, shall be sold to the highest bidder; and after retaining the amount of such call, and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and and delivered to the purchaser or purchasers thereof. 6. No member or stockholder of the Company shall be liable in his person or separate estate for any debt or obligation of the Company, or for any further greater or other sum than such as may remain unpaid on the shares taken or held by him, unless he shall have rendered himself so liable by becoming surety for any such debt or obligation; but no stockholder who may have transferred his interest in any share or shares taken or held by him shall by such transfer cease to be liable for or upon any debt, obligation or contract incurred or made prior to the date of such transfer, to the extent of any amount remaining unpaid on such share or shares, provided that any action or suit in respect of such liability shall be taken and commenced within six months from the date of such transfer. 7. Whenever, for the purposes of the said Company, lands or rights of way contiguous to the quarries or other property of the Company, may be requisite for the laying, constructing or erection of any road, railroad, or tramway, or of any building, wharf, dock, or other place for storing or shipping the stone, or other minerals dug, quarried or manufactured by the Company, and no agreement for the purchase of such lands or right of way can be made with the owner or owners thereof, the said Company or the Directors thereof may apply to a Judge of the Supreme Court by petition, with a correct plan of the premises in question thereto annexed, on oath, praying a conveyance of such lands or right of way; and such petition shall set forth by metes and bounds the nature, situation and quantity of the lands or rights of way required, the names of the owners or occupiers thereof; and any further particulars which the case may require; whereupon if the Judge be satisfied that such lands or rights of way, or any part thereof, are actually required for carrying out the purposes and operations of the said Company, he shall appoint a time and place for the consideration of such petition, and direct notice of the object of such application to be given to the owners or occupiers of such lands, either if practicable by personal service, or if not, by publication thereof for at least two weeks in a newspaper published at the City of Saint John, or one published in the County of Charlotte, requiring them to attend at the time and place appointed, to shew just cause why an order for such conveyance should not be made; and at such time and place the Judge may either proceed at once to order the parties interested to make all necessary conveyances upon such terms as he may see fit to order and direct, or if he deem it necessary, to order that the lands or rights of way so required be examined and surveyed by appraisers to be by him appointed, of whom one appraiser shall be named by the petitioners, one by the respondents, and a third by the Judge, or if the respondents do not appear, two of such appraisers shall be named by the Judge, due proof being furnished to him of the due service or publication of said notice; the appraisers so appointed shall forthwith proceed to examine and value the lands or rights of way so required, to ascertain the necessity for them, and the quantity of land required, and in their valuation they shall not take into account the enhanced value of any such lands and premises by reason of the operations of the said Company, or of any discovery by them upon their own lands, of minerals, ores or other metallic substances, or any further works or operations by them contemplated; and the valuation of such appraisers, or any two of them, shall be returned in writing and upon oath to such judge as soon as may be; whereupon the said Judge shall fix a time and place for hearing such award or valuation, of which all parties shall have due notice, either by their attorney or as aforesaid; and at the return of such notice, and upon hearing all parties interested, the said Judge shall have power to alter, modify, approve or reject such valuation; and in case of rejecting the same, shall proceed as before to the appointment of other appraisers, and so on as often as the the case may happen; if the valuation be approved or modified, the Judge may make such order in the premises, as to the payment of costs and awards, and the mode of conveyance of such lands or rights of way, as he may deem expedient, and any conveyance made under such order shall be registered in the County in which the premises conveyed shall be, and have the same operation and effect as if made by the owner or owners of the fee to the said Company. 8. The said Company may, when required, make or construct a railway or tramway over and across any roads in the line of the projected railroad or tramway, and over any brooks, streams or rivers on public lands, subject nevertheless to regulations to be made by the Court of Sessions or Municipal Corporation of the County for the protection and safety of the inhabitants and their property, and the preservation of public and private rights; and may build, erect and make harbours, piers, breakwaters, and shipping places for granite or other productions of the said Company, upon any land owned or lawfully held by the Company, or acquired under this Act, or upon the shores of the harbour or other lands of

Royal Gazette - Jul. 8, 1874 CAP. CX. An Act in amendment of and in addition to an Act to incorporate the Hopewell Freestone and Mining Company. Sec. Sec. 1. Name of company changed. 4. Capital stock may 2. Additional power of Company. Be increased. 3. Certificates of shares, by 5. Annual meetings, whom signed. When and where held. Passed 8th April, 1874 Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That notwithstanding anything contained in an Act made and passed in the thirty sixth year of Her Majesty's Reign, intituled An Act to incorporate the Hopewell Freestone and Mining Company, the corporate name of ""The Hopewell Freestone and

Mining company"" is hereby changed, and from and after the passing of this Act the corporate name of the said Company shall be ""The Hopewell Quarry Company,"" and all the provisions of the said recited Act shall apply to the said The Hopewell Quarry Company, except as herein altered or amended. 2. That in addition to the powers given to the said Company in and by the first Section of the said recited Act, the said Hopewell Quarry Company shall be and they are hereby empowered to purchase, hold and use all such vessels as may be necessary for the purpose of transporting the products of the operations of the said Company, and carrying the supplies and materials required for the efficient working of the said operations, and to sell, convey and dispose of this such vessels from time to time as they may see fit. 3. The certificates of shares in the said Company shall after the passing of this Act be in the same form as provided in the sixth Section of the said Act, except that the same shall be signed by the President and Treasurer of the said Company instead of by the President and Clerk or Secretary; provided that nothing in this Act shall affect any certificate of shares heretofore issued. 4. The stockholders of the said Company may at any general meeting to be called for that purpose, increase the capital stock thereof from time to time by such sum or sums as they may order and direct, such increase not to exceed two hundred thousand dollars, and may increase the number of shares accordingly. 5. Notwithstanding any law or custom to the contrary, the said Company may by their bye laws appoint the annual meeting of the shareholders, directed to be held in the said Act, to be holden at such time and in such place as shall be prescribed by such bye laws."

Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Isaac W. Bradbury, John McIntosh, William H. Gray, Charles F. Clinch, James A. Moran, James O'Neill, and James E. Lynott, their associates, successors, and assigns, are hereby constituted a body politic and corporate by the name of The Utopia Red Granite Company of Saint George for the purpose and with the power of purchasing, holding, leasing and selling granted lands and mineral rights, and for quarrying and manufacturing, polishing, buying and selling Red Granite and all kinds of stone and minerals in the County of Charlotte, and purchasing, holding, using, selling and conveying real estate, machinery, vessels, vehicles and any other property required for constructing, holding and operating roads, railroads, and tramways, for the transportation of Red Granite and other substances and supplies to and from the quarries and works, and using the same for the purposes aforesaid, and all other purposes for which roads, railroads and tramways may be used; and of acquiring, purchasing, constructing, hiring or holding such wharves, water lots, docks, and piers, as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, or for protection and safety of shipping, and constructing and holding dwellings and other works and buildings for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes, or any of them; and the said Company shall have all other the powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province."

Daily Tribune - Mar. 13, 1875 Fredericton, March 13. This morning the opponents of the Utopia Red Granite Co. bill called the question on its third reading, when it was finally passed."

Daily Tribune - Mar. 13, 1875 Mr. McKay committed the bill to incorporate the Utopia Red Granite Company, St. George, Mr. Jones in the chair. A discussion came up on a section of the bill providing for exemption from taxation for three years. Hon. Mr. Stevenson referred to the length of time consumed in getting such companies into operation, and the fact that no profits could be realized for three years. The other companies in precisely similar positions are exempted and the people are willing that this company also should be so favored. A division being taken on the motion to adopt the exempting clause, it was agreed to on the following vote: Yeas. - King, Stevenson, McQueen, Crawford, Perley, Burns, Blanchard, Johnson, Smith, Flewelling, McLeod, McKay, Butler, Ryan, Elder, Rogers, Cotterell - 17. Nays. - Fraser, Kelly, Willis, Covert, Keans, Phillips, Austin, Robinson, Dow, Barker, Davidson, Humphrey, Pickard, Swim, Leighton - 15. The bill was

Hazelhurst, of the City of Saint John, manufacturer. Dated this 15th day of October, A.D. 1889. Curry & Vincent, Sols. for Applicants."
Royal Gazette - Feb. 26, 1890 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, and Amending Acts, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the twenty sixth day of February, A.D. 1890, incorporating Robert Wisely, of the City of Saint John, in the City and County of Saint John, in the Province of New Brunswick, Gentleman; John Connor, of the same place, manufacturer; John Kelly, of the same place, manufacturer; Levi H. Young, of the same place, manufacturer; W. Alonzo Chesley, of the same place, manufacturer; Arthur L. Trueman, of the same place, barrister-at-law; John A. Chesley, of the same place, manufacturer; Lemuel A. Curry, of the same place, barrister-at-law; and George R. Vincent, barrister-at- law; for the purpose of quarrying, polishing and selling of Red Granite; and also the acquiring, holding, selling and conveying of lands and of rights and interests in lands within the Province of New Brunswick, for Mining and other purposes incidental to mining and quarrying, and the working of Mines and Quarries, and the raising, selling and exporting of and dealing in Ores and Minerals of all kinds, and all other purposes connected with the business of mining and quarrying; by the name of The Welsford Red Granite Company, with a total capital of Fifty thousand dollars, divided into one thousand shares of Fifty dollars each. Dated at the Office of the Provincial Secretary, at Fredericton, the twenty sixth day of February, A.D. 1890. James Mitchell, Provincial Secretary."

St. Andrews Standard - Aug. 14, 1875 Village of St. George. - A St. George correspondent of the Calais Times gives a graphic account of what he terms the loveliest village in the Dominion, pointing out its great natural beauties, its hills and dales, its alluvial soil, its trade, its great natural resources - red granite, copper, lime, mineral springs, ... Six miles from St. George, on the St. Johnpost road, there are a number of springs known as the 'Mineral Springs' noted for there curative properties..... ... The most interesting industry in St. Georgeat present, is the Red Granite Works of the Bay of Fundy Company. As you may be aware, the manufacture of this valuable stone has hitherto been confined to Scotland which has supplied the world with it. The Bay of Fundy Co., are now about fairly started, and employ upwards of 100 hands, filling orders for different parts of the U.S. and Canada. The wide circuit from which the orders come, and the large business showered upon the Co., in this unprecedented dull year, goes to prove the demand to be extraordinary in good times."

N.B. Courier - Dec. 20, 1823 We understand Dr. Hunt purposes to give Six Lectures on Chemistry and Geology, premised with a short Dissertation on the modern nomenclature of the Materia Chemica. The Nitrous Oxide, or Exhilarating Gas to be exhibited, and its nature and properties explained, and during the course a number of experiments will be attempted illustrative of Chemical Phenomena. The arrangement and position of the Primary and Secondary Rocks, &c. will be illustrated by Drawings done expressly for the purpose. The whole intended to excite the .?. to useful study, to facilitate the approach to scientific knowledge as connected with the improvements of the arts. Tickets to Subscribers for the course will be Four Dollars. As an accommodation to persons who may wish to attend a particular Lecture they can be admitted by Tickets for the evening. Should it be found that Six Lectures are insufficient to finish the intended course, they will be continued till it is completed, without additional expense to Subscribers."

City Gazette - Feb. 5, 1824 Communicated. - On Saturday evening next, Dr. Hunt will give his concluding Lecture. (Geology;) illustrated by Drawings of primitive and secondary formations. ""If the practical utility of Geology be questioned, nothing is more easily demonstrated; and it augers well that its pursuit in this respect is daily extending. To refer to two or three instances only, to mining, farming, and building."" That these Provinces contain valuable minerals there can be little doubt, and it requires but a small share of study, to acquire sufficient knowledge to form a judgement where the probability exists of their deposition; but when found it requires a further knowledge to ascertain whether the research or working, will be attended with profit or advantage, and this knowledge may be considered as altogether

Nova Scotian - Aug. 7, 1828 Editorial on Geology and Mineralogy ..... A Society might easily be formed here, and another at St. John, for the purpose of making full collections of Mineralogical specimens, and watching over this branch of science; and, with a very trifling expense either of time or money, might, in a few years, by the emulation and interest which they would create, and by the judicious application of honorary rewards, do much towards the acquisition of correct and valuable information ...."

Weekly Observer - Jul. 26, 1836 We have authority to state that replies have been received from the Rev. Dr. Buckland, Professor of Geology in the University of Oxford, and from Dr. Thompson,Professor of Chemistry at Glasgow, to the letters of inquiry some time since addressed to those distinguished gentlemen, respecting a Lecturer in Natural History and Experimental Philosophy for King's College, Fredericton. In consequence of an expected vacancy in the Professorship of Mathematics and Natural Philosophy, a resolution was lately adopted by the College Council, requiring in the gentlemen who might be appointed to fill such vacancy, a thorough competency to give instruction in Experimental Philosophy; a resolution was at the same time passed, requiring any gentleman who might be appointed to the Lectureship, to be equally well versed in Mineralogy and Geology. - Royal Gazette."

S.J. Weekly Chronicle - Feb. 16, 1837 Geological Survey - The House of Assembly have granted the sum of œ300 for a Geological Survey of the whole Province. We hope our friend Mr. Aaron Inglewood will make an early application for the appointment as Surveyor, or at least for a part of the grant to enable him to prosecute the work he so auspiciously

Codes: GEOL / IDX_Names: Geology - General;
Miramichi Gleaner - Feb. 21, 1837 Geological Survey. - February 11. - In Committee of Supply, on the Petition of Francis Peabody and others, praying for a grant of money, to prepare a Geological survey of the northern section of the Province, being read, Mr. Street said, that the petition itself fully explained its object, - and rendered it unnecessary for him to enlarge upon it. The petitioners prayed for the means of obtaining a Geological survey of their section of the country; it was a matter of considerable importance, and well worthy the consideration of the Legislature, because it was highly desirable that the resources of the country should be known. He believed that various useful minerals might be found in the northern parts of the Province, and advantageously worked; and it was very desirable that a scientific exploration should be made. The Hon. Member then moved a Resolution for a grant of money for that purpose. Mr. Speaker had some doubts of the propriety of such a grant at present. He thought it would be better that all such operations should be left to Mining Companies, whose proper business and interest it would be, to search for useful minerals. A mining company was already in existence, which might turn its attention to the subject. There would be great difficulty in finding a person properly qualified to make such a survey; and he (Mr. Speaker), feared that any grant of money would only be thrown away. It was already well known what minerals were in the country, and coal was actually now worked. The province had no funds to spare for mere visionary speculations, on which too much money had already been thrown away. Mr. Street could not consider this project as at all visionary; he believed it quite possible to ascertain the natural resources of the country, without a great outlay of money; and he thought the period now arrived, when they should be thoroughly known. For the last few years there had been such great uncertainty in agricultural pursuits, that attention should as much as possible be turned to the encouragement of commercial operations. - He thought that Dr. Gesner, of Nova Scotia, might be induced to undertake the work; and if so, the grant would be very advantageously expended, as that gentleman was known to be a scientific and competent person. About œ150, probably, would be sufficient; and such an operation might be the means of opening new sources of trade to the country. Mr. Speaker replied, that if a dozen of the ablest geologists in the world were employed at present in this Province, it would be quite impossible for them to make an effectual exploration, unless they first cleared away the forests from the face of the ground. It could be only a mere partial and insufficient operation, in the present wilderness state of this Province. Let the Legislature, then, encourage the existing staple exports of the country; and when those resources declined, it would be time enough to search for others. But at present the country was not prepared for such Surveys. Mr. Wyer said he would support the motion, if it was amended, so as to include both the ""northern and western parts of the Province;"" as such a Survey was quite as desirable in one as the other. Messrs. J.M. Wilmot, Connell, and Brown, briefly supported the sentiments of the hon. Speaker; and Messrs. End, Weldon, and Woodward, those of Mr. Street. On the question, the Committee divided as follows:- Yeas - Messrs. Street, Ford, Stewart, Weldon, Partelow, End, Woodward, Taylor, Rankin, and Allen - 10.Nays - Mr. Speaker, Messrs. Connell, McLeod, Clinch, Brown, Wyer, Gilbert, D.L. Robinson, Freeze, Morehouse, Burns, Palmer, Hannington, J.M. Wilmot - 14. And therefore it was decided in the negative."

Royal Gazette - Oct. 11, 1837 Kings College, Fredericton, October 7, 1837. At a meeting of the College Council this day held, Dr. James Robb was appointed Lecturer in Chemistry andNatural History; and Mr. George Roberts, Senior Master of the Collegiate School. The Lecturer in Chemistry and Natural history, will give three Courses of Lectures in the Academical year, commencing on the first Tuesday in Michaelmas, Lent and Easter Terms, respectively..."

Codes: GEOL / IDX_Names: Geology - General;
N.B. Courier - Oct. 21, 1837 LETTER V. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor and Commander in Chief of the Province of New Brunswick, &c. &c. &c. May It Please Your Excellency: From the cursory view already taken of the Province of New Brunswick, and the information derived from the most current sources, it appears that there is a peculiarityin the arrangement of the rocky strata of the country, as interesting as it is singular, much important matter may often be collected by a reference to a correct geographical map of any part of the world in regard to the situation and character of its different rock, more especially when the mountains are accurately laid down, and the courses of the rivers are correctly marked. Granite and other primary rocks form the most elevated portions of the earth, the secondary formations are placed at a lower level, and the tertiary strata generally occupy the valleys. This remark will apply more frequently to the older deposits; and often where the rocks forming any part of a chain of mountains are discovered, the practical geologist can trace their continuance to great distances, unaided by other information than that obtained from the distant appearance of the hills, and a knowledge of the most remarkable characters of the rivers that may happen to flow from them. When rivers take their rise in, and flow from primary and transition districts towards the sea, their channels are often obstructed by upturned strata, or dykes of crystaline rocks, hence lakes have been found in basins where outlets are more shallow than their beds, and consequently vast quantities of water remain confined 9 even in very elevated situations. The overflowings of these lakes produce rivers, those, the streams collected from the dissolving snow, rain and springs, in their journey towards the sea, descend from step to step producing either the sublime fall or the dangerous rapid. Beholding only the more superficial parts of this planet, the student in geognasy might suppose all its various materials were placed in the utmost confusion, and most astonishing disorder. But upon strict enquiry it will be found that the rocks are deposited in the most beautiful order of succession, and the greatest harmony prevails throughout the whole of inanimate creation. The different orders of rocks are piled mountain upon mountain, and hill upon hill, succeeding each other according to a scale adapted to the wants of man, and display the most exalted power, wisdom, and benificence. The lofty and almost barren primitive rock, scarcely sustaining with food the Shepherd's bleating flock, affords the richest metals; the transition and secondary formations supply coal, iron, salt, and lime, while the tertiary deposits contain the valleys ""covered with corn."" In proportion to the height of the mountains and the distance, so is the velocity of the water increased, hence falls, rapids, and cascades are produced, and make a beautiful part of the highland scenery. Not so with the river that traverses the newer and more level deposits; scarcely raised above the surface of the sea it steals silently along, and admitting commerce to pass over its bosom; it slowly mingles with the mighty deep, where its journey terminates. A brief explanation of these facts can hardly be given than by a reference to the St. John River, which in its course passes over primary transition, secondary, and tertiary formations. Crossing granite and limestone at its entrance, the falls of this river display the peculiar effects of these rocks on the passage of the stream, and the water collected above comes thundering headlong from their elevated masses. The river then extends along the border of a great coal field, and peacefully reaches the Meductic, where the older formations display the same characteristics by giving rise to a tremendous rapid. At the Grand Falls the river is compelled to pass over almost vertical layers of slate, and bounding from precipices to precipice makes a sudden leap of a hundred and twenty feet. Commencing at Shepody a chain of high hills extends along the coast of the Bay of Fundy, westerly, and within a few miles of the shore. It crosses the St. John embracing the Falls, and occupies the rugged hills of marble and greywacke, so conspicuous in that part of the country. In this range is included the lofty hills of the Nerepis, Eagle and Bald Mountains. Following a curvilinear course this chain continues uninteruptedly near Loon, Oromocto, and Eel River Lakes, and from thence to the notorious Mars Hill. From this point it appears 10 that chain divides into two branches, one extending in a westerly direction into the State of Maine, and another towards the northeast, reaching the Bay of Chaleur. In the western part of the county of Gloucester, there is a large tract of mountainous land, which is continued into the district of Gaspe. Granite and other primary rocks are the principal constituents of these mountains, and the transition marble, greywacke and slate, in contact with them form a broad zone on each side. By referring to a map of the Province, it will appear that the primary district constitutes the segment of a vast circle, or, a line describing a cone, the base of which extends from Shediac, on the Gulf Shore, to Bathurst, with the apex reaching into the county of York. The tract of country included in this elliptical figure may be compared to a deep bay, having primordial rocks placed around the greatest portion of its border. The whole of the area thus enclosed on three of its sides by granitic mountains, and the superimposed transition series, have its limits fixed in a South-east direction by the coast of the Gulf of St. Lawrence, where its strata lie buried beneath the sea. The whole of this extensive portion of the county may be justly termed a coal field, which in magnitude will exceed any in Great Britain. In it the rocks of the carboniferous order are predominant, and at numerous points on its surface outcroppings of coal have been discovered. It has been remarked, that Nova Scotia abounds in the most useful of all mineral substances, and certainly her deposits of coal are scarcely surpassed by any in the world. But it is, nevertheless, certain, that the coal district of New Brunswick is of greater dimensions than that of the sister province, and evidently contains an inexhaustible supply of the bituminous fuel. It must not be supposed, however, that the boundaries of the coal district of New Brunswick can now be clearly defined, or that its superficies can be measured on a geographical map. There are numerous irregularities along its borders where other rocks may intrude into it to considerable distances. But, his brief, and perhaps imperfect outline will be found sufficiently correct for general

purposes, until the country shall be explored, and its different formations be clearly ascertained. Like the imperfect chart of the mariner, it points out the position of continents, islands, rivers and bays, while the survey of the lesser creeks and estuaries have been altogether omitted. With such a chart the crew of Columbus would have been satisfied, and never have manifested to their intrepid master any symptoms of disobedience or revolt. Nor must it be believed, that at any part of the country thus denominated its coal district, the bituminous mineral can be obtained. Many large portions of its surface are deeply covered with beds of conglomerate, and new red sandstone, rocks always found above the coal. At other places there are probably enormous dykes of trap, and faults that will defy the miners skill; therefore the situations may be few where mining can be conducted with profit, and where the coal may be so placed as to admit of an easy and cheap transportation. To discover these, the skill of the practical geologist is required, and to expose the minerals connected with the carboniferous strata, and other rocks associated with them affords scope for his labour, and patient investigation. Before leaving this part of the subject it may be remarked, that the situation of the unified coal district of the two Provinces, is somewhat singular, being placed along the sides of a Bay, which forms a part of the Gulf of St. Lawrence, with the Island of Cape Breton on its southern border. Dr. Buckland in his Bridgewater Treatise, vol.1, page 64, remarks of the great coal series that ""it is in this formation chiefly, that the remains of plants of a former world have been preserved, and converted into beds of mineral coal; having been transported to the bottom of former seas and estuaries, or lakes, and buried in beds of sand and mud, which have since been changed into sandstone and shale."" This opinion is confirmed by the discoveries of almost every geologist. At Partridge Island River in Nova Scotia, the water has produced a section of the rocks belonging to a coal basin, which was evidently in a former condition of the earth a lake. The rocks are exposed a mile and a half along the side of the river. In that distance there are five strata containing the remains of (Mytili) fresh water muscles; these strata are nearly perpendicular, and are now from one hundred feet, to a half mile apart. They are interstratified with sandstone containing numerous remains of vegetables and whole trunks of trees, plainly shewing that at some former and remote period, the bottom of a lake was covered with myriads of shellfish, which were time after time buried by sand and the timber floated down from the neighboring hills. And it is far from being improbable that the great coal district already mentioned was a broad and deep estuary, or bay, of which the Gulf of St. Lawrence still forms a part. To those who first approach this subject, such opinions may be startling indeed, but they are not more surprising, than that whole forests of fossil trees are now standing beneath the sea, having their once thriving trunks converted into solid rock, and their former luxuriant foliage now broken from its stoney sculpture by each succeeding wave; or, that the bones of numerous tribes of gigantic animals should be exhumed from the bowels of the earth, on which they have no living successors. The rocks of the carboniferous order also appear at Prince Edward Island, where they are generally covered with the new red sandstone, and its associated beds of limestone and gypsum. 12 It does not appear that in the attempt to fix theboundary line between the province of New Brunswick and the State of Maine, the mineral deposits in the disputed territory were ever taken into consideration, but there can be little doubt that they are some of the objects, the inhabitants of that State seem so desirous to possess. It is remarkable that the coal district of New Brunswick should terminate but a short distance from the line separating the two countries, which if fixed according to the warmest desires of the Americans, would probably leave all the coal beyond their borders; and although distant as it might be found from situations favorable to its transportation, to those who possess scarcely a ton of that valuable mineral in their own State, even a small part of the New Brunswick deposit would be very acceptable, especially in the smelting and manufacture of iron profusely given to both sides. At many places within this district, coal has been discovered. The strata being intersected by numerous rivers and creeks, have become worn down, and superficial layers have been exposed. Some of these have been worked, but they are generally too thin to offer many inducements for mining operations, and the coal taken so near the surface has been found to be of an inferior quality. No scientific examination of the Province has been made to discover its mineral wealth, and a large portion of its surface, covered with a thick forest, remains unexplored, and unknown to all but a few of the native Indians, who have often brought away pieces of ore found in the mountains of the wilderness. One exception in the above remark, is afforded by the Salmon River Coal Company, who are now boring the strata at the head of the Grand Lake, and have penetrated to the depth of two hundred feet with the best prospects of ultimate success in finding a deep stratum of the bituminous mineral. It is by no means surprising that the public mind should so long have overlooked one of the natural resources of the country, and permitted substances ultimately connected with her welfare to remain unnoticed. The inhabitants of the Province possessing all the facilities of navigation have directed their energies to the timber growing on the surface, an object more immediately exposed to their senses, and offering a more immediate profit than the minerals hidden beneath the soil. But the time is near, when, like the Americans, the inhabitants of this flourishing colony will see the propriety of examining almost every rock of the Province, not only to discover coal, and the ores of the metals, but also to obtain lime, and thereby secure their agricultural interest. The money and labor thus expended will yield as profitable a return as the vast sums appropriated for such purposes in making geological surveys in Great Britain, France, and the United States, when nothing has been left unsought for, that would add 13 to national wealth. Enquiries of this kind will ever be of the highest importance to the country where they are instituted; they not only reveal proper objects of lawful industry and enterprise, but retain the surplus earnings of the people among themselves, by obtaining those articles from their own labor which are now altogether imported from other countries. Nor are such investigations less useful in restraining the misguided speculations of individuals, who without a proper knowledge of the materials and circumstances connected with their adventurous passion, rush headlong into useless expenditure, until their prospects are blighted by the discovery of some fact which might have been foreseen at the commencement of their career. Numerous are the instances even in England, where men of great wealth have been ruined by ignorant pretenders, who, without an acquaintance with the leading principles of geology have found when it was too late, ""that it is not all gold that glitters"". Vast sums of money have been expended in boring for coal, where it could never be procured. Micaceous oxide of iron has been mistaken for silver, iron pyrites for gold, and the wonderful charm of the mineral rod has proved a fruitful source of deception among the credulous and ambitious seekers of the precious metals. At one place in the United States, pieces of coal had been found on the sea shore, and thousands of dollars were expended in searching for the rich deposit to which it was supposed to belong, nor were the speculators disposed to desist, until an aged inhabitant residing at a distance, rode to the spot, and informed him that the fuel they had found, was part of the cargo of a ship stranded on the coast many years ago. It is to prevent mankind from falling into such errors that use of science should be extended, and while the ultimate object of national prosperity are kept in view, to

N.B. Courier - Dec. 8, 1838 Mechanics' Institute. - ..... The season is to be opened by an introductory lecture from Dr. Gesner, on Monday evening next, at the St. John Hotel; this is to be followed by a series of experimental lectures from Mr.

Novascotian - Dec. 20, 1838 St. John, N.B. Mechanics Institute. - Doctor Gesner opened the Session, and was to be followed by Lectures on Experimental Philosophy. ...."

Codes: GEOL / IDX_Names: Geology - General;
St. Andrews Standard - Jan. 6, 1838 The Advancement of Science. - About twelve months ago a few gentlemen of this place anxious to do something towards the diffusion of scientific knowledge here, and in particular to afford the means of pursuing that useful branch of inquiry which studies the structure of the earth and seeks to discover the nature of its surface, sought to avail themselves of Capt. Yule's return to Great Britain by requesting him to obtain for them a series of works on geology and mineralogy together with a collection of specimens of rocks, ores, metals, fossils, gems, &c. and the tests and apparatus necessary for the purposes of experiment. Their request was most promptlyand kindly complied with by that gentleman, who on his arrival in England fulfilled his undertaking, and the desiderata arrived here a week or two ago, accompanied by a donation from the gallant officer himself, who thereby shews that he appreciates arts as well as arms. The original contributors, through whose means this peculiar importation was procured, have handsomely and generously laid the whole open for the use of the public, under certain rules and regulations which they submitted for the approval of a general meeting of whoever chose to attend, and which was held on Tuesday last. We have seldom participated so heartily - so fervently in the anxiety of persons engaged in any incipient purpose, as we did on that occasion, when we beheld so many influential gentlemen blending with the less pretending classes of society and the aspiring youngsters, all equally emulous of the end for which they had been called together. John Wilson, Esq. was called to the chair, and Dr. Frye was requested to act as Secretary. The preparatory suggestions of a committee of the original contributors having been submitted to the meeting, they were considered seriatim, and agreed to in the spirit with few alterations in the letter. Rules and Regulations of the Geological and Mineralogical Society of Saint Andrews, New Brunswick. The intention of forming this society is, to diffuse a spirit of enquiry into, and a taste for Geology and Mineralogy - to cultivate these branches of science especially with a view of acquiring a knowledge of the nature and features of the Earth's surface in our immediate neighborhood - and to establish a Museum for specimens, and natural curiosities, and such other useful purposes as may be determined upon. In order the better to attain these objects, the following rules shall be adopted for its government. 1. It shall be called the St. Andrews Geological and Mineralogical Society. It shall have a President, two Vice Presidents, a Secretary, a Treasurer, and six Committee men - who shall constitute a General Committee of Management, to be elected annually by ballot on the first Monday of January. 2. The duty of the Committee shall be to manage, direct, and superintend the concerns of the county; and to report to its meetings the proceedings immediately intervening. 3. Every Member of this Society shall pay seven Shillings and six pence in advance; and the family of any member who gives a donation of twenty shillings shall be intitled to visit the Museum and the Meetings. 4. Any person wishing to become a member of this Society, must be accompanied by a member, and approved of by the Committee. 5. The funds of the Society (after defraying incidental charges) shall be expended in procuring minerals, books, and such useful instruments and information as may from time to time be judged expedient. 6. It shall in the duty of every member to use his best endeavors to collect specimens and deposit them in the Museum, with a description of the location where found; and also to communicate any important discovery to the Committee, who will report the same to the society as circumstances may authorize. 7. Members and others handling the specimens shall do so with the utmost care, and replace them in their proper situations and shall apprize the person in charge, of any accident or injury that may have happened to them. 8. The Books belonging to the Society shall be wholly under the direction of the Committee. 9. Every member shall have the privilege of taking a stranger or friend to visit the museum when open. 10. The museum shall be open every Saturday from 3 till 4 o'clock p.m., in winter, and from 5 to 6 in summer; and also at such times as may be convenient to the person in charge. 11. Such members as desire it, may be entitled as a Club for mutual improvement in the objects of the Society, and shall have free access to the Museum when it is not otherwise occupied. 12. Any proposed alteration in the Rules or addition to them, shall be submitted to the Committee; and if approved of by it shall afterwards be submitted to the approval of a general or quarterly meeting, which shall be on the first Monday of January, April, July, and October, in each year. The meeting then proceeded to choose their office bearers and committee by ballot, after which the following persons were declared to be duly elected: President - Dr. S. Frye, Vice-presidents - John Wilson, } James Rait, } Esqrs. Secretary - John Rodger, Esq. Treasurer - Geo. D. Street, Esq. 3 Committee - Rev. Alex McLean, C.V. Foster, } H..?.. Hatch, } Geo. F. Campbell, } Esqrs. Thomas Sime, } Geo. N. Smith, } We understand that the Committee are in ..?.. for a capacious room, in which the imported articles and

Miramichi Gleaner - May 1, 1838 Fredericton Sentinel, April 14. - Dr. Gesner, the able and indefatiguable investigator of the Geology and Mineralogy of Nova Scotia, has visited Fredericton during the past week, and is about, we understand, to enter on a survey of this Province; His Excellency the Lieutenant Governor having engaged his valuable services for the purpose, agreeably to an appropriation made by the Legislature in their late session. Dr. Gesner proposes to make a commencement on Charlotte county; but the time, we trust, is not very distant, when the basin of our great river will be

Royal Gazette - Apr. 3, 1839 Geological Survey of New Brunswick. (PART 7) By Abraham Gesner, Provincial Geologist.... see original..."

N.B. Courier - Apr. 6, 1839 Geology. - Dr. Gesner's Lectures on Geology continue to excite much interest. His day course is most respectably attended by ladies and gentlemen. The lecturedelivered before the Mechanics' Institute on Monday evening last, on the origin of coal, evinced a perfect knowledge on the subject, on the part of the Lecturer; and the clear, animated, and eloquent manner in treating on this interesting topic, afforded the highest satisfaction to his delighted audience. The next Lecture before the Institute will be given on Monday evening next."

Weekly Chronicle - Apr. 12, 1839 Dr. Gesner will deliver his next lecture before the Mechanics' Institute at the St. John Hotel, on Friday evening the 12th instant, and the concluding lecture of his course on Monday next."

Royal Gazette - Apr. 17, 1839 Geological Survey of New Brunswick. (PART 9) By Abraham Gesner, Provincial Geologist. ... see original..."

Weekly Observer - Dec. 17, 1839 Mechanics' Institute. - Dr. Gesner delivered a most interesting and intellectual Lecture on Electricity, last evening, before a large and most respectable audience, who appeared to take a deep interest in the subject. - The concluding lecture on Electricity will be delivered by Dr. G. on Monday evening next."

N.B. Courier - Feb. 9, 1839 Geology of New Brunswick. - It has been believed by many that Geology is a science of limited usefulness, and not calculated to excite much, if any interest, beyond the extraordinary facts which it develops with regard to the remains of animals and plants, now found in some of the hardest rocks. But if there ever was a time when mankind derived no benefit from this branch of Natural History, that time has passed away, and the labours of the Geologist have become of incalculable importance. Last year the House of Assembly placed a small sum at the disposal of the Lieutenant Governor, for the purpose of commencing a Geological Survey of the Province, and His Excellency Sir John Harvey, with his usual desire to promote the welfare of the country, employed Dr. Gesner to carry the intended object into effect. A report of the survey, as far as it has been made, has, within, a few days, been laid before the different branches of the Legislature, and which was printed at our Office. The importance of such exploration is well set forth in the introductory part of the report to it, therefore, a reference is given for a brief view of the object and results of an investigation which has already, by a number of valuable discoveries, shewn how the wealth of the Province is to be increased, by applying those resources which, from ignorance or inattention, have hitherto been suffered to remain inactive. The writer states very justly, at page 7, that hitherto the energies of the Province have been directed to the exportation of Timber in its various forms, and the commerce of the Colony has been greatly enlarged from the fine forests which formerly occupied the interior of the country. But Timber is gradually becoming more scarce, - the expense of procuring it is annually increasing, and the time will come when other objects for exportation must be sought for. It is, then, certainly desirable that other resources of the country should be opened, and while the agricultural districts are encouraged and protected, the riches contained in the bosom of the earth should not be overlooked. Much to the credit of Charlotte County, it appears that the Agricultural Society (the only efficient one in existence in the Province), is exerting its salutary influence in that quarter, and it will be seen in their last report how highly Marl is estimated, by the compliment paid to its discoverer. It is far from being improbable, that in other parts of the country, as well as in the County of Charlotte, there are collections of Marl, which by future examinations, may be rendered of infinite service to the country. On page 2, there is also the following remark - ""Almost all the Coal used in the Province is imported from England and Nova Scotia, and it is a singular fact, that the steamboats plying on the river between Saint John and the Capital, are propelled by imported fuel; while during each of their trips, they pass over a coal field now known to contain vast quantities of that imported combustible."" This may, indeed, be called a singular fact. But it may be inquired, how is it possible for those who are engaged in other pursuits, and who are ..?.. by science and experience, to lay hold of treasures buried in the bowels within a few feet of rich marl, - the masters of our steamboats may move amidst beds of coal, and, in both instances, those valuable substances may remain useless until the practical geologist shall direct both to the material which they so much require in their different occupations."

Codes: GEOL / IDX_Names: Geology - General;
Miramichi Gleaner - Feb. 12, 1839 Geological Survey of the Province. - It will be remembered that the Legislature during its sitting last year, placed at the disposal of His Excellency, a certain sum to be expended in a Geological Survey of the Province. In compliance with this Resolution, his Excellency requested Dr. Gesner, to undertake the important task. He did so, and through the kindness of the author we obtained by the last post, a copy of theReport which he has drawn up of his labours; printed in a pamphlet form, extending to 87 pages. The short time which has elapsed since its receipt, has not enabled us to peruse the work. We shall, however, do so, and make such extracts from it, as shall strike us as being interesting to our numerous readers."

S.J. Weekly Chronicle - Feb. 15, 1839 Geological Survey - Dr. Gesner's first Report on the Geological Survey of the Province has been kindly handed to us, and for which we feel much obliged. - Dr. Gesner has exhibited in his report a pleasing picture ofthe internal resources of our highly favoured land: he has shown that his labours of research have been indefatigable, and we hope that they will eventually prove a permanent benefit to the Province of New Brunswick."

Royal Gazette - Mar. 27, 1839 The Lectures on Geology, which Dr. Robb has lately been delivering at King's College. Fredericton, having been concluded on Saturday the 16th instant, during the course of last week, the following letter, which we have been requested to insert, was addressed to that Gentleman by those who attended them. Fredericton, March 20, 1839 Dear Sir:- Having attended your late course of Lectures on Geology, we beg leave to express to you our best thanks for the instruction and entertainment we have derived from them. The subject is most interesting in itself, and to many of your hearers it was entirely new. Your pains were unwearied, as well in the preparation of your Lectures, as of the specimens and drawings, by which they were so well illustrated, and you did ample justice to the topics you selected for the short course to which you were necessarily confined. We feel that you are justly entitled to the commendation so desirable to every public instructor, of having conveyed much useful knowledge in a very attractive form. We are, dear Sir, Your faithful servants, (Signed) Ward Chipman, Chief Justice. Edwin Botsford, Executive and Legislative Councillor. Geo. F. Street, Member Legislative Council. Royal Gazette - Mar. 27, 1839 Geological Survey of New Brunswick. (PART 6) By Abraham Gesner, Provincial Geologist. ... see original..."

N.B. Courier - May 4 1839 We have much pleasure in publishing the following letter addressed to Dr. Gesner since his Geological Lectures, by the Gentlemen who attended the day course.It is a compliment to which his great exertions to communicate knowledge, and excite an interest in this community in Scientific Inquiries, justly entitle him. - City Gaz. Sir. - Your Lectures on Geology for the present season being concluded, We, the Subscribers, who have attended the Morning course, beg to express our acknowledgements for the pleasure and information we have derived from your very interesting and instructive observations. We have been particularly gratified by the pains you have taken to illustrate your remarks in this useful science, by drawings prepared for the occasion, and by the exhibition and description of several beautiful specimens, especially those discovered in this and adjoining Province. Your obligating offer also, to allow us to examine your whole collection of fossils and minerals, deserves our best thanks. We sincerely wish you abundant success in the more important duty, to which your Summer months are to be devoted, of developing the mineral resources of the country; and shall be glad, when those labours are concluded, of again receiving your instructions. (Signed) R. Parker B. Robinson Robert F. Hazen William Scovil W.B. Kinnear John Kinnear Geo. D. Robinson W. Scovil, Junior R. Bayard N. Parker J.G. Woodward William Livingstone R. Woodward E.D.W. Weekly Observer - Dec. 15, 1840 ...At the close it was announced that Dr.Gesner would, on Friday evening next, lecture upon Mineralogy, and illustrate his observations by exhibiting specimens of native and foreign minerals. ..."

S.J. Morning News - Dec. 21, 1840 Mineralogy. - Dr. Gesner delivered a very interesting lecture on this useful science, on last Friday evening, before the Mechanic's Institute. He illustrated his subject with a number of rare and beautiful specimens of minerals - explaining the places of their nativity, the materials of their composition, and the various uses to which they are applied. It so to the earth that we owe the largest debt - not only for our means of subsistence, but for the costly gems which adorn the brows of nobles and princes. Comparatively few are acquainted with its invaluable properties; or at least ever bring it within their reflections; and it is only by listening to a treatise on the subject, like that of Friday evening, that we acquire a taste to study a science that conduces so materially to the wealth of the world. The Doctor exhibited, among other minerals, a specimen of Amethyst which is to be found in this Province; and he stated that a piece of the same sort, highly wrought, and beautifully polished, was placed beside the precious stones, which adorn the crown of the King of the French. He also stated that he would use his endeavors to have presented to Her Most Gracious Majesty the Queen, one of the same class, and of equal beauty, in order that New Brunswick may have the honor of knowing that she contributed one gem to Her Majesty's diadem..."

Codes: GEOL / IDX_Names: Geology - General;

Weekly Observer - Dec. 22, 1840 Mechanics' Institute. - Last evening, Dr. Gesner delivered as exceeding interesting Lecture before the Institute on Mineralogy, exhibiting a number of crystals, ores, and other mineral productions of these Colonies in illustration of his observations. The subject being confined to one Lecture, compelled Dr. Gesner to take a very brief, but comprehensive show of the principles of this Science, and the divisions of the mineral kingdom. - Courier."

N.B. Courier - Feb. 15, 1840 Geology of New Brunswick. - Dr. Gesner's Second Report on the Geology of New Brunswick, has just been published, and duly laid before His Excellency Sir John Harvey, our worthy and talented Lieutenant Governor. The Report is about the same length as the First one, or nearly ninety pages. It is extremely well written and clear in all its details. We believe it is to the wisdom and foresight of His Excellency that we are indebted, in the first place, for the commencement of this highly important Survey. The many advantages which have already resulted to the Province at large, from the valuable discoveries made by Dr. Gesner, prove the correctness of the warm terms in which His Excellency recommended the Survey to the favorable consideration of the House of Assembly, and his confidence in the talent and ability of our worthy and enterprising Provincial Geologist. We feel satisfied that the immense labor which the Doctor undergoes in the prosecution of his duties, could only be accomplished by an enthusiast of great scientific acquirements. In his opinion, we are fully borne out by the high standing he has already acquired, by his publications alone, among the first Geologists in England. With respect to the great importance of such a Survey, we have only to refer to our noble Mother Country, and, we will find that, even up to this very hour, in consequence of the improvements in the different departments of Science, a minute and searching Survey is going on in every part of England, that vast store-house of mineral wealth. If, therefore, it is still deemed proper and profitable to carry on such a Survey in the Mother Country, where, we may very naturally suppose, that the Government must have been well acquainted both with the Geological and Mineralogical characters of the country many years ago, how much more is it necessary for us, in this unexplored Province, to proceed in the same manner until we acquire sufficient knowledge of the various resources which God, in his infinite wisdom, has stored up in the bowels of the earth for the use and comfort of man? From the discoveries made by Dr. Gesner in two short seasons, we may fearlessly assert that New Brunswick is one of the richest and most important dependence of the British Crown!! With respect to the Scientific department of the Report, our author proves that he is well qualified to discharge the important duties intrusted to him. Although, to those who have never studied the Science of Geology, it may appear a dry, unprofitable and uninviting subject, yet Dr. Gesner never fails, in his writings and public lectures, in rendering it not only pleasing, but even extremely inviting. The gorgeous beauties connected with the science of Geology, rank it next in order to that of Astronomy; 2 for, although the latter Science may more readily captivate and arrest the attention of the common observer by the splendour and brilliancy of the countless worlds which float in yonder distant ether, yet, the former is not less attractive to the patient enquirer, who finds, at every step that he takes in, more and more reason to admire the beauty and harmony which exist in the material world; and fully satisfied that there must be an Almighty Architect who created, and still preserves this ponderous globe of ours in its unvarying revolutions amid the immensity of space - and that the same Omnipotent intelligence must preside over, and preserve in unison all those silent and secret operations, which are still going forward both on its surface and in its deep and fiery caverns! While the astronomer, by the aid of his powerful telescope, surveys the splendid and countless worlds that float in far distant space, all obedient to the Divine will of their Creator, he cannot help being impressed with the most overwhelming conceptions of the magnificence, power and splendors of the Deity! Yet the Geologist, whether he wanders upon the surface, or descends into the bowels of the earth, cannot but feel equal wonder and astonishment at the harmonies and beauties which he uniformly finds existing in every part of this terraqueous globe - and, which must inspire him with the most profound veneration for the Omnipotent character of an all bountiful God! But, as our present limits will not permit us to enter upon the many beauties connected with this delightful Science we must content ourselves, in the mean time, with directing attention to those parts of the Report which are of most importance to the inhabitants of the Province, in a commercial point of view. And as the objects of the Survey are both clearly and satisfactorily explained by our Doctor himself, we shall now introduce him to our readers, in the full confidence that they will feel as much pleasure in perusing this valuable document as we have done ourselves. ((Extract from 2nd report ..... see original report......)) Before the Doctor commenced his Survey, several unsuccessful attempts had been made to work the Coal of this Province, and that altogether in consequence of the very imperfect knowledge which we had of the real Coal Fields; and, of course, being ignorant of the proper situations where to open Pits or Mines, it is not to be wondered at if the parties did fail in accomplishing their desirable purpose. However, we are happy to think that, in future, when spirited individuals again engage in similar speculations, their prospects of success must be certain; for the very accurate information communicated in the Doctor's Reports, together with the splendid Geological Map which he has in progress, will be sufficient to guide the enterprise of our inhabitants to profitable and certain results. The Survey, in this way alone, will a thousand times over repay the Province for the trifling expense of the undertaking. With respect to the value and importance of Iron and Coal to this Province, he makes the following judicious remarks in the introduction, page vi: ((Extract from 2nd report ..... see original report......)) In order that our readers may form some idea of the immense quantity of Coal in this Province, we give the following as a sample of the extent of one Coal Field, discovered and explored last summer, page 3. ((Extract from 2nd report ..... see original report......)) From the important discoveries already made, we may assert without hesitation that there is no country in the world more bountifully supplied with the valuable article of Coal, than our own favored Province of New Brunswick; and yet, for the want of scientific knowledge, we have been obliged to depend upon England up to this very time, for almost every chaldron that has been consumed in the country. As there are but a limited number of the Report printed, and consequently, but few of our readers may have an opportunity of perusing it, we intend continuing our examinations of the most important discoveries, and, from time to

Miramichi Gleaner - Jul. 21, 1840 While upon the subject of a Mineralogical Survey - we cannot refrain from noticing that the inhabitants of this County were the first to Petition the Legislature togrant a sum of money for a Mineralogical and Geological Survey of the Province, commencing with this county. It shared the fate of very many other petitions of practical utility from this quarter - it was thrown out. The following year, if our memory serves us, Dr. Gesner was appointed Provincial Geologist; he has visited several Counties of the Province, published two annual reports, and this is to be his last year of service; and although this is considered, nay known, to be the most valuable section in Mineral Wealth, he has not yet made his appearance in this quarter. We should very much like to be made acquainted with the reason for

Miramichi Gleaner - Jul. 21, 1840 While upon the subject of a Mineralogical Survey - we cannot refrain from noticing that the inhabitants of this County were the first to Petition the Legislature to grant a sum of money for a Mineralogical and Geological Survey of the Province, commencing with this county. It shared the fate of very many other petitions of practical utility from this quarter - it was thrown out. The following year, if our memory serves us, Dr. Gesner was appointed Provincial Geologist; he has visited several Counties of the Province, published two annual reports, and this is to be his last year of service; and although this is considered, nay known, to be the most valuable section in Mineral Wealth,

he has not yet made his appearance in this quarter. We should very much like to be made acquainted with the reason for

Novascotian - Jun. 25, 1840 Geology. - We see, by pamphlets and notices in the newspapers, that Geological surveys have been made ofa great part of New Brunswick and Newfoundland."

N.B. Courier - May 30, 1840 and Royal Gazette - Jun. 3, 1840 and Weekly Observer - Jun. 2, 1840 Dr. Gesner's Museum of Natural History. - After the Procession, on Wednesday last, His Excellency the Lieutenant Governor, attended by his suite, visited the large and valuable collection of objects of Natural History belonging to Dr. Gesner. The collection has of late been greatly enriched by numerous specimens of minerals and fossils from the recent discoveries of Dr. G. and by some particularly fine specimens of the deer tribe. A bull moose killed in December last, weighing, when alive, upwards of eight hundred pounds, has been exceedingly well prepared and set up by the Doctor himself, and this specimen, from its extraordinary size and great beauty, formed a very attractive object, while other good specimens of the caribou and red deer were much noticed. The very extensive collection of British American minerals and fossils, many of them of rare beauty and uncommon richness, excited great admiration, as well as surprise, from their displaying such ample proof of the yet hidden wealth of this part of Her Majesty's dominions. - A very neat and almost unique collection of the birds of New Brunswick, was carefully noticed, and His Excellency expresses great satisfaction in being enabled to examine, through the labors of one person, a collection so varied and interesting. On parting, he said Dr. Gesner a very high compliment for his enthusiastic zeal and unwearied perseverance, which had carried him through labour and fatigue of no ordinary character, and by which the interests of science had been so greatly advanced in these Provinces."

N.B. Courier - Nov. 28, 1840 Gloucester and Restigouche. - We republish in another column, from the Mining Review published in London, a paper read by W.J. Henwood, Esq., before the Royal Geological Society of Cornwall, which will be found highly interesting and particularly so to our friends in the eastern part of the Province. Mr. Henwood is the Geological Surveyor whose arrival here we noticed last summer, and it is gratifying to learn that his visit to New Brunswick is likely to be productive of benefit, and make us better known in England. - Dr. Gesner also comes in for a well deserved share of notice and that need of praise which is justly due him. - We recommend an attentive perusal of the article. [SEE Mining Review, OCT. 31 ABOVE for article]"

Codes: GEOL / IDX_Names: Geology - General;
N.B. Courier - Oct. 17, 1840 The British Association. - This important national institution formally commenced its sittings this year, in Glasgow, on the 17th September. - We copy the following extract from a report of its proceedings in the Glasgow Herald of the 18th ult. -- Section C.- Geology. Charles Lyell, Esq., F.R.S.G.S. in the Chair. This section, which met in the Common Hall of the University, was very numerously attended by ladies and gentlemen. The Marquis of Northampton, Lord Greenock, and the leading geologists, occupied the Professors' bench.Dr. James Robb stated the substance of a paper he had given in on the geological features of the River St. John, in New Brunswick. He first called

attention to the fact that in this river there are several falls, not downwards, as in the ordinary course of rivers, but upwards against the current. The River St. John is of the size of the Rhine, the first class of European rivers, and the third or fourth of those of America. It drains a large portion of the province of New Brunswick. The mass of water it discharges into the Bay of Fundy is prodigious, especially during the spring floods, when the tides rise to the height of 35, 50, and sometimes even 60 feet, above the ordinary level. The remarkable fall of the water backwards is produced by the enormous volume of water, occupying a channel in some places ten miles in breadth, being confined near St. John into a breadth of 300 yards, which occasions it to roll back impetuously in the form of a magnificent cascade. The next point to which he directed attention was the fact that along the course of the river there occur terraces, parallel and single, which Dr. Robb illustrated by sections. These terraces are composed of sedimentary matter, in which fragments of rock are found. At one place, indicated in the section, the channel was very deeply cut, and here the river was small and insignificant. At all points the terraces were distinctly marked, although the country was flat above, and you go down these steps to the river below. Such terraces, Dr. Robb observed, are common more or less to all large rivers. - They abound in England and Scotland, on the Niagara, the St. Lawrence, and on the rivers of the south and north in the United States. In fact the phenomena were general; and they were only more distinctly marked in New Brunswick, by the circumstance of less having been done to efface them by the hand of man. The occurrence of these terraces, covered with detrital matter, on the St. John and all the rivers of North America, might be explained by some geologists by supposing that lakes on the course of the rivers had burst their banks; that their barriers had given way, and that the rivers had fallen to their present level. Now if the rivers in question had ever had lakes in their course, there might have been some reason for this hypothesis; but this was not the case. He inferred, therefore, that the general cause or causes of these terraces were operating throughout a vast extent of country, and that these were uprisings of land occasioning a corresponding depression in the levels of the river. Thus, wherever they found terraces, and they found them in all the rivers of America and Scotland, there were indications of the upheavings of land, and that at a comparatively recent period of the world's history. His object in being here today was to have the opportunity of hearing geologists expressing their views in solution of the phenomena he had described. The Chairman said they were very much indebted to Dr. Robb for having brought forward this interesting question. He then proceeded to ask one or two questions on matters of fact. In particular, he referred to the origin of these river terraces, which, as had been stated, abounded both in this country and in America. The fact he wished to know, in regard to these terraces, was, as to the detrital matter, whether Dr. Robb had found any organic remains in it, showing the recent origin of the matter in which the terraces were cut, or in proof of the recent upheaval of the land? Dr. Robb replied, that the country was extremely unfavorable to such investigations, at least in his district of it, where there was not sufficient lime to construct the shells of animals of the molluscous kind. They were, therefore, but rarely found. Another disadvantage was the extremely long winter, which was unfavorable to the development of shells. He had discovered, however, a few shells in the river, one of which was the unios - (the name of the other we did not catch). Such of the shells as had been discovered were seldom analagous to living species in the present waters. The shells found in the raised beaches were always marine. The Chairman - Then there were no fossil remains in the terraces, and when the shells were found they were fresh-water shells. He went on to observe that the paper in which the formation of these terraces was most fully explained, was Dr. Darwin's on the parallel roads of Glenroy. Mr. Greenough combated the views of the Chairman, and stated his conviction that the terraces were formed by cracks and fissures in these rocks; and that the wearing away of the channel of the river was the effect of the action of water, and of fissures produced in the rocks. By that means the phenomenon was explained to his satisfaction. The Marquis of Northampton asked a question 3 respecting the nature of the vegetable soil on the surface of the terraces. Dr. Robb explained, that the deposit differed both as to quantity and quality on the different terraces. - In reply to a question from the Noble Marquis, he also stated, that the only discovery of animal remains with which he was acquainted, in the neighborhood of Fredericton, was that of some bones which had been reported in the newspapers to be those of the mammoth, but which, on examination, he had no hesitation in pronouncing to be those of a spermaceti whale. The discussion then terminated. [There are two things in the above which will be immediately noticed by those who know the facts. One is the extraordinary statement made, and the other the source whence the real information was taken. The Dr. says, 'in this River, (the Saint John,) there are several falls - not downwards, as in the ordinary course of rivers, but upwards, against the current."" This is a discovery indeed, but one which falls against the current of common sense. Were it true, it would be wonderful. Fortunately for the craft on the river, it is neither. Why could not this gentleman have given his author at once, and said, that in Gesner's second Report on the Geology of the Province, page 9, he was informed that at St. John ""the falls are too narrow to allow the sea to flow in freely, and therefore there is a fall inwards at high tide, and a fall outwards at low water."" The account given of terraces on the St. John, was evidently drawn from one of a series of letters addressed by Dr. Gesner to Sir John Harvey, in the Courier of the 7th October, 1837. Whoever will read both communications will be satisfied of the plagiarism. Dr. Robb says, that in ""his District,"" (the St. John river), ""there was not sufficient lime to construct the shells of animals of the moluscous kind."" Here is another strange thing. Ten miles above Fredericton, lime is abundant, also, at the ""Head of the Reach."" Nearer St. John the river passes through limestone to a distance of five miles. His shell-fish are bad masons if they cannot work with such materials. Where do the coral insects get lime to build mountains in the ocean? It is also stated that the tide, at St. John, ""sometimes"" rises sixty feet above the ordinary level; this is either a mental or typographical error. Why not measure the end of a wharf? Or say the half of sixty feet? But the Doctor declares, that in the deposits composing the different terraces 'in the neighborhood of Fredericton"" ""some bones"" had been found, which had been reported in the newspapers to be those of the Mammoth, but which, on examination, he had no hesitation in pronouncing to be those of a Spermaceti Whale. ""What! A Whale!!! a spermaceti whale!!! How strange!!! No doubt 4 these are the same bones he was permitted to examine in Dr. Gesner's private collection. If found on the terraces Dr. R. speaks of, they are indeed fossil; this is a candid admission - truly, this is the age of wonders. What! spermaceti whales at Fredericton!!! Certainly. And, after a few more years have passed away, and Dr. Robb has become able to collect facts for himself, we may know things still more wonderful than these, and the college of which the Doctor is a professor will be discovered to be a vast petrifaction. There will then be other subjects besides Gesner's big bones, and the tertiary deposits

S.J. Morning News - Aug. 9, 1841 Mr. Lyell. - We are happy to notice the arrival at Halifax of this celebrated Geologist and his Lady, by the steamer Acadia from Liverpool. We understand that Mr. L. Intends visiting New Brunswick shortly, and purposes accompanying Dr. Gesner in his explorations next summer. - Courier."

N.B. Courier - Dec. 4, 1841 We understand that Dr. Gesner, our indefatigable Provincial Geologist, intends delivering a course of Lectures in Fredericton this winter, on the Natural Productions and Resources of New Brunswick. As these Lectures will doubtless contain much valuable information, relative to the capabilities of this Colony, which the Doctor's official connection with the Province for the last four years, added to his known talent and unwearied industry and research in Geological and other scientific pursuits, has enabled him to acquire, we trust he will by induced to repeat them before the Mechanic's Institute in this City, before the close of the lecture season."

Newbrunswicker - Dec. 9, 1841 and Morning News - Nov. 3, 1841 and N.B. Courier - Nov. 13, 1841 and S.J. Morning News - Jan. 3, 1842 ADVERTISEMENT: Museum of Natural History. The subscriber being about to open a Museum of Natural History at Saint John, begs leave to inform his friendsin New Brunswick and the neighbouring Province, that he will be happy to receive donations of specimens belonging to the animal, vegetable and mineral kingdoms, fossils, relics, works of art, ancient books and papers, models, inventions, domestic manufacture, and curiosities of all kinds. A liberal price will be given for foreign specimens, not intended as donations. The Museum which at present consists of upwards of 4000 specimens, will be open free to persons making liberal donations. A donation of the value of œ1 will entitle the donor to free admissions for one year. Masters and supercargoes of vessels who make donations will be entitled to free admission. Publishers of newspapers who may insert this advertisement four times a year, will be entitled to free admission, by sending one copy of the paper and advertisement yearly to the Museum. Persons who shall contribute original information in regard to the Natural History of the Provinces, shall be entitled to free admission. Masters and supercargoes of vessels belonging to the Province, and trading to foreign ports, are respectfully requested to aid in the useful and interesting work. The names of donors will be recorded in the catalogues opposite the names of specimens received from them. The objects of Natural History of the Provinces will be exchanged for those of foreign countries. St. John, 4th December, 1841 A. Gesner Wanted for the above Museum:- Wolf, male and female; Lynx or Wild Cat, male and female; Red Fox, male and female; Black Fox, male and female; one male Beaver; Cacajon Glutton or Indian Devil, male and female. - The skins, jaws, legs and paws of the animals must be perfect, and forwarded to the Museum immediately after they are procured."

Weekly Observer - Feb. 2, 1841 Dr. Gesner commenced a course of Twelve Lectures on the interesting subject of Geology, at Fredericton, on Friday evening last. His Excellency the Lieutenant Governor and Suite, most of the Heads of Departments, the Speaker and several Members of the Assembly, and a large number of the respectable inhabitants of the town, honored the Lecturer with their attendance."

Weekly Observer - Feb. 9, 1841 We have received a copy of Dr. Gesner's ""Third Report on the Geological Survey of the Province of New Brunswick,"" which we will notice more fully in our next paper."

Royal Gazette - Feb. 10, 1841 ADVERTISEMENT: Lectures on Geology. -- Under the Patronage of His Excellency the Lieutenant Governor, Sir John Harvey, K.C.B. & K.C.H. -- By A. Gesner, F.G.S. Provincial Geologist. -- Twelve lectures on the interesting and important Scienceof Geology; to embrace a succinct account of the history, structure, and different formations of the earth, and many of the animal and vegetable remains found in it. Each lecture will be demonstrated with large drawings, sections, and maps, and with a great variety of foreign and Provincial specimens of minerals and fossils. The Geology of New Brunswick will be duly attended to; its different classes of rocks and minerals will be offered for inspection, so far as they have been discovered. A very large and beautiful Geological Map of New Brunswick, with the fossils discovered in this Province, will also be exhibited; the whole being intended to illustrate a system of Geology adapted to this part of North America. Price of Family Tickets for the Whole course, 20s.; Single Ticket for ditto, 10s.; Ticket for Single Lecture, 2s. 6d. The Lectures will be delivered in Messrs. Beckwith's Building, on Monday, Wednesday, and Friday, in each week, at Eight o'clock in the evening, to commence on Friday the 29th January, 1841. Tickets to be had at Mr. Beverley's and Mr. Beek's Book Stores."

S.J. Morning News - Feb. 11, 1841 Doctor Gesner has commenced a course, consisting of twelve lectures, in Fredericton, on Geology. The first evening his Excellency the Lieut. Governor and suiteattendant."

Codes: GEOL / IDX_Names: Geology - General;

S.J. Morning News - Feb. 12, 1841 We have yielded our usual editorial space in this number, to extracts from Doctor Gesner's Report, which will be found highly interesting, and well worthy the space they occupy. Dr. Gesner's Report. - We cannot do better, we find, on a further perusal of the Doctor's Report, thanby devoting a column or so, of our space, to extracts from the work. - The following will be found highly interesting:- ""Animal Remains. - Besides the remains of many species of shell-fish just notices, the relics of vertebrated animals have been found. The jaw of a shark was discovered in the indurated clay of the Belleisle, with fragments of shells. Both the jaw, and some of the teeth are very perfect, and but little mineralized. I had also received from a friend, a few pieces of an enormous bone, which had been sawed and greatly injured. From the great thickness and solidity of some of these pieces, they were supposed to belong to an animal of the mammalia class; but they are too small in size, and the original bone has been too much injured to admit of having their true nature understood. Afterwards a portion of a jaw was discovered, having distinct impressions of the remains of sockets of four teeth. The canal and cavities were filled with blue tertiary clay, containing several fossil shells. This bone, although much decayed, is but partially mineralised, and the softer parts have been eaten by teredos. - Whether it belonged to the same animal that possessed the lesser fragments is by no means certain. The locality where these relics were found has been discovered; but the waters of the rivers and lakes were too high at the time of my exploration along the Saint John and its lower branches to make a successful search for these interesting relics. They will claim my earnest attention as soon as a convenient opportunity offers. From all these circumstances, and a comparison of the part of the jaw with other animal remains, I have been led to think that it might probably have belonged to some saurian reptile, notwithstanding the difficulties of deciding correctly in a case like the present. ""Since the above was in the press I have received professor Hitchcock's report on the Geology of Massachusetts; and find, that not only has the existence of tertiary deposits been fully established in that State, but also the remains of vertebrated animals and saurians, have been found in them; which throw a great light upon similar relics discovered in this Province. The chief part of these fossils was found by the learned professor in the tertiary strata of ""Gay's Head"". In treating of vertebrated animals, he says, ""the bones and teeth of these animals are more numerous at Gay's Head than any other organic relics. They are found in the greatest abundance in the osserus conglomerate, already described; but they also occur in the green sand, and in a yellowish sand, associated with the green sand. For the most part the bones are not mineralized, but frequently they are black when broken; and sometimes they are thoroughly impregnated with iron ore. In general, they are much broken, and often rolled. In one instance, however, I noticed a succession of large vertebrae; one or two occasionally being absent, for a distance of ten or twelve feet. Some of these are nine inches thick, and as much in length. All the varieties of teeth that accompany these bones, which I could find, after a protracted search, are exhibited on Plate XI. The flat teeth are evidently those of a shark; probably also, the triangular teeth belong to the shark; and these are more numerous than the others, and rather more broken, though all of them are often very much injured. We ascertain, then with considerable confidence, the remains of the crocodile, and two or three species of shark, in this cliff. None of the vertebrae, or other bones which I have described, however seem to be those of the shark. They bear a much nearer resemblance to those of huge saurian reptiles, which I have examined in the geological collections of New Haven and Philadelphia; one of the vertebrae, in particular appears very much like those of the plesiosaurus. At present, I am inclined to believe that the bones at Gay's Head belonged to the lizard tribe, though I dare not speak on this point with confidence. ""It is stated by Provost, that the remains of reptiles (crocodiles), are characteristic of the tertiary plastic clay, near Paris; and they are known to exist in the tertiary strata of England, as described by Mr. Mantle, and several other geologists."" The Doctor concludes his highly interesting Report, by referring to the alluvium of the St. John:- ""It may not be improper, in concluding the present report, to take a brief view of the extensive collections of alluvium which have been formed, and are still accumulating along the banks of the Saint John. This majestic stream, having taken its rise about four hundred miles in the interior of the country, receives vast supplies of water from the numerous branches, tributaries and lakes communicating with it; until it is poured into the sea, through a narrow outlet near the city. It not only conveys to the ocean the surplus waters of large part of New Brunswick, but also drains a part of the State of Maine, belonging to the United States. Of all the agents employed in modifying the surface of the earth, water is the most active. Its operations commence in the falling of the gentle shower, and do not cease until after the mighty torrent has lost its fury in the sea. The particles of the hardest rocks become loosened by atmospheric changes, and are swept downwards from the mountain's brow; to form new deposits in the valleys; by currents of water even large rocks are torn from there native beds, and transported to great distances. The soil thus formed is always deposited along the lowest levels; and the matter there collected, whether consisting of large stones, gravel, sand, or mud, is identical with the rocks from which it was derived, unless changed by some chemical affinity existing between its atoms. From the debris of the surrounding country, all the low intervale has been produced. Each succeeding freshet brings down a new supply of mud and sediment, which is added to former accumulations, and yearly increases their fertility. ""The alluvial deposits along the St. John contain the relics of animals and plants, still belonging to the country, and suffering transportation through the medium of water. Along the deep water courses and channels worn I found rafts of timber, boards, shingles, leaves, bones of birds and quadrupeds, and fluviatile shells, all buried in the alluvium where they were deposited in the same manner that the remains of organized bodies appear in the solid rocks. The sediment accumulates on the borders of the river more readily than near the upland. - This arises from the particles of alluvium being thrown down before they reach the more remote places; hence, all the coarse materials, by falling first, will be found upon the banks of the river, and the fine particles only are conveyed, in times of freshet, to the lowest and most remote parts. Thus the river runs between two alluvial walls, thrown up by the greater deposit along its margins. The Mississippi and other large streams exhibit the same phenomena. ""From the annual freshets that overflow all the low lands along the St. John, those lands are rising, and consequently improving in quality, by being rendered capable of producing finer grasses; and the time is drawing nigh, when all the sunken tracts along this noble stream, will become so elevated, by yearly accessions of diluvial matter, that they will be covered by water during extreme floods, and can be extensively cultivated. ""From the slow movement of the current, this river may be considered a lake during the summer season; but in the spring and autumn the violence of the flood sweeps down immense quantities of sand, gravel and mud; but as the river may be said to be dammed up at its mouth, the sedimentary matter cannot escape, and by the back current of the tide it is deposited. In the mean time the channel is kept freely open, and the sediment brought down is not permitted to lessen its depth; the water always securing for itself a free passage. ""When we look back and consider what was the condition of this river valley previous to the collections of alluvium along its borders, we see the site of an ancient estuary of the sea meeting a lake. The elevation of the coast has already been adverted to, and the evidences of that event have been noticed. From all these it appears evident that the physical character of the country has been greatly changed, at a period comparatively recent in geological chronology. The precise nature of the revolutions, by which the physical geography of this part of the Province has been altered, may

St. Andrews Standard - Feb. 19, 1841 We have received a copy of Dr. Gesner's ""Third Report on the Geological Survey of the Province of New Brunswick,"" which we will notice more fully next paper."

St. Andrews Standard - Feb. 19, 1841 Gesner's 3rd. report published ...."

St. Andrews Standard - Feb. 19, 1841 Legislature.-.... A petition from Abraham Gesner, praying such assistance as will enable him to purchase certain Instruments requisite for a correct Geological Survey of the Province."

St. Andrews Standard - Feb. 19, 1841 Fredericton, 6th Feb. 1841. Mr. Editor, There ... I almost forget to inform you that I have been attending Dr. Gesner's evening lectures on what he calls Geology, in Mr. Beckwith's large room at the upper end ofthe Town. - This Geology is a painting of the whole earth and the greater part of the Heavens, which he has hung up on the wall behind him, and which he points out to his hearers with a long pole. Before him is a globe which he shews that this cold earth on which we live, is nothing more than a lump of the hot burning sun which was thrown off like a lump of mud from a waggon wheel, the heart of which is ""hissing hot"" to this very hour. Then again he has all kinds of Indian utensils, Pots, Axes, Gouges, Spear and Arrow heads, all made out of stone, by which he shews what miserable creatures men were before they knew Geology. He has ever so many broken pieces of stones of all manner of shapes and kinds, and tells all about them, and how and when they were made. He shews some of them which he says fell blazing from the Heavens, and maintains that they contain substances which on this earth are no where to be found. ""The moon,"" he says, ""is as hot as Tophet,"" and ""full of burning volcanoes;"" from this I infer, that these flaming firebrands have been hurled down at our heads by my old friend the ""Man in the Moon"", just by way of fun. However, as this is only my own conjecture, I may be wrong. But this I do know that Dr. Gesner is the most wonderful man that I ever did hear in all the days of my life. I could sit and listen to him the whole night, and am always sorry when his lecture is done. Your's, Jack Robinson."

Weekly Observer - Feb. 23, 1841 Third Report on the Geology of the Province of New Brunswick; by Abraham Gesner, F.G.S., Provincial Geologist, &c. - The above work furnishes much useful and interesting information on the mineral wealth of the Province, which only requires the attention of enterprising individuals to become a source of revenue to the country and to themselves. Coal and iron areabundant, and must ere many years, as our forests recede, arrest the attention of capitalists, as articles of export, as well as for domestic consumption. The labours of the Provincial Geologist have been of great utility, in developing the hidden resources of the Colony; and the annual grants for the support of this survey have therefore been judiciously applied. The fostering protection of the Legislature should be extended to this important object, until every section of the Province has been thoroughly explored. The ""Report"" is highly interesting throughout, and should be carefully read by every reflecting inhabitant of the country. We subjoin the following extracts from the author's introduction to the Report:- [SEE ORIGINAL] Dr. Gesner concludes his work with the following remarks on the

Morning News - Nov. 3, 1841 Gesner's Museum. - We are pleased to see that the Doctor is about throwing open his Museum for public exhibition. We trust it will be the means of paying him handsomely for the outlay and trouble which he has undergone, from time to time, in making so large and useful a collection of natural and artificial curiosities."

Nova Scotian - Nov. 11, 1841 Doctor Gesner is about to open his Museum for public exhibition."

Codes: GEOL / IDX_Names: Geology - General;
N.B. Courier - Oct. 16, 1841 We publish the following additional letter from Dr. Gesner, which was unavoidably omitted in our preceding number:-May it Please Your Excellency - I beg leave to report for the information of your Excellency, that I have recentlyexplored the line of country from the entrance of the Schoodic or Saint Croix, along the reputed American Boundary to the River Saint John. The rocks from Saint Stephens to the lower Cheputneticook Lake, were found to consist of varieties of Greywacke and Slate. These rocks are met by a tract of Granite, occupying an extensive area, reaching in a northeast direction from the Cheputneticook Lakes to the Saint John, at the Meductic Falls and Pokiok. The most interesting minerals discovered in this exploration, are sulphuret of Iron and Copper Pyrites, which occur between Eel River and Woodstock. Almost the whole of the country examined, is uninhabited, and we were compelled to encamp every night during a fortnight. The wild and ungranted lands situated between the Saint Croix and the Magaguadavic are nearly all capable of cultivation, and ..?.. places the soil is of a superior quality. The Granite tract already mentioned, although

bearing a fine growth of pine and hemlock, and other forest trees, is less favorable for tillage. - At the upper part of Eel River, there is a fine tract of intervale extending twelve miles along the stream, and as the uplands are good, fine settlements might be made upon the sides of this river. There is already a tolerable portage road from the Meductic settlement to this tract, and the distance to the lower part of the intervale is only six miles from the Saint John. Much of this land, I am informed, remains ungranted. One of the most important features of the interior of the country between the Saint John and St. Andrews, is seen in the numerous lakes and rivers, by which almost every part of the wilderness may be traversed in canoes and skiffs; and the new settler enabled to receive his first supplies, and hold communication with the older villages, before roads and bridges can be constructed. There still remains in this part of the Province some groves of excellent pine; but they are somewhat remote from any navigable stream, and therefore the expense of conveying the timber to market would be greater than usual. Bears, wolves, moose, carriboo, and deer are numerous, and the lakes and rivers abound in the best trout, perch and other fish. These last are highly beneficial to the pioneer of the woods. Many families on the American side of the line derive a considerable part of their diet from the fish taken in the Cheputneticook Lakes. Hoping that these brief remarks will be deemed sufficient, until my Annual Report is published, of this district, I have the honour to be Your Excellency's most obedient and very humble servant, Abraham Gesner, Provincial Geologist. St. John, Jul 8, 1841. His Excellency Sir W.M.G. Colebrooke, &c. &c. &c."

Morning News - Sep. 27, 1841 We observe by the last Miramichi Gleaner, that Dr. Gesner has arrived in that section of the province, upon his Geological exploration; and is prosecuting his researches with much success. He sets forth that there is every prospect that mining operations might be pursued in that quarter, with great advantage."

Novascotian - Apr. 7, 1842 Doctor Gesner, it is said, is to be employed in a Geological Survey in Canada. His official engagement in New Brunswick has ceased."

N.B. Courier - Apr. 16, 1842 and New Brunswicker - Apr. 30, 1842 ADVERTISEMENT: Gesner's Museum of Natural History, (Robertson's Brick Building, Prince Wm. St.)Museum open on Mondays, Wednesdays, and Fridays, from 12 to 4, p.m. Price of admission - 1s. 3d. Yearly admission - at all times during hours: For a Lady or Gentleman, ... 10s. A Lady and Gentleman of the Same family, 15s. For a whole family, including resident members only, 20s. Contributors to have free admission, according to the value of their contributions. The names of Donors, and of persons having yearly admission are recorded at the entrance of the Museum. April 16."

N.B. Courier - Apr. 16, 1842 Gesner's Museum. - We have examined (cursorily, we must acknowledge) with much satisfaction, the extensive collection of Natural and other Curiosities recently arranged and opened by Dr. Gesner, in a spacious room in the new brick building of Duncan Robertson, Esquire, Prince William street. The collection comprises about four thousand specimens, belonging to the animal, vegetable and mineral kingdoms, fossils, relics, works of art, ancient books, coins, &c. &c., and is highly creditable to the taste and talents of the Proprietor, who has spent several years in bringing it to its present state of perfection. As the want of such an establishment has, on many accounts, been often felt in this city, we trust, now that one so extensive and valuable has been opened to the public, it will meet with extensive and liberal support and encouragement, so that its intelligent and gentlemanly Proprietor will be amply rewarded for the labour and expense he has employed upon it. To strangers visiting Saint John, the Museum will be an object of much interest, as there specimens of the various mineral productions of our Province may be examined, and information respecting the same collected, which, we may venture to say, cannot be obtained in any other way without much expense and research. - This of itself is a great desideratum, and one which the man of science will fully appreciate. - A reference to the catalogue of the contents of the Museum is only necessary to induce a visit from our Citizens generally, and few, we think, if any persons of respectability and intelligence will visit Saint John in future without inspecting this collection of rare specimens of Nature and Art."

Newbrunswicker - Apr. 30, 1842 Dr. Gesner's Museum of Natural History. - We have visited the Museum of Dr. Gesner, recently opened in this city, which contains a rare and unique collection of Natural curiosities, from the largest animals which range our forests, to the smallest of nature's handiwork - allarranged in a striking and elegant manner, which causes the visitor to receive increased pleasure from the sight. Many artificial articles of an ingenious construction are also to be seen in the Museum; and a more extensive collection of Animal, Vegetable and Mineral curiosities, cannot probably be found in North America. Much credit is due to Dr. Gesner for his perseverance and industry, and we feel confident, that the people of this Province will know how to appreciate the talents of this scientific gentleman."

Codes: GEOL / IDX_Names: Geology - General;
N.B. Courier - Aug. 6, 1842 Geology. - The celebrated Mr. Lyell, President of the Royal Geological Society of London, who has of late been lecturing on his favorite science to the savans of the United States, has recently visited the Chignecto coal field in New Brunswick and Nova Scotia, and other interesting localities in that quarter, accompanied by Doctor Gesner, whom he met by appointment at Parrsboro'. Sections of the Coal district have been taken, and the English geologist has expressed, as we understand, a high degree if satisfaction in being able to visit a number of places described in the works of our Provincial Geologist, and to confirm the important and interesting discoveries therein contained. Mr. L. proceeded to Halifax, via Truro and Pictou, to take passage by the next Steamer for England, and we are happy to learn

that he intends to visit New Brunswick during the next or succeeding season. We rejoice that these Colonies are beginning to share the attention of the Scientific world, and we acknowledge that Dr. Gesner deserves much credit from the inhabitants of New Brunswick and Nova Scotia, for his increasing labours in these pursuits."

Royal Gazette - Aug. 13, 1842 Communication From Dr. Gesner, Provincial Geologist. May it please Your Excellency, I beg leave to state that I have just returned from accompanying Mr. Lyell, President of the Geological Society of London, in making an examination of the Chignecto Coal Field, a great part of which is in this Province, and it affords me much pleasure to state, that the distinguished Geologist fully approves of the Reports I have made concerning it, and the remarkable fossils found in that quarter. Mr. Lyell requested me to return most respectfully his sincere thanks for the aid Your Excellency had so kindly offered him, and with me regrets that circumstances compel him to return to England by the next Steamer. He has however promised to return to New Brunswick next Season, and then to continue his explorations. Brief as the visit of this gentleman has been, I am confident it will prove serviceable to this Country, as he has expressed his determination to bring the Geology of these Provinces into notice in Europe. I am happy to add that the Crops are very promising throughout the whole Province, and although there is considerable embarrassment in certain districts, there is no cause for any great alarm, as the produce of the Season is already beginning to supply food for the poor, and a far greater quantity of seed was planted than in any former Season. By correct information received from Eel River, it appears that the Settlement I had located last Winter on the Magaguadavic River has also been successful; the latter has received no aid from the Government. I have, &c. (Signed) A. Gesner Saint John, 5th August, 1842. His Excellency Sir W.M.G. Colebrooke, Lt. Governor, &c. &c. &c."
